Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV â€“ Daily Operations

Subject: BLUF - Tribal protests in North Dakota

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

This BLUF is for situational awareness only.

The sustained protest of Dakota Access pipeline supported by the Standing Rock Sioux Tribe has now entered a third week, with conflicting reports on size, but current estimates range from 1500-2000 protesters. The protest site is located 1 mile off the reservation in neighboring Morton County, North Dakota. On Friday Aug. 19, North Dakota Governor Jack Dalrymple signed an emergency declaration, and Morton County has issued a local emergency declaration, which is expected to be extended. The state emergency declaration is primarily focused on law enforcement and traffic regulation and does not include activation of the National Guard.

Coverage of the protest also varies widely depending on the position of the covering media. After the initial arrests last week, more recent reports indicate there has been generally peaceful situation between protesters and law enforcement.

Awareness.

Police use pepper spray while arresting 83 at Dakota Access Pipeline protest

- Mike Anderson Journal staff
  -
- Updated Oct 23, 2016

Editor's note: As part of the Journal's ongoing coverage of the massive Dakota Access Pipeline protest in North Dakota, staff writer Mike Anderson has been camping in a tent near the protest site. He filed this dispatch from the scene on Saturday.

CANNON BALL, N.D. | A peaceful protest against the Dakota Access Pipeline ended in the arrests of 83 people in North Dakota on Saturday morning amid a chaotic scene in which police in riot gear used pepper spray to break up and subdue a group of 200 to 300 protesters.

It is the highest number of people arrested in a single day in North Dakota during the last several months of protest actions against the oil pipeline, bringing the total number of arrests up to 222.

Though the protesters behaved non-violently and cooperated with the police, North Dakota law enforcement officials described Saturday's events as a riot. Police have offered conflicting reports alleging that one protester either verbally threatened an officer, or tried to physically grab away a can of pepper spray, resulting in the protester and the officer both being pepper sprayed in the face.

Most, if not all, of those arrested after the 5-hour ordeal on Saturday will be charged with criminal trespass, a misdemeanor, according to Morton County Sheriff spokesperson Rob Keller. Other charges included assault on a peace officer, reckless endangerment, engaging in a riot, resisting arrest, and fleeing an officer on foot.

"It's an unlawful activity," Keller said during phone interview on Saturday afternoon. "The bottom line is it's on private property. It's posted, 'No Criminal Trespass'. It's like you're invading someone's home. Consequently, there were arrests that were made."

The arrests occurred as the protesters were marching through wide-open prairie lands along the route of the Dakota Access Pipeline west of Highway 1806 outside Cannon Ball, N.D. They hoped to get to four fellow protesters who had locked themselves to a piece of construction equipment in the early morning hours at sites where the pipeline, which is planned to be buried beneath the Missouri River, is now under construction.

A police statement said the four were arrested after they were found, "attached to the vehicle; two attached to the outside of the vehicle, one attached to the steering wheel and another whose body was outside the vehicle with his arm fed through a hole in the door and his hand was in a bucket of hardened concrete."

The call to action went through the main resistance camp around 5:20 a.m. while it was still dark and freezing cold. A man walked through the camp speaking through a megaphone.

"Wake up relatives," he said. "Wake up water protectors. Wake up land defenders. Time to wake up. Time to send our boys to the universe. Time to send our boys to the rising sun."

A convoy of vehicles formed in the camp, a prayer was held, and the assembled were instructed to behave peacefully and respectfully if they encountered police.

“I know it’s hard on the front line,” the prayer leader said in the dark. “But do not cuss, do not holler. If you see someone getting out of hand, tell them to calm down.”

Then the convoy moved out. Parking their vehicles along the highway, the protesters began hiking into the field as the sun rose a little before 8 a.m. Their path took them along a craggy dirt road near the route of the Dakota Access Pipeline on land that tribal members of the Hunkpapa Sioux of Standing Rock said is filled with sacred burial sites.

Some of the protesters remained behind as several hundred others carrying signs and banners began marching into the field, singing, praying, and burning bundles of ceremonial sage as they went.

They walked two to three miles inward when they encountered a line of more than 50 officers from multiple law enforcement agencies. Most of the officers wore riot gear, most held wooden truncheons, and some had shotguns, canisters of pepper spray, and tear gas grenade launchers in their hands. Two armored personnel carriers arrived later while a helicopter circled low overhead.

The protesters and police lines met in the middle of an open field. The protesters remained calm, playing drums and offering prayers in English and Lakota to the officers, who remained stone-faced and uncommunicative.

When the police line began to advance on the protesters, the leaders of the group instructed everyone to fall back and cooperate with the police. They were dispersing when an officer spoke over a loud-speaker from the turret of an armored vehicle.

His only words — and the only words police spoke to the protesters all morning — were, “You’re all under arrest for trespassing.”

The police continued to advance on the fleeing protesters, snatching some of the stragglers, throwing them behind their lines, and pepper-spraying several others in the face as they trod silently forward.

The police eventually surrounded the group, repeating that every one of the 200 to 300 people present would be placed under arrest. The protesters linked arms and tied bandanas to their faces as the officers pressed in, splitting the group and pressing many to the ground. Most, if not all of the men and women taken into custody, did not resist arrest.

A small group managed to retreat over the hill, a few pouring water into the eyes of friends who had been stung by pepper spray and guiding them by hand up the dirt road as they made their way back to camp.

“It was all peaceful. And then the cops showed up," said Harmony Restoule, a young Ojibwe woman from Northern Ontario, Canada. “It was really scary when the police kicked into action.”

Restoule went to the demonstration with her cousin Paige, both of whom participated in mass protests during the Idle No More movement, a grassroots campaign organized in 2012 by the indigenous peoples of Canada against perceived legislative violations of their treaty rights.

“The Canadian police never showed up in riot gear,” Paige Restoule said.

A young man from California who identified himself only as Ahkua said his friend was among the people arrested, and that the police took him after he knelt to the ground to help someone else up.

“There were a few officers who were excessively aggressive and got the others riled up,” he said. “Most cops are pretty chill.”

Saturday’s protest was one of several high profile demonstrations in the Cannon Ball area against the Dakota Access Pipeline in recent months. Police arrested celebrity Shailene Woodley along with more than 20 others on Oct. 10 along the route of the pipeline near St. Anthony, N.D. Police referred to the event as a riot and charged many people with either inciting or engaging in a riot. At the time, it was the highest total number of arrests made in a single day.

The protesters, who now number in the thousands at a main camp near Cannon Ball, want to stop the ongoing construction of the pipeline that will transport oil from the Bakken and Three Forks formations of North Dakota, through South Dakota and Iowa, into southern Illinois. The pipeline would carry 450,000 barrels per day initially and could reach 570,000 barrels a day. The total length of the pipeline across the four states would be 1,134 miles, with 271 miles in South Dakota. The company's estimated cost for the South Dakota segment is $820 million.

On Sept. 3, police and private security forces used pepper spray and dogs to drive protesters away from construction equipment.

"Today's situation clearly illustrates what we have been saying for weeks, that this protest is not peaceful or lawful," Kirchmeier said in a press-release about Saturday's events. "This protest was intentionally coordinated and planned by agitators with the specific intent to engage in illegal activities. I have repeatedly stressed that it is our job to provide safety and security for all involved in the situation at hand. This is not about the pipeline. This is not about the protesters. This is about the rule of law."

The protesters may have been peacefully dispersing on Saturday morning, Keller said, but that doesn't change the fact that they broke the law.

"That's the whole purpose of having a police line, to protect the (pipeline) property and their right to commerce," Keller said. "We are protecting the protesters too, and the ranchers as well."

When asked if she felt protected by the police, Harmony Restoule said, "No."

Subject: Pipeline update

Pipeline update:

Yesterday was a big day, Jessy Jackson arrived on site and talks between the protestors and law enforcement broke down.

- There was an article today from the Associated Press Regarding WY sending law enforcement to North Dakota: http://trib.com/news/state-and-regional/wyoming-sends-troopers-to-north-dakota-pipeline-protest/article_2972e493-0b71-5cab-9c7d-3c27fb67542e.html (full article pasted below). Pre the article both tribes in WY are opposed to sending the law enforced support.
- There was a media report yesterday that Indiana is sending law enforcement to support ND. The article references FEMA paying for the support. We have reached out to Region IV for awareness and to let them know that FEMA is not paying for any law enforcement. The article is likely referencing EMAC. http://www.theindychannel.com/news/call-6-investigators/call-6-dozens-of-indiana-officers-deployed-to-north-dakota-pipeline-dispute-but-whos-paying (full article below).
- I am hearing a lot about treaty rights on social media, this morning on NPR the Chairman of the Standing Rock Sioux talked about this land belonging to the tribes based on treaties (NPR and other media sources).
- A new encampment (the 1851 Treaty Camp) has been set up directly on the pipeline path, which is private property (KILI Radio).
- On Wed. Jessy Jackson arrived on site to speak out about the many human and civil rights violations being perpetrated by local police (Indian Country Today).
- Actor Mark Ruffalo was at Standing Rock yesterday showing his support and Leonardo DiCaprio announced today he is on his way (Indian Country Today).
- Everyone is still calling for peaceful protests (multiple media outlets).
- It is being reported there have been between 260 and 300 arrests since the protests began with most of them happening last Saturday and pepper spray being used by law enforcement (multiple media sources).
- FAA has issued temporary flight restrictions over the protest camps. Only response aircraft in support of law enforcement activity are authorized in the airspace (Bismarck Tribune).
- Negotiations broke down between protestors and law enforcement yesterday (Bismarck Tribune).
- This inforum link is to a video that shows clear frustration by law enforcement and that they do not want a confrontation. http://www.inforum.com/news/government/4145254-jesse-jackson-joins-pipeline-protest-effort-faa-issues-no-fly-restriction (InForum)

This is a particularly good story about law enforcement and what happened yesterday.

New roadblock emerges on Highway 1806 as confrontation between protesters, law enforcement looms

By Amy Dalrymple and Mike Nowatzki / Forum News Service Today at 10:22 a.m.

Dawn breaks over the Oceti Sakowin Camp Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor1 / 2

ⓘ A roadblock manned by North Dakota National Guard troops blocks North Dakota Hwy. 1806 before sunrise Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor2 / 2

MORTON COUNTY, N.D. — One day after negotiations between Dakota Access Pipeline protesters and law enforcement broke down, the mood was tense but quiet Thursday, Oct. 27, as the sun rose above the resistance camps.

Above, in restricted airspace, a North Dakota Highway Patrol aircraft circled.

Cecily Fong, spokeswoman for the state's Department of Emergency Services, said medical staffing is in place should any injuries occur at the protest sites.

She said law enforcement will likely issue a warning to protesters congregating at a camp along State Highway 1806, where pipeline opponents have set up teepees and staged hay bales, logs and barbed wire to block the road, if necessary.

However, Fong said she didn't know the timing of any law enforcement action planned, and officers want protesters to leave the northern camp, which is on private property recently purchased by the pipeline's developer, Dallas-based Energy Transfer Partners.

Protesters will be encouraged to return to the southern camp on U.S. Army Corps of Engineers land.

By Thursday morning, protesters set up an additional "halfway" roadblock on Highway 1806 — between their main barricade and the frontline camp where they've promised to hold their ground.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, “from the police, yeah, definitely,” he said.

“All we’re trying to do is protect our people,” Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters’ main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person “frontline” camp, where teepees and tents continued to pop up on land where the pipeline is planned

“We’re here telling you this is private property and you have to leave,” Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. “We don’t want a confrontation. Please stand your people down and go back to the main camp.”

Mekasi pointed at the road – “our no surrender line,” he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their “no retreat” line.

“That’s your final word?” Laney asked.

“That’s my final word,” Camp-Horinek said, walking away.

“Good day, gentleman,” Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an “impasse.”

Kirchmeier emphasized that “the last thing we want to do is do it forcefully.”

“If we have the chance for open dialog, that’s what we want to continue,” he said.

Pipeline opponents say they’ve reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents’ rights by blocking the highway.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press
- Updated 11 hrs ago

- AP

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe’s reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol's Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because "a neighbor state asked for help and Wyoming answered the call."

"North Dakota asked for help from all 50 states, so Wyoming and other states responded," Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

"It kind of sheds light on really who's running the show here," Baldes said. "The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets."

Mead denied that the decision to send troopers was political.

"The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue," he said.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including

emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Greg

Understand about SHSP/LETPP. I asked Brad to check with his peers to see if other states' had reprogrammed grants to cover these types of events. Unfortunately, it sounds like even if reprogramming is possible, the pool of available funds will limit this option.

I was pleased to see the potential options regarding JAG grants and/or emergency JAG grants. I hope that proves a solution, even if a partial one.

We'll keep looking around here but to date, no other feasible solutions are coming to the fore.

Take care and stay in touch,

Regards, Nancy

Thanks Alan for the info. As far as the SHGP grants are concerned, we are a marty minimum state so we don't receive much. Unless there is chance of new or additional/supplemental funding we would be robbing Peter to pay Paul and both are already on the front line of response. Reprograming does not get us much relief.

Greg

I pulled this from a Serino speech in Boston. I found bullet #3 interesting.

Immediate Aftermath and Recovery

- Two days after the bombing, President Obama issued an Emergency Declaration for Massachusetts to "alleviate the hardship and suffering caused by the emergency on the local population, and to provide appropriate assistance for required emergency measures, authorized under Title V of the Stafford Act, to save lives and to protect property and public health and safety, and to lessen or avert the threat of a catastrophe in the counties of Middlesex, Norfolk, and Suffolk."

- This declaration authorized FEMA to identify, mobilize and provide equipment and resources necessary to alleviate the impacts of the emergency. FEMA was authorized to provide Category B emergency protective measures to include items such as police personnel, search and rescue, and removal of health and safety hazards. FEMA also provided Public Assistance to include funding for shelters and emergency care for Norfolk and Suffolk counties, which was primarily used for residents whose homes had been impacted during the blast or could benefit from crisis counseling. That assistance was provided with 75 percent federal funding.

- Additionally, FEMA authorized state and local agencies in Massachusetts to use existing preparedness grant funding to support law enforcement and first responder overtime costs resulting from investigation support activities or heightened security measures, from April 15, 2013 through May 5, 2013. FEMA granted a similar authorization for state and local agencies hosting major special events scheduled during this timeframe.

Subject: RE: Invitation to Download a File

Good Morning Nancy,
In response to a Request for Information (RFI) from the NPPD Chief of Staff asking about potential impacts and private sector coordination related to the recent pipeline incidents, our Office of Cyber and Infrastructure Analysis provided the response below. That has been combined with a brief summary of some of the outreach our Protective Security Advisors in the area have done. I am in DC this week, but both Scott Behunin and I are available via email and phone should you or your team need anything from us.

Thank you,
Shawn

Subject: RFI - Potential Long-Term Impacts to Disruption of Pipelines

The Office of Cyber and Infrastructure Analysis (OCIA) assesses that there will be minimal short-term and no long-term damages and/or impacts to the Oil and Natural Gas Subsector stemming from the recent incidents in which activists closed a mainline valve on the Express Pipeline in Eagle Butte, MT and other valves on pipelines which belong to Enbridge in Minnesota and Trans-Canada in North Dakota. SCADA systems belonging to these pipelines notify operators about interruptions which results in a timely dispatch of crews to restore the flow thus mitigating any significant delay in the delivery of product. Further security personnel will likely be dispatched to the site to further deter any more actions by the part of activists. All of the targeted pipelines are fully operational.

DOT regulations require operators to have protection in place to prevent tampering with chain link fences and locks. DOT PHMSA is drafting a Safety Advisory Bulletin to publish for pipeline operators.

An RFI was produced by OCIA and pushed out to the North Dakota State and Local Intelligence Center by the ND PSA. The PSA has been in contact with utility companies (Montana Dakota Utilities; MinnKota; and Otter Tail) to help maintain their awareness of the ongoing situation. Contact information has been gathered for all the major energy stakeholders in the state for communications purposes.

Shawn

I'm sharing with you a power point provided by ND Emergency Management Director, Greg Wilz. He asked me to facilitate a conference call with the other R8 state directors to discuss potential EMAC requests. In preparation for the meeting, he provided this update; it is a large file and took approximately 10 minutes to download. You may already know much or all of this but I thought it was a nice rollup.

He has asked to keep distribution to FOUO.

Please let me know if you have any questions.

Regards, Nancy

Nancy J. Dragani

Region 8 Directors,

I am hoping this all work. Below is a link to a state of North Dakota secure file transfer site. The file is about 190 meg so it was too large to send regular email. It is a briefing that will help explain what is going on in North Dakota. We are providing it all states that have inquired about what is the risk of sending LEO to North Dakota based on our EMAC.

The complete situation here on the ground is very complex almost unbelievable unless you have been here since the beginning. What has started as peaceful protest by concerned citizens and Tribal members has grown to situation that is at times out of control with recent actions bordering on terrorism with state, national , and international implications.

I look forward to talking to you all this morning. If the file transfer works and you get a chance to look at it before the conference call that would be great.

Greg

You can download the file using the following link: https://apps.nd.gov/itd/filetransfer/downloadByInvitation.htm?id=1-cc8f91f7036cb333c3fdef74e22b47ff.

****

For security reasons, please do not forward this email to other persons. Doing so may allow unauthorized persons the ability to download the file as well.

Subject: RE: HQ IHS inquiry re: Standing Rock

Let me know what you think. This is essentially media monitoring, and HIS could pick that up, they also have people on the ground who should be able to provide them with some visibility. A bit concerning they are coming to us.

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA would engage in, we have been monitoring for situational awareness. The only direct contact we have had with the State has been a call from the State's director of Homeland Security, letting our Acting Regional Administrator know he would not be attending a conference because of the protest. All of our awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.

- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the XL Pipeline, this the Keystone Pipeline.
- The protest is about a mile north of the Reservation.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the intel could be incorrect. We have not reached out to the tribe or had additional conversations with the State, as this is not a FEMA related issue.

If there is anything else you need from me, please let me know.

Subject: HQ IHS inquiry re: Standing Rock

Hi Stacie -

Got a call from Milo this evening. Apparently, high level people at IHS are looking for Intel on standing rock protests. We have a reputation for knowing what is generally going on so they called Milo. Milo asked me to respond to the email below with what I may be hearing. I told him I would but I would site my sources and make sure that it is clear we have not been in contact with the tribe and this is not our issue.

Milo is concerned if we don't address it at this level, Fugate might get asked and it come down to Nancy.

I plan on writing my response first thing. I'll send it to you for review, unless you just want to be copied. I am going to try and get it out as early as possible.

Once that is out I'll write the tribal policy summary.

Thanks
M.

How is this?

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the Keystone XL Pipeline, this the Bakken Pipeline.
- The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).

- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV – Daily Operations, the situation is significant enough for the State EM director and the Adjutant General to cancel their planned participation in the TAG/NORTHCOM seminar August 17-18.

I have spoken with Greg Wilz and we are monitoring the situation. I do not anticipate any role for FEMA; this BLUF is for situational awareness only.

Regards, Nancy

Cc: Greff, Stacie; Floyd, Megan; Deal, Timothy
Subject: BLUF - Tribal protests in North Dakota

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

This BLUF is for situational awareness only.

The sustained protest of Dakota Access pipeline supported by the Standing Rock Sioux Tribe has now entered a third week, with conflicting reports on size, but current estimates range from 1500-2000 protesters. The protest site is located 1 mile off the reservation in neighboring Morton County, North Dakota. On Friday Aug. 19, North Dakota Governor Jack Dalrymple signed an emergency declaration, and Morton County has issued a local emergency declaration, which is expected to be extended. The state emergency declaration is primarily focused on law enforcement and traffic regulation and does not include activation of the National Guard.

Coverage of the protest also varies widely depending on the position of the covering media. After the initial arrests last week, more recent reports indicate there has been generally peaceful situation between protesters and law enforcement. North Dakota Highway 1806, which runs adjacent to the protest, is closed to through traffic, with detours established. Work at the site is currently halted as legal proceedings initiated by both the Standing Rock and the Dakota Access owners now work their way through the legal system.

On Sept. 9-11 the Annual United Tribes International Powwow is scheduled in Bismarck, approximately 60 miles from the protest site. The powwow normally sees about 5000 visitors, but there is speculation that that number could swell significantly in light of the protest, which is being supported by other tribes around the country.

I still do not anticipate any formal role for FEMA, but Region VIII will continue to monitor the situation via traditional and social media, and continue ongoing communication with the state.

Regards, Nancy

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

“I feel like I just got shot down,” said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe’s emergency response coordinator. “It’s very hurtful.”

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe’s request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

“People are getting overheated now already,” Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline’s river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe’s request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don’t have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, “I think they have to step up and take some responsibility, as well.”

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

“At this point, there is not a permit, but it is my understanding they are requesting a permit,” which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

“We want to make sure that things are handled peaceably,” she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff's Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

"I've been getting notifications from tribes all over the country that have caravans in route, so it's continuing to grow," he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

"He'd like to keep this in the law enforcement arena," he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of "outside agitators" responsible for vandalism, trespassing on private property and blocking the highway – "hundreds of criminal acts."

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said "nothing bad is happening here."

Still, protesters acknowledged the camp has split into two factions.

“You have the pacifists and then you have the people who feel something should be done, and they’re camped across the river from each other,” said Jesse Stevens, 32, a member of Wisconsin’s Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the “peaceful” side, Stevens said he felt like he should be across the river.

“My point in coming out here was some kind of action, regardless of whether it’s life-threatening or not,” he said. “This is our land, our people.”

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming’s Wind River Reservation, said she was a little concerned about her children’s safety at the campsite. But she added, “I believe there’s strength in prayer,” and said it’s a once-in-a-lifetime opportunity.

“Our water is sacred,” she said. “I want to make a difference, and I want them to know they can make a difference, too.”

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes’ chairman Mark Fox issued a formal letter of support for Standing Rock’s opposition.

“We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives,” Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe’s reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe’s water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It's estimated some 60 tribes are represented at the protest and tribal leaders say it's the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead 'solidarity' rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

Standing Rock tribal leaders represented by former U.S. attorney (Billings Gazette)

BISMARCK – Former North Dakota U.S. Attorney Tim Purdon will represent the Standing Rock Sioux tribal leaders who have been sued by Dakota Access LLC for protesting the pipeline construction.

Chairman Dave Archambault II and council member Dana Yellow Fat are among several defendants named in a civil case filed last week in federal court in Bismarck by Dakota Access. The lawsuit alleges that the defendants are interfering with pipeline construction north of the reservation.

Purdon said he worked closely with Archambault while serving as U.S. attorney and he was asked to represent the tribal leaders.

"This case is about the parameters of the First Amendment in terms of tribal officials protesting here in North Dakota," Purdon said.

The complaint claims that Archambault, Yellow Fat and others tried to block Dakota Access employees from entering and exiting the construction site. The complaint also claims that Archambault excused all tribal employees from work on Aug. 12 and encouraged them to protest.

About 4,000 people were estimated to be at the protest site on Monday. Pipeline construction has been halted in that area since last week.

Last week, U.S. District Judge Daniel Hovland granted a temporary restraining order against the tribal leaders and other defendants that prevents them from unlawfully protesting the pipeline construction.

A hearing was set for Thursday in the case, but has been postponed because Archambault plans to travel to Washington, D.C., for a hearing on Wednesday in the tribe's lawsuit against the U.S. Army Corps of Engineers, Purdon said.

The Bismarck hearing is now set for Sept. 8 to determine if a preliminary injunction should be issued. The temporary restraining order has been extended until Sept. 8, though Hovland wrote in his order that the parties are "strongly encouraged to meet and confer in good faith in an attempt to resolve this dispute prior to the hearing."

Archambault and Yellow Fat are among 29 people who have been arrested during the protest. Each faces a misdemeanor charge of disorderly conduct in Morton County.

Purdon resigned as U.S. attorney for the district of North Dakota last year. He now works in private practice in Bismarck for national law firm Robins Kaplan, where he is co-chairman of the American Indian Law and Policy Practice Group.

Yeah. Hard to know where the truth is, although the pilot thing is scary. That doesn't feel like something you would just make up. But with thousands of people it's almost certain to have some bad apples.

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, "I think they have to step up and take some responsibility, as well."

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

"At this point, there is not a permit, but it is my understanding they are requesting a permit," which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

"We want to make sure that things are handled peaceably," she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff's Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

"I've been getting notifications from tribes all over the country that have caravans in route, so it's continuing to grow," he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

"He'd like to keep this in the law enforcement arena," he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of "outside agitators" responsible for vandalism, trespassing on private property and blocking the highway – "hundreds of criminal acts."

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said "nothing bad is happening here."

Still, protesters acknowledged the camp has split into two factions.

“You have the pacifists and then you have the people who feel something should be done, and they’re camped across the river from each other,” said Jesse Stevens, 32, a member of Wisconsin’s Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the “peaceful” side, Stevens said he felt like he should be across the river.

“My point in coming out here was some kind of action, regardless of whether it’s life-threatening or not,” he said. “This is our land, our people.”

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming’s Wind River Reservation, said she was a little concerned about her children’s safety at the campsite. But she added, “I believe there’s strength in prayer,” and said it’s a once-in-a-lifetime opportunity.

“Our water is sacred,” she said. “I want to make a difference, and I want them to know they can make a difference, too.”

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes’ chairman Mark Fox issued a formal letter of support for Standing Rock’s opposition.

“We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives,” Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe’s reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe’s water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It’s estimated some 60 tribes are represented at the protest and tribal leaders say it’s the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead ‘solidarity’ rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

Standing Rock tribal leaders represented by former U.S. attorney (Billings Gazette)

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, "I think they have to step up and take some responsibility, as well."

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

"At this point, there is not a permit, but it is my understanding they are requesting a permit," which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

“We want to make sure that things are handled peaceably,” she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff’s Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

“I’ve been getting notifications from tribes all over the country that have caravans in route, so it’s continuing to grow,” he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff’s Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

“He’d like to keep this in the law enforcement arena,” he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there’s an element of “outside agitators” responsible for vandalism, trespassing on private property and blocking the highway – “hundreds of criminal acts.”

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said "nothing bad is happening here."

Still, protesters acknowledged the camp has split into two factions.

"You have the pacifists and then you have the people who feel something should be done, and they're camped across the river from each other," said Jesse Stevens, 32, a member of Wisconsin's Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the "peaceful" side, Stevens said he felt like he should be across the river.

"My point in coming out here was some kind of action, regardless of whether it's life-threatening or not," he said. "This is our land, our people."

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming's Wind River Reservation, said she was a little concerned about her children's safety at the campsite. But she added, "I believe there's strength in prayer," and said it's a once-in-a-lifetime opportunity.

"Our water is sacred," she said. "I want to make a difference, and I want them to know they can make a difference, too."

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes' chairman Mark Fox issued a formal letter of support for Standing Rock's opposition.

"We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives," Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe's reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe's water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It's estimated some 60 tribes are represented at the protest and tribal leaders say it's the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead 'solidarity' rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

Standing Rock tribal leaders represented by former U.S. attorney (Billings Gazette)

- By AMY DALRYMPLE Forum News Service
- 20 hrs ago
-

BISMARCK – Former North Dakota U.S. Attorney Tim Purdon will represent the Standing Rock Sioux tribal leaders who have been sued by Dakota Access LLC for protesting the pipeline construction.

Chairman Dave Archambault II and council member Dana Yellow Fat are among several defendants named in a civil case filed last week in federal court in Bismarck by Dakota Access. The lawsuit alleges that the defendants are interfering with pipeline construction north of the reservation.

Purdon said he worked closely with Archambault while serving as U.S. attorney and he was asked to represent the tribal leaders.

“This case is about the parameters of the First Amendment in terms of tribal officials protesting here in North Dakota,” Purdon said.

The complaint claims that Archambault, Yellow Fat and others tried to block Dakota Access employees from entering and exiting the construction site. The complaint also claims that Archambault excused all tribal employees from work on Aug. 12 and encouraged them to protest.

About 4,000 people were estimated to be at the protest site on Monday. Pipeline construction has been halted in that area since last week.

Last week, U.S. District Judge Daniel Hovland granted a temporary restraining order against the tribal leaders and other defendants that prevents them from unlawfully protesting the pipeline construction.

A hearing was set for Thursday in the case, but has been postponed because Archambault plans to travel to Washington, D.C., for a hearing on Wednesday in the tribe’s lawsuit against the U.S. Army Corps of Engineers, Purdon said.

The Bismarck hearing is now set for Sept. 8 to determine if a preliminary injunction should be issued. The temporary restraining order has been extended until Sept. 8, though Hovland wrote in his order that the parties are “strongly encouraged to meet and confer in good faith in an attempt to resolve this dispute prior to the hearing.”

Archambault and Yellow Fat are among 29 people who have been arrested during the protest. Each faces a misdemeanor charge of disorderly conduct in Morton County.

Purdon resigned as U.S. attorney for the district of North Dakota last year. He now works in private practice in Bismarck for national law firm Robins Kaplan, where he is co-chairman of the American Indian Law and Policy Practice Group.

Construction stops, traffic restricted due to Dakota Access Pipeline protest

- CAROLINE GRUESKIN Bismarck Tribune
- 16 hrs ago
-

Morton County Sheriff Kyle Kirchmeier says all work on the Dakota Access Pipeline south of Mandan has been stopped indefinitely.

Construction is being stopped on the Dakota Access Pipeline near Cannonball Ranch and law enforcement is routing traffic away from the protest area as safety concerns mount.

“As of this moment, the Dakota Access Pipeline Project is being discontinued for the time being,” Morton County Sheriff Kyle Kirchmeier said Wednesday. “No work is going to be done there for an undetermined amount of time."

Kirchmeier said the protest has become unlawful as a result of criminal activity. He said his officers have been threatened and heard gunshots. The agency has gotten reports of pipe bombs, assaults on private security personnel, fireworks and vandalism.

In the interest of public safety, North Dakota Department of Transportation and Highway Patrol has established a traffic control point on Highway 1806 south of the North Dakota Veterans Cemetery. Only emergency vehicles and local traffic will be allowed through. Other vehicles will be detoured to Highway 6.

Kirchmeier said officers will safeguard workers and equipment as they leave the area. It is not clear whether the equipment will be removed.

Currently, there are no officers on the protest site. They are stationed at the highway barrier.

Kirchmeier said the state national guard has not been asked to intervene.

The sheriff's department will not be providing supplies such as Dumpsters and water to the protesters.

"I don't know if we need to provide them supplies when it has turned into an unlawful protest," Kirchmeier said. "We are just going to make sure that it remains safe."

The plan resulted from discussions with Energy Transfer Partners, the governor's office and tribal leadership, according to Kirchmeier.

About 1,500 to 2,000 people are camping in the area south of Mandan, Kirchmeier said. Twenty-eight people have been arrested in the past week.

Officers from around the state, including Mercer County, Cass County and Mandan, as well as Game and Fish, Highway Patrol and parole and probation, have assisted in policing the area.

During the closure, the Fort Rice boat ramp and campground, Eckroth Bottoms fishing area, Little Heart boat ramp, Little Heart Rifle Range and Graner Park will be closed to the public.

Regulators sound off on pipeline protests

- NICK SMITH Bismarck Tribune
  Nick Smith
  -

North Dakota regulators on Wednesday defended their permit approval for the Dakota Access Pipeline, saying they hope tensions between protesters and law enforcement at a site near the Standing Rock Sioux reservation will cool off in the days ahead.

“I really regret that there’s this much conflict,” said Julie Fedorchak, chairwoman of the North Dakota Public Service Commission. “They have a right to disagree. They don’t have the right to threaten. They don’t have the right to obstruct.”

Hundreds of activists, as well as protesters from various tribes, have descended on the site in Morton County. Construction workers had begun ground work near where a section of the pipeline is intended to go. It will be bored under the Missouri River less than a mile from the tribe’s reservation boundary.

Since last week, at least 28 arrests have been made during the protests for disorderly conduct and criminal trespass.

Work has ceased indefinitely as of Wednesday.

Protesters' concerns include potential contamination of the Missouri River if the pipeline were to rupture, as well as the disturbance of cultural sites along the route.

After a rumor of human remains being found at the construction site spread, State Historical Society of North Dakota officials inspected the site on Friday but found no evidence of any cultural site or remains.

The Standing Rock tribe has filed a federal lawsuit against the U.S. Army Corps of Engineers over the permits issued for the project.

Dakota Access LLC, a partner of Dallas-based Energy Transfer Partners, countered on Monday by filing a lawsuit against Standing Rock Sioux Chairman Dave Archambault II and several others, citing threats to the safety of construction workers and law enforcement. Archambault was arrested Friday.

Archambault told reporters on Monday he was simply doing what others were doing during the protest when arrested. Several arrests were made when protesters pushed back against a police line when an attempt was made to block workers from leaving the site.

“The Dakota Access Pipeline project is harmful. It will not just be harmful to my people, but its intent and construction will harm the water of the Missouri River,” Archambault said Monday when urging others to join them.

Fedorchak said the 1,172-mile, 30-inch-wide pipeline project was reviewed over a 13-month period, with hearings in Mandan, Killdeer and Williston last year.

“This was very carefully reviewed by the PSC,” Fedorchak said.

Dakota Access began work on the nearly $3.8 billion project this spring following permit approval by the PSC and regulators in other states along the route. The pipeline is to begin in western North Dakota near Stanley and end near Patoka, Ill. It would transport as many as 450,000 barrels per day of Bakken crude when finished, with a future capacity of 570,000 barrels per day.

“They have a right to build this project,” said Fedorchak, adding that the company went through the proper permitting process and was granted approval.

Commissioner Brian Kalk agreed.

“These groups didn’t come to our hearings,” said Kalk, expressing disappointment that tribal leaders didn't appear at that time to voice their concerns.

Commissioner Randy Christmann said a large portion of North Dakota oil is transported by rail, and accidents can result from that mode of transport as well.

Sioux tribe leader wants political help to halt oil pipeline

- By JAMES MacPHERSON Associated Press
- Updated 17 hrs ago

BISMARCK, N.D. (AP) — A tribal leader Wednesday said he contacted the White House and met with North Dakota's senators in an effort to halt construction of a $3.8 billion, four-state oil pipeline that crosses the Missouri River near an American Indian reservation in southern North Dakota.

Standing Rock Sioux Tribal Chairman David Archambault II, in a teleconference with reporters, stressed that the he and the tribe are working to ensure peace among those protesting the Dakota Access pipeline.

"There is no place for threats, violence or criminal activity," Archambault said.

North Dakota transportation officials, meanwhile, closed a several-mile stretch of Highway 1806 on Wednesday because of the protest along the road.

The 1,172-mile pipeline planned by Dallas-based Energy Transfer Partners is passing through the Dakotas and Iowa on its way to Illinois. Construction crews with armed private security guards arrived last week just north of the Standing Rock Sioux reservation at the confluence of the Cannonball and Missouri rivers, where native Americans have been staging a protest for months at a "spirit camp."

Archambault and more than two dozen others have been arrested in the past week for interfering with construction of the project.

On Monday, developers of the project sued in federal court to stop protesters — including Archambault — from interfering with the project, alleging the safety of workers and law enforcement is at risk.

U.S. District Court Judge Daniel Hovland granted the developer's motion for a temporary restraining order Tuesday.

Archambault said he met Wednesday with North Dakota Sens. John Hoeven and Heidi Heitkamp to "express concerns" about the pipeline.

The tribe sued federal regulators late last month for approving the pipeline. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Archambault told reporters he also has urged President Barack Obama to step in. The president and First Lady Michelle Obama traveled to the Standing Rock Indian Reservation in 2014 to get a firsthand look at the impoverished living conditions on the reservation that straddles the North Dakota-South Dakota border.

Archambault said he asked nothing of the president then but is doing so now.

"I believe both he and Michelle Obama were touched," Archambault said. "So now if there's any way he can intervene and move this pipeline off our treaty lands, I'm asking him."

The White House did not immediately respond to emails seeking comment.

Subject: RE: Dakota Access Pipeline Protest

WOW!

IT is hard for me to believe the Chairman would have said what he did about violence. On the other hand, things are escalating. I had heard they were slowing down. Of course my sources are social media where tribal members are still talking about peaceful protests and prayer.

If they are looking to move FBI agents into the area, that will change everything, a lot like the National Guard would have changed things. The Powwow is coming up, they do have reason to be concerned.

My email differs from the information in this email. I do not want to contradict a federal partner, however, I will say the FBI is known for not being tribal friendly in Sioux country.

Also – as a side note they are not referring to the tribe or the Chairman. They are the Standing Rock Sioux, which is part of the grater Sioux Nation.

This is tricky. It also occurred to me if IHS is asking us for information we probably need to let Ron P. over at HHS know since he is my POC or HHS which over sees IHS.

I also looked up the person Milo referenced as looking for the information. Her name is Mary Smith and she is the Principal Deputy Director if Indian Health Services.

Subject: RE: Elliott Ward comments on Webinar

I have not talked to Elliott in some time, so unless mitigation has spoken to him I don't know about a conversation about the pipeline and PDM grants. I know that back when they were trying to work with the 404 funds that it was said by mitigation that cultural items where not approved mitigation projects, or at least the ones they were mentioning at the time, like using the grant to identify cultural sites.

As to the Regional EM call that we have been doing prior to OST deployment I was planning on doing one next month, but now with Matthew here and me potentially going to have to leave, I figured I would wait a couple weeks to before continuing with the planning.

Hi All –

(b)(6) (Standing Rock) is on the National Tribal Policy consultation webinar right now. He has asked Milo about using PDM to plan for the braking of the pipeline. He said that FEMA has said they can't help since it is off reservation, even though it was part of the Sioux Nation. He also asked about working with tribes on culturally sensitive areas but when they ask for PDM grants won't cover that so the wording in the PDM grant is wrong. This is of particular concern because of the use of water.

I am going to assume we talked to him at some point on this issue. He will likely be calling or emailing Milo at HQ.

He also asked about doing a National Tribal Emergency Association. Milo told him to look at what tribal associations are doing. ITEMA was used as an example, intertribal recovery foundation, National Congress of American Indians. He may be open to pushing something in our region.

Ricky, do you want to reach out to (b)(6) on this one?

M.

Subject: RE: (b)(6) comments on Webinar

I have not talked to (b)(6) in some time, so unless mitigation has spoken to him I don't know about a conversation about the pipeline and PDM grants. I know that back when they were trying to work with the 404 funds that it was said by mitigation that cultural items where not approved mitigation projects, or at least the ones they were mentioning at the time, like using the grant to identify cultural sites.

As to the Regional EM call that we have been doing prior to OST deployment I was planning on doing one next month, but now with Matthew here and me potentially going to have to leave, I figured I would wait a couple weeks to before continuing with the planning.

Hi All –

(b)(6) (Standing Rock) is on the National Tribal Policy consultation webinar right now. He has asked Milo about using PDM to plan for the braking of the pipeline. He said that FEMA has said they can't help since it is off reservation, even though it was part of the Sioux Nation. He also asked about working with tribes on culturally sensitive areas but when they ask for PDM grants won't cover that so the wording in the PDM grant is wrong. This is of particular concern because of the use of water.

I am going to assume we talked to him at some point on this issue. He will likely be calling or emailing Milo at HQ.

He also asked about doing a National Tribal Emergency Association. Milo told him to look at what tribal associations are doing. ITEMA was used as an example, intertribal recovery foundation, National Congress of American Indians. He may be open to pushing something in our region.

Ricky, do you want to reach out to Elliott on this one?

M.

Subject: a few things

Hi Milo and Margeau –

I wanted to touch base on three things….

1) Are we still looking at tomorrow as the start for consultation for the Tribal Policy? And will we get to see the changes before it goes out?
2) There are significant protests going on just north of the Standing Rock Reservation (southwestern SD) regarding the XL Pipeline. Media is anticipating large busloads of people from other reservations arriving today. We are tracking from here. We haven't gotten any questions on it, but depending on how long it goes on, it could impact some of our travel plans and the availability of tribal EMs and Council as well as their interest in FEMA. The protests have all been peaceful and are expected to stay that way.

Hope you are both doing well!

Megan

Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV – Daily Operations, the situation is significant enough for the State EM director and the Adjutant General to cancel their planned participation in the TAG/NORTHCOM seminar August 17-18.

I have spoken with Greg Wilz and we are monitoring the situation. I do not anticipate any role for FEMA; this BLUF is for situational awareness only.

Subject: RE: HQ IHS inquiry re: Standing Rock

Let me know what you think. This is essentially media monitoring, and HIS could pick that up, they also have people on the ground who should be able to provide them with some visibility. A bit concerning they are coming to us.

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA would engage in, we have been monitoring for situational awareness. The only direct contact we have had with the State has been a call from the State's director of Homeland Security, letting our Acting Regional Administrator know he would not be attending a conference because of the protest. All of our awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the XL Pipeline, this the Keystone Pipeline.
- The protest is about a mile north of the Reservation.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.

- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the intel could be incorrect. We have not reached out to the tribe or had additional conversations with the State, as this is not a FEMA related issue.

If there is anything else you need from me, please let me know.

Hi Stacie -

Got a call from Milo this evening. Apparently, high level people at IHS are looking for Intel on standing rock protests. We have a reputation for knowing what is generally going on so they called Milo. Milo asked me to respond to the email below with what I may be hearing. I told

him I would but I would site my sources and make sure that it is clear we have not been in contact with the tribe and this is not our issue.

Milo is concerned if we don't address it at this level, Fugate might get asked and it come down to Nancy.

I plan on writing my response first thing. I'll send it to you for review, unless you just want to be copied. I am going to try and get it out as early as possible.

Once that is out I'll write the tribal policy summary.

Thanks
M.

PIPELINE FIGHTER

Kayla Lookinghorse-Smith set out from New York to Washington, D.C. late Tuesday night, driving six hours to attend her first protest on the East Coast against the looming Dakota Access Pipeline, a $3.78 billion, 1,100-mile oil project being built by a group of firms led by Texas-based Energy Transfer Partners.

Her two young sons, 19 months and 5 years old, slept in the backseat.

“I didn’t know what to expect,” she said, as she drove into the early morning hours. “I just knew that I have to support my tribe, because they are taking a stand for water, an essential to life, in this world.”

The pipeline — already facing immense criticism — will cross hundreds of rivers, creeks and tributaries. And, part of it will run directly under the Missouri River, the only source of water for Lookinghorse-Smith’s tribe, the Standing Rock Sioux. Any leaks could compromise the entire water supply, and tribe members are concerned that sacred sites like burial grounds will be destroyed. DAPL would be the first to transport over 470,000 gallons of fracked, crude Bakken shale per day from North Dakota directly to refineries in the U.S. Gulf Coast, notably Illinois.

Lookinghorse-Smith is a full-blood Hunkpapa Lakota. Her family and thousands of other supportive people from around the world (including members of my tribe, the Shinnecock Nation of New York) have offered support or camped out across from the DAPL construction site near Cannon Ball, North Dakota, since April 1. They are locked in a tense, politicized, very personal yet peaceful struggle against officers of the law and the U.S. Army Corps of Engineers, which has overseen the project.

Many people close to the protest camp, like Lookinghorse-Smith, are upset by media reports of violence against police by Native people.

“This peaceful protesting is happening every day in North Dakota,” she said. “Our drum beats are not gunshots, our canupas (peace pipes) are not bombs, and our war cries are not criminal activity — as mainstream news media clearly misleads the public to believe.” Lookinghorse-Smith says the only loaded guns brought to the protest are those carried by the heavy police presence surrounding the area. Instead of weapons, Native protestors are using their voices, and our violent and oppressed collective history as a guide. They are broadcasting radio from a makeshift station at Sacred Stones (Standing Rock Spirit Resistance Radio @ 87.9 FM), and social media is flush with petitions, commentary and live videos from around the world in support of Standing Rock.

Violence and dangerous racist rhetoric is brewing nearby, however, in Bismarck Mandan, North Dakota.

“Tension is high, and the people of Standing Rock are starting to feel uncomfortable going into Bismarck to get supplies … because there are a tremendous number of threats and KKK mentality. People are talking about killing Indians now,” Lookinghorse-Smith said.

Actress Shailene Woodley (who also traveled to the Washington protest on Wednesday) joined the camp at Standing Rock two-and-a-half weeks ago, and has been sitting on the front lines. “If I thought my life was at risk,” she mused in a recent on-site interview, “do you think I would be sitting here like this?” Woodley paused. “The only thing that is happening are messages of love and peace … and unity. I love how mainstream media can spin a story however they want.”

Outside U.S. District Court in Washington on Wednesday, things were also calm. Several hundred supporters gathered, including Susan Sarandon and Standing Rock Tribal Chairman

David Archimbault II. Inside, Judge James Boasberg considered the case of the Standing Rock Sioux, who have filed to halt pipeline production and are asking the US to honor long-ago enacted treaties protecting Native lands and water.

And, for Native people, there is a spiritual element to water that goes far beyond the fear of pollution. Besides being a physical necessity for life, in traditional Native American circles water is the "first medicine" in a complex and environmentally respectful belief system that refers to the earth as the mother of all things.

Randy Ross of the Ponca/Oto tribe in South Dakota, which the pipeline will also cross, recalls a prophecy revealed by his late Cheyenne River Sioux tribal Elder Sidney Keith.

"There are many elements of healing brought by Creator, but water is essential to life, it is sacred," he explained. "Oil, as we discovered after the Gulf Coast BP Oil spill, destroyed so much, and Mother Earth will shake herself to cleanse. Many believe that time is upon us. We see fires, floods, tornados of unheard of frequency and power, earthquakes in greater frequency and power."

As protesters wait for the judge's promised ruling Sept. 9, Lookinghorse-Smith worries for her relatives and the others standing firm in the way of development. "It's starting to get cold in North Dakota right now, and cold weather gear and other essentials are much needed. The camp will sustain as long as they can."

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe's cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company's assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it's gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America's prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

Ute Tribe: Utah Republican pushes modern day Indian land grab

Wednesday, September 14, 2016

The following is a statement from the Ute Tribe on H.R.5780, the Utah Public Lands Initiative Act. A hearing on the controversial bill takes place on September 14, 2016.

In the next few weeks Congressman Rob Bishop will attempt to push through the U.S. House of Representatives the first Indian land grab in over 100 years. H.R. 5780, the Utah Public Lands Initiative, proposes to rollback federal policy to the late 1800's when Indian lands and resources where taken for the benefit of others. In a startling lack of transparency, Congressman Bishop plans only one hearing on this 215-page bill with about 129 other land management proposals in the obscure Subcommittee on Federal Lands.

The Ute Indian Tribe strongly opposes H.R. 5780, the devastating effect it would have on our Uintah and Ouray Reservation and precedent that the bill sets for federal Indian policy. The bill is promoted as a local solution to difficult federal land management issues in eastern Utah. Nothing could be further from the truth. In fact, much of H.R. 5780 was built on the back of the Ute Indian Tribe and our 4.5 million acre Uintah and Ouray Reservation without our knowledge or consent.
The Tribe was shocked to learn that the bill proposes to take more than 100,000 acres of our Reservation lands for the State of Utah. After 4 years and, apparently, more than 1,200 meetings with stakeholders, the Tribe first learned of this proposal when a discussion draft of the bill was released on January 20, 2016. Over these 4 years, the Congressmen never invited the Tribe to a meeting or came to our Reservation to discuss their proposal to take our lands.

This modern day Indian land grab cannot be allowed to stand. The Federal government rejected these devastating policies long ago as tribes prospered under policies of tribal self-determination and restoring and protecting tribal homelands.

H.R. 5780 also proposes to alter the management of another 200,000 acres within our Reservation and without our consent. Among other things, the bill proposes a "Utility Corridor," "Special Management Areas," "Wildernesses," "Wild and Scenic Rivers" and "Recreation Areas" within our Reservation. These changes would directly affect our ability to exercise tribal self-determination, utilize our water rights and manage our Reservation lands for the benefit of our members.

The Ute Indian Tribe is a major economic engine in northeastern Utah. We are currently working with State and local governments to address long-standing issues related to jurisdiction, air quality, preservation of cultural and environmental resources, and responsible energy development. H.R. 5780 threatens to undermine these relationships.

The Congressmen's election year maneuver to rush H.R. 5780 through the House of Representatives will die in the Senate and 4 years of meetings will be wasted. It did not have to be this way. If the Congressmen had accepted the Ute Indian Tribe as a full partner, we could have developed a Utah Public Lands Initiative capable of passing Congress. With these disastrous proposals off the table, we need a Utah Public Lands Initiative that benefits all of Utah including the State's oldest residents—the Ute Indian Tribe.

Hundreds rally at White House to block Dakota Access Pipeline

Tuesday, September 13, 2016

Several hundred people rallied in front of the White House on Tuesday to pressure the Obama administration to cancel the $3.8 billion Dakota Access Pipeline.

A key portion of the controversial project is on hold pending further review of issues raised by the Standing Rock Sioux Tribe. But opponents called on President Barack Obama to put an end to the project altogether.

"This pipeline, it's poison. It's poison and it's going to kill us," said Jasilyn Charger, a young member of the Cheyenne River Sioux Tribe who has been at the forefront of the #NoDAPL and ReZpect Our Water movements.

Sen. Bernie Sanders (I-Vermont), who was the first national political figure to oppose the pipeline, echoed the sentiments. He said a "full environmental and cultural impact analysis" will show the true dangers of the project.

Jasilyn Charger, a young member of the Cheyenne River Sioux Tribe, speaks at a #NoDAPL rally in front of the White House on September 13, 2016. Photo by Indianz.Com

"We've got to change the federal government's relationship with Native people," Sanders, a former candidate for president, said to applause.
"They've been lied to. They've been exploited," he said. "This has got to change."

The rally came as Energy Transfer Partners, the parent company of Dakota Access, broke four days of silence on the controversy. A memo from chairman and chief executive Kelcy Warren vowed to complete the pipeline despite new obstacles.

"We – like all Americans – value and respect cultural diversity and the significant role that Native American culture plays in our nation's history and its future and hope to be able to strengthen our relationship with the Native American communities as we move forward with this project," Warren wrote.

At the same time, Warren rejected all of the arguments that the tribe and #NoDAPL resisters have raised. He said the pipeline will not harm sacred sites or impact water resources despite its proposed path under the Missouri River at Lake Oahe.
"I am confident that as long as the government ultimately decides the fate of the project based on science and engineering, the Dakota Access Pipeline will become operational bringing a safer means of transportation to a much needed supply of oil to communities across the country," Warren said.

Warren promised meetings with "officials in Washington" but otherwise did not explain how Dakota Access will convince the U.S. Army Corps of Engineers to approve work at Lake Oahe. Without that easement -- which is on hold as a result of the Obama administration's extraordinary action -- the pipeline cannot transport oil along its current path in North Dakota.

The memo was also noticeably silent on the lawsuit that prompted the administration's intervention. Dakota Access has not filed any papers in court since Friday, when a judge ruled against the tribe's motion for a preliminary injunction against the Army Corps.

"Energy Transfer Partners has demonstrated time and time again that the bottom line for them is money," Chairman Dave Archambault II said in a statement on Tuesday. "The bottom line for the Standing Rock Sioux Tribe is and will always be protecting our lands, people, water, and sacred sites from the devastation of this pipeline."

The tribe already filed a notice of appeal and asked Judge James Boasberg for an injunction that would have forced Dakota Access to stop all work pending resolution of that appeal. But the request -- which was joined by the Cheyenne River Sioux Tribe -- was rejected on Monday.
Additionally, Boasberg struck a new filing by the Cheyenne River Sioux Tribe from the record. A short order noted that the tribe, although it has been allowed to enter the case as a plaintiff, is "not entitled to its own separate complaint."

Key House Democrats call for hearing on Dakota Access Pipeline
Wednesday, September 14, 2016

Two leading Democrats in the House are calling for a hearing on the Dakota Access Pipeline as Republicans continue to maintain silence on the controversy.

Rep. Raúl M. Grijalva (D-Arizona), the top Democrat on the House Committee on Natural Resources, and Rep. Raul Ruiz (D-California), the top Democrat on the House Subcommittee on Indian, Insular and Alaska Native Affairs, both visited the

#NoDAPL encampment in North Dakota over the weekend. After seeing the struggle first-hand, they want Congress to investigate whether federal agencies properly consulted the Standing Rock Sioux Tribe before approving the pipeline.
"We are very concerned about potential impacts both to sacred sites along the selected route for the pipeline, as well as to the tribe's water source," the lawmakers said in a letter to their Republican counterparts on Tuesday. "Furthermore, we are disheartened to learn that meaningful consultation with the tribe concerning sacred sites and proposed mitigation plans has still not occurred."
The request is not likely to go far despite widespread and growing support for the #NoDAPL movement. The House Subcommittee on Indian, Insular and Alaska Native Affairs has all but gone missing in action in the past few months -- Rep. Don Young (R-Alaska), the chairman of the panel, has convened just six hearings on Indian issues since the start of 2016.

In comparison, the Senate Committee on Indian Affairs holds hearings and meetings just about every week when Congress is in session. Since the beginning of the year, the panel has advanced about two dozen bills, with several becoming law.

The subject matter of the #NoDAPL controversy also poses conflicts for Republicans, whose agenda embraces energy development. No GOP lawmakers sided with Indian Country during the battle over the Keystone XL Pipeline and few are willing to speak about Dakota Access without fear of seeming too pro-tribal.

"It is incumbent upon all parties to move forward peacefully and expeditiously, within the law, to come to a resolution that honors the rights of lawful commerce," Rep. Kevin Cramer (R-North Dakota) said in a statement on Friday, after the Obama administration took the extraordinary step of putting a hold on a key portion of the project.
The hands-off approach to Dakota Access stands in contrast to the GOP's treatment of the Gold King Mine disaster that polluted the waters on three reservations in the Southwest. Republican leaders convened a slew of hearings Navajo Nation, whose leaders have repeatedly expressed solidarity with the #NoDAPL movement and have gone to North Dakota to emphasize their support.

"The position the Standing Rock Sioux Tribe is taking to halt the pipeline is one that is common to every Native American tribe. We all must consistently work to protect our land, our natural resources and especially our water," Navajo President Russell Begaye said in a statement on Friday.

ENERGY TRANSFER

Memorandum

To: All Partnership Employees
From: Kelcy Warren, Chairman and Chief Executive Officer
Date: Tuesday, September 13, 2016
Re: Dakota Access Pipeline Project Update

I want to provide the entire Energy Transfer family with an update on the Dakota Access Pipeline project. Recent events in North Dakota and Washington, DC have brought the project to the forefront of national media attention. I recognize that many of you are receiving questions about our work and I want to be the first to share with you our commitment to the project, what we know, and where I am focused.

First, I am proud of our work on Dakota Access. As one of the largest U.S. infrastructure companies, our experience in designing, constructing, and operating natural gas, crude oil, and refined products pipelines is extensive. We have designed the state-of-the-art Dakota Access pipeline as a safer and more efficient method of transporting crude oil than the alternatives being used today, namely rail and truck. Today the 1,172 mile project is nearly 60 percent complete, employs more than 8,000 highly trained skilled labor workers who are safely constructing it, and we have spent just over $1.6 billion on equipment, materials and the workforce to date. Once operational, the project will safely move American oil to American markets. It will reduce our dependence on oil from unstable regions of the world and drive down the cost of petroleum products for American industry and consumers.

We are committed to completing construction and safely operating the Dakota Access Pipeline within the confines of the law. On Friday, a federal judge reaffirmed the U.S. Army Corps of Engineers' previous decision to permit construction of the Dakota Access Pipeline. Despite the judge's ruling that the project is in compliance with U.S. rules and regulations, the Department of Justice, Department of the Army and Department of Interior later announced that the U.S. Army Corps of Engineers is determining "whether it will need to reconsider any of its previous decisions" and called on the company to voluntarily halt construction. We intend to meet with officials in Washington to understand their position and reiterate our commitment to bring the Dakota Access Pipeline into operation.

Second, our corporate mindset has long been to keep our head down and do our work. It has not been my preference to engage in a media/PR battle. However, misinformation has dominated the news, so we will work to communicate with the government and media more clearly in the days to come.

In the meantime, I want to share with you information about our work on the Dakota Access Pipeline.

- The right of way for the entire pipeline has been obtained. All four states the pipeline traverses – North Dakota, South Dakota, Illinois, and Iowa – have issued favorable certificates, permits and approvals for construction.
- Nearly the entire Dakota Access pipeline route is across private land. In addition, neither the land abutting nor Lake Oahe itself is subject to Native American control or ownership. Despite this, we worked to meet with the Standing Rock Sioux Tribe leaders on multiple occasions in the

past two years and gave the U.S. Army Corps data for their 389 meetings with more than 55 tribes across the project, including nine with The Standing Rock Sioux Tribe at Lake Oahe. We – like all Americans – value and respect cultural diversity and the significant role that Native American culture plays in our nation's history and its future and hope to be able to strengthen our relationship with the Native American communities as we move forward with this project.

- Nearly the entire pipeline route in North Dakota – and the entire portion the protestors are focused on – is located immediately adjacent to an existing natural gas pipeline built in 1982. The route also parallels a high voltage electric transmission line. This land has been studied, surveyed, and constructed upon – at least twice before – over the past several decades.
- Multiple archaeological studies conducted with state historic preservation offices found no sacred items along the route. State archeologists issued a 'no significant sites affected' determination in February on the North Dakota segment of the pipeline. If any potentially sacred objects were to be found, archaeologists, environmental inspectors, or trained construction staff are on site throughout construction to ensure their proper care and that proper notifications are made.
- Concerns about the pipeline's impact on the local water supply are unfounded. Multiple pipelines, railways, and highways cross the Missouri River today, carrying hundreds of thousands of barrels of oil. Dakota Access was designed with tremendous safety factors and redundancies, including compliance with and exceeding all safety and environmental regulations. The pipeline crosses 90 to 115 feet below Lake Oahe with heavy wall pipe and, as we all know, the pipe is inspected, tested and re-tested prior to being placed into service to ensure its long-term integrity.

Third, we respect the constitutional right of all assembled in North Dakota to voice their opinions for or against projects like ours. However, threats and attacks on our employees, their families and our contractors as well as the destruction of equipment and encroachment on private property must not be tolerated.

We appreciate the work of local sheriffs and law enforcement to date. I have directed our team to work closely with local, state and federal officials to ensure the safety and protection of our construction contractors and employees, contractors' equipment, private land and those whose right it is to peacefully protest. Together we must promote a peaceful discourse and path forward. We are committed to protecting and respecting the welfare of all workers, the Native American community, local communities where we operate, and the long-term integrity of the land and waters in the region.

Finally, many of you have asked what you can do. Here are a few ways you can support Dakota Access:

1. Continue to do your jobs in a thoughtful and professional manner. Your conduct and commitment demonstrates to the world that we are playing by the rules and are committed to completing this important infrastructure project.
2. Help explain to your friends and neighbors the facts about the work that you are doing. There has been an enormous amount of misinformation out there and you are our best ambassadors to the public.
3. Contact your elected representatives – all of them – to tell them how important this project is to your livelihood. Remind them that the company fully complied with the regulatory process and the U.S. Army Corps of Engineers issued a nationwide permit and other essential permits for our work.

I am confident that as long as the Government ultimately decides the fate of the project based on science and engineering, the Dakota Access Pipeline will become operational bringing a safer means of transportation to a much needed supply of oil to communities across the country. So we will continue to obey the rules and trust the process.

As the situation warrants, I will continue to communicate directly with you so that you can be fully informed of what’s going on and what you can do to help.

Thank you again for all that you do.

Kelcy

Megan gave a heads up to Milo yesterday, but I wanted you to have awareness too as our ARA is sending a note to Beth Z, just for awareness. We have no action.

There are significant protests going on just north of the Standing Rock Reservation (southwestern SD) regarding the XL Pipeline. Media is anticipating large busloads of people from other reservations arriving today. We are tracking from here. We haven't gotten any questions on it, but depending on how long it goes on, it could impact some of our travel plans and the availability of tribal EMs and Council as well as their interest in FEMA. So far, the protests have all been peaceful.

Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV – Daily Operations, the situation is significant enough for the State EM director and the Adjutant General to cancel their planned participation in the TAG/NORTHCOM seminar August 17-18.

I have spoken with Greg Wilz and we are monitoring the situation. I do not anticipate any role for FEMA; this BLUF is for situational awareness only.

Regards, Nancy

Subject: BLUF - Tribal protests in North Dakota

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

This BLUF is for situational awareness only.

The sustained protest of Dakota Access pipeline supported by the Standing Rock Sioux Tribe has now entered a third week, with conflicting reports on size, but current estimates range from 1500-2000 protesters. The protest site is located 1 mile off the reservation in neighboring Morton County, North Dakota. On Friday Aug. 19, North Dakota Governor Jack Dalrymple signed an emergency declaration, and Morton County has issued a local emergency declaration, which is expected to be extended. The state emergency declaration is primarily focused on law enforcement and traffic regulation and does not include activation of the National Guard.

Coverage of the protest also varies widely depending on the position of the covering media. After the initial arrests last week, more recent reports indicate there has been generally peaceful situation between protesters and law enforcement. North Dakota Highway 1806, which runs adjacent to the protest, is closed to through traffic, with detours established. Work at the site is currently halted as legal proceedings initiated by both the Standing Rock and the Dakota Access owners now work their way through the legal system.

On Sept. 9-11 the Annual United Tribes International Powwow is scheduled in Bismarck, approximately 60 miles from the protest site. The powwow normally sees about 5000 visitors, but there is speculation that that number could swell significantly in light of the protest, which is being supported by other tribes around the country.

I still do not anticipate any formal role for FEMA, but Region VIII will continue to monitor the situation via traditional and social media, and continue ongoing communication with the state.

Regards, Nancy

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, "I think they have to step up and take some responsibility, as well."

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

"At this point, there is not a permit, but it is my understanding they are requesting a permit," which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

"We want to make sure that things are handled peaceably," she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff's Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

"I've been getting notifications from tribes all over the country that have caravans in route, so it's continuing to grow," he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

"He'd like to keep this in the law enforcement arena," he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of "outside agitators" responsible for vandalism, trespassing on private property and blocking the highway – "hundreds of criminal acts."

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said "nothing bad is happening here."

Still, protesters acknowledged the camp has split into two factions.

"You have the pacifists and then you have the people who feel something should be done, and they're camped across the river from each other," said Jesse Stevens, 32, a member of Wisconsin's Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the "peaceful" side, Stevens said he felt like he should be across the river.

"My point in coming out here was some kind of action, regardless of whether it's life-threatening or not," he said. "This is our land, our people."

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming's Wind River Reservation, said she was a little concerned about her children's safety at the campsite. But she added, "I believe there's strength in prayer," and said it's a once-in-a-lifetime opportunity.

"Our water is sacred," she said. "I want to make a difference, and I want them to know they can make a difference, too."

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes' chairman Mark Fox issued a formal letter of support for Standing Rock's opposition.

"We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives," Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe's reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe's water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It's estimated some 60 tribes are represented at the protest and tribal leaders say it's the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead 'solidarity' rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

Standing Rock tribal leaders represented by former U.S. attorney (Billings Gazette)

- By AMY DALRYMPLE Forum News Service
- 20 hrs ago
-

BISMARCK – Former North Dakota U.S. Attorney Tim Purdon will represent the Standing Rock Sioux tribal leaders who have been sued by Dakota Access LLC for protesting the pipeline construction.

Chairman Dave Archambault II and council member Dana Yellow Fat are among several defendants named in a civil case filed last week in federal court in Bismarck by Dakota Access. The lawsuit alleges that the defendants are interfering with pipeline construction north of the reservation.

Purdon said he worked closely with Archambault while serving as U.S. attorney and he was asked to represent the tribal leaders.

"This case is about the parameters of the First Amendment in terms of tribal officials protesting here in North Dakota," Purdon said.

The complaint claims that Archambault, Yellow Fat and others tried to block Dakota Access employees from entering and exiting the construction site. The complaint also claims that Archambault excused all tribal employees from work on Aug. 12 and encouraged them to protest.

About 4,000 people were estimated to be at the protest site on Monday. Pipeline construction has been halted in that area since last week.

Last week, U.S. District Judge Daniel Hovland granted a temporary restraining order against the tribal leaders and other defendants that prevents them from unlawfully protesting the pipeline construction.

A hearing was set for Thursday in the case, but has been postponed because Archambault plans to travel to Washington, D.C., for a hearing on Wednesday in the tribe's lawsuit against the U.S. Army Corps of Engineers, Purdon said.

The Bismarck hearing is now set for Sept. 8 to determine if a preliminary injunction should be issued. The temporary restraining order has been extended until Sept. 8, though Hovland wrote in his order that the parties are "strongly encouraged to meet and confer in good faith in an attempt to resolve this dispute prior to the hearing."

Archambault and Yellow Fat are among 29 people who have been arrested during the protest. Each faces a misdemeanor charge of disorderly conduct in Morton County.

Purdon resigned as U.S. attorney for the district of North Dakota last year. He now works in private practice in Bismarck for national law firm Robins Kaplan, where he is co-chairman of the American Indian Law and Policy Practice Group.

Police use pepper spray while arresting 83 at Dakota Access Pipeline protest

- Mike Anderson Journal staff
-
- Updated Oct 23, 2016

Editor's note: As part of the Journal's ongoing coverage of the massive Dakota Access Pipeline protest in North Dakota, staff writer Mike Anderson has been camping in a tent near the protest site. He filed this dispatch from the scene on Saturday.

CANNON BALL, N.D. | A peaceful protest against the Dakota Access Pipeline ended in the arrests of 83 people in North Dakota on Saturday morning amid a chaotic scene in which police in riot gear used pepper spray to break up and subdue a group of 200 to 300 protesters.

It is the highest number of people arrested in a single day in North Dakota during the last several months of protest actions against the oil pipeline, bringing the total number of arrests up to 222.

Though the protesters behaved non-violently and cooperated with the police, North Dakota law enforcement officials described Saturday's events as a riot. Police have offered conflicting reports alleging that one protester either verbally threatened an officer, or tried to physically grab away a can of pepper spray, resulting in the protester and the officer both being pepper sprayed in the face.

Most, if not all, of those arrested after the 5-hour ordeal on Saturday will be charged with criminal trespass, a misdemeanor, according to Morton County Sheriff spokesperson Rob Keller. Other charges included assault on a peace officer, reckless endangerment, engaging in a riot, resisting arrest, and fleeing an officer on foot.

"It's an unlawful activity," Keller said during phone interview on Saturday afternoon. "The bottom line is it's on private property. It's posted, 'No Criminal Trespass'. It's like you're invading someone's home. Consequently, there were arrests that were made."

The arrests occurred as the protesters were marching through wide-open prairie lands along the route of the Dakota Access Pipeline west of Highway 1806 outside Cannon Ball, N.D. They hoped to get to four fellow protesters who had locked themselves to a piece of construction equipment in the early morning hours at sites where the pipeline, which is planned to be buried beneath the Missouri River, is now under construction.

A police statement said the four were arrested after they were found, "attached to the vehicle; two attached to the outside of the vehicle, one attached to the steering wheel and another whose body was outside the vehicle with his arm fed through a hole in the door and his hand was in a bucket of hardened concrete."

The call to action went through the main resistance camp around 5:20 a.m. while it was still dark and freezing cold. A man walked through the camp speaking through a megaphone.

"Wake up relatives," he said. "Wake up water protectors. Wake up land defenders. Time to wake up. Time to send our boys to the universe. Time to send our boys to the rising sun."

A convoy of vehicles formed in the camp, a prayer was held, and the assembled were instructed to behave peacefully and respectfully if they encountered police.

“I know it’s hard on the front line,” the prayer leader said in the dark. “But do not cuss, do not holler. If you see someone getting out of hand, tell them to calm down.”

Then the convoy moved out. Parking their vehicles along the highway, the protesters began hiking into the field as the sun rose a little before 8 a.m. Their path took them along a craggy dirt road near the route of the Dakota Access Pipeline on land that tribal members of the Hunkpapa Sioux of Standing Rock said is filled with sacred burial sites.

Some of the protesters remained behind as several hundred others carrying signs and banners began marching into the field, singing, praying, and burning bundles of ceremonial sage as they went.

They walked two to three miles inward when they encountered a line of more than 50 officers from multiple law enforcement agencies. Most of the officers wore riot gear, most held wooden truncheons, and some had shotguns, canisters of pepper spray, and tear gas grenade launchers in their hands. Two armored personnel carriers arrived later while a helicopter circled low overhead.

The protesters and police lines met in the middle of an open field. The protesters remained calm, playing drums and offering prayers in English and Lakota to the officers, who remained stone-faced and uncommunicative.

When the police line began to advance on the protesters, the leaders of the group instructed everyone to fall back and cooperate with the police. They were dispersing when an officer spoke over a loud-speaker from the turret of an armored vehicle.

His only words — and the only words police spoke to the protesters all morning — were, “You’re all under arrest for trespassing.”

The police continued to advance on the fleeing protesters, snatching some of the stragglers, throwing them behind their lines, and pepper-spraying several others in the face as they trod silently forward.

The police eventually surrounded the group, repeating that every one of the 200 to 300 people present would be placed under arrest. The protesters linked arms and tied bandanas to their faces as the officers pressed in, splitting the group and pressing many to the ground. Most, if not all of the men and women taken into custody, did not resist arrest.

A small group managed to retreat over the hill, a few pouring water into the eyes of friends who had been stung by pepper spray and guiding them by hand up the dirt road as they made their way back to camp.

“It was all peaceful. And then the cops showed up," said Harmony Restoule, a young Ojibwe woman from Northern Ontario, Canada. “It was really scary when the police kicked into action.”

Restoule went to the demonstration with her cousin Paige, both of whom participated in mass protests during the Idle No More movement, a grassroots campaign organized in 2012 by the indigenous peoples of Canada against perceived legislative violations of their treaty rights.

“The Canadian police never showed up in riot gear,” Paige Restoule said.

A young man from California who identified himself only as Ahkua said his friend was among the people arrested, and that the police took him after he knelt to the ground to help someone else up.

“There were a few officers who were excessively aggressive and got the others riled up,” he said. “Most cops are pretty chill.”

Saturday’s protest was one of several high profile demonstrations in the Cannon Ball area against the Dakota Access Pipeline in recent months. Police arrested celebrity Shailene Woodley along with more than 20 others on Oct. 10 along the route of the pipeline near St. Anthony, N.D. Police referred to the event as a riot and charged many people with either inciting or engaging in a riot. At the time, it was the highest total number of arrests made in a single day.

The protesters, who now number in the thousands at a main camp near Cannon Ball, want to stop the ongoing construction of the pipeline that will transport oil from the Bakken and Three Forks formations of North Dakota, through South Dakota and Iowa, into southern Illinois. The pipeline would carry 450,000 barrels per day initially and could reach 570,000 barrels a day. The total length of the pipeline across the four states would be 1,134 miles, with 271 miles in South Dakota. The company's estimated cost for the South Dakota segment is $820 million.

On Sept. 3, police and private security forces used pepper spray and dogs to drive protesters away from construction equipment.

"Today's situation clearly illustrates what we have been saying for weeks, that this protest is not peaceful or lawful," Kirchmeier said in a press-release about Saturday's events. "This protest was intentionally coordinated and planned by agitators with the specific intent to engage in illegal activities. I have repeatedly stressed that it is our job to provide safety and security for all involved in the situation at hand. This is not about the pipeline. This is not about the protesters. This is about the rule of law."

The protesters may have been peacefully dispersing on Saturday morning, Keller said, but that doesn't change the fact that they broke the law.

"That's the whole purpose of having a police line, to protect the (pipeline) property and their right to commerce," Keller said. "We are protecting the protesters too, and the ranchers as well."

When asked if she felt protected by the police, Harmony Restoule said, "No."

A young man from California who identified himself only as Ahkua said his friend was among the people arrested, and that the police took him after he knelt to the ground to help someone else up.

“There were a few officers who were excessively aggressive and got the others riled up,” he said. “Most cops are pretty chill.”

Saturday’s protest was one of several high profile demonstrations in the Cannon Ball area against the Dakota Access Pipeline in recent months. Police arrested celebrity Shailene Woodley along with more than 20 others on Oct. 10 along the route of the pipeline near St. Anthony, N.D. Police referred to the event as a riot and charged many people with either inciting or engaging in a riot. At the time, it was the highest total number of arrests made in a single day.

The protesters, who now number in the thousands at a main camp near Cannon Ball, want to stop the ongoing construction of the pipeline that will transport oil from the Bakken and Three Forks formations of North Dakota, through South Dakota and Iowa, into southern Illinois. The pipeline would carry 450,000 barrels per day initially and could reach 570,000 barrels a day. The total length of the pipeline across the four states would be 1,134 miles, with 271 miles in South Dakota. The company's estimated cost for the South Dakota segment is $820 million.

On Sept. 3, police and private security forces used pepper spray and dogs to drive protesters away from construction equipment.

"Today's situation clearly illustrates what we have been saying for weeks, that this protest is not peaceful or lawful," Kirchmeier said in a press-release about Saturday's events. "This protest was intentionally coordinated and planned by agitators with the specific intent to engage in illegal activities. I have repeatedly stressed that it is our job to provide safety and security for all involved in the situation at hand. This is not about the pipeline. This is not about the protesters. This is about the rule of law."

The protesters may have been peacefully dispersing on Saturday morning, Keller said, but that doesn't change the fact that they broke the law.

"That's the whole purpose of having a police line, to protect the (pipeline) property and their right to commerce," Keller said. "We are protecting the protesters too, and the ranchers as well."

When asked if she felt protected by the police, Harmony Restoule said, "No."

Panel votes to borrow $6M for costs associated with pipeline protests, blasts feds inaction

By Mike Nowatzki Today at 12:18 p.m.

NO DAKOTA ACCESS PIPELINE
NO DAKOTA ACCESS PIPELINE
HONOR THE EARTH
UTION

ⓘ Demonstrators against the Dakota Access Pipeline south of Mandan, N.D., gather in opposition early this month. File photo.

BISMARCK — The state Emergency Commission voted Wednesday, Sept. 21, to borrow up to $6 million from the state-owned Bank of North Dakota to support law enforcement efforts related to the Dakota Access Pipeline protests, but not before members blasted the lack of federal support to deal with protesters camped out on federal land.

"I know we have to do it, but it's not right, and the lack of federal involvement is disgusting," said House Majority Leader Al Carlson, R-Fargo. "And we need to protect our North Dakota people, but this is just plain wrong that they're ignoring this issue."

Maj. Gen. Alan Dohrmann, adjutant general of the North Dakota National Guard, said the state has spent $1.88 million on protest-related costs so far, the bulk of it personnel costs for

assistance from the National Guard and law enforcement agencies from across the state. Morton County estimated last week it had spent about $400,000 on top of that.

The $6 million line of credit from the Bank of North Dakota will fund future efforts as authorized by Gov. Jack Dalrymple's emergency declaration Aug. 19. The Legislature will have to make a deficiency appropriation from the state's general fund to pay back the bank after lawmakers convene in regular session in January, Budget Director Pam Sharp said.

Authorities have responded to multiple protests at pipeline construction sites and in Bismarck-Mandan since protests began to ramp up in mid-August. They've also created a traffic checkpoint and increased patrols in Morton County, which they say are necessary for the safety of local residents, farmers and ranchers and the thousands of protesters camped out on U.S. Army Corps of Engineers land about 35 miles south of Mandan.

Last Friday, the Corps of Engineers issued a special use permit for protesters to use Corps land south of the Cannonball River but not the land north of the river where the majority of them are camping, because that land is subject to an existing grazing lease.

Carlson said it bothers him that it's "a federal problem that they've ignored" and the Legislature will have to cover the costs at a time of budget shortfalls. Rep. Jeff Delzer, R-Underwood, agreed.

"The taxpayers shouldn't have to be paying for this," he said.

Dalrymple said he's been in contact with the White House, U.S. Department of Justice, Corps of Engineers, Department of Interior and the state's congressional delegation but is still waiting to hear if they're going to help financially or with in-kind services.

"The problem that we have, of course, is that these public safety needs are imminent every day," Dalrymple said. "We really have no choice but to protect the public with law enforcement. Recovering funds from the federal government is definitely a top priority, but it undoubtedly will take some time."

The commission's other members are Secretary of State Al Jaeger, Rep. Jeff Delzer, R-Underwood, Sen. Rich Wardner, R-Dickinson, and Sen. Ray Holmberg, R-Grand Forks.

Interesting piece…

Treaty issues underlie Dakota Access protests

John Hult, jhult@argusleader.com 9:02 a.m. CDT September 7, 2016

People protesting the construction on a four-state oil pipeline at a site in southern North Dakota gather at campground near the Standing Rock Sioux reservation on Thursday, Aug. 25, 2016. About 300 people were at the campsite where protesters from across the country and members of 60 tribes have gathered in opposition to the $3.8 billion Dakota Access pipeline that will pass through Iowa, Illinois, North Dakota and South Dakota.(Photo: James MacPherson, AP)

20 CONNECTTWEETLINKEDIN 1 COMMENTEMAILMORE

Protests in Cannonball, North Dakota took an ugly turn over the weekend, when a Dakota Access pipeline security team used pepper spray and dogs to ward off protesters who'd crossed a fence to stop construction work.

By that point, the Sacred Stone Camp's weeks-long protest had grown to historic proportions, as tribes from across the U.S. joined the Standing Rock Sioux Tribe in solidarity with its opposition to the 1,200-mile, $3.8 billion pipeline.

Organizers at the North Dakota camp near the confluence of the Cannonball and Missouri rivers say the protests represent the largest gathering of tribes since the days of Sitting Bull.

The opposition is concerned about potential oil spill in the Missouri River, which Dakota Access would cross, as well the possibility of damage to historic and cultural sites.

-
ARGUS LEADER
Judge grants short stop on 4-state oil pipeline construction

Pipeline supporters maintain that the project was properly vetted and permitted, that tribes had the opportunity to comment, and that Dakota Access will move the U.S. and its oil-consuming population closer to energy independence.

But there's something larger than the pipeline behind the pipeline protests.

The land on which the clash occurred is privately owned and permitted for construction, but it falls within a swath of the Great Plains that once belonged to the tribes. It also lies along the Missouri River, whose bottom lands were subject to a further erosion of tribal territory during the 20th Century.

“Part of the frustration you’re seeing play out at Cannonball are voices that didn’t get heard,” said lawyer and author Peter Capossela. “These are voices that haven’t been heard for a long time, and now they’re insisting that they be heard.”

Capossela has worked for several Native American tribes as a lawyer and wrote a book called "The Land Along the River" about the Missouri River treaties.

Much of what is now South Dakota, North Dakota, Nebraska and Wyoming was once part of the Great Sioux Reservation, created through the Fort Laramie Treaty of 1851. That treaty was altered multiple times, shrinking to encompass half of South Dakota in 1868, then pushing the reservation west of the Black Hills in 1877, tightening further in 1889 to create six smaller reservations.

-
ARGUS LEADER
Oil pipeline protest turns violent in southern North Dakota

Some of that land was opened to homesteaders in 1915.

Then, after Missouri River flooding in the 1940s, bottom lands were taken by the Army Corps of Engineers as part of the Pick-Sloan plan to dam the river.

Jurisdiction over those bottom lands in South Dakota – which the tribes had hoped to reclaim in the 1990s – was given to the Department of Game, Fish and Parks through the Water Resources Development Act of 1999.

Capossela sees a clear line between the treaties of the mid-1800s, failure to honor those treaties and the handling of the pipeline project by state and federal regulators.

Beyond physical boundaries are issues of cultural sites. Even when land is privately held, Capossela said, tribes have the “right of repatriation” for human remains and cultural artifacts found on private land.

That has played out in hearings on the pipeline at the state level, and continues to be one focal point of a lawsuit filed in U.S. District Court in Washington, D.C.

The Standing Rock Sioux Tribe filed a lawsuit against the Corps of Engineers in late July, alleging that the agency failed to reach out to or adequately consult tribes during the planning process.

- ARGUS LEADER
  12 people arrested at Dakota Access Pipeline demonstration

“DAPL claims to have completed cultural resource surveys along the entire pipeline length,” the tribe’s complaint said. “However, the out-of-state, non-Tribal consultants hired by DAPL to do cultural surveys are unable to assess the potential cultural significance of sites in this area to the Tribes.”

The lawsuit says the tribe “participated extensively” during the Corps’ public comment process.

Dakota Access and its supporters disagree. If there’s been a lack of consultation, they say, it’s not for lack of trying.

Dakota Access filed affidavits saying its representatives reached out to Standing Rock officials to ask about tribal surveys on numerous occasions, but that most tribes refused to participate.

“The only response or comments we received from the Standing Rock Sioux Tribe were to stop the project categorically avoid the entire western Great Plains Region as that is considered the Greater Sioux Nation’s ‘historical range,’ which is an impossible request to accommodate,” wrote Joey Mahmoud, VP of Dakota Access.

Joel Ames, Tribal Liaison for the Corps of Engineers Omaha District, wrote in the Corps’ response that he first attempted to consult with the Standing Rock Sioux Tribe in September of 2014. He wrote that a Tribal Historic Preservation Officer named Waste’ Win Young did not attend scheduled meetings and later declined to consult with the Corps, telling Ames in February of 2015 that she intended to work directly with Dakota Access.

- ARGUS LEADER
  Judge orders protesters not to interfere with Dakota Access oil pipeline

Ames wrote that he continued trying to work with Standing Rock throughout 2015, but that tribal officials cancelled meetings, failed to return phone calls or sent responses that accused the Corps of trying to circumvent the consultation process.

The Corps presented tribes with a draft environmental assessment in December of 2015. Tribal officials from Standing Rock requested a full environmental impact statement and continued to request a full consultation with tribes to create one until the project was permitted by the Corps in late July.

Such back-and-forth over consultation is a mark of disputes between the federal government and tribes, Capossela said.

“The extent of consultation is something that always gets disputed,” Capossela said.

By April, people had begun to gather at the Cannonball camps. By August, North Dakota Governor Jack Dalrymple had declared a state of emergency, saying the protests constituted a “significant public safety concern.”

The weekend represented the most violent incident. A tribal spokesman said six people were bitten by dogs, including a child, and that at least 30 people were pepper-sprayed. Law enforcement said protesters injured four security guards and two dogs.

-

ARGUS LEADER
Native American teens run to protest pipeline

After the clashes, the Corps filed a motion saying it did not oppose a temporary restraining order in the interest of "preserving peace" until a final decision on the Standing Rock lawsuit is reached.

The judge granted a temporary order on Tuesday, but only to stop work on State Highway 1806 and 20 miles east of Lake Oahe in North Dakota. Work on the west side can continue.

"We are disappointed that the U.S. District Court's decision does not prevent DAPL from destroying our sacred sites as we await a ruling on our original motion to stop construction of the pipeline," Standing Rock Chairman David Archambault II said in a statement.

Judge James Boasberg said he intends to issue a decision on the legality of the Corps' permit by Friday.

If history is any indication, however, the decision will not put an end to the opposition.

Protester says take pipeline fight to 'Obama's doorstep'

By Nick Smith / Bismarck Tribune on Sep 5, 2016 at 9:20 p.m.

NEAR CANNON BALL, N.D.—Despite a clash on Saturday between opponents of the Dakota Access Pipeline project and private security officers hired for protection along the construction route, protesters say they're still optimistic the project can be stopped by continued opposition and through the courts.

Recommended for you

Vets on the fast track

Cavalier man hurt in motorcycle crash

Hundreds milled around the protest camps near the Standing Rock Sioux Tribe reservation on a cool Monday, contrasting the gloomy weather with continued prayers, mingling with each other and enjoying donated food being cooked.

With the weather beginning to change and a ruling coming by Friday on an injunction sought by the Standing Rock Sioux Tribe in U.S. District Court in Washington, D.C., pipeline opponents see their actions as just beginning.

"I think this has essentially become ground zero for the climate (change) fight," Bill Kitchen of Johnstown, N.Y., said. "What happens if the courts rule in the company's favor? You've got all these people that aren't ready to give up and get out."

Kitchen, who works part-time for the Portland, Maine-based Biodiversity Research Institute and also participates in environmental activism, said the growing visibility of the protests will only help the cause.

If completed on schedule before the end of the year, the Dakota Access Pipeline would transport up to 450,000 barrels per day of Bakken crude with a future maximum capacity of 570,000 barrels per day.

The project originates in North Dakota and ends in Illinois. The pipeline has an overall cost of $3.78 billion.

A section of the pipeline will be bored under the Missouri River and run less than a mile from the tribe's reservation boundary.

Tribal leaders and groups have been staging protests over the pipeline for more than a month, citing concerns over potential contamination of the Missouri River if the pipeline were to rupture. Concerns over disturbing cultural sites have also loomed large.

Kitchen said the protest is an extension of the Keystone XL fight; the pipeline took years of review and required a State Department review because it would have crossed the U.S. and Canadian border. The project was eventually shelved.

"They need to take this right to Obama's doorstep," Kitchen said, adding he's optimistic the pipeline won't be completely built.

He believes Saturday's clash between approximately 300 protesters and 14 private security officers at a work site shouldn't be a stain on the protest effort.

Tribal officials said cultural sites had been recently discovered in an area where Dakota Access, LLC, a partner of Dallas-based Energy Transfer Partners, had begun work on Saturday.

This prompted a march by protesters, who confronted and assaulted several security officers, according to a Morton County Sheriff's Department release. Three security officers were injured. No arrests have yet been made but the incident is under investigation.

"To go plowing through those sites ... it's not going to look good for the company," Kitchen said.

Tonya Hertel, of Mobridge, S.D., agreed.

"I feel that the federal judge made the right decision by waiting," Hertel said, adding that it allowed both sides to be fairly heard before weighing in. "We feel we're going to win this."

Hertel had arrived to visit the camp and drop off donations to the protesters including clothing. She says she's tried to visit at least once a week to provide whatever might be useful for the hundreds that are camping out from dozens of tribes from across the country as they settle in for the long haul.

She declined to speculate on whether or not the court will rule in their favor this week and how protesters might react.

"I think the tribes are doing a great job," Hertel said. "I feel people are hearing us."

NORTH DAKOTA LT. GOV. DREW WRIGLEY Q&A: 'An unlawful protest'

By Tom Dennis on Aug 28, 2016 at 12:09 a.m.

On Tuesday, North Dakota Lt. Gov. Drew Wrigley visited the Herald to talk about the protest near Standing Rock against the Dakota Access Pipeline project. The following is a transcript, edited for clarity and length.

Do you agree with the protest against Dakota Access pipeline?

No
Yes
Not sure

Current Poll

Previous Polls

Q. Tell us why you're here.

The evolving situation with Standing Rock is obviously very serious, and I don't know that publicly it's been discussed as broadly as it's going to be. The governor went on the radio, and we'll be talking much more about what is actually transpiring there.

We're dealing with a very significant and challenging law enforcement issue.

It's an important story, it's an evolving story, and there's frankly a lot of misinformation going out.

It's also a complicated situation. It started off as a peaceful protest, although it was being conducted in part on land on which they did not have any permits to go. They were on the Army Corps of Engineers land, and that's where the main encampment is.

But it has become an unlawful protest. And there is no way to peacefully and lawfully participate in an unlawful protest.

I liken it to conspiracy law. When you're involved in an illegal enterprise of some kind, everyone is involved in what's taking place. When someone says, "Well, I've been lawfully standing here on the Corps land the whole time, I've been peaceful, and my intentions are peaceful," that person still is part of an unlawful protest.

Vernon Red Owl, a member of the Siseton Wahpeton Oyate Tribe in South Dakota, raises his arm. 8-23-2016

And when you have a situation in which hundreds of people are walking down a state highway, then off in the ditches standing there—and a lot of the people out there at least initially were very young children. That is both a complicated and an extremely dangerous situation.

A chief concern was that the traveling public comes in there, somebody gets spooked, they're going through a crowd—who knows what their reaction is going to be. Very, very concerning.

So the governor had the Highway Patrol and Department of Transportation put that barrier across State Highway 1806, except for people who live there and emergency personnel and law enforcement. Everyone else has to be diverted around and detoured.

And that was purely about public safety and being able to maintain the law enforcement effort, which is now required in view of the unlawful protest.

Q. Why is it being termed an unlawful protest?

There have been hundreds of criminal acts, violating a variety of state and federal laws. They include two substantiated cases of lasers being pointed into the cockpits of aircraft coming over. Those are life-threatening federal crimes, and they're being investigated right now.

There has been talk of weapons that were taken off two of the protesters early on. Also early on, there was a substantiated case of people believed to be members of the protest traveling to Bismarck, going to the home of a member of the North Dakota Highway Patrol, walking around that property, then going back to their vehicle and leaving. Almost like a recon.

Aerial photograph taken Aug. 20, 2016 over protest camp on the Standing Rock Indian Reservation. (Tom Stromme/Bismarck Tribune)

Trespasses have been documented. Threats on law enforcement, both on social media and in person.

Crimes committed by people riding horses into a police line. I've spoken with the people who were on that line. They were beyond threatened. You can call what happened a lot of things, but you can look at that situation and say, "That is an assault with a deadly weapon. That horse is no different than a car going into a line of people." Law enforcement retreated at that point.

Q. How many protesters are local?

We've not been able to go through and take a census, of course. But people talk of the Seven Sioux Tribes; they haven't been together and "sharing their campfires," some say, for over 100 years.

But I think it's clear that the tribes are not united down there, and that there is not a united leadership front. There are factions within this illegal protest. And numbers vary on how many members are from the Standing Rock reservation. We just don't know.

I think it could be helpful to the situation if the leadership of the various tribes that are represented recognize that their people are not only involved in an illegal protest action, they are also endangering themselves, the public and law enforcement.

Q. Where do you see this headed?

Tribal veterans stand Aug. 24, at the opposition site near suspended pipeline construction. (Michael Vosburg/Forum News Service)

I don't have a prediction, because it would be easier to predict if it had unified leadership. Then you could size the person or persons up and assess what's been done in the past and what you can expect up ahead.

That's a very complicated thing to do, though, when there are many groups with many leaders involved.

Q. How many people are we talking about?

It varies. There are reports that it could swell to as many as 3,000; I heard rumors that we're already at 2,500 out there. But it varies, because it's not hard to go back to the Standing Rock reservation. Others have further to travel.

Q. What's happening with water and other services?

There were questions recently about some of the items that the state Health Department had provided for what initially was a lawful protest. The governor now has made clear that it has morphed into an unlawful protest, and there will not be the provision of water and other items of comfort out there. There still are ambulance and other services out there for everyone's protection.

There were some reports that people were concerned about there being water. There's plenty of water; it's just not at the protest site. There's plenty of water when people travel back to their homes and access it. So nobody's keeping them from whatever resources they need. But the state is not providing that.

Protesters of the Dakota Access pipeline and officers face off at a work site of the pipeline. (Michael Knudsen of Bismarck)

Q. What's next?

The governor's declaration was the beginning of establishing what the lawful boundaries are for peaceful protest. Meanwhile, every violation accumulates more and more support for our observation that it is an unlawful protest.

And that's why I say, people still have the opportunity to extract themselves.

Anyone who wants to be peaceful, who wants to be law-abiding, still has the opportunity to withdraw from these protests. They got themselves there, they have the capacity to leave. No one is going to stop them as they disperse.

Q. Is the National Guard coming in?

The governor made clear from his declaration the other day that it wasn't a National Guard callout. He has not made that callout. The National Guard is always there as a resource in North Dakota to deal with emergency situations, whatever they might be. But they weren't called out as part of the emergency declaration.

Q. Are there discussions about calling out the National Guard?

You talk about all different options, but there is not a decision to call out the National Guard.

Q. It sounds a little like the Black Lives Matter protests in Minneapolis, where the activists blocked Interstate 94 for a time.

I know people think about examples like that, but I think you're dealing with a different group dynamic. I don't think anybody involved in this would seriously question that a significant number of people went out there with peaceful, law-abiding intent. But now, anyone aware of the facts out there would agree that it is an unlawful protest.

And you can't lawfully participate in an unlawful protest.

Q. Some protesters might respond by saying, "If we lawfully protest, nothing will change, and the pipeline will be built." And their goal is to stop the pipeline. How would you respond?

There's always a lawful way in our society to push your perspective. There has been an extensive, long comment period, opportunity to weigh in, opportunity to be heard, to have your perspective be part of the formal record.

It's been documented out there, too, that those hearings had no representation from people who in many instances didn't have to travel very far to put that perspective out there. And that's not unimportant in this.

But even so, I'd be the last person to say, "Well, you didn't go, now you can't say anything." It's just that you've got to be lawful. And any time when things don't play out your way, it's not OK to resort to violence, threats and obstruction of lawful process.

That is not one of your options.

You can write letters. You can march peacefully. You can call your federal delegation. You can call your state legislator. You can call your community leadership. We have open and transparent and accessible leadership in this state.

But this is not an option: Unlawful, threatening, intimidating, dangerous protest.

Q. Does the fact that this involves Native American tribes make it harder? Given their history with the United States, their tribal leaders might not have much trust that the regular methods would work.

I wouldn't be the right person to ask about that. You'd have to ask them what their perspective is. But I can say that we in North Dakota state government interact with the tribes regularly on matters of central importance to them and us. We have strong relationships—not because we always agree, but because we're dealing with very, very important matters.

Look at the Three Affiliated Tribes. It's the absolute heart of oil country out there, and the tax agreements that were reached between the state and the tribe that led to private enterprise feeling comfortable in going out there and conducting very expensive business and investment—that takes a lot of trust.

That was an opportunity, and look what happened: Benefit to the tribes, benefit to everyone involved, benefit to commerce, job creation, opportunity.

We also interact with the tribes regularly on environmental and other matters. We have regular meetings, and we'll meet any time the tribal leadership wants to come in.

Q. What are the discussions like?

It's like any negotiation or discussion. It never ends in a way that's perfect for either side, but you reach accord.

Someone commented the other day, "Why isn't Sen. Heidi Heitkamp out there? She has good relationships." Why, because she's a Democrat? She does have good relationships with the tribes. And so do we.

We know these folks. Standing Rock Chairman Dave Archambault and the governor speak regularly and comfortably, and they have in this situation, especially early on. There's a friendship there, or a kinship out of understanding that they both represent important interests. So it's not for lack of opportunity to access.

Also, at every legislative session, the tribe comes in; they get their own opportunity to speak to a joint session. The governor gives the State of the State address; they give the State of the Relationship address.

No other other government leaders come in and get an opportunity like that. Sometimes our congressional delegation will address, but it's not the same thing as a joint session.

Also, the tribal leaders come in, there are days of meetings, they're there regularly petitioning the government to interact with them in this fashion or that, or adjust this agreement.

But that has not been accessed in all of this in ways that can be constructive.

Sioux tribe leader wants political help to halt oil pipeline

- By JAMES MacPHERSON Associated Press
- Updated 17 hrs ago

BISMARCK, N.D. (AP) — A tribal leader Wednesday said he contacted the White House and met with North Dakota's senators in an effort to halt construction of a $3.8 billion, four-state oil pipeline that crosses the Missouri River near an American Indian reservation in southern North Dakota.

Standing Rock Sioux Tribal Chairman David Archambault II, in a teleconference with reporters, stressed that the he and the tribe are working to ensure peace among those protesting the Dakota Access pipeline.

"There is no place for threats, violence or criminal activity," Archambault said.

North Dakota transportation officials, meanwhile, closed a several-mile stretch of Highway 1806 on Wednesday because of the protest along the road.

The 1,172-mile pipeline planned by Dallas-based Energy Transfer Partners is passing through the Dakotas and Iowa on its way to Illinois. Construction crews with armed private security guards arrived last week just north of the Standing Rock Sioux reservation at the confluence of the Cannonball and Missouri rivers, where native Americans have been staging a protest for months at a "spirit camp."

Archambault and more than two dozen others have been arrested in the past week for interfering with construction of the project.

On Monday, developers of the project sued in federal court to stop protesters — including Archambault — from interfering with the project, alleging the safety of workers and law enforcement is at risk.

U.S. District Court Judge Daniel Hovland granted the developer's motion for a temporary restraining order Tuesday.

Archambault said he met Wednesday with North Dakota Sens. John Hoeven and Heidi Heitkamp to "express concerns" about the pipeline.

The tribe sued federal regulators late last month for approving the pipeline. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Archambault told reporters he also has urged President Barack Obama to step in. The president and First Lady Michelle Obama traveled to the Standing Rock Indian Reservation in 2014 to get a firsthand look at the impoverished living conditions on the reservation that straddles the North Dakota-South Dakota border.

Archambault said he asked nothing of the president then but is doing so now.

"I believe both he and Michelle Obama were touched," Archambault said. "So now if there's any way he can intervene and move this pipeline off our treaty lands, I'm asking him."

The White House did not immediately respond to emails seeking comment.

Work stops at Dakota Access Pipeline site

- LAUREN DONOVAN Bismarck Tribune

Lauren Donovan

- LAUREN DONOVAN, TRIBUNE

Arvol Looking Horse, a Sioux holy man from the Cheyenne River Reservation, leads hundreds out of a new protest camp set up near the Standing Rock Sioux Reservation boundary to a site along Highway 1806 where the Dakota Access Pipeline has been under protest since late last week. The keeper of a sacred pipe led a long prayer session for peace and the safety of all late Tuesday morning. For a gallery of photos, go to bismarcktribune.com.

Tribal members protesting the Dakota Access Pipeline crossing of the Missouri River near the Standing Rock Sioux Reservation move toward the empty pipeline construction site Tuesday to join in prayer and song for safety and peace.

The Dakota Access Pipeline construction site was abandoned Tuesday and protesters walked through the construction site down to the Missouri River, about a half-mile distant. Some walked, some rode horse, some elderly traveled in pickups, all of them intent on making contact with the water they hope to protect.

- LAUREN DONOVAN, TRIBUNE
  Cheyenne River Sioux Tribe chairman Harold Frazier, along with hundreds of his tribal members, joined the Dakota Access Pipeline protest Tuesday. Frazier said he thinks the pipeline should stop until the courts can sort out the matter. Meanwhile, he and Standing Rock Sioux Chairman Dave Archambault were working to ensure adequate shelter and safety for the hundreds of protesters now on location.

- LAUREN DONOVAN, TRIBUNE
  DAKOTA ACCESS PIPELINE – Work stopped Tuesday and possibly Wednesday at the site where hundreds of Standing Rock Sioux tribal members and supporters are protesting construction of the Dakota Access Pipeline near the reservation boundary.

The work stoppage gave law enforcement, tribal and state officials some time out to plan how to manage the protest, with numbers swelling by the hour with busloads of Sioux and others arriving to join the anti-pipeline movement and arrests occurring almost daily.

Workers were instructed to leave their equipment late Monday after youthful protesters walked onto the work site and surrounded the machinery. Morton County Sheriff Kyle Kirchmeier said the mix of people around the machinery caused him to stop work until an improved plan for safety could be developed.

Kirchmeier said he didn't know whether work would resume Wednesday (today), because some options were still in flux Tuesday evening. One option was the private landowner allowing his fence to be moved back into his property to give protesters more room to assemble off the highway.

Kirchmeier met with Standing Rock Sioux officials in the morning and with state officials at the governor's office Tuesday afternoon, before returning to the department headquarters to brief patrol on how and when work will continue.

"Basically, what we talked about at the meeting was how to de-escalate tensions between the pipeline workers and the protesters, and us, I guess. One option is to give them more land and more comfort, room for tents, water, a dumpster, that kind of thing," the sheriff said. Ideally, there would be ample room to move the hundreds of cars, pickups and enforcement vehicles off the roadway, too, he said.

Some 28 people have been arrested since last week, including tribal chairman Dave Archambault, and charged with disorderly conduct for trying to block access to the work site. The tribal members are protesting the pipeline's crossing of the Missouri River near the reservation boundary for fear it will rupture and contaminate their water, water downstream and disrupt sacred historic sites.

The sheriff said a federal court judge, at the request of Dakota Access Pipeline, signed a restraining order against anyone arrested being at the pipeline location.

"We are pleased that the judge granted our request for a temporary restraining order, which will allow us to more safely carry out our construction activities at the site. We will continue to put the safety of our workers and those who live in the area as our top priority as we continue construction in all four states of this important energy infrastructure project," Granado Communications Group, a PR firm for Energy Transfer Partners, said in a statement.

In a situation of historical irony, after the work shutdown, law enforcement pulled back from the protest site on Highway 1806 to a communication command center set up at Fort Lincoln State Park. The park preserves the fort from which the cavalry and Lt. Col. George Armstrong Custer left to never return after a fatal battle against the Sioux. A replica of Custer's captured flag was flying among others representing some of the 25 to 30 estimated tribes that have arrived to support Standing Rock since the protest started last week.

Another reason to pull back toward Mandan was to get into range of reliable cell phone service. Many at the protest scene believe cell towers are being purposely jammed to prevent communication, but North Dakota Highway Patrol Cap. Eric Pederson said that there is no truth to the rumor.

With the growing numbers of protesters -- now at least 500-600 -- a second protest camp was established late Monday night on low land just south of the Cannonball River and tents, buses and teepees were scattered around a central kitchen and check-in tent. An original spirit camp was set up months ago in protest.

Cheyenne River Sioux Tribal Chairman Harold Frazier arrived with several busloads of his tribal members Tuesday afternoon and said it's the biggest such gathering of Native tribes he can recall, with representatives from tribes coast-to-coast and Canada.

“Things are going well, with the construction stopped. I think it should stay stopped and let the courts settle it,” Frazier said. “I believe we will stop it.”

Frazier said he and Archambault were cooperating to ensure there is adequate food and shelter for everyone arriving to support Standing Rock.

Dakota Access did not return calls and emails seeking comment on the work stoppage.

Back at the protest site closest to where the pipeline is being staged up for boring under the Missouri River, the scene was relatively quiet and peaceful throughout the day.

One of the Sioux' most holy men, Arvol Looking Horse, the 19th successive keeper of the sacred White Buffalo Calf pipe, led hundreds in prayer at the gated entrance to the pipeline route.

The prayers, burning sage and sounds of drumming were intended to restore a protest based on prayer and peaceful objection, amidst worries that not everyone can be controlled in such a large, fast-moving situation and as arrests continued to mount. Men, women and children sang the old language and turned as one to the four corners of the universe. Cameras were forbidden during the ceremony.

Tribal member and former councilman Tim Mentz said the prayers were at the request of Archambault. “The chairman asked to go back to prayer, to ask for peace and safety and that we can accomplish what we are here to do,” Mentz said. “It's for one thing; the safety of everyone. We're all praying for the same thing.”

After the prayers, the access gates were propped open and the protesters walked the construction route on private land down to the Missouri River below, a hot walk in nearly 85-degree temperatures. Many walked, some rode horse and others rode in the back of pickup trucks, intent of making contact with the water a half-mile away.

Turtle Mountain gets housing funds

By Herald Staff Report on Sep 7, 2016 at 7:33 p.m.

Members of North Dakota's congressional delegation announced federal grants totaling $140,000 to help make housing more affordable to rural North Dakotans.

The Turtle Mountain Housing Authority will receive $70,000 of the funds.

The grants were made available through the U.S. Department of Agriculture's Rural Development Housing Preservation Grants and will help modernize, repair and make homes more energy efficient.

- LAUREN DONOVAN, TRIBUNE

Arvol Looking Horse, a Sioux holy man from the Cheyenne River Reservation, leads hundreds out of a new protest camp set up near the Standing Rock Sioux Reservation boundary to a site along Highway 1806 where the Dakota Access Pipeline has been under protest since late last week. The keeper of a sacred pipe led a long prayer session for peace and the safety of all late Tuesday morning. For a gallery of photos, go to bismarcktribune.com.

Tribal members protesting the Dakota Access Pipeline crossing of the Missouri River near the Standing Rock Sioux Reservation move toward the empty pipeline construction site Tuesday to join in prayer and song for safety and peace.

The Dakota Access Pipeline construction site was abandoned Tuesday and protesters walked through the construction site down to the Missouri River, about a half-mile distant. Some walked, some rode horse, some elderly traveled in pickups, all of them intent on making contact with the water they hope to protect.

- LAUREN DONOVAN, TRIBUNE
  Cheyenne River Sioux Tribe chairman Harold Frazier, along with hundreds of his tribal members, joined the Dakota Access Pipeline protest Tuesday. Frazier said he thinks the pipeline should stop until the courts can sort out the matter. Meanwhile, he and Standing Rock Sioux Chairman Dave Archambault were working to ensure adequate shelter and safety for the hundreds of protesters now on location.

In North Dakota, people vs. oil pipeline protest strengthens

- By JAMES MacPHERSON
- Updated Aug 13, 2016

NEAR THE STANDING ROCK SIOUX RESERVATION, N.D. (AP) — Opponents of a $3.8 billion Midwest oil pipeline are vowing to keep up the pressure after this week's arrests at a construction zone in North Dakota.

The Standing Rock Sioux had quietly opposed the Dakota Access pipeline for months at a "spirit camp" near their reservation, which straddles the North Dakota-South Dakota border.

Protesters' resistance heated up this week as at least 18 people were arrested, and a Hollywood actress joined their gathering.

Tribal members say the pipeline would disturb sacred sites and could affect drinking water on the reservation and for people downstream.

The four-state pipeline's path in North Dakota would cross beneath the Little Missouri River once and the Missouri River twice. The company said the pipeline would include safeguards such as leak detection equipment.

Sioux tribe leader wants political help to halt oil pipeline

- By JAMES MacPHERSON Associated Press
- Updated 17 hrs ago

BISMARCK, N.D. (AP) — A tribal leader Wednesday said he contacted the White House and met with North Dakota's senators in an effort to halt construction of a $3.8 billion, four-state oil pipeline that crosses the Missouri River near an American Indian reservation in southern North Dakota.

Standing Rock Sioux Tribal Chairman David Archambault II, in a teleconference with reporters, stressed that the he and the tribe are working to ensure peace among those protesting the Dakota Access pipeline.

"There is no place for threats, violence or criminal activity," Archambault said.

North Dakota transportation officials, meanwhile, closed a several-mile stretch of Highway 1806 on Wednesday because of the protest along the road.

The 1,172-mile pipeline planned by Dallas-based Energy Transfer Partners is passing through the Dakotas and Iowa on its way to Illinois. Construction crews with armed private security guards arrived last week just north of the Standing Rock Sioux reservation at the confluence of the Cannonball and Missouri rivers, where native Americans have been staging a protest for months at a "spirit camp."

Archambault and more than two dozen others have been arrested in the past week for interfering with construction of the project.

On Monday, developers of the project sued in federal court to stop protesters — including Archambault — from interfering with the project, alleging the safety of workers and law enforcement is at risk.

U.S. District Court Judge Daniel Hovland granted the developer's motion for a temporary restraining order Tuesday.

Archambault said he met Wednesday with North Dakota Sens. John Hoeven and Heidi Heitkamp to "express concerns" about the pipeline.

The tribe sued federal regulators late last month for approving the pipeline. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Archambault told reporters he also has urged President Barack Obama to step in. The president and First Lady Michelle Obama traveled to the Standing Rock Indian Reservation in 2014 to get a firsthand look at the impoverished living conditions on the reservation that straddles the North Dakota-South Dakota border.

Archambault said he asked nothing of the president then but is doing so now.

"I believe both he and Michelle Obama were touched," Archambault said. "So now if there's any way he can intervene and move this pipeline off our treaty lands, I'm asking him."

The White House did not immediately respond to emails seeking comment.

NORTH DAKOTA LT. GOV. DREW WRIGLEY Q&A: 'An unlawful protest'

By Tom Dennis on Aug 28, 2016 at 12:09 a.m.

On Tuesday, North Dakota Lt. Gov. Drew Wrigley visited the Herald to talk about the protest near Standing Rock against the Dakota Access Pipeline project. The following is a transcript, edited for clarity and length.

Do you agree with the protest against Dakota Access pipeline?

No
Yes
Not sure

Previous Polls

Q. Tell us why you're here.

The evolving situation with Standing Rock is obviously very serious, and I don't know that publicly it's been discussed as broadly as it's going to be. The governor went on the radio, and we'll be talking much more about what is actually transpiring there.

We're dealing with a very significant and challenging law enforcement issue.

It's an important story, it's an evolving story, and there's frankly a lot of misinformation going out.

It's also a complicated situation. It started off as a peaceful protest, although it was being conducted in part on land on which they did not have any permits to go. They were on the Army Corps of Engineers land, and that's where the main encampment is.

But it has become an unlawful protest. And there is no way to peacefully and lawfully participate in an unlawful protest.

I liken it to conspiracy law. When you're involved in an illegal enterprise of some kind, everyone is involved in what's taking place. When someone says, "Well, I've been lawfully standing here on the Corps land the whole time, I've been peaceful, and my intentions are peaceful," that person still is part of an unlawful protest.

Vernon Red Owl, a member of the Siseton Wahpeton Oyate Tribe in South Dakota, raises his arm. 8-23-2016

And when you have a situation in which hundreds of people are walking down a state highway, then off in the ditches standing there—and a lot of the people out there at least initially were very young children. That is both a complicated and an extremely dangerous situation.

A chief concern was that the traveling public comes in there, somebody gets spooked, they're going through a crowd—who knows what their reaction is going to be. Very, very concerning.

So the governor had the Highway Patrol and Department of Transportation put that barrier across State Highway 1806, except for people who live there and emergency personnel and law enforcement. Everyone else has to be diverted around and detoured.

And that was purely about public safety and being able to maintain the law enforcement effort, which is now required in view of the unlawful protest.

Q. Why is it being termed an unlawful protest?

There have been hundreds of criminal acts, violating a variety of state and federal laws. They include two substantiated cases of lasers being pointed into the cockpits of aircraft coming over. Those are life-threatening federal crimes, and they're being investigated right now.

There has been talk of weapons that were taken off two of the protesters early on. Also early on, there was a substantiated case of people believed to be members of the protest traveling to Bismarck, going to the home of a member of the North Dakota Highway Patrol, walking around that property, then going back to their vehicle and leaving. Almost like a recon.

Aerial photograph taken Aug. 20, 2016 over protest camp on the Standing Rock Indian Reservation. (Tom Stromme/Bismarck Tribune)

Trespasses have been documented. Threats on law enforcement, both on social media and in person.

Crimes committed by people riding horses into a police line. I've spoken with the people who were on that line. They were beyond threatened. You can call what happened a lot of things, but you can look at that situation and say, "That is an assault with a deadly weapon. That horse is no different than a car going into a line of people." Law enforcement retreated at that point.

Q. How many protesters are local?

We've not been able to go through and take a census, of course. But people talk of the Seven Sioux Tribes; they haven't been together and "sharing their campfires," some say, for over 100 years.

But I think it's clear that the tribes are not united down there, and that there is not a united leadership front. There are factions within this illegal protest. And numbers vary on how many members are from the Standing Rock reservation. We just don't know.

I think it could be helpful to the situation if the leadership of the various tribes that are represented recognize that their people are not only involved in an illegal protest action, they are also endangering themselves, the public and law enforcement.

Q. Where do you see this headed?

Tribal veterans stand Aug. 24, at the opposition site near suspended pipeline construction. (Michael Vosburg/Forum News Service)

I don't have a prediction, because it would be easier to predict if it had unified leadership. Then you could size the person or persons up and assess what's been done in the past and what you can expect up ahead.

That's a very complicated thing to do, though, when there are many groups with many leaders involved.

Q. How many people are we talking about?

It varies. There are reports that it could swell to as many as 3,000; I heard rumors that we're already at 2,500 out there. But it varies, because it's not hard to go back to the Standing Rock reservation. Others have further to travel.

Q. What's happening with water and other services?

There were questions recently about some of the items that the state Health Department had provided for what initially was a lawful protest. The governor now has made clear that it has morphed into an unlawful protest, and there will not be the provision of water and other items of comfort out there. There still are ambulance and other services out there for everyone's protection.

There were some reports that people were concerned about there being water. There's plenty of water; it's just not at the protest site. There's plenty of water when people travel back to their homes and access it. So nobody's keeping them from whatever resources they need. But the state is not providing that.

Protesters of the Dakota Access pipeline and officers face off at a work site of the pipeline. (Michael Knudsen of Bismarck)

Q. What's next?

The governor's declaration was the beginning of establishing what the lawful boundaries are for peaceful protest. Meanwhile, every violation accumulates more and more support for our observation that it is an unlawful protest.

And that's why I say, people still have the opportunity to extract themselves.

Anyone who wants to be peaceful, who wants to be law-abiding, still has the opportunity to withdraw from these protests. They got themselves there, they have the capacity to leave. No one is going to stop them as they disperse.

Q. Is the National Guard coming in?

The governor made clear from his declaration the other day that it wasn't a National Guard callout. He has not made that callout. The National Guard is always there as a resource in North Dakota to deal with emergency situations, whatever they might be. But they weren't called out as part of the emergency declaration.

Q. Are there discussions about calling out the National Guard?

You talk about all different options, but there is not a decision to call out the National Guard.

Q. It sounds a little like the Black Lives Matter protests in Minneapolis, where the activists blocked Interstate 94 for a time.

I know people think about examples like that, but I think you're dealing with a different group dynamic. I don't think anybody involved in this would seriously question that a significant number of people went out there with peaceful, law-abiding intent. But now, anyone aware of the facts out there would agree that it is an unlawful protest.

And you can't lawfully participate in an unlawful protest.

Q. Some protesters might respond by saying, "If we lawfully protest, nothing will change, and the pipeline will be built." And their goal is to stop the pipeline. How would you respond?

There's always a lawful way in our society to push your perspective. There has been an extensive, long comment period, opportunity to weigh in, opportunity to be heard, to have your perspective be part of the formal record.

It's been documented out there, too, that those hearings had no representation from people who in many instances didn't have to travel very far to put that perspective out there. And that's not unimportant in this.

But even so, I'd be the last person to say, "Well, you didn't go, now you can't say anything." It's just that you've got to be lawful. And any time when things don't play out your way, it's not OK to resort to violence, threats and obstruction of lawful process.

That is not one of your options.

You can write letters. You can march peacefully. You can call your federal delegation. You can call your state legislator. You can call your community leadership. We have open and transparent and accessible leadership in this state.

But this is not an option: Unlawful, threatening, intimidating, dangerous protest.

Q. Does the fact that this involves Native American tribes make it harder? Given their history with the United States, their tribal leaders might not have much trust that the regular methods would work.

I wouldn't be the right person to ask about that. You'd have to ask them what their perspective is. But I can say that we in North Dakota state government interact with the tribes regularly on matters of central importance to them and us. We have strong relationships—not because we always agree, but because we're dealing with very, very important matters.

Look at the Three Affiliated Tribes. It's the absolute heart of oil country out there, and the tax agreements that were reached between the state and the tribe that led to private enterprise feeling comfortable in going out there and conducting very expensive business and investment—that takes a lot of trust.

That was an opportunity, and look what happened: Benefit to the tribes, benefit to everyone involved, benefit to commerce, job creation, opportunity.

We also interact with the tribes regularly on environmental and other matters. We have regular meetings, and we'll meet any time the tribal leadership wants to come in.

Q. What are the discussions like?

It's like any negotiation or discussion. It never ends in a way that's perfect for either side, but you reach accord.

Someone commented the other day, "Why isn't Sen. Heidi Heitkamp out there? She has good relationships." Why, because she's a Democrat? She does have good relationships with the tribes. And so do we.

We know these folks. Standing Rock Chairman Dave Archambault and the governor speak regularly and comfortably, and they have in this situation, especially early on. There's a friendship there, or a kinship out of understanding that they both represent important interests. So it's not for lack of opportunity to access.

Also, at every legislative session, the tribe comes in; they get their own opportunity to speak to a joint session. The governor gives the State of the State address; they give the State of the Relationship address.

No other other government leaders come in and get an opportunity like that. Sometimes our congressional delegation will address, but it's not the same thing as a joint session.

Also, the tribal leaders come in, there are days of meetings, they're there regularly petitioning the government to interact with them in this fashion or that, or adjust this agreement.

But that has not been accessed in all of this in ways that can be constructive.

Protester says take pipeline fight to 'Obama's doorstep'

By Nick Smith / Bismarck Tribune on Sep 5, 2016 at 9:20 p.m.

NEAR CANNON BALL, N.D.—Despite a clash on Saturday between opponents of the Dakota Access Pipeline project and private security officers hired for protection along the construction route, protesters say they're still optimistic the project can be stopped by continued opposition and through the courts.

Recommended for you

Lake Region State College Peace Officer Trainees are ready for duty

Vets on the fast track

Cavalier man hurt in motorcycle crash

Hundreds milled around the protest camps near the Standing Rock Sioux Tribe reservation on a cool Monday, contrasting the gloomy weather with continued prayers, mingling with each other and enjoying donated food being cooked.

With the weather beginning to change and a ruling coming by Friday on an injunction sought by the Standing Rock Sioux Tribe in U.S. District Court in Washington, D.C., pipeline opponents see their actions as just beginning.

"I think this has essentially become ground zero for the climate (change) fight," Bill Kitchen of Johnstown, N.Y., said. "What happens if the courts rule in the company's favor? You've got all these people that aren't ready to give up and get out."

Kitchen, who works part-time for the Portland, Maine-based Biodiversity Research Institute and also participates in environmental activism, said the growing visibility of the protests will only help the cause.

If completed on schedule before the end of the year, the Dakota Access Pipeline would transport up to 450,000 barrels per day of Bakken crude with a future maximum capacity of 570,000 barrels per day.

The project originates in North Dakota and ends in Illinois. The pipeline has an overall cost of $3.78 billion.

A section of the pipeline will be bored under the Missouri River and run less than a mile from the tribe's reservation boundary.

Tribal leaders and groups have been staging protests over the pipeline for more than a month, citing concerns over potential contamination of the Missouri River if the pipeline were to rupture. Concerns over disturbing cultural sites have also loomed large.

Kitchen said the protest is an extension of the Keystone XL fight; the pipeline took years of review and required a State Department review because it would have crossed the U.S. and Canadian border. The project was eventually shelved.

"They need to take this right to Obama's doorstep," Kitchen said, adding he's optimistic the pipeline won't be completely built.

He believes Saturday's clash between approximately 300 protesters and 14 private security officers at a work site shouldn't be a stain on the protest effort.

Tribal officials said cultural sites had been recently discovered in an area where Dakota Access, LLC, a partner of Dallas-based Energy Transfer Partners, had begun work on Saturday.

This prompted a march by protesters, who confronted and assaulted several security officers, according to a Morton County Sheriff's Department release. Three security officers were injured. No arrests have yet been made but the incident is under investigation.

"To go plowing through those sites ... it's not going to look good for the company," Kitchen said.

Tonya Hertel, of Mobridge, S.D., agreed.

"I feel that the federal judge made the right decision by waiting," Hertel said, adding that it allowed both sides to be fairly heard before weighing in. "We feel we're going to win this."

Hertel had arrived to visit the camp and drop off donations to the protesters including clothing.

She says she's tried to visit at least once a week to provide whatever might be useful for the hundreds that are camping out from dozens of tribes from across the country as they settle in for the long haul.

She declined to speculate on whether or not the court will rule in their favor this week and how protesters might react.

"I think the tribes are doing a great job," Hertel said. "I feel people are hearing us."

Interesting piece…

Treaty issues underlie Dakota Access protests

John Hult, jhult@argusleader.com 9:02 a.m. CDT September 7, 2016

People protesting the construction on a four-state oil pipeline at a site in southern North Dakota gather at campground near the Standing Rock Sioux reservation on Thursday, Aug. 25, 2016. About 300 people were at the campsite where protesters from across the country and members of 60 tribes have gathered in opposition to the $3.8 billion Dakota Access pipeline that will pass through Iowa, Illinois, North Dakota and South Dakota.(Photo: James MacPherson, AP)

20 CONNECTTWEETLINKEDIN 1 COMMENTEMAILMORE

Protests in Cannonball, North Dakota took an ugly turn over the weekend, when a Dakota Access pipeline security team used pepper spray and dogs to ward off protesters who'd crossed a fence to stop construction work.

By that point, the Sacred Stone Camp's weeks-long protest had grown to historic proportions, as tribes from across the U.S. joined the Standing Rock Sioux Tribe in solidarity with its opposition to the 1,200-mile, $3.8 billion pipeline.

Organizers at the North Dakota camp near the confluence of the Cannonball and Missouri rivers say the protests represent the largest gathering of tribes since the days of Sitting Bull.

The opposition is concerned about potential oil spill in the Missouri River, which Dakota Access would cross, as well the possibility of damage to historic and cultural sites.

-
ARGUS LEADER
Judge grants short stop on 4-state oil pipeline construction

Pipeline supporters maintain that the project was properly vetted and permitted, that tribes had the opportunity to comment, and that Dakota Access will move the U.S. and its oil-consuming population closer to energy independence.

But there's something larger than the pipeline behind the pipeline protests.

The land on which the clash occurred is privately owned and permitted for construction, but it falls within a swath of the Great Plains that once belonged to the tribes. It also lies along the Missouri River, whose bottom lands were subject to a further erosion of tribal territory during the 20th Century.

“Part of the frustration you’re seeing play out at Cannonball are voices that didn’t get heard,” said lawyer and author Peter Capossela. “These are voices that haven’t been heard for a long time, and now they’re insisting that they be heard.”

Capossela has worked for several Native American tribes as a lawyer and wrote a book called "The Land Along the River" about the Missouri River treaties.

Much of what is now South Dakota, North Dakota, Nebraska and Wyoming was once part of the Great Sioux Reservation, created through the Fort Laramie Treaty of 1851. That treaty was altered multiple times, shrinking to encompass half of South Dakota in 1868, then pushing the reservation west of the Black Hills in 1877, tightening further in 1889 to create six smaller reservations.

-
ARGUS LEADER
Oil pipeline protest turns violent in southern North Dakota

Some of that land was opened to homesteaders in 1915.

Then, after Missouri River flooding in the 1940s, bottom lands were taken by the Army Corps of Engineers as part of the Pick-Sloan plan to dam the river.

Jurisdiction over those bottom lands in South Dakota – which the tribes had hoped to reclaim in the 1990s – was given to the Department of Game, Fish and Parks through the Water Resources Development Act of 1999.

Capossela sees a clear line between the treaties of the mid-1800s, failure to honor those treaties and the handling of the pipeline project by state and federal regulators.

Beyond physical boundaries are issues of cultural sites. Even when land is privately held, Capossela said, tribes have the “right of repatriation” for human remains and cultural artifacts found on private land.

That has played out in hearings on the pipeline at the state level, and continues to be one focal point of a lawsuit filed in U.S. District Court in Washington, D.C.

The Standing Rock Sioux Tribe filed a lawsuit against the Corps of Engineers in late July, alleging that the agency failed to reach out to or adequately consult tribes during the planning process.

-
ARGUS LEADER
12 people arrested at Dakota Access Pipeline demonstration

“DAPL claims to have completed cultural resource surveys along the entire pipeline length,” the tribe’s complaint said. “However, the out-of-state, non-Tribal consultants hired by DAPL to do cultural surveys are unable to assess the potential cultural significance of sites in this area to the Tribes.”

The lawsuit says the tribe “participated extensively” during the Corps’ public comment process.

Dakota Access and its supporters disagree. If there’s been a lack of consultation, they say, it’s not for lack of trying.

Dakota Access filed affidavits saying its representatives reached out to Standing Rock officials to ask about tribal surveys on numerous occasions, but that most tribes refused to participate.

“The only response or comments we received from the Standing Rock Sioux Tribe were to stop the project categorically avoid the entire western Great Plains Region as that is considered the Greater Sioux Nation’s ‘historical range,’ which is an impossible request to accommodate,” wrote Joey Mahmoud, VP of Dakota Access.

Joel Ames, Tribal Liaison for the Corps of Engineers Omaha District, wrote in the Corps’ response that he first attempted to consult with the Standing Rock Sioux Tribe in September of 2014. He wrote that a Tribal Historic Preservation Officer named Waste’ Win Young did not attend scheduled meetings and later declined to consult with the Corps, telling Ames in February of 2015 that she intended to work directly with Dakota Access.

-
ARGUS LEADER
Judge orders protesters not to interfere with Dakota Access oil pipeline

Ames wrote that he continued trying to work with Standing Rock throughout 2015, but that tribal officials cancelled meetings, failed to return phone calls or sent responses that accused the Corps of trying to circumvent the consultation process.

The Corps presented tribes with a draft environmental assessment in December of 2015. Tribal officials from Standing Rock requested a full environmental impact statement and continued to request a full consultation with tribes to create one until the project was permitted by the Corps in late July.

Such back-and-forth over consultation is a mark of disputes between the federal government and tribes, Capossela said.

“The extent of consultation is something that always gets disputed,” Capossela said.

By April, people had begun to gather at the Cannonball camps. By August, North Dakota Governor Jack Dalrymple had declared a state of emergency, saying the protests constituted a “significant public safety concern.”

The weekend represented the most violent incident. A tribal spokesman said six people were bitten by dogs, including a child, and that at least 30 people were pepper-sprayed. Law enforcement said protesters injured four security guards and two dogs.

ARGUS LEADER
Native American teens run to protest pipeline

After the clashes, the Corps filed a motion saying it did not oppose a temporary restraining order in the interest of "preserving peace" until a final decision on the Standing Rock lawsuit is reached.

The judge granted a temporary order on Tuesday, but only to stop work on State Highway 1806 and 20 miles east of Lake Oahe in North Dakota. Work on the west side can continue.

"We are disappointed that the U.S. District Court's decision does not prevent DAPL from destroying our sacred sites as we await a ruling on our original motion to stop construction of the pipeline," Standing Rock Chairman David Archambault II said in a statement.

Judge James Boasberg said he intends to issue a decision on the legality of the Corps' permit by Friday.

If history is any indication, however, the decision will not put an end to the opposition.

Police use pepper spray while arresting 83 at Dakota Access Pipeline protest

- Mike Anderson Journal staff
  -
- Updated Oct 23, 2016

Editor's note: As part of the Journal's ongoing coverage of the massive Dakota Access Pipeline protest in North Dakota, staff writer Mike Anderson has been camping in a tent near the protest site. He filed this dispatch from the scene on Saturday.

CANNON BALL, N.D. | A peaceful protest against the Dakota Access Pipeline ended in the arrests of 83 people in North Dakota on Saturday morning amid a chaotic scene in which police in riot gear used pepper spray to break up and subdue a group of 200 to 300 protesters.

It is the highest number of people arrested in a single day in North Dakota during the last several months of protest actions against the oil pipeline, bringing the total number of arrests up to 222.

Though the protesters behaved non-violently and cooperated with the police, North Dakota law enforcement officials described Saturday's events as a riot. Police have offered conflicting reports alleging that one protester either verbally threatened an officer, or tried to physically grab away a can of pepper spray, resulting in the protester and the officer both being pepper sprayed in the face.

Most, if not all, of those arrested after the 5-hour ordeal on Saturday will be charged with criminal trespass, a misdemeanor, according to Morton County Sheriff spokesperson Rob Keller. Other charges included assault on a peace officer, reckless endangerment, engaging in a riot, resisting arrest, and fleeing an officer on foot.

"It's an unlawful activity," Keller said during phone interview on Saturday afternoon. "The bottom line is it's on private property. It's posted, 'No Criminal Trespass'. It's like you're invading someone's home. Consequently, there were arrests that were made."

The arrests occurred as the protesters were marching through wide-open prairie lands along the route of the Dakota Access Pipeline west of Highway 1806 outside Cannon Ball, N.D. They hoped to get to four fellow protesters who had locked themselves to a piece of construction equipment in the early morning hours at sites where the pipeline, which is planned to be buried beneath the Missouri River, is now under construction.

A police statement said the four were arrested after they were found, "attached to the vehicle; two attached to the outside of the vehicle, one attached to the steering wheel and another whose body was outside the vehicle with his arm fed through a hole in the door and his hand was in a bucket of hardened concrete."

The call to action went through the main resistance camp around 5:20 a.m. while it was still dark and freezing cold. A man walked through the camp speaking through a megaphone.

"Wake up relatives," he said. "Wake up water protectors. Wake up land defenders. Time to wake up. Time to send our boys to the universe. Time to send our boys to the rising sun."

A convoy of vehicles formed in the camp, a prayer was held, and the assembled were instructed to behave peacefully and respectfully if they encountered police.

“I know it’s hard on the front line,” the prayer leader said in the dark. “But do not cuss, do not holler. If you see someone getting out of hand, tell them to calm down.”

Then the convoy moved out. Parking their vehicles along the highway, the protesters began hiking into the field as the sun rose a little before 8 a.m. Their path took them along a craggy dirt road near the route of the Dakota Access Pipeline on land that tribal members of the Hunkpapa Sioux of Standing Rock said is filled with sacred burial sites.

Some of the protesters remained behind as several hundred others carrying signs and banners began marching into the field, singing, praying, and burning bundles of ceremonial sage as they went.

They walked two to three miles inward when they encountered a line of more than 50 officers from multiple law enforcement agencies. Most of the officers wore riot gear, most held wooden truncheons, and some had shotguns, canisters of pepper spray, and tear gas grenade launchers in their hands. Two armored personnel carriers arrived later while a helicopter circled low overhead.

The protesters and police lines met in the middle of an open field. The protesters remained calm, playing drums and offering prayers in English and Lakota to the officers, who remained stone-faced and uncommunicative.

When the police line began to advance on the protesters, the leaders of the group instructed everyone to fall back and cooperate with the police. They were dispersing when an officer spoke over a loud-speaker from the turret of an armored vehicle.

His only words — and the only words police spoke to the protesters all morning — were, “You’re all under arrest for trespassing.”

The police continued to advance on the fleeing protesters, snatching some of the stragglers, throwing them behind their lines, and pepper-spraying several others in the face as they trod silently forward.

The police eventually surrounded the group, repeating that every one of the 200 to 300 people present would be placed under arrest. The protesters linked arms and tied bandanas to their faces as the officers pressed in, splitting the group and pressing many to the ground. Most, if not all of the men and women taken into custody, did not resist arrest.

A small group managed to retreat over the hill, a few pouring water into the eyes of friends who had been stung by pepper spray and guiding them by hand up the dirt road as they made their way back to camp.

“It was all peaceful. And then the cops showed up," said Harmony Restoule, a young Ojibwe woman from Northern Ontario, Canada. “It was really scary when the police kicked into action.”

Restoule went to the demonstration with her cousin Paige, both of whom participated in mass protests during the Idle No More movement, a grassroots campaign organized in 2012 by the indigenous peoples of Canada against perceived legislative violations of their treaty rights.

“The Canadian police never showed up in riot gear,” Paige Restoule said.

A young man from California who identified himself only as Ahkua said his friend was among the people arrested, and that the police took him after he knelt to the ground to help someone else up.

“There were a few officers who were excessively aggressive and got the others riled up,” he said. “Most cops are pretty chill.”

Saturday’s protest was one of several high profile demonstrations in the Cannon Ball area against the Dakota Access Pipeline in recent months. Police arrested celebrity Shailene Woodley along with more than 20 others on Oct. 10 along the route of the pipeline near St. Anthony, N.D. Police referred to the event as a riot and charged many people with either inciting or engaging in a riot. At the time, it was the highest total number of arrests made in a single day.

The protesters, who now number in the thousands at a main camp near Cannon Ball, want to stop the ongoing construction of the pipeline that will transport oil from the Bakken and Three Forks formations of North Dakota, through South Dakota and Iowa, into southern Illinois. The pipeline would carry 450,000 barrels per day initially and could reach 570,000 barrels a day. The total length of the pipeline across the four states would be 1,134 miles, with 271 miles in South Dakota. The company's estimated cost for the South Dakota segment is $820 million.

On Sept. 3, police and private security forces used pepper spray and dogs to drive protesters away from construction equipment.

"Today's situation clearly illustrates what we have been saying for weeks, that this protest is not peaceful or lawful," Kirchmeier said in a press-release about Saturday's events. "This protest was intentionally coordinated and planned by agitators with the specific intent to engage in illegal activities. I have repeatedly stressed that it is our job to provide safety and security for all involved in the situation at hand. This is not about the pipeline. This is not about the protesters. This is about the rule of law."

The protesters may have been peacefully dispersing on Saturday morning, Keller said, but that doesn't change the fact that they broke the law.

"That's the whole purpose of having a police line, to protect the (pipeline) property and their right to commerce," Keller said. "We are protecting the protesters too, and the ranchers as well."

When asked if she felt protected by the police, Harmony Restoule said, "No."

Panel votes to borrow $6M for costs associated with pipeline protests, blasts feds inaction

By Mike Nowatzki Today at 12:18 p.m.

BISMARCK — The state Emergency Commission voted Wednesday, Sept. 21, to borrow up to $6 million from the state-owned Bank of North Dakota to support law enforcement efforts related to the Dakota Access Pipeline protests, but not before members blasted the lack of federal support to deal with protesters camped out on federal land.

"I know we have to do it, but it's not right, and the lack of federal involvement is disgusting," said House Majority Leader Al Carlson, R-Fargo. "And we need to protect our North Dakota people, but this is just plain wrong that they're ignoring this issue."

Maj. Gen. Alan Dohrmann, adjutant general of the North Dakota National Guard, said the state has spent $1.88 million on protest-related costs so far, the bulk of it personnel costs for

assistance from the National Guard and law enforcement agencies from across the state. Morton County estimated last week it had spent about $400,000 on top of that.

The $6 million line of credit from the Bank of North Dakota will fund future efforts as authorized by Gov. Jack Dalrymple's emergency declaration Aug. 19. The Legislature will have to make a deficiency appropriation from the state's general fund to pay back the bank after lawmakers convene in regular session in January, Budget Director Pam Sharp said.

Authorities have responded to multiple protests at pipeline construction sites and in Bismarck-Mandan since protests began to ramp up in mid-August. They've also created a traffic checkpoint and increased patrols in Morton County, which they say are necessary for the safety of local residents, farmers and ranchers and the thousands of protesters camped out on U.S. Army Corps of Engineers land about 35 miles south of Mandan.

Last Friday, the Corps of Engineers issued a special use permit for protesters to use Corps land south of the Cannonball River but not the land north of the river where the majority of them are camping, because that land is subject to an existing grazing lease.

Carlson said it bothers him that it's "a federal problem that they've ignored" and the Legislature will have to cover the costs at a time of budget shortfalls. Rep. Jeff Delzer, R-Underwood, agreed.

"The taxpayers shouldn't have to be paying for this," he said.

Dalrymple said he's been in contact with the White House, U.S. Department of Justice, Corps of Engineers, Department of Interior and the state's congressional delegation but is still waiting to hear if they're going to help financially or with in-kind services.

"The problem that we have, of course, is that these public safety needs are imminent every day," Dalrymple said. "We really have no choice but to protect the public with law enforcement. Recovering funds from the federal government is definitely a top priority, but it undoubtedly will take some time."

The commission's other members are Secretary of State Al Jaeger, Rep. Jeff Delzer, R-Underwood, Sen. Rich Wardner, R-Dickinson, and Sen. Ray Holmberg, R-Grand Forks.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press
- Updated 11 hrs ago

- AP

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe's reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol's Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because "a neighbor state asked for help and Wyoming answered the call."

"North Dakota asked for help from all 50 states, so Wyoming and other states responded," Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

"It kind of sheds light on really who's running the show here," Baldes said. "The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets."

Mead denied that the decision to send troopers was political.

"The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue," he said.

Police use pepper spray while arresting 83 at Dakota Access Pipeline protest

- Mike Anderson Journal staff
    -
- Updated Oct 23, 2016

Editor's note: As part of the Journal's ongoing coverage of the massive Dakota Access Pipeline protest in North Dakota, staff writer Mike Anderson has been camping in a tent near the protest site. He filed this dispatch from the scene on Saturday.

CANNON BALL, N.D. | A peaceful protest against the Dakota Access Pipeline ended in the arrests of 83 people in North Dakota on Saturday morning amid a chaotic scene in which police in riot gear used pepper spray to break up and subdue a group of 200 to 300 protesters.

It is the highest number of people arrested in a single day in North Dakota during the last several months of protest actions against the oil pipeline, bringing the total number of arrests up to 222.

Though the protesters behaved non-violently and cooperated with the police, North Dakota law enforcement officials described Saturday's events as a riot. Police have offered conflicting reports alleging that one protester either verbally threatened an officer, or tried to physically grab away a can of pepper spray, resulting in the protester and the officer both being pepper sprayed in the face.

Most, if not all, of those arrested after the 5-hour ordeal on Saturday will be charged with criminal trespass, a misdemeanor, according to Morton County Sheriff spokesperson Rob Keller. Other charges included assault on a peace officer, reckless endangerment, engaging in a riot, resisting arrest, and fleeing an officer on foot.

"It's an unlawful activity," Keller said during phone interview on Saturday afternoon. "The bottom line is it's on private property. It's posted, 'No Criminal Trespass'. It's like you're invading someone's home. Consequently, there were arrests that were made."

The arrests occurred as the protesters were marching through wide-open prairie lands along the route of the Dakota Access Pipeline west of Highway 1806 outside Cannon Ball, N.D. They hoped to get to four fellow protesters who had locked themselves to a piece of construction equipment in the early morning hours at sites where the pipeline, which is planned to be buried beneath the Missouri River, is now under construction.

A police statement said the four were arrested after they were found, "attached to the vehicle; two attached to the outside of the vehicle, one attached to the steering wheel and another whose body was outside the vehicle with his arm fed through a hole in the door and his hand was in a bucket of hardened concrete."

The call to action went through the main resistance camp around 5:20 a.m. while it was still dark and freezing cold. A man walked through the camp speaking through a megaphone.

"Wake up relatives," he said. "Wake up water protectors. Wake up land defenders. Time to wake up. Time to send our boys to the universe. Time to send our boys to the rising sun."

A convoy of vehicles formed in the camp, a prayer was held, and the assembled were instructed to behave peacefully and respectfully if they encountered police.

“I know it’s hard on the front line,” the prayer leader said in the dark. “But do not cuss, do not holler. If you see someone getting out of hand, tell them to calm down.”

Then the convoy moved out. Parking their vehicles along the highway, the protesters began hiking into the field as the sun rose a little before 8 a.m. Their path took them along a craggy dirt road near the route of the Dakota Access Pipeline on land that tribal members of the Hunkpapa Sioux of Standing Rock said is filled with sacred burial sites.

Some of the protesters remained behind as several hundred others carrying signs and banners began marching into the field, singing, praying, and burning bundles of ceremonial sage as they went.

They walked two to three miles inward when they encountered a line of more than 50 officers from multiple law enforcement agencies. Most of the officers wore riot gear, most held wooden truncheons, and some had shotguns, canisters of pepper spray, and tear gas grenade launchers in their hands. Two armored personnel carriers arrived later while a helicopter circled low overhead.

The protesters and police lines met in the middle of an open field. The protesters remained calm, playing drums and offering prayers in English and Lakota to the officers, who remained stone-faced and uncommunicative.

When the police line began to advance on the protesters, the leaders of the group instructed everyone to fall back and cooperate with the police. They were dispersing when an officer spoke over a loud-speaker from the turret of an armored vehicle.

His only words — and the only words police spoke to the protesters all morning — were, “You’re all under arrest for trespassing.”

The police continued to advance on the fleeing protesters, snatching some of the stragglers, throwing them behind their lines, and pepper-spraying several others in the face as they trod silently forward.

The police eventually surrounded the group, repeating that every one of the 200 to 300 people present would be placed under arrest. The protesters linked arms and tied bandanas to their faces as the officers pressed in, splitting the group and pressing many to the ground. Most, if not all of the men and women taken into custody, did not resist arrest.

A small group managed to retreat over the hill, a few pouring water into the eyes of friends who had been stung by pepper spray and guiding them by hand up the dirt road as they made their way back to camp.

“It was all peaceful. And then the cops showed up," said Harmony Restoule, a young Ojibwe woman from Northern Ontario, Canada. “It was really scary when the police kicked into action.”

Restoule went to the demonstration with her cousin Paige, both of whom participated in mass protests during the Idle No More movement, a grassroots campaign organized in 2012 by the indigenous peoples of Canada against perceived legislative violations of their treaty rights.

“The Canadian police never showed up in riot gear,” Paige Restoule said.

A young man from California who identified himself only as Ahkua said his friend was among the people arrested, and that the police took him after he knelt to the ground to help someone else up.

“There were a few officers who were excessively aggressive and got the others riled up,” he said. “Most cops are pretty chill.”

Saturday’s protest was one of several high profile demonstrations in the Cannon Ball area against the Dakota Access Pipeline in recent months. Police arrested celebrity Shailene Woodley along with more than 20 others on Oct. 10 along the route of the pipeline near St. Anthony, N.D. Police referred to the event as a riot and charged many people with either inciting or engaging in a riot. At the time, it was the highest total number of arrests made in a single day.

The protesters, who now number in the thousands at a main camp near Cannon Ball, want to stop the ongoing construction of the pipeline that will transport oil from the Bakken and Three Forks formations of North Dakota, through South Dakota and Iowa, into southern Illinois. The pipeline would carry 450,000 barrels per day initially and could reach 570,000 barrels a day. The total length of the pipeline across the four states would be 1,134 miles, with 271 miles in South Dakota. The company's estimated cost for the South Dakota segment is $820 million.

On Sept. 3, police and private security forces used pepper spray and dogs to drive protesters away from construction equipment.

"Today's situation clearly illustrates what we have been saying for weeks, that this protest is not peaceful or lawful," Kirchmeier said in a press-release about Saturday's events. "This protest was intentionally coordinated and planned by agitators with the specific intent to engage in illegal activities. I have repeatedly stressed that it is our job to provide safety and security for all involved in the situation at hand. This is not about the pipeline. This is not about the protesters. This is about the rule of law."

The protesters may have been peacefully dispersing on Saturday morning, Keller said, but that doesn't change the fact that they broke the law.

"That's the whole purpose of having a police line, to protect the (pipeline) property and their right to commerce," Keller said. "We are protecting the protesters too, and the ranchers as well."

When asked if she felt protected by the police, Harmony Restoule said, "No."

In North Dakota, people vs. oil pipeline protest strengthens

- By JAMES MacPHERSON
- Updated Aug 13, 2016

NEAR THE STANDING ROCK SIOUX RESERVATION, N.D. (AP) — Opponents of a $3.8 billion Midwest oil pipeline are vowing to keep up the pressure after this week's arrests at a construction zone in North Dakota.

The Standing Rock Sioux had quietly opposed the Dakota Access pipeline for months at a "spirit camp" near their reservation, which straddles the North Dakota-South Dakota border.

Protesters' resistance heated up this week as at least 18 people were arrested, and a Hollywood actress joined their gathering.

Tribal members say the pipeline would disturb sacred sites and could affect drinking water on the reservation and for people downstream.

The four-state pipeline's path in North Dakota would cross beneath the Little Missouri River once and the Missouri River twice. The company said the pipeline would include safeguards such as leak detection equipment.

Work to resume on Dakota Access Pipeline near Lake Oahe

By Mike Nowatzki Today at 9:34 a.m.

BISMARCK – The company building the Dakota Access Pipeline said Tuesday, Oct. 11, it looks forward to a "prompt resumption" of construction near Lake Oahe and hopes the federal government will assist local law enforcement officials dealing with protests of the pipeline.

Dallas-based Energy Transfer Partners released a statement saying it is pleased with a federal appeals court decision Sunday denying the Standing Rock Sioux Tribe's request for an emergency injunction to stop construction of the $3.8 billion, 1,172-mile pipeline that will carry 470,000 barrels of crude oil per day from North Dakota to Illinois.

The three-judge panel in Washington, D.C., also lifted a temporary suspension of construction activities within 20 miles east and west of Lake Oahe, a dammed section of the Missouri River.

"In light of Sunday's court decision, Dakota Access looks forward to a prompt resumption of construction activities east and west of Lake Oahe on private land. We reiterate our commitment to protect cultural resources, the environment and public safety," the company said.

Company spokeswoman Vicki Granado declined to specify when the company will resume construction in the 20-mile area, which includes the area along Highway 1806 where protest activities to block pipeline construction began Aug. 10. An estimated 2,500 to 3,000 American Indians and other pipeline opponents are encamped along the highway and have drawn international support.

The proposed construction area also includes a stretch west of Highway 1806 that was bulldozed on Sept. 3, the day after the Standing Rock Sioux Tribe filed court documents identifying that part of the route as containing burial grounds and other sacred sites. Angry protesters clashed with the pipeline's private security that day, with both sides claiming injuries, and a joint law enforcement task force is investigating the incident.

Last week, state archeologists concluded that no sacred sites were destroyed, but the tribe disputes that conclusion because its historic preservation officer wasn't allowed to participate in the survey. The tribe's ongoing lawsuit against the U.S. Army Corps of Engineers contends the agency didn't properly consult the tribe before granting permits for the project.

Energy Transfer Partners said the decisions by two separate federal courts show otherwise.

"The Army Corps and Dakota Access carefully considered the views of all potentially affected tribes that chose to participate in the consultative process prescribed by Congress, and fully complied with both the letter and the spirit of the National Historic Preservation Act," the company said. "Their careful and sensitive work has been reviewed and approved by highly qualified private and state-employed archeologists."

The pipeline was 87 percent completed in North Dakota at the end of September and is largely completed in South Dakota, Iowa and Illinois.

"We continue to believe that the Army Corps will soon issue the easement for approximately 1,100 feet necessary for the crossing beneath the Missouri River – the sole remaining authorization necessary for completion of the project," the company said.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it won't authorize pipeline construction on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The three agencies asked that the company voluntarily pause construction within 20 miles of the lake.

The company on Tuesday urged that any protests "be undertaken in a peaceful and law abiding manner." Authorities arrested 27 protesters at two construction sites Monday, including actress Shailene Woodley, bringing the total number of arrests to 123.

"All construction efforts will be undertaken in close coordination with state and local law enforcement officials, and we are hopeful their law enforcement efforts will be supplemented by those of the federal government," the company said.

State officials and lawmakers have decried the lack of financial and law enforcement support from the federal government, given that the Corps is withholding the lake-crossing easement and allowing protesters to camp on Corps-owned land. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs, and Monday's response involved deputies from Wisconsin – the first time out-of-state officers have been used.

Actress Woodley released from jail after arrest at Dakota Access protests

By Mike Nowatzki on Oct 10, 2016 at 9:59 p.m.

ST. ANTHONY, N.D. – Authorities arrested Hollywood actress Shailene Woodley and 26 other protesters at two Dakota Access construction sites in Morton County on Monday, Oct. 10, as pipeline opponents vowed to keep disrupting the project after an appeals court ruling Sunday that allows work to resume on a 20-mile stretch west of Lake Oahe.

Despite the court's ruling, the U.S. Army Corps of Engineers said Monday it won't authorize construction of the $3.8 billion pipeline on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The Corps also repeated its request that Dakota Access LLC voluntarily pause all construction activity within 20 miles east or west of the lake. A company spokeswoman did not return a message seeking comment.

Monday marked the most arrests in one day since protests of the four-state, 1,172-mile pipeline began two months ago just north of the Standing Rock Sioux Reservation, where tribal members fear the pipeline will leak and contaminate their water supply and destroy sacred sites on ancestral lands.

Authorities were notified about 7:15 a.m. Monday that two protesters had attached themselves to construction equipment about 2 miles southwest of St. Anthony, Morton County Sheriff's Department spokesman Rob Keller said. Both were arrested for felony reckless endangerment, and a third person filming the event also was arrested, he said.

A few miles south along Highway 6, about 200 protesters converged on the west side of the road where the pipeline is strung but not yet buried, including Woodley, who live-streamed video of the protest on Facebook. The star of the "Divergent" film series was arrested at 12:05 p.m. on suspicion of criminal trespass and engaging in a riot, the same basis for most of the 27 arrests, said Cass County Sheriff Paul Laney, operations chief.

Woodley was released on $500 bond about 3:30 p.m. Her next court appearance will be Oct. 24.

Protesters erected an uncovered teepee in the pipeline corridor, and more than a dozen people who locked arms inside it were arrested. The 27 arrests brings the total to 123 so far. More than 100 law enforcement officers, many of them wearing riot gear, responded to the scene, directing protesters back across the fence line and forming a human barricade to keep them off the construction site. Protesters formed their own line less than 10 feet away, holding signs, pounding drums and yelling refrains such as "Respect our land, respect our water, honor our treaties." "They plan to continue building, and we plan to continue to disrupt," a protester declared through a bullhorn. No physical violence was reported. But Laney disputed claims that it was a peaceful protest, noting protesters used threatening speech, refused to leave when asked and, at one point, surrounded a deputy who was arresting a protester, forcing another deputy to break up the circle. "This was not a protest," he said. "This was a riot." Watch the video below to see Woodley's arrest. Fast-forward to the last five minutes of the video to see the arrest.

Robby Romero, an Apache from Taos, N.M., criticized what he described as the militarized police response, complete with an armored Mine-Resistant Ambush Protected vehicle parked at the top of the hill on Highway 6 overlooking the protest. “This is a crazy response to a peaceful resistance to something that is so dangerous to all life,” he said, adding, “We will win this fight, peacefully. We come with prayer and feathers. They come with weapons of destruction.” Both protests took place outside the 20-mile zones east and west of the Missouri River at Lake Oahe where a federal appeals court had ordered Dakota Access LLC to pause construction while the court decided on the Standing Rock Sioux Tribe’s request for an emergency injunction. The three-judge panel in Washington, D.C., issued a ruling Sunday rejecting the tribe’s request and dissolving the 20-mile, no-work zone.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it hopes to conclude its review soon. The agencies said they “continue to respect the right to peaceful protest and expect people to obey the law.” “We also look forward to a serious discussion during a series of consultations, starting with a listening session in Phoenix on Tuesday, on whether there should be nationwide reform on the Tribal consultation process for these types of infrastructure projects,” they said.

Officers from Wisconsin assisted in Monday’s response. Schools in nearby St. Anthony and Flasher went on lockdown. Laney said the 200 to 300 protesters who took part are a “distinct” group within the 2,500 to 3,000 mostly peaceful people camping along Highway 1806 about 25 miles away near the confluence of the Missouri and Cannonball rivers. He said protesters’ message has been heard “loud and clear” over the last 62 days, but added “the courts have ruled” and the company has a legal right to do construction. “If their determination is that they’re going to … do everything they can to stop this work, I guess we’re going to be here for a while,” he said.

Pipeline route moved south of Bismarck partly because of drinking water contamination concerns

By Amy Dalrymple Today at 7:16 a.m.

ⓘ Dakota Access Pipeline crews leave the work site on Monday, Aug. 15, 2016, north of the Standing Rock Sioux Tribe Reservation. Work has not yet resumed in that area due to safety concerns surrounding the protest. Amy Dalrymple/Forum News Service

BISMARCK — An early proposal for the Dakota Access Pipeline called for the project to cross the Missouri River north of Bismarck, but one reason that route was rejected was its potential threat to Bismarck's water supply, documents show.

Now a growing number of protesters are objecting to the oil pipeline's Missouri River crossing a half-mile north of the Standing Rock Sioux Reservation, which they argue could threaten the water supply for the tribe and other communities downstream.

Early in the planning process, Dakota Access considered but eliminated an alternative that would have crossed the Missouri River about 10 miles north of Bismarck instead of the route currently under construction.

The U.S. Army Corps of Engineers evaluated the Bismarck route and concluded it was not a viable option for many reasons. One reason mentioned in the agency's environmental assessment is the proximity to wellhead source water protection areas that are avoided to protect municipal water supply wells.

In addition, the Bismarck route would have been 11 miles longer with more road crossings and waterbody and wetland crossings. It also would have been difficult to stay 500 or more feet away from homes, as required by the North Dakota Public Service Commission, the Corps of Engineers states.

The Bismarck route also would have crossed an area considered by federal pipeline regulators as a "high consequence area," which is an area determined to have the most significant adverse consequences in the event of a pipeline spill.

The Standing Rock Sioux Tribe argues that consequences would be severe if the 30-inch pipeline carrying 450,000 barrels of oil per day were to leak near the reservation's water intake valves.

The tribe is suing the Corps of Engineers over its approval of the water crossing. A hearing is scheduled for next week in Washington, D.C.

"We are taking all necessary legal steps to curtail construction on the pipeline until our grievances are heard and resolved in court," Tribal Chairman Dave Archambault II said Thursday.

State regulators did not evaluate the Bismarck route because Dakota Access had selected the current Missouri River crossing when it submitted its application in December 2014, said Public Service Commission Chairwoman Julie Fedorchak.

A map included in the Dakota Access application has a May 2014 date on the Bismarck route.

The proposed route was changed in September 2014 to cross the Missouri River near the Standing Rock reservation, according to dates on the PSC documents.

Dakota Access said in a statement that the company conducts extensive surveys of proposed pipeline routes to mitigate the pipeline's impact on the area and determine the safest route.

The corps, which issued a permit for the water crossing, said the pipeline will be installed 92 feet below the riverbed with horizontal directional drilling methods to minimize impacts. The Corps also noted safeguards that will be in place, including remote monitoring of the pipeline and emergency response plans.

"Given the engineering design, proposed installation methodology, quality of material selected, operations measures and response plans the risk of an inadvertent release in, or reaching, Lake Oahe is extremely low," the corps concluded.

Public Service Commissioners defended their approval of the pipeline project this week, saying it was thoroughly reviewed and considered risks to water bodies. The state regulators also said they held a 13-month review process but didn't hear these concerns from the tribe.

Standing Rock leaders have, however, repeatedly objected to the way the corps evaluated the route and now are asking a federal judge to intervene.

Pipeline construction is halted in the protest area until the Aug. 24 hearing on the tribe's court case, Morton County Sheriff Kyle Kirchmeier said Thursday.

Pipeline opponents also demonstrated late Thursday afternoon near the state Capitol, chanting, "We can't drink oil, keep it in the soil."

Gov. Jack Dalrymple issued his first public statement on the protest Thursday, emphasizing safety and stating that law enforcement and state agency directors would continue to closely monitor the situation.

"While we are concerned about some cases of unlawful activity, we are pleased that no one has been injured and it is our top priority to keep it that way," Dalrymple said.

Pipeline protesters rally in front of N.D. Capitol

By Nick Smith / Bismarck Tribune on Aug 18, 2016 at 8:42 p.m.

BISMARCK—Opponents of the controversial Dakota Access Pipeline project took to the streets Thursday evening for a peaceful protest in solidarity against a project they say could cause severe harm to Missouri River drinking water for tribal members and others.

"Even though the oil companies might have the money, they can't subdue the message," Cody Hall of Eagle Butte, S.D., spokesman for the Red Warrior Camp, said. "This is our stand. We all depend on water."

More than 200 protesters initially lined both sides of East Boulevard Avenue while about 60 members of state and local law enforcement looked on at the south entrance of the state Capitol. A city permit for 4 to 6 p.m. was granted for the protest.

East Boulevard Avenue was soon shut down between Fourth Street North and Seventh Street North to traffic, allowing participants to chant, dance and drum in the intersection in front of the Capitol.

"We will win this fight. We have to take a vigorous stance to fight for what's right," Hall said.

Holding signs with phrases including "No Dakota Access Pipeline" and "Rezpect our Water," participants chanted, cheered and were in high spirits.

"We can't drink oil, keep it in the soil," was a popular chant among the crowd.

As the protest wound down, participants invited members of law enforcement to join in the dancing, which a few obliged in doing briefly.

Afterward, protesters formed a line and walked the police line at the Capitol entrance, shaking hands and joking with officers.

Thursday's protest was an extension of the movement that's sprung up off of Highway 1806 near the Standing Rock Sioux reservation. From 1,500 to 2,000 protesters are camping near a part of the project site in Morton County.

At the same time as the protest by the Capitol, about 20 people were at the now-closed work site along the Cannon Ball River, where protests have been staged over the past week. As no law enforcement or pipeline workers were there, the protesters walked around both sides of the barricade and up the path towards the construction site.

Construction workers recently had began ground work near where a section of the pipeline will go and a portion is planned to be bored under the Missouri River and run less than a mile from the tribe's reservation boundary.

This week, work temporarily ceased at the site. Oral arguments in a lawsuit filed by the Standing Rock Sioux tribe against the U.S. Army Corps of Engineers last month over the permits issued for the project are set for Wednesday in U.S. district court in Washington, D.C.

Protesters' concerns include potential contamination of the Missouri River if the pipeline were to rupture as well as the disturbance of cultural sites along the route.

Dakota Access LLC, a partner of Dallas-based Energy Transfer Partners, countered the Standing Rock lawsuit earlier this week by filing a lawsuit against several protesters, alleging threats to the safety of construction workers and law enforcement.

At least 28 arrests had been made during the protests near the project site for disorderly conduct and criminal trespass.

Dallas Goldtooth, a member of the Lower Sioux Dakota Nation in Minnesota and of the Indigenous Environmental Network, said Thursday's effort helps put the issue in the spotlight. He said putting it closer to the public in an urban setting also builds momentum.

"It definitely helps to engage and bring this discussion into public spaces. Folks are committed for the long run," Goldtooth said.

Doris Anderson, who lives along East Boulevard Avenue a few doors down from the intersection, said she's neutral on the project but said she understood opponents' concerns.

"I think it's been pretty calm. Respectful and calm," Anderson said as she looked on from her front lawn. "And they've got a lot to say."

Anderson suggested that, if the company altered the design of the project slightly, it might alleviate concerns by opponents. She added she'd never seen a large protest in person before.

The 1,172-mile, 30-inch diameter pipeline when finished would originate in western North Dakota near Stanley and end near Patoka, Ill.

Dakota Access began work on the nearly $3.8 billion project this spring following permit approval by state and federal officials. It would transport up to 450,000 barrels per day of Bakken crude when finished this year with a future capacity of 570,000 barrels per day.

Vicki Granado, a spokeswoman for Energy Transfer Partners, said in a statement the construction timeline remains unchanged.

"We are constructing this pipeline in accordance with applicable laws, and the local, state and federal permits and approvals we have received. This is an important energy infrastructure project that benefits all Americans and our national economy," she said

Pipeline route moved south of Bismarck partly because of drinking water contamination concerns

By Amy Dalrymple Today at 7:16 a.m.

ⓘ Dakota Access Pipeline crews leave the work site on Monday, Aug. 15, 2016, north of the Standing Rock Sioux Tribe Reservation. Work has not yet resumed in that area due to safety concerns surrounding the protest. Amy Dalrymple/Forum News Service

BISMARCK — An early proposal for the Dakota Access Pipeline called for the project to cross the Missouri River north of Bismarck, but one reason that route was rejected was its potential threat to Bismarck's water supply, documents show.

Now a growing number of protesters are objecting to the oil pipeline's Missouri River crossing a half-mile north of the Standing Rock Sioux Reservation, which they argue could threaten the water supply for the tribe and other communities downstream.

Early in the planning process, Dakota Access considered but eliminated an alternative that would have crossed the Missouri River about 10 miles north of Bismarck instead of the route currently under construction.

The U.S. Army Corps of Engineers evaluated the Bismarck route and concluded it was not a viable option for many reasons. One reason mentioned in the agency's environmental assessment is the proximity to wellhead source water protection areas that are avoided to protect municipal water supply wells.

In addition, the Bismarck route would have been 11 miles longer with more road crossings and waterbody and wetland crossings. It also would have been difficult to stay 500 or more feet away from homes, as required by the North Dakota Public Service Commission, the Corps of Engineers states.

The Bismarck route also would have crossed an area considered by federal pipeline regulators as a "high consequence area," which is an area determined to have the most significant adverse consequences in the event of a pipeline spill.

The Standing Rock Sioux Tribe argues that consequences would be severe if the 30-inch pipeline carrying 450,000 barrels of oil per day were to leak near the reservation's water intake valves.

The tribe is suing the Corps of Engineers over its approval of the water crossing. A hearing is scheduled for next week in Washington, D.C.

"We are taking all necessary legal steps to curtail construction on the pipeline until our grievances are heard and resolved in court," Tribal Chairman Dave Archambault II said Thursday.

State regulators did not evaluate the Bismarck route because Dakota Access had selected the current Missouri River crossing when it submitted its application in December 2014, said Public Service Commission Chairwoman Julie Fedorchak.

A map included in the Dakota Access application has a May 2014 date on the Bismarck route. The proposed route was changed in September 2014 to cross the Missouri River near the Standing Rock reservation, according to dates on the PSC documents.

Dakota Access said in a statement that the company conducts extensive surveys of proposed pipeline routes to mitigate the pipeline's impact on the area and determine the safest route.

The corps, which issued a permit for the water crossing, said the pipeline will be installed 92 feet below the riverbed with horizontal directional drilling methods to minimize impacts. The Corps also noted safeguards that will be in place, including remote monitoring of the pipeline and emergency response plans.

"Given the engineering design, proposed installation methodology, quality of material selected, operations measures and response plans the risk of an inadvertent release in, or reaching, Lake Oahe is extremely low," the corps concluded.

Public Service Commissioners defended their approval of the pipeline project this week, saying it was thoroughly reviewed and considered risks to water bodies. The state regulators also said they held a 13-month review process but didn't hear these concerns from the tribe.

Standing Rock leaders have, however, repeatedly objected to the way the corps evaluated the route and now are asking a federal judge to intervene.

Subject: Dakota Access Pipeline Update

American Indian tribes unite to protect Missouri River from pipeline

Unknown
Aug. 29, 2016
CAPJOURNAL-Pierre, SD

Standing Rock Reservation, tribal members continue strategic planning and prayers in their fight to stop the Dakota Access Pipeline from crossing the nearby Missouri River.

Different areas of the camp have specific designations, including an area where tribal members participate in sacred rituals, including a sweat lodge, where access is restricted to preserve the sanctity of the ceremonies.

Near the entrance of the campsite, different informational tents are set up to provide demonstrators with advice, supplies and other information prudent to continuing a nonviolent protest while keeping everyone involved safe.

With limited resources, the camp must rely on volunteers and the goodwill of others to provide supplies.

One man's job is to keep the fires burning with a steady feed of wood.

In another tent, hot food is prepared and given out to anyone who wants a meal.

A Standing Rock Sioux Tribe ambulance stands by in case a medical issue arises, especially since many of the demonstrators do not have access to daily medications in the remote, isolated area.

Despite the hardships, the spirit and will of protesters who want to keep the river safe is abundant.

Members from at least 200 tribes from across the U.S. have joined the protest in an effort to protect both the Standing Rock Sioux Tribe's main water source and the rights of the American Indian people. They don't want the Dakota Access Pipeline to go beneath the river, fearing a leak will contaminate the river with crude oil. The 1,134-mile pipeline would carry as much as 450,000 gallons of crude oil per day from North Dakota's Bakken oil fields to Illinois.

American Indian Movement official Chief Harry Goodwolf Kindness said this is the first time in more than 150 years that so many members from so many tribes have joined together.

"First time since the Battle of Greasy Grass, so it's been a long time," Kindness said.

Known by most white people as the Battle of Little Big Horn, it was in June 1876. Lakota, Northern Cheyenne and Arapaho tribes defeated U.S. Army forces led by George Custer.

"We refer to this pipeline as the black snake. This pipeline affects everybody, not just the Indian Nation. It's no different than somebody putting it right in downtown Los Angeles," he said.

Campsite stories

For Standing Rock Sioux Tribe member James Iron Eyes, the protest campsite resembles the tribal campsite stories his grandmother told him about when he was a child.

"My grandma told me a long time ago there were camps along the river near Mobridge, and it's kind of like that now," Iron Eyes said.

He has been involved with the protest since it started on Aug. 10.

“I came out here the first day and it felt good. You can just feel the power. It’s a great feeling,” he said.

Iron Eyes took a break from directing traffic at the campsite entrance to visit the nearby pipeline construction site, which workers abandoned on Aug. 15.

Flags from all the visiting tribes fly along the fence surrounding the construction site, exemplifying the solidarity of the Indian Nation in the fight to protect its rights and the water that sustains not only the lives of members of the Standing Rock Sioux Tribe, but all who prosper from the Missouri River.

Land concerns

After working in the Bakken oil fields, Iron Eyes has seen firsthand the destruction crude oil can cause.

“It was a job, you know, but after seeing (the land) get torn up like that ...” Iron Eyes said, shaking his head.

“They can’t guarantee it’s not going to leak. The ground shifts. Why can’t they take (the oil) on railway cars in tanks or something? It’s slowed down up there so much now. The oil business is not as busy it was,” Iron Eyes said.

His frustration was amplified after a judge Wednesday delayed ruling on an injunction filed by the Standing Rock Sioux Tribe to stop the pipeline from going under the river.

The lawsuit claims that the environmental assessment permit was approved by the U.S. Army Corps of Engineers without adequate consultation from the tribe regarding the environmental impact and cultural historic preservation.

Dallas Goldtooth, Keep It in the Ground campaign organizer, said the camp is not going anywhere until there is no threat of the pipeline crossing the river.

“There is frustration with the lack of action by the federal judge. Obviously, we believe the arguments the tribe put forth are substantial,” Goldtooth said.

Attorney Michelle Cook, who works in the area of indigenous people’s law and policy in Tucson, Ariz., told demonstrators at the camp that the possibility of an injunction is not why construction stopped.

“The sheriff has said he will not allow them to do construction until it’s safe,” Cook said during a Thursday campsite meeting. “As long as this camp is sturdy and robust and in prayer, that pipeline is going to have a little trouble starting up again. Not because we are violent, but because we are present. We are present to protect the water,” Cook said.

Public safety

Morton County Sheriff Kyle Kirchmeier said that from the first day of the protest the No. 1 concern has been public safety, regardless of beliefs.

“We wanted to make sure that it remained peaceful between the protesters, the workers who have the legal right to be there and the law enforcement officers. We have nothing to do with the pipeline. We don’t put in the pipeline. Like I’ve been saying, we’re not pro-pipeline, we’re not pro-protest, but we’re pro-law,” he said.

So far, there have been 29 arrests and 32 charges relating to the protest. All the charges have been misdemeanors, Kirchmeier said.

“They have the right to go there and the right to protest if they remain peaceful. There’s a difference between peaceful and nonviolent, also. They have the right to protest, but they don’t have the right to disrupt traffic, close a road, trespass on private property, disrupt law enforcement or legal activities, and some of those things obviously have been occurring. That is when the whole safety concern comes in that public safety is No. 1,” he said.

Budget impact

Kirchmeier's department's budget has taken a hit due to the overtime officers were required to work because of the protest.

"The numbers we've put together with the people we have now and the overtime, we're at about $100,000 per week," he said.

Kirchmeier said there are 34 sworn officers working in the department to cover Morton County, which has a population of just over 30,000 people.

The Morton County Commission chairman signed an emergency declaration resolution on Aug. 15 to tap outside law enforcement agencies.

Kirchmeier said the sheriff's department is working in cooperation with law enforcement from the Bureau of Indian Affairs, Cass County Sheriff's Department, Fargo Police Department, North Dakota Highway Patrol, Stutsman County Sheriff's Department, Dunn County Sheriff's Department, McLean County Sheriff's Department, Grand Forks Police Department and Emmons County Sheriff's Department.

"We want to make sure we still have open communication with the Standing Rock tribal leaders and with the camp leaders. But I believe there are numerous people, the majority of people, who want to keep this protest peaceful. But there are some outside people that have come in that want to make this into a conflict. They want to get the protesters worked up, so there are professional agitators that are out there that want to make this more than, I think, just a pipeline issue," Kirchmeier said.

Other than a small toddler who wriggled in his father's arms, protesting nap time, there was no evidence of anything but peaceful demonstrators at the campsite Thursday.

"Everything is running pretty smoothly. Everybody is happy and visiting and getting to know people," Iron Eyes said.

Key information

- Energy Transfer Partners is building the $3.8 billion, 1,134-mile pipeline that would carry as much as 450,000 gallons of crude oil per day from North Dakota's Bakken oil fields to Illinois.
- Dakota Access is a subsidiary of Energy Transfer Partners.
- The pipeline construction site is less than a mile upstream from the Standing Rock Reservation boundaries on the Cannonball Buffalo Ranch.
- The Standing Rock Sioux Tribe filed a lawsuit seeking an injunction on construction where the line crosses the Missouri River, citing that the project violates the Clean Water Act and fails to assess the environmental and cultural impact on tribal lands. A federal judge delayed a decision on the injunction. A ruling is expected by Sept. 9.
- Opposition against the pipeline gained momentum on Aug. 10 when protesters prevented Michels Corp. workers from beginning construction at the river.
- On Aug. 11, private security hired by the company constructing the pipeline made a report to the Morton County Sheriff's Department of protesters inhibiting construction progress.
- On Aug. 15, Dakota Access moved equipment to the Missouri River crossing site. Demonstrators on horseback pushed back a law enforcement barricade. Work was halted, and pipeline workers evacuated area.
- On Aug. 17, the North Dakota Highway Patrol established a checkpoint on North Dakota Highway 1806 to direct southbound traffic to an alternative route around the protest site.
- On Aug. 19, North Dakota Gov. Jack Dalrymple signed an emergency declaration.

Subject: Short update on OST

This weekend could likely be a very continuous weekend up in the Bismarck, Mandan and Standing Rock area.

- Tomorrow Federal court is expected to make a decision about whether to block construction of the pipeline. The Tribe has challenged the USACE decision to grant the permit to the pipeline company.
- This weekend in the United Tribes Technical Collage International Powwow in Bismarck. This is typically a huge event. Many of the tribes who have written support for or are part of the protest at Standing Rock are on the board of directors. This year's theme is *Empowerment Though Unity*.
- Yesterday and today the Tribal Leaders Summit is taking place, this is always happened before the Powwow. There has been a lot of discussion at the meeting about the Pipeline and the protest.
- **The Governor of ND has activated (although no a full mobilization) the National Guard as backup for law enforcement in anticipation of the ruling.**
- There are ongoing reports of violence on both sides,
- The chairman has issued a statement calling for peace.

ND pipeline protesters to march across Bismarck bridge; actress to lead 'solidarity' rally in D.C.

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

Law enforcement beefing up presence ahead of Dakota Access ruling Friday

By Forum News Service Today at 4:25 p.m.

The Dakota Access Pipeline, pictured under construction on Friday, July 29, 2016, in northwest North Dakota, is expected to be complete by the end of 2016. Forum News Service file photo by Eric Hylden

BISMARCK—Authorities are beefing up their presence in the Bismarck-Mandan area in anticipation of a court decision expected Friday on the heavily protested Dakota Access Pipeline, a spokesman for North Dakota Gov. Jack Dalrymple said Wednesday, Sept. 7.

Spokesman Jeff Zent said plans are under way for additional law enforcement officers in the Bismarck-Mandan area and enhanced patrols in Morton County, where hundreds of protesters are camped out near a pipeline construction site along Highway 1806 about 35 miles south of Mandan.

Zent said he didn't have any information on whether the North Dakota National Guard would be on standby, but said, "The governor has always said the National Guard is an option."

Thirty-seven people have been arrested on charges including preventing arrest, disorderly conduct and criminal trespass in connection with protests at pipeline construction sites in Morton County that began in mid-August.

U.S. District Court Judge James Boasberg in Washington, D.C., has said he will rule on or before Friday on the Standing Rock Sioux Tribe's request for an emergency injunction to halt construction of the pipeline, which will cross the Missouri River less than a mile north of the Standing Rock reservation. The tribe fears the pipeline will leak and contaminate its water supply and sacred sites, and its lawsuit claims the corps failed to consider the historical and cultural significance of that area.

A permitted protest is scheduled from 3 to 6 p.m. Friday on the south end of the state Capitol mall in Bismarck to coincide with the ruling. A Facebook page for the "Peace Rally Against the Pipeline" showed more than 350 people planning to attend and 1,200 interested.

Zent said the governor's office, state Highway Patrol and Morton County Sheriff's Department will continue to monitor the situation and re-evaluate the need for law enforcement to ensure public safety. A roadblock restricting southbound traffic on Highway 1806 to local traffic only remains in place.

Protesters have said they expect the ruling to be appealed regardless of which way it goes, and that they plan to continue protesting until the four-state pipeline project is rerouted or scrapped. The 1,172-mile, $3.8 billion pipeline will initially carry 450,000 barrels of oil per day from the Bakken oil fields to Patoka, Ill., with a capacity of 570,000 barrels per day.

Subject: ACTION: BLUF - Standing Rock Sioux Tribal protests

Brian – Nancy and I spoke this morning. She'd like to send another BLUF up to Beth Z on the situation, it should be pretty tight, just a quick update. Below is what she sent previously. **Given what we know, would you do a quick draft that Megan can then review as she is at OST and heading into a meeting?**

Key items that need to be included for sure (I'm open to other):
**Information is mixed and doesn't fully jive from sources.
**Stop of work.
**Upcoming powwow.
**Ongoing monitoring of media/social media, and communication with the state.
**Again, no FEMA role at this time.

Anything else?

Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV – Daily Operations, the situation is significant enough for the State EM director and the Adjutant General to cancel their planned participation in the TAG/NORTHCOM seminar August 17-18.

I have spoken with Greg Wilz and we are monitoring the situation. I do not anticipate any role for FEMA; this BLUF is for situational awareness only.

Regards, Nancy

Subject: RE: HQ IHS inquiry re: Standing Rock

Let me know what you think. This is essentially media monitoring, and HIS could pick that up, they also have people on the ground who should be able to provide them with some visibility. A bit concerning they are coming to us.

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA would engage in, we have been monitoring for situational awareness. The only direct contact we have had with the State has been a call from the State's director of Homeland Security, letting our Acting Regional Administrator know he would not be attending a conference because of the protest. All of our awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the XL Pipeline, this the Keystone Pipeline.
- The protest is about a mile north of the Reservation.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the intel could be incorrect. We have not reached out to the tribe or had additional conversations with the State, as this is not a FEMA related issue.

If there is anything else you need from me, please let me know.

Hi Stacie -

Got a call from Milo this evening. Apparently, high level people at IHS are looking for Intel on standing rock protests. We have a reputation for knowing what is generally going on so they called Milo. Milo asked me to respond to the email below with what I may be hearing. I told him I would but I would site my sources and make sure that it is clear we have not been in contact with the tribe and this is not our issue.

Milo is concerned if we don't address it at this level, Fugate might get asked and it come down to Nancy.

I plan on writing my response first thing. I'll send it to you for review, unless you just want to be copied. I am going to try and get it out as early as possible.

Once that is out I'll write the tribal policy summary.

Thanks
M.

How is this?

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the Keystone XL Pipeline, this the Bakken Pipeline.
- The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure

Thanks!

I have been doing shot updates for Stacie every morning. This will be a great resource for the update….. you guys are great.

It is interesting looking at these stories and the other stories that I pick up from native news networks and the different story they are telling.

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

“I feel like I just got shot down,” said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe’s emergency response coordinator. “It’s very hurtful.”

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe’s request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

“People are getting overheated now already,” Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline’s river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe’s request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don’t have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, “I think they have to step up and take some responsibility, as well.”

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

“At this point, there is not a permit, but it is my understanding they are requesting a permit,” which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

“We want to make sure that things are handled peaceably,” she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff’s Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

“I’ve been getting notifications from tribes all over the country that have caravans in route, so it’s continuing to grow,” he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

“He'd like to keep this in the law enforcement arena,” he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of “outside agitators” responsible for vandalism, trespassing on private property and blocking the highway – “hundreds of criminal acts.”

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said “nothing bad is happening here.”

Still, protesters acknowledged the camp has split into two factions.

“You have the pacifists and then you have the people who feel something should be done, and they're camped across the river from each other,” said Jesse Stevens, 32, a member of Wisconsin's Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the “peaceful” side, Stevens said he felt like he should be across the river.

“My point in coming out here was some kind of action, regardless of whether it's life-threatening or not,” he said. “This is our land, our people.”

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming's Wind River Reservation, said she was a little concerned about her children's safety at the campsite. But she added, “I believe there's strength in prayer,” and said it's a once-in-a-lifetime opportunity.

“Our water is sacred,” she said. “I want to make a difference, and I want them to know they can make a difference, too.”

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes' chairman Mark Fox issued a formal letter of support for Standing Rock's opposition.

"We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives," Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe's reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe's water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It's estimated some 60 tribes are represented at the protest and tribal leaders say it's the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead 'solidarity' rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

Standing Rock tribal leaders represented by former U.S. attorney (Billings Gazette)

By AMY DALRYMPLE Forum News Service
20 hrs ago

BISMARCK – Former North Dakota U.S. Attorney Tim Purdon will represent the Standing Rock Sioux tribal leaders who have been sued by Dakota Access LLC for protesting the pipeline construction.

Chairman Dave Archambault II and council member Dana Yellow Fat are among several defendants named in a civil case filed last week in federal court in Bismarck by Dakota Access. The lawsuit alleges that the defendants are interfering with pipeline construction north of the reservation.

Purdon said he worked closely with Archambault while serving as U.S. attorney and he was asked to represent the tribal leaders.

“This case is about the parameters of the First Amendment in terms of tribal officials protesting here in North Dakota,” Purdon said.

The complaint claims that Archambault, Yellow Fat and others tried to block Dakota Access employees from entering and exiting the construction site. The complaint also claims that Archambault excused all tribal employees from work on Aug. 12 and encouraged them to protest.

About 4,000 people were estimated to be at the protest site on Monday. Pipeline construction has been halted in that area since last week.

Last week, U.S. District Judge Daniel Hovland granted a temporary restraining order against the tribal leaders and other defendants that prevents them from unlawfully protesting the pipeline construction.

A hearing was set for Thursday in the case, but has been postponed because Archambault plans to travel to Washington, D.C., for a hearing on Wednesday in the tribe’s lawsuit against the U.S. Army Corps of Engineers, Purdon said.

The Bismarck hearing is now set for Sept. 8 to determine if a preliminary injunction should be issued. The temporary restraining order has been extended until Sept. 8, though Hovland wrote in his order that the parties are “strongly encouraged to meet and confer in good faith in an attempt to resolve this dispute prior to the hearing.”

Archambault and Yellow Fat are among 29 people who have been arrested during the protest. Each faces a misdemeanor charge of disorderly conduct in Morton County.

Purdon resigned as U.S. attorney for the district of North Dakota last year. He now works in private practice in Bismarck for national law firm Robins Kaplan, where he is co-chairman of the American Indian Law and Policy Practice Group.

Hi (b)(6)

Cynthia Hunter and I will be in the state next week and were wondering if you would be available for a meeting next Monday around 3:30. We are doing a tour of the congressional offices in the state and will do a few other informal stops. The primary purpose is to just get her more familiar with North Dakota and issues in the state, as we are shifting some duties around in our office. Please let me know if you are available and can meet and if so, I will try to be quiet and (b)(6) (b)(6) ☺

Subject: RE: Short update on OST
Date: Thursday, September 08, 2016 3:59:00 PM

Made a couple of small edits and one addition. Take a look.

This weekend could likely be a very contentious weekend up in the Bismarck, Mandan and Standing Rock areas.

- Tomorrow Federal court is expected to make a decision about whether to block construction of the pipeline. The Tribe has challenged the USACE decision to grant the permit to the pipeline company.
- This weekend in the United Tribes Technical Collage International Powwow in Bismarck. This is typically a huge event. Many of the tribes who have written support for or are part of the protest at Standing Rock are on the board of directors. This year's theme is *Empowerment Though Unity*.
- Yesterday and today the Tribal Leaders Summit is taking place, this always happens before the Powwow. There has been a lot of discussion at the meeting about the Pipeline and the protest.
- **The Governor of ND has activated (although not a full mobilization) the National Guard as backup for law enforcement in anticipation of the ruling. Guard members will assist in providing security at traffic checkpoints on the state highway leading to the protest site, which is being reopened to traffic this afternoon.**
- There are ongoing reports of violence from both sides.
- The chairman has issued a statement calling for peace.

I got another request last night from Milo on behalf of IHS requesting any updates we have.

There is nothing to share outside of what the media is saying. Social media has blown up. There are so many different versions and accounts about the protests, it would take a full time person to track it all.

At some point soon I need to call up to Standing Rock. The tribe needs to make a few decisions about EMI training before the end of the month. I am thinking I'll call before the 9th.

I'll send Milo and IHS some clips and let them know that is all we have. No direct information. I'll copy you on the email.

M.

DALRYMPLE STATEMENT REGARDING PUBLIC SAFETY AND PROTEST ACTIVITIES

Gov. Jack Dalrymple today issued the following statement regarding recent pipeline protest activities and public safety:

"Public safety is paramount as we continue to closely monitor protest activities and coordinate our public safety efforts with law enforcement leaders and state agency directors.

Following reports of heavy pedestrian traffic and numerous vehicles parked along ND Highway 1806, we restricted travel six miles south of Mandan to local traffic and emergency response vehicles only. Alternate routes are available for through traffic. Additionally, we established a traffic control point at the intersection of ND Highway 6 and Morton County Road 138A to provide information regarding protest activities along the highway.

While we are concerned about some cases of unlawful activity, we are pleased that no one has been injured and it is our top priority to keep it that way."

PROTECTOR CAMPS REMAIN PEACEFUL

By Brandon Ecoffey
Lakota Country Times
Aug. 25, 2016

EVERYONE
WElCOME
Sacred Stone
Camp!

Water protectors remain peaceful despite efforts to cast them in a different level light. PINE RIDGE—Despite efforts by the local North Dakota media and county officials water protectors and Standing Rock Sioux Tribal officials say that the message emanating through the camps is one of peaceful resistance.

Nearly 3,000 water protectors gathered peacefully this past weekend in Cannonball, ND., to speak out against the construction of the Dakota Access Pipeline that is set to be built near the Standing Rock Reservation and could possibly threaten drinking water for tribal citizens. The gathering has been peaceful as organizers have directed those in attendance to not engage in violent acts.

“There are no weapons within the camp,” said Cody Hall, who is the media spokesperson for the Red Warrior Camp. “We have security in the camp at all hours and when people arrive they are asked what they have in the car. Our security walks the camps at all hours to make sure nothing like that is happening,” said Hall.

Hall says that all entering the camp are made aware that weapons and alcohol are not allowed.

Additionally, LaDonna Allard, Director of the Camp of the Sacred Stone, addressed these same issues in a press release on Tuesday after the Governor of North Dakota declared a state of emergency.

“The gathering here remains 100% peaceful and ceremonial, as it has from day one. We are standing together in prayer. No firearms or weapons are allowed. Why is a gathering of Indians so inherently threatening and frightening to some people,” asked Allard.

Governor Dalrymple declared a State of Emergency last Friday to allow for additional state resources to be directed to the gatherings as he mentioned that he believed “outside agitators” were responsible for committing crime within the camps. The reports have remain unsubstantiated and irresponsible comments from local law enforcement about the possibility of the presence of pipe bombs have contributed to a false narrative about the activities of protectors.

A report from the Bismark Tribune on Tuesday, however, revealed a conflict of interest for Dalrymple as they reported that he owns stock in ExxonMobile. A spokesman for the governor told the Tribune that, “He is not going to discuss the details of his personal finances.”

Early efforts by the local media and the representatives from Morton County Law Enforcement to sensationalize “reports” of weapons including pipe bombs have been quickly dismissed by those present within the camps and several journalists including LCT’s Karin Eagle who spent time embedded in both camps over the weekend.

Sources inside of the office of Standing Rock Sioux President Dave Archambault Jr., have told LCT that from the start of the protest the goal of the administration is to keep the protests peaceful and prayerful. The nonviolent direct action taken by organizers of the camps has been partly credited with the overwhelming show of support from both tribalnations and non-Native allies who flocked to the camps in the thousands this past weekend.

“The growing support from tribal-nations and others for this movement has partly been brought about by the people’s willingness to remain unarmed and nonviolent.”

Crazy Horse Students Witness History

Brandon Ecoffey
Lakota Country Times
Aug. 25, 2016

NO DAPL
MNI W

Crazy Horse School students travelled to ND last week to bear witness to history. Photo courtesy/Sunny Clifford WANBLEE—Nearly forty students from the Crazy Horse School travelled to Cannonball, ND., to witness living history as thousands of water protectors have gathered in the area to stop the construction of the Dakota Access Pipeline.

According to Sunny Clifford, a teacher at Crazy Horse High School, the students were joined by several staff members including Silas Blaine on the day long trip. The school says that the students did not go on the trip to join the protest but to observe this moment in history that will likely reverberate for decades across Indian Country.

The idea for the trip was first introduced by staff members on the school's cultural advisory board who felt that the experience would be beneficial to the students.

Joelle Red Willow, 17, is a senior at Crazy Horse School and had spent her last week of summer inside the protest camps near Cannonball, ND., that have been set up to halt the construction of the Dakota Access Pipeline that was supposed to begin being built last week.

"It was an honor to be there and see all the council fires there working to try and find a better way."

Red Willow says that what she had seen in Cannonball was something she wanted to experience with her classmates as it it has motivated to use her voice to address injustices.

"It was an honor to stand with our people," said Red Willow. "When I saw all the elders crying, and to see them all their fighting for everyone it inspired me to speak out even more."

The pipeline is intended to move 470,000 barrels of crude oil per day to hubs further south but construction on the project has been halted after workers were told leave the job site by their employers due to the protests.

The pipeline that had been quietly ushered through the regulation process is set to be built right next to the Standing Rock Reservation and would run under the Missouri River. The route cuts right through lands included in the Fort Laramie Treaty of 1868. The Standing Rock Sioux Tribe has opposed the construction due to the inherent risks that pipelines pose to groundwater. Over the past weekend nearly 3,000 from across the country joined the resistance that has swelled near Cannonball, ND.

Defender Camps 2,000 Strong

Judge Will Issue Opinion Sept. 9

ALL NATIONS
#NODAPL

1,000 strong, defenders descended on the Veteran's Memorial bridge in Bismarck to stress their commitment to stop he pipeline; photo courtesy of Arlo Iron Cloud. BISMARK, ND– On Tuesday, close to 1,000 defenders traveled north to Bismarck to express their commitment against the Dakota Access Pipeline, banners were draped over the restraining walls of the Veteran's Memorial bridge, prayers were said, songs were shared and tobacco ties were placed. Another 1,000 defenders were back in the Sacred Stone Spiritual camp and the Spirit Camp near the Cannonball River.

Friday, Arvol Looking Horse and the Dakota 38 riders rode from the Spirit Camp to the protest site at the entrance to one of three construction sites while Deb White Plume of Owe Aku led a number of boats, canoes and kayaks on the Cannonball River this past weekend in preparation for possible protests on the Missouri.

There was a pipe ceremony scheduled first thing Wednesday morning followed by a walk at 11am from the Spirit Camp to the protest site. A wacipi was planned for Wednesday evening.

Arvol Looking Horse and Dakota 38 lead a horse ride from the Spirit Camp to the lprotest site on Friday; photo courtesy of Arlo Iron Cloud. Everyone was waiting for the Aug. 24 hearing in federal court in Washington DC, the Standing Rock Sioux Tribe had filed a suit against the Dakota Access Pipeline, requesting an injunction to stop the pipeline construction. The Judges Opinion from that Hearing will be issued Sept. 9. Dave Archambault, SRST president, OST vice president Tom Poor Bear and council representative CJ Clifford along with a bus of supporters from Cheyenne River Sioux Tribe and a number of additional tribal officials planned to be in DC for Wednesday's hearing.

A separate suit has been filed against the US Army Corps of Engineers for violating several treaties when they approved the Dakota Access Pipeline. The Corps has filed a suit against protectors.

Rumors were rampant that the road to Bismarck were blocked but it was law enforcement warning vehicles about events and activities going on throughout the area; photo courtesy of Arlo Iron Cloud. Tuesday, the OST council voted overwhelmingly to continue supporting the activities against the Dakota Access Pipeline and approved looking a filing a suit against South Dakota.

"The plan to cross he Missouri River in two different places puts tribal members in Lower Brule, Rosebud and Pine Ridge at risk, all of us use Missouri River water and a break in the line near the Missouri would damage water we all use," said John Yellow Bird Steele, OST president. "We have sent hundreds of tribal members to Cannonball and we will continue to fight the pipeline on every level."

Construction has halted at two of the sites but the construction on the east side of the Missouri, where preparations are being made to drill under the Missouri, not only continue but have been stepped up going 24 hours a day. Armed security had been added to the site and aerial patrols mark skies.

Corps says pipeline still needs water-crossing easement

LAUREN DONOVAN
Bismarck Tribune

Standing Rock Sioux Chairman David Archambault II, center, is surrounded by family and friends following his address to the council fire gathering at the Dakota Access Pipeline protest encampment Thursday after returning from a federal court room in Washington, D.C.

MORTON COUNTY — While hundreds are settling in for the long haul at an encampment to protest the Dakota Access Pipeline, the U.S. Army Corps of Engineers confirmed Thursday that the pipeline developer, Energy Transfer Partners, does not yet have a written easement to build the pipeline on corps property.
Corps spokesman Larry Janis said the easement is still under review, though the agency did issue Section 408 permission in late July that allows the easement to be written.

“They can’t build the project by accessing corps property from west to east across Lake Oahe,” Janis said of any current construction.

That could partly explain the company’s decision Aug. 18 to voluntarily stop construction at its work site just north of the Standing Rock Sioux Reservation near the Missouri River-Lake Oahe, where an active protest led to 28 arrests. The company has since received a federal court restraining order to prevent all arrestees — including tribal chairman Dave Archambault — and any “Jane and John Doe” from being at the work site and places such violations in federal, not district court.

The stopped work also stopped active protest, and protesters have since held prayer circles and other gatherings in the camp area about 1 mile south.

The realization that the company still does not have an actual easement surfaced Wednesday in a federal district court in Washington, D.C., where the Sioux tribe’s request for an injunction to stop the pipeline pending its suit against the corps was heard. The court judge said he wants more time to study whether the corps failed to follow the National Historic Preservation Act and other federal laws in its environmental review of the project. The judge said he will rule on the injunction Sept. 9.

“Everybody thought they had it (easement),” said attorney Carolyn Raffensperger, executive director of the Science and Environmental Health Network. “This is really important information.”

Raffensperger is among four attorneys volunteering legal services to the tribe and the individuals who were or may be arrested.

They addressed several hundred circled around the council fire mid-day Thursday; a cool, breezy day that called for blankets and jackets. They said legal issues may get worse for the state of North Dakota and other agencies.

Amnesty International observers were in the camp Thursday and an observer from the United Nations is scheduled to be in camp Tuesday, said Phyllis Young, the Standing Rock camp coordinator.

Young said the tribe is alleging racial discrimination for acts including a police barricade on Highway 1806 near Mandan that detours anyone going home to the reservation, but gives access to everyone else north of the reservation, and airplane surveillance.

“We are exploring the defense of that roadblock. There’s nothing to warrant that kind of lockdown," said Angela Bibens, an attorney.

The roadblock is manned 24 hours a day by North Dakota Highway Patrol troopers and other cooperating agencies. Bibens urged anyone with an outstanding warrant or unpaid child support to refrain from getting arrested to prevent their personal problems from getting worse. She said only people with a clean record should consider themselves arrest-able.

Meanwhile, camp managers met Thursday to discuss logistics now that it appears the camp, with anywhere from 500 to 2,000 people in tents and tepees, will stay active until the court’s injunction decision Sept. 9.

Johnelle Leingang, an emergency manager, said a noticeable number of people left the camp after Wednesday’s news that the injunction decision would be delayed.

“The majority are coming back, and the head cook said she’ll provide the same amount of food for 2,500 people,” Leingang said.

The camp is actually three camps: the main Seven Council camp on the north side of the Cannonball River, the Rosebud camp across the river and the original Sacred Stone Spirit camp further southeast.

Even as a small group from the Arizona Navajo Nation that brought meat and produce to the campers earlier this week packed up to go home Thursday, a group of eight Native Descendants from California rode in on motorcycles to stay through the weekend.

“It was a beautiful drive. We had the heart and the spirit to get here and, if we could stay longer, we would. This is history in the making,” Anthony Cuevas, said.

Chairman Archambault, who this week had an opinion piece on the protest published in the New York Times, spoke at the council fire after returning from the D.C. court hearing.

He expressed gratitude for the support from tribal nations around the country and for the peaceful prayerful nature of the camp.

“When this is done, if it’s ever done, they will remember the people who live on reservations. What I see today is unbelievable. The prayers are never-ending," said Archambault, adding that the protest has caught the attention of the nation.

Protesters, officers gird for pipeline ruling, but restarting construction may wait regardless

By Mike Nowatzki
Bismark Tribune
Aug 24, 2016

NEAR CANNON BALL -- Construction won’t immediately restart on a $3.8 billion pipeline if a judge rules against the Standing Rock Sioux Tribe after a court hearing Wednesday, Aug. 24.

Dakota Access LLC, which temporarily stopped construction last week amid growing tribal protests near the pipeline’s planned crossing of the Missouri River, will wait for law enforcement to determine it’s safe to resume construction, Morton County Sheriff Kyle Kirchmeier said Wednesday morning.

That call will depend on how protesters react to the ruling, if it’s favorable to Dakota Access, Kirchmeier said.

“We’ve done everything we possibly could to make sure this stays safe,” he said.

Law enforcement officers met with tribal leaders and protest organizers Wednesday morning and had a “positive dialogue,” the sheriff said. There are 40 officers on site near the confluence of the Missouri and Cannonball rivers, which has drawn 2,000-some protesters camped nearby, many from tribes across the region and the country. Fargo police officers and deputies from Cass and Grand Forks counties are among the agencies assisting Morton County deputies.

Standing Rock members oppose the river crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites. The tribe is represented by the environmental law group Earthjustice in the lawsuit against the U.S. Army Corps of Engineers over permits issued for the pipeline, which would cross the Missouri River a half-mile north of the reservation and be the largest oil pipeline from the Bakken oil fields, moving 450,000 barrels per day to Patoka, Ill.

Dakota Access temporarily stopped construction near the river crossing site as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct.

A federal judge in Washington, D.C., will consider Wednesday the tribe's request for an injunction that would effectively halt construction of the 1,172-mile pipeline. A lawyer for the tribe said the judge has indicated he will rule from the bench or shortly after the hearing.

Vic Camp, a 41-year-old from South Dakota's Pine Ridge Reservation, said Tuesday that protesters will refrain from violence if the judge's ruling doesn't go their way.

"The only way violence will happen is if the cops provoke it and they attack us," he told Forum News Service, adding, "We have our women and we have our children. We have grandparents here."

When asked what will happen if the judge denies the injunction and Dakota Access tries to resume construction, Camp said, "Then we'll start blockading."

"We'll do what we can with our bodies to keep the machines from coming in," he said.

A checkpoint on State Highway 1806 about 6 miles south of Mandan has been restricting traffic to the protest area for days, but an additional blockade was added Wednesday. Due to concerns about the safety of protesters who may march from the campsites to the construction site, authorities set up a second checkpoint farther south near Fort Rice and were preventing any vehicles from passing through.

Dakota Access: Billy Mills Supports Water Protectors at Standing Rock Sioux Reservation

By Chelsey Luger & Thosh Collins
Indian Country Today
Aug. 23, 2016

Billy Mills (Oglala Lakota), 1964 Olympic Gold Medalist, expressed his support for the Standing Rock Sioux Tribe in an interview on August 20, 2016 at the Cannon Ball Prayer Camp near the site of the proposed Bakken Oil Pipeline.

Billy Mills, a 1964 Olympic Gold Medalist and citizen of the Oglala Lakota Nation, visited the Standing Rock Reservation over the weekend to show support for the youth, leadership and any others who stand with the Standing Rock Sioux Tribe in opposition to the Energy Transfer Company's Bakken Oil Pipeline, also called the Dakota Access pipeline.

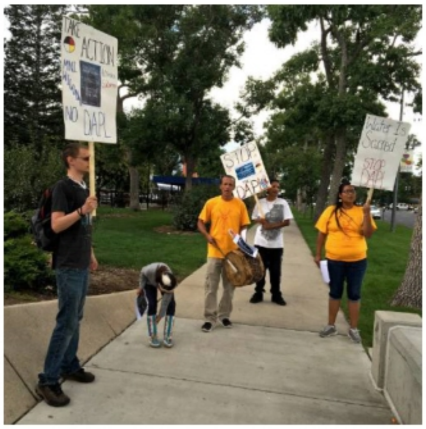
In his message to the people, Mills expresses his sincere respect and appreciation for the leadership of Standing Rock, including Chairman Dave Archambault II, Jodi Archambault-Gillette, and Dave Archambault Sr.

Mills then incorporates his interpretation of a broader historical context which has led to the situation at hand. He notes that due to the sweeping legacy of injustice brought forth through manifest destiny, broken treaties, and white privilege, the rights of Native American people have been undermined and devalued in the American legal system.

As a man of both Native American and white American descent, Mills says that he has both benefited from and been hurt by the invisible force of white privilege. With the gentle tone and spirit of camaraderie that Mills always puts forth, he expresses his wish for Native American children to be afforded the same opportunities as other Americans and to be empowered by information that most schools aren't teaching.

Peaceful pipeline protest held in Colorado Springs park

By: Billie Stanton Anleu
The Gazette-Colorado Springs,CO
August 25, 2016



Donald Little Thunder, a Rosebud Sioux Indian living in Colorado Springs, beats a drum and sings as he leads a group through downtown Acacia Park while protesting the Dakota Access Pipeline.

Like hundreds if not thousands of Indians across the nation, Donald Little Thunder, friends and family members marched in protest Thursday against the controversial $3.7 billion Dakota Access Pipeline.

They chanted, sang and beat drums through downtown Colorado Springs' Acacia Park in an effort to raise awareness and support for the Standing Rock Sioux Nation and others protesting in North Dakota.

The underground pipeline is designed to stretch nearly 1,170 miles, carrying oil from the Bakken fields of western North Dakota through South Dakota and Iowa to Illinois. It also is to travel beneath the Missouri River, the sole source of water for the Standing Rock Sioux Reservation.

"Our ancestors told us that in the seventh generation, the black snake will come through," Little Thunder said, noting that his 8-year-old daughter, Wi Wanbli Win, is from that seventh generation.

"We're just asking everybody to be aware of it and help in some way," Little Thunder said. "We are very spiritual people. This is the most peaceful protest in the U.S. We're sitting and praying and singing to stop the oil pipeline."

Marching with him were Lena Sun Bear, an Oglala and Rosebud Sioux; Donna Marshall, of the Rosebud Sioux Nation; and John Freyta, an Apache veteran of the Gulf War.

Energy Transfer Partners of Texas has said its pipeline will pump millions of dollars into the economy and reduce U.S. reliance on foreign oil.

But the Sioux and other tribes say a leak or break could wipe out water supplies. Iowa landowners have sued, too, to keep the pipeline off their properties.

Construction on the pipeline stopped Aug. 16 as protesters encircled the workers' machinery.

In Washington, D.C., U.S. District Judge James Boasberg decided Wednesday to delay a decision until Sept. 9 on whether to grant an injunction stopping work on the project, the Bismarck Tribune reported.

The company argued that delays could cost it more than $100 million.

The tribe is suing the U.S. Army Corps of Engineers, which issued the pipeline permits, saying it violated the National Historic Preservation Act and failed to adequately review environmental and archaeological concerns.

Attorneys for the Army Corps argued that no evidence indicates historic artifacts are in the pipeline's path, and the agency followed proper protocol in consulting with the tribes.

North Dakota Oil Pipeline Battle: Who's Fighting and Why

By JACK HEALY
New York Times
AUG. 26, 2016

A protester rode a horse through the construction site for the Dakota Access oil pipeline in south central North Dakota. Credit Daniella Zalcman for The New York Times

This week, an impassioned fight over a 1,170-mile oil pipeline moved from the prairies of North Dakota to a federal courtroom in Washington. The Standing Rock Sioux tribe, whose reservation lies just south of the pipeline's charted path across ranches and under the Missouri River, has asked a judge to halt construction. The American Indian tribe argues that a leak or spill could be ruinous.

It may take until Sept. 9 for a federal judge to decide whether to allow the Dakota Access pipeline to move ahead, or grant an injunction that would press the pause button on construction.

Here is a look at how the battle over the pipeline has become an environmental and cultural flash point, stirring passion across the Plains and drawing hundreds of protesters to camp out in rural North Dakota.

Pipes being stacked for the Dakota Access oil pipeline last year at a staging site in Worthing, S.D. Credit Nati Harnik/Associated Press

What Is Happening in North Dakota?

American Indians have been gathering since April outside Cannon Ball, a town in south central North Dakota near the South Dakota border, to protest the Dakota Access pipeline as construction commences. Starting with members of the Standing Rock Sioux tribe, the protest has since grown to several hundred people — estimates vary — most of them from tribes across the country.

The protesters have encamped in a field belonging to the United States Army Corps of Engineers. Each day, they march a mile up a highway to a construction site where preparatory work is being done for the pipeline. While the protesters say they are peaceful, there have been reports of heated confrontations with law enforcement officers and construction workers, and 20 people have been arrested. Construction on a road to the pipeline has stopped for the moment. The pipeline company, Energy Transfer Partners, has sued several protesters, claiming they have threatened and intimidated contractors and were blocking work at the site.

What Does Each Side Want?

The Dakota Access pipeline is a $3.7 billion project that would carry 470,000 barrels of oil a day from the oil fields of western North Dakota to Illinois, where it would be linked with other pipelines. Energy Transfer says the pipeline will pump millions of dollars into local economies and create 8,000 to 12,000 construction jobs — though far fewer permanent jobs to maintain and monitor the pipeline.

Members of the Standing Rock Sioux tribe see the pipeline as a major environmental and cultural threat. They say its route traverses ancestral lands — which are not part of the reservation — where their forebears hunted, fished and were buried. They say historical and cultural reviews of the land where the pipeline will be buried were inadequate. They also worry about catastrophic environmental damage if the pipeline were to break near where it crosses under the Missouri River.

What About Protests in North Dakota?

For the moment, the mood there is calm, but anxious. North Dakota's governor has declared a state of emergency there, and law enforcement has barricaded the main highway leading to the protest site and the campers.

Hundreds of people are camped out about a mile down the road from the construction site. They say they are there to pray and protest peacefully, but some people are worried that the situation could turn volatile if work resumes at the site or the government tries to disband the camp.

Are Others Fighting the Pipeline?

Yes. State and federal agencies have approved the pipeline, and some farmers and ranchers have welcomed the thousands of dollars in payments that came with signing agreements to allow it to across their land. But others oppose the pipeline.

In Iowa, one of the four states that the pipeline would traverse, some farmers have gone to court to keep it off their land. They say that Iowa regulators were wrong to grant the pipeline company the power of eminent domain to force its way through their farms. Most landowners in the 346-mile path of the pipeline through Iowa, however, have signed easements allowing it to be built across their land.

How Many Pipelines Cross the United States?

The United States has a web of 2.5 million miles of pipelines that carry products like oil and natural gas, pumping them to processing and treatment plants, power plants, homes and businesses. Most of the lines are buried, but some run above ground.

While a natural gas line to a newly built subdivision is not likely to generate national controversy, proposed major pipelines like the Keystone XL, the Dakota Access or the Sandpiper in northern Minnesota have generated huge opposition from environmental groups and people living in their paths.

How Safe Are Pipelines?

Energy companies and their federal overseer, the Pipeline and Hazardous Materials Safety Administration, promote the safety record of pipelines. Pipeline companies say it is far safer to move oil and natural gas in an underground pipe than in rail cars or trucks, which can crash and create huge fires.

But pipeline spills and ruptures occur regularly, sometimes in small leaks and sometimes in catastrophic gushers. In 2013, a Tesoro Logistics pipeline in North Dakota broke open and spilled 865,000 gallons of oil onto a farm. In 2010, an Enbridge Energy pipeline dumped more than 843,000 gallons of oil into the Kalamazoo River in Michigan, resulting in a cleanup that lasted years and cost more than a billion dollars, according to Inside Climate News.

In a 2012 examination of pipeline safety, ProPublica reported that more than half of the country’s pipelines were at least 50 years old. Critics cited aging pipelines and scant federal oversight as factors that put public health and the environment at risk.

FEMA homes 'small part' of need on Pine Ridge

Rapid City Journal
Mike Anderson Journal staff
Aug 18, 2016

Native Nations

In May 2015, Leroy Broken Nose's childhood home on the Pine Ridge Indian Reservation was pummeled by hail the size of tennis balls.

The same storm caused extensive flooding and destroyed hundreds of homes on the reservation. President Barack Obama declared it a national disaster on Aug. 7, 2015, marking the first and only time a sovereign Native American tribe independently requested and received a formal disaster declaration from a president.

In the weeks that followed the storms, Broken Nose's battered roof leaked and rotted out, collapsing in certain sections.

Although it took almost 11 months, the 62-year-old disabled man now has a new home on a small plot of land south of Oglala Lake.

"It was a long waiting game," Broken Nose said Wednesday while sitting at his new kitchen table. "But it's here, so I'm happy."

Broken Nose's new roof was provided by the Federal Emergency Management Agency, which has spent more than a year repairing and replacing households damaged during a series of storms in May 2015.

As FEMA finalizes that work, a larger undertaking by multiple federal agencies lies ahead: to continue improving the overall conditions on the reservation.

Since December, FEMA has installed 196 manufactured housing units like the one Broken Nose now occupies. The last was installed on July 11. FEMA has also repaired an additional 107 homes, and another 13 are scheduled to be repaired before FEMA closes its eight disaster recovery centers scattered across the reservation in mid-September. All of the repairs and replacements were provided for free by FEMA, or contractors hired by the agency.

An unfinished job

Having spent more than a year away from his wife, FEMA coordinating officer Gary Stanley is ready to return to his own home, but he harbors no illusions that the work on Pine Ridge is finished.

"What we did here in terms of disaster response is a very small part of what the need is on the reservation," Stanley said.

According to Stanley, FEMA determined there is a shortage of at least 4,000 livable homes on the reservation. "It was imperative that we come up with a solution because it's impacting a lot of young children and the elderly," he said.

The people impacted include Broken Nose, who suffered a stroke in 2004 and has been battling cancer and diabetes for many years.

“I beat one cancer,” Broken Nose said, “but I can’t beat leukemia.”

Broken Nose goes to Rapid City once a month for cancer treatment, but doesn't have a car so he takes a bus to the hospital. He gets a ride from his neighbors to Oglala, where the bus picks him up. It won’t make the drive to his home several miles south of town, he said, partially because the dirt road to his doorstep turns into an impassable trench of mud when it rains.

This is but one small example of how seriously the reservation’s road system is in need of upgrades. FEMA’s workers discovered this first-hand while trying to find certain homes, many of which are remote, like Broken Nose’s. Often, they don't have recorded addresses and are accessible only by barely maintained, dirt roads that haven't been inventoried.

FEMA may be leaving next month, but a disaster recovery team will stay behind to continue working with the tribe on various initiatives, with roads and housing designated as the primary focus areas. A FEMA coordinator — operating out of the Region 8 office in Denver — will be joined by the Department of Housing and Urban Development, the Department of Agriculture Rural Development, the U.S. Army Corps of Engineers, the National Renewable Energy Laboratory, and the Federal Highway Administration, according to a FEMA press release.

Making progress

Some progress has already been made under FEMA’s direction, with more than 460 miles of tribal roads assessed and inventoried. The results will be entered into a Geospatial Information System map. Similar efforts are also underway to better catalog the true extent of the housing needs on the reservation.

Broken Nose's original home was torn down after the storm, and he now lives in a manufactured housing unit provided by FEMA. It has a handicapped accessible ramp, three bedrooms, air conditioning, and is furnished with a couch, bed, and full array of standard kitchen appliances.

While it serves his needs well, Broken Nose worries the housing unit’s energy costs will be too high. He hasn’t received his first bill, but people living in other FEMA-provided units have complained of high electricity bills.

FEMA has heard these concerns as well, and as a result created a program to reduce energy expenses by teaching low-cost weatherization techniques. Other efforts are also underway to educate tribal officials on strategic planning and grant application processes for future infrastructure improvement initiatives.

“There’s a lot of need on Pine Ridge right now,” Stanley said. “I would like to think part of what we did was help focus folks on what those needs are.”

According to Stanley, the housing units are designed to last at least 20 years, provided they are well-maintained.

Broken Nose hopes his new home will be around for his grandson to live in someday, but he has already seen evidence that it might not.

Even though it's new, Broken Nose said, some of the siding has already begun to break off and blow away.

Gov. Daugaard: State won't fight renaming of Harney Peak

Rapid City Journal
Seth Tupper Journal Staff
August 19, 2016

Gov. Dennis Daugaard said the state will not fight the renaming of Harney Peak to Black Elk Peak, and will accept a decision from a federal board that formally changed the name of South Dakota's highest mountain.

In an exclusive interview with the Rapid City Journal, the governor said Thursday he will accept the federal renaming decision, even though South Dakota was under no legal pressure to accept the new name.

With his declaration, Daugaard removed a final obstacle to full implementation of the controversial name change.

“I don’t want the state to have one name and the feds another,” Daugaard said, “so we will make the change.”

His comments end a week of speculation about whether state government will honor the Aug. 11 decision by the U.S. Board on Geographic Names to rename the 7,242-foot mountain, which is South Dakota's tallest and is often called the nation's highest point east of the Rockies.

The board said it made the change, which went against the recommendation of a South Dakota naming panel, because Harney Peak could be seen as insensitive to Native Americans.

Daugaard's statement also could end nearly two years of controversy that split South Dakotans, sometimes along racial lines.

William S. Harney, the peak’s former namesake, was an Army officer in the 1800s who was known as an “Indian fighter.” Nicholas Black Elk, the peak’s new namesake, was a Lakota Sioux holy man who was confined to reservation life around the turn of the 20th century.

Daugaard said he spent part of the past week conferring with members of the state congressional delegation about whether the federal board’s decision could be overturned.

While that is possible — congressional legislation could be sought to strike down the decision — Daugaard said neither he nor the state’s members of Congress are willing to prioritize that task over other work.

Daugaard said he will speak with his cabinet secretaries about how to implement the change on signs, maps, websites, tourism literature and any other state-produced references. That work is already under way within the federal government, which manages the peak as part of the Black Elk Wilderness area in the Black Hills National Forest.

Last year, the South Dakota Board on Geographic Names recommended no change to the mountain’s name. The recommendation went unheeded at the federal level, and Daugaard said he remains concerned about the “unilateral” power wielded by the federal board.

U.S. Sen. John Thune, R-S.D., was also critical of the federal board and said this week in a Journal interview that he may recommend changes to reduce the board’s power. Those changes, if they happen, will be too late to influence the Harney Peak renaming.

That was welcome news for Lakota elder Basil Brave Heart, of Pine Ridge, who proposed the name change in a September, 2014 letter.

Brave Heart considers Harney's name to be offensive because Harney led deadly campaigns against Native Americans, and because the peak named for him is within the Black Hills, an area of spiritual significance to some tribes.

Modern Native American animosity toward Harney is focused mostly on the Battle of Ash Hollow in 1855 in present-day Nebraska, where he led troops who attacked and killed an estimated 86 Sioux people, including women and children. The attack was launched in retaliation for the so-called Grattan Fight of the previous year, when Sioux warriors killed 29 soldiers.

Black Elk is known worldwide as the subject of the book "Black Elk Speaks," author John Neihardt's 1932 account of stories and spiritual visions related to him by Black Elk. More than 900,000 copies of the book have been sold since its first printing, according to the University of Nebraska Press.

Brave Heart was not immediately available Thursday afternoon by phone, but he spoke to the Journal earlier in the week and said he and many other Native Americans hoped Daugaard would honor the federal board's decision.

"We don't want to be defined by a government that named a sacred Black Hills mountain after someone who committed an atrocity," Brave Heart said. "This could really lift some negative energy off our backs."

Daugaard did not attach the same degree of significance to the name change. In fact, he said, he thought the matter had concluded with the state board's recommendation. He was not aware it was under consideration by the federal board until a staffer informed him of the federal board's decision on the day it happened, Aug. 11.

"I have things that I think are more important to the state than what we name a place," he said.

When asked if he thinks the name change is symbolically important for Native Americans, Daugaard said, "only if they're knowledgeable about history."

The governor sidestepped a question about his personal preference of name for the mountain, but he allowed that "Black Elk Peak" is an acceptable choice.

"If the name had to be changed, I like 'Black Elk' just fine," he said.

Q&A on North Dakota pipeline construction, protests

Rapid City Journal
By JAMES MacPHERSON
August 18, 2016

BISMARCK, N.D. | Developers of a four-state oil pipeline have agreed to halt construction of the project in southern North Dakota until a federal court hearing next week in Washington, D.C. The temporary construction shutdown comes amid growing protests and increased tension over the Dakota Access Pipeline that is intended to cross the Missouri River near the Standing Rock Sioux reservation that straddles the North Dakota-South Dakota border.

Some things to know about the pipeline and the protest:

WHAT IS THE DAKOTA ACCESS PIPELINE?

Dallas-based Energy Transfer Partners' Dakota Access Pipeline is a $3.8 billion, 1,172-mile project that would carry nearly a half-million barrels of crude oil daily from North

Dakota's oil fields through South Dakota and Iowa to an existing pipeline in Patoka, Illinois, where shippers can access Midwest and Gulf Coast markets.

WHY THE PROTEST?

The Standing Rock Sioux Tribe is suing federal regulators for approving the oil pipeline that would be the largest-capacity one carrying crude out of western North Dakota's oil patch. The tribes' lawsuit filed last month in federal court in Washington challenges the U.S. Army Corps of Engineers' decision to grant permits at more than 200 water crossings in four states for the pipeline. The tribe argues the pipeline that would be placed less than a mile upstream of the reservation could impact drinking water for the more than 8,000 tribal members and the millions who rely on it further downstream. The lawsuit, filed on behalf of the tribe by environmental group Earthjustice, said the project violates several federal laws, including the National Historic Preservation Act. The tribe worries the project will disturb ancient sacred sites outside of the 2.3-million acre reservation. The hearing on the tribe's request for a temporary injunction is slated for Wednesday.

WHO ARE THE PROTESTERS?

Mostly members of the Standing Rock Sioux tribe, but they've been joined by other American Indians and non-Native Americans from across the country. "Divergent" actress Shailene Woodley was part of the protests last week.

ARRESTS

American Indians have for months been staging a nonviolent protest at a "spirit camp" at the confluence of the Cannonball and Missouri rivers in the path of the pipeline. More than a dozen young people from the reservation also ran from North Dakota to Washington to deliver 140,000 petition signatures to the Corps to protest the pipeline. The protest took a turn last week when law enforcement was called to keep the peace between protesters and armed security guards hired by the company. Twenty-eight people have been arrested since then and charged with interfering with the pipeline construction, including Standing Rock Sioux Tribal Chairman David Archambault II. Developers on Monday sued in federal court to stop protesters, alleging the safety of workers and law enforcement is at risk.

IS THE PIPELINE SAFE?

The company said the pipeline would include safeguards such as leak detection equipment, and workers monitoring the pipeline remotely in Texas could close block valves on it within three minutes if a breach is detected.

WHY THE NEED?

Energy Transfer Partners announced the Dakota Access pipeline in 2014, a few days after North Dakota Gov. Jack Dalrymple urged industry and government officials to build more pipelines to keep pace with the state's oil production, which is second only to Texas'. Supporters said the pipeline would create more markets for the state's oil and gas, and reduce truck and oil train traffic, the latter of which has been a growing concern after a spate of fiery derailments of trains carrying North Dakota crude, including one near Dalrymple's hometown of Casselton in 2013, and an explosion in Quebec that same year that killed 47 people.

Dull Knife arrested resisting Dakota Access Pipeline

Native Sun Weekly, Rapid City
By Natalie Hand
Lakota Media Project OWE AKU
August 17, 2016

GUY DULL KNIFECANNON BALL, N.D. — On August 24, 2016, a federal judge in Washington, DC will issue his ruling on the injunction filed by the Standing Rock Sioux Tribe regarding the Dakota Access Pipeline (DAPL). Many water protectors and land defenders have gathered here to show love and respect for our first medicine, the sacred water.

On Monday, August 15 five people were arrested at the site where DAPL is building a road they will use to transport their equipment to the work site. Guy Dull Knife, Oglala Lakota elder of the Pine Ridge Indian Reservation was one of the people arrested when he blocked the gate to the DAPL worksite. Many more people have given themselves to be arrested as the days move toward August 24. We have set up our Red Warrior Camp and are holding Non-Violent Direct Action trainings in camp and at the action site. We are entrenched and will protect the Mni Sosi River (Missouri) that we all belong to. Red Nations from all along the river are here. Many citizens of America are here to protect sacred water. This is our Treaty Territory, our Ancestral Homelands.

Our ancestors trusted us to continue to protect our first medicine. We do this in a good way, out of love. We do not bring hate here. We are a spiritual people and we will defend our relative, sacred water. Our Pte San Win (White Buffalo Calf Woman) brought us the sacred pipe, and She also handed us the bow and arrow. We follow Her teachings in this way.

Owe Aku has trained thousands of people through Moccasins on the Ground NVDA training camp held for four years when we were challenging TransCanada, Inc and the KXL Tarsands Pipeline. Communities and families are ready, they are here. This pipeline has the potential to contaminate water forever. This issue is a Human Rights Issue. It affects all of us. To support our NVDA work, please visit our website at www.oweakuinternational.org.

My Voice: Black Elk Peak is right name

Sioux Falls-Argus Leader
John YellowBird Steele
August 17, 2016

MDEWAKANTON

On Aug. 11, the Oceti Sakowin, or Seven Council Fires of the Great Sioux Nation, and the United States took a long stride forward towards justice in the Black Hills. At the request of our Lakota Oyate, the U.S. changed the name of Harney Peak to Black Elk Peak. We thank our Oglala Lakota tribal members, Basil Brave Heart — a lifelong educator — and Myron Pourier, Black Elk's great grandson, who brought this issue forward to the Oglala Sioux Tribal Council and the National Park Service.

Rising from the center of the Black Elk Wilderness, Black Elk Peak is the highest mountain in the Black Hills. The former name of Harney Peak was offensive to Native Americans, because General Harney and 600 U.S. Cavalry and Infantry soldiers massacred 86 Lakota men, women and children of Chief Little Thunder's village as they slept along Blue Water Creek on Sept. 3, 1855. Harney was sent out by the U.S. to "punish" our Lakota for the 1854 Grattan Affair, a U.S. Army attack to "avenge" the loss of a Mormon cow. When confronted by an angry Lt. Grattan ("Give me 20 men and I will ride through the whole Sioux Nation"), Chief Conquering Bear sought to maintain the peace under the 1851 Treaty by offering Grattan three horses to compensate the Mormon family for their lost cow (which had been left wandering on the prairie). Grattan, acting in violation of his orders, chose war. Lt. Grattan and his platoon were wiped out after Grattan ordered them to open fire on Conquering Bear's village and assassinated the Chief. Our Lakota Oyate acted in self-defense. Against this background, General Harney's massacre of our Lakota was pure genocide. The name Harney Peak was truly offensive to Lakota people.

In contrast, Black Elk, our Oglala Lakota Holy Man, is famous worldwide for his beautiful vision of Lakota culture and religion, which he told to Neihardt the Nebraska Poet Laureate in "Black Elk Speaks." Black Elk said: "You have noticed that everything an Indian does is in a circle, and that is because the Power of the World always works in circles, and everything tries to be round... . The Sky is round, and I have heard that the earth is round like a ball, and so are all the stars. The wind, in its greatest power, whirls. Birds make their nest in circles, for theirs is the same religion as ours... . Even the seasons form a great circle in their changing, and always come back again to where they were. The life of a man is a circle from childhood to childhood, and so it is in everything where power moves." Black Elk went to Black Elk Peak to receive his vision.

Now, the name of the sacred peak has come full circle to be named Black Elk Peak, which reflects a vision of beauty and the sacredness of life. Gov. Dennis Daugaard is confused by the name change. Perhaps upon reading "Black Elk Speaks," he will come to know the beauty, sacredness and unique Dakota perspective that the name Black Elk Peak represents. Black Elk Peak is the right name for the Mountain, which honors the true history of South Dakota and the sacred nature of the Black Hills. After all, we put the "Dakota" in South Dakota.

MY VOICE

John YellowBird Steele, Manderson, is president of Oglala Sioux Tribe. My Voice columns should be 500 to 700 words.

Subject: Draft BLUF - Standing Rock Sioux Tribal protests of Dakota Access Pipeline

Here's an initial crack at the BLUF. -- Brian

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

The sustained protest of Dakota Access pipeline supported by the Standing Rock Sioux Tribe has now entered a third week, with conflicting reports on size, but estimates ranging from 1500-2000 protesters and continuing to grow. The protest site is located 1 mile off the reservation in neighboring Morton County, North Dakota. On Friday afternoon, Aug. 19 North Dakota Governor Jack Dalrymple signed an emergency declaration, and Morton County has issued a local emergency declaration, which is expected to be extended at a special commission meeting called for today at 4 pm CDT. The state emergency declaration is primarily focused on law enforcement and traffic regulation and does not include activation of the National Guard.

Coverage of the protest also varies widely depending on the position of the covering media. After the initial arrests last week, more recent reports indicate there has been generally peaceful situation between protesters and law enforcement. North Dakota Highway 1806, which runs adjacent to the protest signed is closed to through traffic, with detours established. Work at the site is currently halted as legal proceedings initiated by both the Standing Rock and the Dakota Access owners now work their way through the legal system.

On Sept. 9-11 the Annual United Tribes International Powwow is scheduled in Bismarck, approximately 60 miles from the protest site. The powwow normally sees about 5000 visitors, but there is speculation that that number could swell in light of the protest, which is being supported by other tribes around the country.

I still do not anticipate any formal role for FEMA, but Region VIII will continue to monitor the situation via traditional and social media and in communications with the state. (and/or tribe)? This BLUF is for situational awareness only.

State of North DakotaLNO and Regional Tribal Report #1As of 16 August 2016/1200 MDT)

Situation: On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census). Threats/Impacts/CIKR/Key Resources: Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site.As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol.Tribal concerns include contamination of local water not only for health and environmental reasons but because water is considered sacred to the Native Americans.The Tribe is also concerned about other cultural implications of this pipeline.The pipeline could have ecological threats and impacts.The pipeline will be located under the Missouri River.State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.There are no road closures in effect at this time. State & Federal Posture/Actions: State EOC is in Level IV – Daily Operations. Communication with State/Tribal/Local officials: No contact has been made with the Tribe regarding this issue.The Acting Regional Administrator has been in contact with the Director of North Dakota Department of Emergency Services for situational awareness only. Shortfalls or limiting factors, currently or anticipated, including any support requirements from FEMA HQs: None at this time, State and Local authorities are actively monitoring the event. LNO Summary: FEMA LNO and FEMA Region VIII Tribal Liaison are monitoring the situation.Source of Information: North Dakota Department of Emergency Services and Standing Rock Sioux Tribe Facebook.

Subject: Elliott Ward comments on Webinar

Hi All –

Elliott Ward (Standing Rock) is on the National Tribal Policy consultation webinar right now. He has asked Milo about using PDM to plan for the braking of the pipeline. He said that FEMA has said they can't help since it is off reservation, even though it was part of the Sioux Nation. He also asked about working with tribes on culturally sensitive areas but when they ask for PDM grants won't cover that so the wording in the PDM grant is wrong. This is of particular concern because of the use of water.

I am going to assume we talked to him at some point on this issue. He will likely be calling or emailing Milo at HQ.

He also asked about doing a National Tribal Emergency Association. Milo told him to look at what tribal associations are doing. ITEMA was used as an example, intertribal recovery foundation, National Congress of American Indians. He may be open to pushing something in our region.

Ricky, do you want to reach out to Elliott on this one?

M.

Hello-

Today I listened in to the first half of the Tribal Policy Listening Session during which Elliott spoke on concerns for PDM grants and the potential pipeline.

Am not sure who else was able to make the call so wanted to share the information for follow-up with him.

Thanks!

Attachments: NEMA input from Region 8 September 2016 DRAFT.docx

Megan,

I am about to send you a bunch of emails that are mostly clips about Dakota Pipeline that were singled out to send one another, perhaps with a comment.

Also I have attached the comments we sent in for the NEMA briefing packet, which includes one sentence describing the pipeline standoff.

Otherwise, everything I saw related to the pipeline was in our daily clips or the MOC reports.

Region VIII NEMA input for NEMA briefing memo

Colorado:

- Mitigation recently determined that two Boulder County properties were ineligible for buy-out based upon FEMA's policy on the "Limits on Subsurface Uses" associated with hydraulic fracturing and horizontal directional drilling. The properties were deemed ineligible because under Colorado law they would remain subject to potential forced pooling and subsurface activity following acquisition. Throughout Colorado and many other states, mineral rights are often owned separately from surface rights. A further complication is that many states, including Colorado and all Region VIII states, have statutory or forced pooling laws, allowing subsurface activity without owner consent. The Region anticipates an appeal from Boulder County and continues to engage HQ FIMA on the implications of the policy, not only to Colorado and Region VIII, but other states.

- Landslides present acute and/or long-term threats to some 20-80 homes in Colorado Springs. There appeared to be money available from the Hazard Mitigation Grant Program for earlier disasters as well as perhaps other federal funds to cope with the short-term threat, though the process was seen as slow and the problem could worsen. FEMA's current policy on the "Limits of Subsurface Uses" and its application may also affect eligibility for these landslide acquisitions.

Oglala Sioux DR 4237: This event was the first direct Individual Assistance declaration to an Indian Tribe.

- To address the severe housing challenges faced by the tribe, the Permanent Housing Construction Program was implemented for the first time within the Lower 48 United States. Through September 1, a total of 196 damaged residences had been replaced with manufactured homes and 100 of the planned 107 homes were repaired by FEMA contractors. All repairs are expected to be completed by September 9, 2016.
- This is one of the largest housing missions ever accomplished on the Pine Ridge Reservation.

Non-Stafford Act issues: Several non-FEMA issues are of particular concern now to Region VIII state emergency managers.

- In North Dakota, protests by the Standing Rock Sioux and perhaps 90 other tribes against an oil pipeline currently under construction have gained national and international attention.
- In Montana, parasites have killed a large number of fish, prompting the shutdown of 180 miles of the Yellowstone River and causing economic distress to the tourism industry there.

- In Utah, two of this desert region’s water sources have come under threat, one from an extraordinary algae bloom and another from an accidental spread of toxic mine waste from a reservoir.

ANALYSIS

- **Colorado:** A rechanneling project through the Garden of the Gods is expected to remove 100 properties from the floodplain… The Colorado Springs Independent interviewed the three colleges in the area about their plans for dealing with disasters, including an active shooter…. Bridges on a county road near the Hayden Pass Fire burn scar were taken out by flooding… The *Denver Post* explains why Colorado mosquitos are not likely to carry the Zika virus.
- **Montana:** An extraordinary outbreak of a parasite killing whitefish caused the state to shut down 180 miles of the Yellowstone River to all recreational uses.
- **North Dakota:** More stories report on the pipeline protest, including one in the *NY Times*: Homeland Security Division Director Greg Wilz explains the decision to withdraw state-owned resources was because the situation is not an emergency, the protestors are not on state-owned land, plus reports of criminal activity. Water has been supplied by the tribe’s road department. Protestors marched over a bridge peacefully and staying on walkways. About 30 people attended a meeting of the Mandan county commissioners; all those who spoke opposed the pipeline, and many spoke against the traffic barrier set up by law enforcement, saying it hurts local businesses and farmers, is humiliating, and prevents people from seeing the protest. Commissioners said the decision was by law enforcement and is not theirs to overturn. The tribe says a leak at the pipeline could contaminate its water supply and sacred sites. The company says construction has only stopped at this one mile of the 1,172 mile pipeline, which would be the largest source for moving Bakken crude oil. Four unions wrote to Governor Dalrymple asking that he make it safe for construction workers to do their jobs. A federal judge is expected to rule today on a request for an injunction to halt the project. Tribal leaders say they will remain peaceful, but will blockade if the ruling goes against them. So far, there have been 29 arrests for trespassing or disorderly conduct.

- **South Dakota:** A $1 million FEMA SAFER g rant will pay for nine new firefighters in Rapid City for two years… A new wildfire broke out near Angostura Reservoir.
- **Utah:** An attempt to upgrade the Tibble Fork Dam has resulted in lake sediments being released over the weekend that have contaminated the American Fork River, apparently with toxic mine waste. Environmentalists fear an ecological disaster. The presence of toxic sediments had led to an earlier decision to upgrade the dam rather than dredge the lake – but draining the lake to work on the dam appears to have done the damage.
- **Wyoming:** Several fires were burning in the area of Yellowstone National Park, though all roads within the park remained open. One fire south of the park blocked access to that entrance. The fires were caused naturally and were not being actively suppressed.
- **Other FEMA-related stories**: *USA Today* reports on possible hurricanes developing in the Atlantic. … *Inside Radio* says the Louisiana floods show the need to activate FM radio chips in cellphones, which do not work when cell towers are down.

Flood project through Garden of the Gods will reroute Colorado Springs floodplain (The Colorado Springs Gazette)

By: Matt Steiner

Two years after city officials teamed with residents of a West Side Colorado Springs neighborhood to plan flood mitigation and reconstruction of Camp Creek, a project to remove more than 100 properties from the floodplain is about to begin.

On Monday, crews could begin the first phase of the more than $30 million project rebuilding about 5,100 feet of channel through Garden of the Gods Park and the Rock Ledge Ranch.

The work could be potentially lifesaving for residents of the Pleasant Valley neighborhood when heavy rains pound the Waldo Canyon fire burn area in the mountains to the west.

"As a community, we can't let our guard down," said Colorado Springs Emergency Manager Bret Waters. "Even though we're seeing some growth, it doesn't mean the risk will go away."

The Camp Creek mitigation project discussed in the spring of 2014 attracted more than 100 residents who helped choose project priorities. The result was a total rebuild of the deteriorating concrete channel through Pleasant Valley, meaning the creek along 31st Street will be refurbished with grass, shrubs, rocks and a relocated bike path.

But first, the work upstream must be done.

"Reducing the flows (through Garden of the Gods) will allow us to build the rest of the project," said project engineer Mike Chaves.

Construction crews will first install a series of rock steps in the creek, reshape banks and plant vegetation near the channel through the ranch and the park. The cross vanes, Chaves said, are intended to slow water and debris. Erosion has been accelerating each year because of floodwaters pouring off the Waldo Canyon burn scar.

The channel stabilization will cost $1.1 million, said city spokeswoman Kim Melchor. Almost $800,000 of that comes from a Natural Resources Conservation Service grant with the rest of the money coming from the city.

That work will likely be followed by construction of a large sediment detention pond at the north end of the park in early 2017, Chaves said.

That phase will cost almost $8 million, Melchor said. It will include a large berm stretching from 30th Street to the hills in the park that can dam floodwaters.

When the entire project is complete, more than 200 Pleasant Valley residents will no longer be in the floodplain.

"The whole intent is to protect the park, protect Rock Ledge Ranch and the downstream communities," Melchor said.

Colleges and universities put emphasis on planning for disasters, including active shooters: Planning for the worst (Colorado Springs Independent)

By J. Adrian Stanley @JAdrianStanley1

On April 16, 2007, Seung-Hui Cho, a senior at Virginia Tech, killed 32 people and wounded another 17 in two separate shootings.

Until June of this year, when Omar Mateen killed 49 people and wounded 53 others in Orlando's Pulse nightclub, the Virginia Tech shooting was the deadliest by a single perpetrator in U.S. history.

Virginia Tech held sway over the country, leading to widespread grief and fear, changing gun laws, prompting deeper discussions on mental illness and leading many colleges and universities to take a second look at their emergency plans.

Back in 2007, institutions of higher education tended to have procedures for protecting their campus communities from natural disasters like fires, tornadoes, floods and earthquakes, and often some man-made accidents as well, like chemical spills. But most had dedicated less — or no — energy to drafting plans to deal with an active shooter rampaging through the campus.

That changed after Virginia Tech. Just as "duck and cover" was a part of common school instruction during the Cold War, in today's age of mass shootings, students now learn to "run, hide, fight."

What Cho did was an eyeopener for school leaders. The gunman, who had known mental health issues, fatally shot two students in a residence hall, walked away, changed his clothes, and ran errands, then calmly entered an academic hall. At some point, he chained shut the exits.

Police were dealing with the first shooting while Cho entered Norris Hall. The university, suspecting the first shooting was of a personal nature, hadn't instructed students, faculty and staff to prepare for an active shooter. In fact, students in Norris reported being simply curious when Cho peeked his head inside their classroom doors before beginning his massacre.

Once the shooting was underway, Cho's victims were largely at a loss to stop his killing spree. Some died trying to hold classroom doors closed, including Professor Liviu Librescu, an Israeli Holocaust survivor, whose body was riddled with bullets as he held his classroom door shut, allowing his students to climb out windows. All but one of the students in Room 204 survived due to his heroism.

Nevertheless, 30 people died in Norris Hall. Cho shot himself before police located him.

"A lot of the [college and university] emergency plans really stepped up after 9/11," UCCS Police Lt. Marc Pino says. "Using common terminology, working on regional resources, things like that — that sort of were identified as issues after 9/11 for responding to emergencies — I would say around that time is when we really stepped things up."

But asked when UCCS began preparing for an active-shooter scenario, Pino says, "Virginia Tech would be when we really started doing emphasis on active shooter, and also our campus developed a student response team as a response.

"Numerous people at Virginia Tech had dealings with the shooter, and no one was really talking together to find out that some larger issues were going on. So, the [UCCS] student response team was [formed] — very shortly after Virginia Tech — [and it] comprises the dean of students office, the chief of police and the head of the counseling center. We sort of field reports from faculty, staff, students, anybody that has a concern about a student. We can sort of reach them before it gets to a critical level."

The *Independent* spoke to representatives at UCCS, Colorado College and Pikes Peak Community College about their emergency plans. While plans and strategies differ, each campus has a plan, along with one or more employees in charge of preparing for emergencies.

Of the three schools, Colorado College, which has about 2,000 students, is the only one without its own police force. John Lauer, co-chair of CC's emergency preparedness group and the college's associate vice president for student life, explains that the school does have a single Colorado Springs police officer assigned to the campus, as well as a campus safety department.

The safety officers — who carry no weapons — walk the campus and look for anything unusual. If a situation warrants it, they call police, with whom the college works closely. Campus safety officers can also take anonymous tips.

The campus does have an emergency plan, last updated in 2012, and a director of campus safety and emergency preparedness — Maggie Santos, a former Colorado Springs Police lieutenant. The plan will be updated soon.

"We're always focused on continuous improvement," Lauer says.

But, he adds, the college stresses that every person has to take responsibility for knowing how to respond, saying, "We're as prepared as every individual is prepared."

CC performs regular fire drills and has started doing active-shooter trainings with resident advisors, as well as sessions open to anyone, or upon request. Lauer says it's important not to drill too often because it can desensitize people in a real emergency.

The campus does contract with a company that sends emergency texts, emails and phone calls when needed to students, staff and faculty, as well as anyone else who wants to be notified.

While not every classroom has a locking door, placards by doors give instructions on what to do in an emergency — such as barricade the door for an active shooter or go to the nearest marked shelter in case of tornado.

CC has cameras throughout campus and a loudspeaker on Palmer Hall. Lauer says the campus is considering replacing that speaker, as well as placing speakers on campus security cars for use in an emergency. Staff in residence halls also have megaphones.

Jim Barrentine is chief of police at PPCC, where he says he was hired five years ago to develop an emergency preparedness plan.

That plan is now the template for the state's community colleges.

At first, Barrentine says most folks at PPCC didn't know how to perform basic safety tasks, like using a fire extinguisher or helping a person in a wheelchair down stairs. He's focused on giving trainings and providing instructional videos for different emergency skills. The school also does lockdown drills for an active-shooter situation, as well as special training, and four or five tabletop exercises meant to mimic a real emergency.

Interestingly, of the three schools, PPCC is the only one with locks on all classroom doors. The college encourages locking those doors during class hours.

With three campuses and 20,000 students, PPCC faces unique challenges. The 18-person police department is distributed among the campuses, where they patrol during business hours.

Barrentine has set up a system so that the campus community will be notified of an emergency immediately through texts, emails, landlines and a speaker system throughout the campus. Barrentine wants to add light boards for the deaf and buzzers for the blind, to ensure they are notified, and he's working on implementing a buddy system to ensure people with disabilities are cared for in an emergency.

He also has hotlines for anonymous tips.

Barrentine says the statewide system of community colleges is working to improve emergency preparedness. But he says PPCC is lucky because unlike many other schools, police are on the scene here.

"In an active shooter [situation]," he says, "security's going to run like everyone else."
Back in 2012, UCCS' emergency plans were tested. The Waldo Canyon Fire was raging nearby, and the campus suddenly became an unofficial evacuation site.

"We had the Air Force Academy cadets here in 2012, we also housed several hundred evacuees in our campus residence halls," UCCS spokesperson Tom Hutton says. "And then in 2013 [during the Black Forest Fire], we were an official Red Cross evacuation site and I think we had half a dozen people here, so we had more when we were an unofficial evacuation site."

Since UCCS is located on a wildland-urban interface, it not only has the normal risks of a university with around 11,300 students, but it also must be prepared for wildfire. Because of that, the university has done mitigation along its borders and, in summer months, UCCS police carry fire extinguishers with water in them, better for fighting wildfires. They also patrol the campus borders on off-road motorcycles.

Like the others, UCCS has an emergency notification system that hooks up to cell phones and landlines in classrooms. The university does not have a loudspeaker system or locks on every door, but emergency instructions near doors show how to barricade a door in emergencies and find marked tornado shelters. UCCS conducts general evacuation drills.

The UCCS police department, which has 21 officers and patrols the campus 24/7, has an intergovernmental agreement with Colorado Springs police to help each other in emergencies with set enforcement boundaries. Many will remember that UCCS Officer Garrett Swasey was killed last November when he responded to a mass shooting at Planned Parenthood. Just as he responded, CSPD would provide backup to UCCS officers in case of an active shooter on campus.

UCCS police do take tips (though anonymous tips must be made online) and say students are vigilant about filing reports of anything suspicious. Police Lt. Pino says he'll often get several calls within a few minutes about an unattended backpack, for instance. That's important, because it means students spot unusual circumstances and take them seriously.

"The reason why we have a very safe campus," he says, "is because we get those reports."

UCCS has emergency phones throughout campus, and police offer free escorts — no questions asked — to anyone requesting them. UCCS staff say they plan for any emergencies, and the university has an emergency manager and several offices that deal with emergency planning, including conducting regular tabletop exercises.

"I think we have a culture of working together as a university," Dean of Students Steve Linhart says, "whatever the situation."

County Road 40 bridges washed out by flash floods (KOAA TV, Colorado Springs)

Updated: Aug 23, 2016 10:00 PM MDT
FREMONT COUNTY - County Road 40 is closed after flash flooding in the area of the Hayden Pass Fire burn scar, according to Fremont County Sheriff's Office.

The dam on County Road 40 is holding, but Butter Creek and Little Cottonwood Creek are flowing heavy with debris. All homes are intact and all residents in the area are safe.

A reverse 911 notification was sent to residents in the area of the Hayden Pass Fire burn scar for a flash flood warning Tuesday evening. The warning was in effect until 9:45 p.m.

Bridges on County Road 40 were washed out by flood water. Fremont Search and Rescue and Fremont Incident Management Team responded as a precaution.

Why Colorado's Mosquitoes Are Not Likely To Spread Zika (Denver Post)

By John Ingold
Denver Post, August 23, 2016

It was an experiment that was part "Outbreak" and part "Trading Places," but researchers at Colorado State University hoped it might answer one of the more pressing public health questions facing the state: Could the Zika virus spread here?

The conventional wisdom was that it couldn't, at least not widely, because the disease's primary vector — a ninja of a mosquito called Aedes aegypti — had no established population in the state. But no one had proved that conventional wisdom true. What if it was wrong? What if the local mosquitoes — particularly those in the Culex genus that already carry the West Nile virus — were also able to transmit Zika?

The mosquito experts at CSU's Arthropod-borne and Infectious Diseases Laboratory decided to put the conventional wisdom to the test. In their lab, they infected Culex mosquitoes with Zika. And then, for a week as the virus incubated inside their study subjects, they held their breath.

Finally, the results:

“We could not get that virus to replicate in the mosquito,” CSU professor Brian Foy said of the experiment, the topic of a soon-to-be-published article.

Whew.

When it comes to being disease-carrying menaces, not all mosquitoes are created equal, and that explains why Zika is a public health crisis in Miami and a relative public health trifle in Milliken. There are 54 species of mosquitoes commonly found in Colorado, but none of them are known to be able to transmit Zika — even if they can, like the Culex mosquitoes, transmit other diseases.

“It’s still kind of a mystery,” Foy said. “There’s a very fine-tuning match of virus and mosquito.”

The reason is that a mosquito’s transmission of a disease is not as simple as taking infected blood in from one person and then backwashing it into another. Instead, the virus must be capable of reproducing inside the mosquito and then making its way into the mosquito’s saliva — the real source of contamination since mosquitoes digest the blood they consume as food.

“When a mosquito bites a person, it spits into the bite,” Foy said.

With the local-born bugs apparently incapable of carrying Zika, then, the only chance of a mosquito-spread outbreak in Colorado comes from a moonshot: the one-in-a-billion possibility that a Zika-capable mosquito that hitchhiked to the state from elsewhere bites into a Zika-infected person who picked up the virus out of state.

So far, only 21 people in Colorado have tested positive for Zika, and all of them contracted the virus somewhere else.

The only instance of a wayward Aedes aegypti being found in the state came in 2010, in Pueblo County. Another species of mosquito possibly capable of transmitting Zika, Aedes albopictus, has been found sporadically in Weld County, most recently in 2011 and most likely was brought to the state in waste tires disposed of here. But those species are just summer tourists; they can’t survive the winter.

“Remember we’re in Colorado; we’re not in the tropics,” said Michael “Doc” Weissmann, the chief entomologist at Colorado Mosquito Control, which does monitoring and eradication for local governments.

Weissmann said none of his company’s traps have snagged worrisome Aedes mosquitoes this year.

“It’s just the same old, same old,” he said.

Eric Aakko of the Weld County Health Department said the county’s surveillance efforts have found higher-than-normal levels of West Nile-carrying mosquitoes but no Zika concerns.

That leaves only one other prominent way that the virus can spread within Colorado, and it’s one Foy knows a little too well. While conducting research in the African nation of Senegal, Foy contracted Zika in 2008. He then came home and accidentally gave it to his wife, which led to a research article hypothesizing — correctly, it turns out — that Zika can spread through sex.

The experience, though, didn’t change his mind about the dangers of Zika in Colorado.

“The risk of all of a sudden having a massive outbreak in Denver is, I would say, infinitesimally small,” he said. “From mosquitoes, I can’t see it happening.”

MONTANA

Yellowstone fish-killing parasite is so prolific it's 'shocking' fish to death

(Missoulian)

By BRETT FRENCH Billings Gazette

PARADISE VALLEY — A previously unidentified strain of parasite has grown so prolific in the Yellowstone River that it is overwhelming whitefish, killing thousands and prompting the state last week to close more than 180 miles of the river to all recreation.

“The sheer parasite loading itself is almost shocking the fish, that that’s what’s killing them,” said Eileen Ryce, Montana Fish, Wildlife and Parks’ hatchery section chief, during a Tuesday press conference along the banks of the Yellowstone River south of Livingston.

Scientists like Ryce believe that the parasite bloom may be so large and unprecedented in part because the Yellowstone River is experiencing near-record low flows and high water temperatures.

“We could see varying responses (of the parasite) depending on which river it gets into,” said Travis Horton, Region 3 fisheries manager in Bozeman.

The nearby Madison River, where flows are dam controlled, may be more resilient to the parasite since the water’s temperature is cooler, coming from the bottom of Hebgen Lake, and the flows can be maintained at a steadier rate. Likewise, outbreaks of similar parasites in Idaho that killed whitefish in 2011 and 2012 may have been more limited because some of the streams are dam controlled, Horton said.

The FWP officials spoke to a crowd of about 50 people — anglers, local lawmakers, the media and business owners — at a fishing access site where the stench of dead whitefish rotting on the riverbank wafted through the air.

Media, business owners, anglers and others gather for a press conference on the banks of the Yellowstone River. CASEY PAGE, Gazette Staff

Acknowledging the effect of the river’s closure to anglers, floaters and on all of the many businesses that service such recreationists, Gov. Steve Bullock said “the impact goes far beyond the water’s edge.” Yet he said “science needs to guide this.”

“We need to make sure we are not only protecting this watershed and this water but indeed our entire state,” he said, noting that the outdoor recreation industry creates about 64,000 jobs and $6 billion in consumer spending annually in Montana.

When Rep. Alan Redfield, R-Livingston, asked why certain portions of the river couldn't be open to fishing to ease some of the impact on local businesses, Horton said FWP hopes to contain the parasite outbreak to the Yellowstone and make its duration short-lived.

"We want to try to minimize this," Horton said. "We don't want to make this situation worse by rushing ahead."

Horton added that when the Yellowstone River's peak water temperatures drop below 55 degrees and stay there, FWP would consider lifting the river closure.

"We're not looking at it being a permanent closure," said Jeff Hagener, FWP director.

He noted the rule to enforce the closure is a temporary emergency closure good for 120 days. After that time the department is forced to re-examine the issue to decide whether the closure should be extended.

The fish kill has been documented by FWP crews from the Yellowstone National Park boundary about 100 miles downstream to just west of the town of Big Timber, Horton said. Other public reports of dead whitefish and suckers downstream from Big Timber to Laurel have not been confirmed by FWP.

The microscopic parasite that infects the fish needs two hosts to complete its life cycle, Ryce explained. It starts in a Bryozoan, a moss animal similar to a freshwater sponge. The Bryozoan releases the parasite that fish absorb through their gills. Similar parasites have caused internal bleeding and kidney failure in whitefish in other outbreaks, such as the ones in Idaho.

But the Yellowstone outbreak is different, Ryce said. There are so many spores being found inside the fish that the scientists are calling it a naive reaction.

"What we mean by that is that the immune response that the fish are expressing would suggest that they have not been exposed to this parasite previously," she said. "That has concerned us since it would suggest it's a new infection. At least we haven't seen anything on this scale previously."

"The other thing that's concerning is from the histology results there were high numbers of parasites seen in multiple tissues. That suggests to us that the infective load that's currently out in the river is very high. Why that's a concern is that the sheer volume of parasites that's out there makes it very easy for the parasite to be spread to other waters."

That's the reason FWP took the unusual step to close down much of the upper river to recreation, Horton said, calling it a "very dramatic step that we took." It's also why the agency is stressing that the best way to fight the spread of the parasite, along with other aquatic invasive species, is to clean, drain and dry all boats and fishing equipment.

FWP crews will continue to search for dead and dying fish in the Yellowstone River and its tributaries like the Stillwater and Boulder rivers to try to determine the extent of the outbreak.

"I hope we can continue to work together, recognizing that the long-term objective is to protect this valley and the river," Gov. Bullock said.

Yet Ryce noted that FWP staff doesn't expect the parasite to disappear, even with colder water temperatures and higher river flows. However, if the fish are given time to adapt they may build up some immunity to the parasite and recover.

NORTH DAKOTA

Occupying the Prairie: Tensions Rise as Tribes Move to Block a Pipeline (NY Times)

By JACK HEALY

August 23, 2016

NEAR CANNON BALL, N.D. — Horseback riders, their faces streaked in yellow and black paint, led the procession out of their tepee-dotted camp. Two hundred people followed, making their daily walk a mile up a rural highway to a patch of prairie grass and excavated dirt that has become a new kind of battlefield, between a pipeline and American Indians who say it will threaten water supplies and sacred lands.

The Texas-based company building the Dakota Access pipeline, Energy Transfer Partners, calls the project a major step toward the United States' weaning itself off foreign oil. The company says the nearly 1,170-mile buried pipeline will infuse millions of dollars into local economies and is safer than trucks and train cars that can topple and spill and crash and burn.

But the people who stood at the gates of a construction site where crews had been building an access road toward the pipeline viewed the project as a wounding intrusion onto lands where generations of their ancestors hunted bison, gathered water and were born and buried, long before treaties and fences stamped a different order onto the Plains.

People have been gathering since April, but as hundreds more poured in over the past two weeks, confrontations began rising among protesters, sheriff's officers and construction workers with the pipeline company. Local officials are struggling to handle hundreds of demonstrators filling the roads to protest and camp out in once-empty grassland about an hour south of Bismarck, the state capital.

More than 20 people have been arrested on charges including disorderly conduct and trespassing onto the construction site. The pipeline company says it was forced to shut down construction this month after protesters threatened its workers and threw bottles and rocks at contractors' vehicles.

Sheriff Kyle Kirchmeier of Morton County, who has led the law enforcement response, said at a news conference that he had received reports of weapons and gunshots around the demonstration, and that protesters were getting ready to throw pipe bombs at a line of officers standing between a rally and the construction site.

Leaders from the Standing Rock Sioux tribe, whose reservation lies just south of the pipeline's path, say the protests are peaceful. Weapons, drugs and alcohol are prohibited from the protest camp. Children march in the daily demonstrations. The leaders believed the reports of pipe bombs were a misinterpretation of their calls for demonstrators to get out their wooden chanupa pipes — which have deep spiritual importance — and pass them through the crowd.

The conflict may reach a crucial moment on Wednesday in a federal court hearing. The tribe has sued to block the pipeline and plans to ask a judge in Washington to effectively halt construction.

The pipeline runs overwhelmingly along private land, but where it crosses bodies of water, federal rules come into play and federal approvals are required.

The tribe says the pipeline's route under the Missouri River near here could threaten its water supplies if the pipeline leaks or breaks, and it says the United States Army Corps of Engineers failed to do proper cultural and historical reviews before granting federal approvals for the pipeline.

"This is our homeland," said Phyllis Young, a member of the Standing Rock Sioux. "We are Dakota. Dakota means friend or ally. Dakota Access has taken our name."

In legal filings, the corps rejects those claims. It says it consulted extensively with tribes, including the Standing Rock Sioux, and it says that tribe has failed to describe specific cultural sites that would be damaged by the pipeline. Energy Transfer Partners says it has the necessary state and federal permits and hopes to finish construction by the end of the year. The pipeline's route starts in the Bakken oil fields of western North Dakota and ends in Illinois.

With the fate of the land here and this $3.7 billion project in the air, people here have decided to take action. They are occupying the prairie.

Echoing protests against the now-scuttled Keystone XL pipeline, environmental activists and other tribes from the Dakotas, the rest of the Great Plains and the Pacific Northwest have been arriving to camp in the open fields and protest near the parcel where the pipeline company has secured an agreement with the landowner to build.

The protesters sleep in tents and tepees, cook food in open-air kitchens and share stories and strategies around evening campfires. There is even a day care. At morning meetings, speakers warn parents to keep their children away from the Missouri River at sunset, and remind one another they are camped out in prayer.

"It's a major movement in Indian country," said CJ Clifford, a member of the Oglala Lakota, who drove up from the Pine Ridge Reservation in South Dakota. He saw the protests as part of a historical continuum reaching to Little Bighorn. This battle, he said, was being waged peacefully.

For many, the effort was about reclaiming a stake in ancestral lands that had been whittled down since the 1800s, treaty by broken treaty.

"Lands were constantly getting reduced, shaken up," said Dave Archambault II, the tribal chairman of the Standing Rock Sioux. "I could give you a list of every wrongdoing this government did to our people. All of that is frustration pent up, and it's being recognized."

He added, “It’s a tipping point for our nations.”

This month, a line of sheriff’s officers retreated in the face of riders on horseback circling and yipping through the grass. (Tribal members said that the display was a Lakota gesture of introduction, and that they have no quarrel with law enforcement.)

There have been no moves so far to disband the camp or keep people from demonstrating. But Sheriff Kirchmeier told reporters that the demonstration had become an “unlawful protest,” and Gov. Jack Dalrymple, citing “public safety risks,” declared a state of emergency on Friday.

Local law enforcement officers set up a barricade on the main road leading to the pipeline site, and officials here in Morton County called a special meeting on Monday to talk about the traffic and how to handle a hundreds-strong protest that could linger for weeks or months.

At the sprawling campsite down the road from the protest site, there had been portable toilets, 500-gallon tanks of drinking water and an air-conditioned trailer with medical supplies provided by the state. But late Monday night, people at the camp said the medical trailer and water tanks had been removed, leaving them to scramble for a new water source for hundreds of people.

After a prayer ceremony at the construction site one recent afternoon, a few young men on horseback opened the gate and rode onto the land. A few days earlier they might have been arrested and accused of trespassing, but that day there were no officers to stop them.

The pipeline company said that it temporarily stopped work here this month while “law enforcement works to contain the unlawful protests,” but that construction was continuing elsewhere.

Energy Transfer Partners has sued Mr. Archambault and six other people over the protests. In a federal lawsuit filed last week, the company accused them and other protesters of blocking access to the construction site, threatening workers and trespassing onto private land.

Jon Eagle Sr., the historic preservation officer for the Standing Rock Sioux, watched from the side of the road as the young men rode into the grassy field, toward a construction floodlight and heaps of excavated dirt. He did not want the pipeline to breach this land. But he did not seem to approve of this either.

“They need to stay out,” he said. “They don’t know where the burials are. They don’t know where the sacred sites are. I’m trying my best to keep the peace.”

Emergency services recalled from Dakota Access Pipeline protest site (KFYR TV, Bismarck)

By Max Grossfeld |

Posted: Tue 4:19 PM, Aug 23, 2016 |

Updated: Tue 6:24 PM, Aug 23, 2016

BISMARCK, N.D. - Demonstrators protesting construction of the Dakota Access Pipeline had been using state resources at their camp until Monday, when the Department of Emergency Services decided to recall them.

Those resources included a mobile command trailer, a medical aid trailer and a water trailer.

A DES official says Tribal Emergency Management requested the resources, which were supposed to be used on tribal land. He says the services brought the trailers back when he heard the trailers were located on land owned by the Army Corps of Engineers.

Reports of unlawful behavior, he says, also influenced his decision.

"This isn't a flood, a fire, an icestorm. This is an event that originally needed some support for the responders dealing with it and at this stage in the game, the event's not an emergency," says Greg Wilz, Homeland Security Division director.

Wilz says all the equipment is back in Bismarck and ready to use in case of emergency.

People concerned with Highway 1806 barricade ask Morton County Commissioners for answers (KFYR TV, Bismarck)

By Megan Hahn |

Posted: Tue 9:43 PM, Aug 23, 2016 |

Updated: Wed 8:07 AM, Aug 24, 2016

MANDAN, N.D. - The Morton County Board of Commissioners heard public testimony regarding the Dakota Access Pipeline for nearly in an hour at Tuesday's meeting.

All those who chose to speak during the hearing were in opposition of the Dakota Access Pipeline.

County Commissioners say the purpose of the meeting was to give people the chance to weigh-in on the matter in a peaceful manner.

About a dozen people addressed Morton County Commissioners in front of a packed room Tuesday. The recurring frustration for many: removal of barriers along Highway 1806, which restrict access to areas south of Mandan including Cannon Ball and Fort Yates.

"I didn't appreciate it when they put up that block. I have granddaughters and daughters that work at Fort Yates and live in Bismarck. It's humiliating and intimidating when the cops come up to your car and look in your car like we are doing something wrong," said a speaker who addressed the Commission.

"I am embarrassed for the law enforcement officers that I meet on the road, blocking people from seeing this protest," said a woman who addressed the Morton County Commission.

Highway 1806 was blocked up last Tuesday past the veteran's cemetery because of public safety concerns, according to the Morton County Sheriff's department. Sheriff Kyle Kirchmeier didn't speak at Tuesday's meeting.

While many spoke out against the traffic interception point, the Board of Commissioners deferred all questions regarding the barricade to law enforcement. The County Commission says they do not have the authority to remove the barricade.

"We thought it was very important to allow these individuals who are protesting to have a voice in a public forum. I think that's very important. As it relates to the traffic control point itself, that is a question that I'll have to refer back to county sheriff, our incident commander Kyle Kirchmeier," said Chairman Cody Schulz, Morton County Board of Commissioners.

Many of those present say they want answers from government officials.

"I don't want any part of it. I don't think that's right. And it's not fair. And that blockade, that should not be there. That's all I have to say," said another speaker.

The Board of Commissioners says they're working toward creating an open and peaceful dialogue with protesters.

Those who spoke against the blockade say not only does it affect commuters driving to work, but it's reduced business for local shops and reduced access to recreation areas.

Both the North Dakota Highway Patrol and North Dakota Department of Transportation have the authority under North Dakota Century Code to close a highway. This decision to temporarily close Highway 1806 was made by DOT and HP August 17.

Pipeline foes take fight to Bismarck, Washington D.C. (Forum News Service)

By Mike Nowatzki on Aug 23, 2016 at 6:38 p.m.

BISMARCK – Waving the flags of their tribes and singing the songs of their ancestors, more than 200 protesters marched across a Missouri River bridge in Bismarck Tuesday ahead of a federal court hearing that will determine the fate of the Dakota Access oil pipeline's route in North Dakota.

“This water belongs to all of us,” Vic Camp, a 41-year-old from South Dakota's Pine Ridge Reservation, said as he rallied the crowd before the march. “We all know that tomorrow in Washington they're going to make a decision that affects every single one of us.”

The march across the 2,370-foot-long Veterans Memorial Bridge aimed to show solidarity with the 2,000-some protesters encamped about 50 miles south on the Standing Rock Sioux Reservation, near the pipeline construction site along State Highway 1806 north of Cannon Ball.

Indeed, many marchers were from the campsite, including 25-year-old Kin-sin-ta Joseph and her 16-year-old sister Kis-dya:n-te' Joseph, who got help from a portable PA system so their river song would carry over the wind and traffic noise. The members of northern California's Hoopa

Valley Tribe said their chairman urged members to assist Standing Rock, and about 25 made the trip.

While they've taken part in protests before, joining a blockade against logging companies just a few months ago, the older sister said it's never been this big, with so many tribes involved.

"This is really spectacular," she said. "We've been waiting for this kind of gathering."

The Standing Rock Sioux Tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline. It would cross the Missouri River a half-mile north of the reservation and be the largest oil pipeline from the Bakken oil fields, moving 450,000 barrels per day to Patoka, Ill.

Standing Rock members oppose the river crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

Dakota Access LLC temporarily stopped construction at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct. But the protest hasn't impacted pipeline construction elsewhere along the four-state route, including in North Dakota, company spokeswoman Lisa Dillinger said via email.

"We have temporarily deferred grading activities across a short section of the right-of-way (less than 1 mile) while law enforcement works to contain the unlawful protests in light of the fact that we have the necessary permits and approvals to work at this site," she said.

A federal judge in Washington, D.C., will consider Wednesday the tribe's request for an injunction that would effectively halt construction of the 1,172-mile pipeline. A lawyer for the tribe said the judge has indicated he will rule from the bench or shortly after the hearing.

Film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside the courthouse in Washington, and actress Susan Sarandon also will speak at the rally, according to a statement.

Protesters on Tuesday blocked traffic only briefly while crossing the street to get to the bridge's pedestrian walkway, and law enforcement reported no problems with the march. Dozens of passing drivers honked their horns in solidarity, though one yelled an expletive aimed at Native Americans.

Camp said protesters will refrain from violence if the judge's ruling doesn't go their way.

"The only way violence will happen is if the cops provoke it and they attack us," he told Forum News Service, adding, "We have our women and we have our children. We have grandparents here."

When asked what will happen if the judge denies the injunction and Dakota Access tries to resume construction, Camp said, "Then we'll start blockading."

"We'll do what we can with our bodies to keep the machines from coming in," he said.

Four labor unions sent Gov. Jack Dalrymple a letter strongly encouraging him to use the power of his office to keep workers safe and ensure protesters are “following the letter of the law.”

The general presidents of the Laborers’ International Union of North America (LIUNA), International Union of Operating Engineers (IUOE), International Brotherhood of Teamsters (IBT), and United Association (UA), said the actions of protesters endanger not only themselves but construction workers and equipment, as well as local law enforcement who’ve bolstered their local presence.

They said the pipeline has created about 4,000 construction jobs in North Dakota along 346 miles of pipeline.

“While they may have a right to protest, we also have a right to do our jobs in a safe environment,” they said.

Protesters, insisting their actions are peaceful, appealed to the United Nations, non-governmental organizations and churches to send observers to the site. They also continued to rail against what they contend is an unnecessarily heavy law enforcement presence, including a checkpoint about six miles south of Mandan that restricts southbound traffic on Highway 1806 to emergency response vehicles and local traffic such as farmers, ranchers and homeowners.

Standing Rock Protestors Find New Resources After State Withdraws Support (KXMB TV, Bismarck)

Published 08/23 2016 04:04PM

Updated 08/23 2016 07:03PM

Protestors of the Dakota Access Pipeline are finding ways to sustain their effort after state officials pulled relief resources from their camp near Cannonball.

Ben Smith has the story.

For nearly a week.

Several state-owned trailers provided water, shelter, and a place to help those sick or hurt.

Monday morning, news came that these resources would soon be gone.

"It was shocking, it was shocking. I didn't expect that,"

"It's a little different now because everything is going to be outdoors where we had the convenience of having everything indoors in case of the rain, weather wind. Resources got taken away from us quick but we got them back," says Joenelle Leingang

As fast as they disappeared, new support came in.

Standing Rock Paramedics erected a tent in which to treat people.

The tribes road department also pitched in, delivering a giant tank of water.

"They keep this full to fill our buffalo tanks with water. We have two, three more possibly coming in from the Cheyenne River who had donated theirs so water supply is going to be back on track again," says Leingang

(Ben Smith, KX News) Not all state-resources have gone. There is one ambulance that is still here, to provide a backup for standing rock paramedics,

"They left the ambulance as an extra resource for us. Because like I said, we still provide services to all the reservation so of course our number of ambulances is limited," says DeAnn Werre, Standing Rock Paramedic

She says it's not your typical day as a Standing Rock paramedic.

"We've been able to bring in extra staff to be able to provide services,"

"We've pulled together and got our resources together and are able to provide the same services for people,"

It seems to be the theme of the effort, pulling together under one cause.

It's very overwhelming, it's great, phone calls, where can I bring it to...

I just would like the public to see for themselves. There is nothing negative going on here at all,

She says for now, this area near the Cannonball river has become a second home.

Protesters attend Morton County Commission meeting (Bismarck Tribune)

CAROLINE GRUESKIN and LEANN ECKROTH Bismarck Tribune

15 hrs ago

The Dakota Access Pipeline protests returned to the Bismarck-Mandan area Tuesday, as protesters walked across the Memorial Bridge and testified before the Morton County Commission.

Several speakers asked the commissioners to remove a roadblock that prevents drivers from traveling south on Highway 1806 from Mandan to the Standing Rock Sioux Reservation, though commission chairman Cody Schulz said after the meeting the commission does not have authority to remove the block.

Speakers told the commissioners and the approximately 30 people who attended the meeting that the block impedes travel, punishes the tribe's economy and can be humiliating to cross.

The highway has been blocked since Aug. 17, when Morton County Sheriff Kyle Kirchmeier said the protest had become unlawful and the road unsafe, points the protesters have contested throughout the week.

Marilyn Kary, who works in Fort Yates, said the roadblock makes it difficult for teachers on the reservation who commute.

Chase Iron Eyes, the Democratic candidate for North Dakota's lone U.S. House seat, said the roadblock was intended to punish the tribe and has disadvantaged businesses in the region.

He said Native Americans and white North Dakotans tend to live in separate worlds.

"Interactions should be encouraged," he said, suggesting the block did the opposite by preventing commerce.

Cody Hall of Eagle Butte, S.D., spokesman for the Red Warrior Camp, said the blockade simply sets the wrong tone.

"It felt like what black people felt in the South," he told commissioners, adding that he was questioned at the blockade, while a white friend was not.

Clyde Bellecourt, co-founder of the American Indian Movement, asked members of the Morton County Commission to consider what future generations would think if the water were contaminated.

"I'm 80 years old. I've lived my life. I don't want my grandchildren to ever question," he said. "Grandpa, why didn't you say nothing?"

He encouraged the commissioners to visit the protest camps.

"You have nothing to be afraid of," he said.

Earlier on Tuesday, about 200 protesters took their cause to the Memorial Bridge, staging a peaceful march from Bismarck to Mandan.

Banners, bright regalia and flags of many Native American nations were presented as smart phones and a drone documented the latest chapter in the protest.

At the staging area, multiple speakers encouraged songs and prayers from participants. Drums pounded in support of discontinuing pipeline construction.

Many protesters held up bottled water mixed with oil to represent the contamination they believe the pipeline would cause to their drinking water, reminding everyone present the water had to be safe for future generations.

Shouts of "save our water" could be heard by protesters as they ascended the bridge.

There was little presence of law enforcement for most of the demonstration except for when North Dakota Highway Patrol troopers and local police briefly blocked traffic as marchers crossed to Front Avenue to reach the pedestrian portion of the bridge. The protesters kept to the walkway and held up their signs as motorists honked their horns.

Those gathered Tuesday insisted their message has been a peaceful one.

"I am here because of the water, because of the grandchildren," said Nora Old Man, who held up a water bottle and sang with her grandsons.

Sunny Red Bear, of Eagle Butte, S.D., said she was participating in the march for her 7-year-old son who joined her Tuesday.

"This is about our future. This is about thinking generationally. This is about everyone it affects, community after community. They are choosing oil, wealth and money over our future. I want to protect that the best I can and to show my son to stand up for what's right."

Rapid City may add 15 more firefighters, 9 paid by FEMA grant, six by city

(Rapid City Journal)

Mike Anderson Journal staff
Rapid City Journal
Aug. 24, 2016

Rapid City will soon hire 15 new firefighters, thanks in large part to a $1 million federal grant awarded to the city fire department last week.

The new hires will fill a staffing shortage that Fire Chief Mike Maltaverne has urged the city council to address since 2014.

The Staffing for Adequate Fire and Emergency Response Grant, or SAFER, administered through the Department of Homeland Security and the Federal Emergency Management Agency, will pay the salaries and benefits of nine new firefighters for the next two years. The other six out of 15 new positions will be paid for out of the city's budget.

"In 2014, we started to identify that, with the way our demands for service were increasing, our resources were starting to spread thin," Maltaverne said on Tuesday. "Our firefighters were going on more and more calls and the staff increases weren't keeping up with the demand for our services."

In a memo to Mayor Steve Allender earlier this year, Maltaverne said that in 1995, the city's fire department had 81 operational firefighters with an annual call volume of 3,600, or 44 calls per firefighter. Rapid City has grown significantly in population and geographical area since the 90s, and with that growth has come more fires.

The department's annual call volumes have grown an average of 7.6 percent since then, Maltaverne said, putting last year's total call volume for the department at 17,012 for its 117 firefighters, or about 145 calls per firefighter.

Maltaverne knew it would require some extra funding to get 15 new firefighters on board to fill the service gap and ease the pressure on existing personnel. So he asked the Rapid City Council to pay for six employees if he could find a grant to pay for nine more.

"We thought that would be more realistic, that the city would be able to fund that," Maltaverne said.

The City Council has already agreed to fund three positions, and the mayor has included another three in next year's proposed budget which will be the subject of a public discussion at 6:30 p.m. today in the city council chamber.

"We clearly articulated the need for additional staffing and our elected officials along with FEMA responded, and for that we are grateful," Maltaverne said.

Though the SAFER grant will only pay the other nine new firefighters through two years of service, Maltaverne is confident that will be plenty of time for the council to figure out how to keep funding those positions indefinitely.

"What would be the point of hiring firefighters for two years and then having the city lay them off?" Maltaverne said. "That doesn't solve the long-term problem."

The grant calls for the new hires to be made within 180 days, a deadline Maltaverne has no worries about meeting. This spring, the Rapid City Fire Department went through a hiring process and compiled a selection of suitable candidates.

"We reviewed that and we feel there are a sufficient number of qualified candidates to fill those positions," he said. "We've got a really good deep list of potential employees."

Maltaverne hopes to have all 15 slots filled by Jan. 1, 2017, which is when the SAFER grant funds will be awarded to the city.

Applying for the grant was a comprehensive and competitive process, Maltaverne said, adding that he sees FEMA's decision to award the funds as a form of validation.

"Getting this grant clearly confirms that the need was there," he said.

New fire burning near Angostura Reservoir (KBHB radio)

Gary Matthews

KBHB Radio
August 23, 2016

HOT SPRINGS, S.D. - The Great Plains Fire Dispatch says federal, state and volunteer fire crews are battling a wildfire in the southern black hills.

The Maitland CA fire is located approximately 6.5 miles southwest of Angostura Reservoir.

Dispatch says the fire had reached 34.5 acres as of Tuesday afternoon.

They list the fire as human caused.

There is no word on any structures being threatened.

UTAH

American Fork fish could contain toxic mine waste (Salt Lake Tribune)

By BRIAN MAFFLY | The Salt Lake Tribune
First Published Aug 23 2016 05:30PM • Updated 57 minutes ago

Some of the sediments that have turned American Fork River's normally clear waters into a black soup could be loaded with arsenic, lead and other toxic metals associated with historical mining operations at the scenic canyon's headwaters.

Officials from several local, federal and state agencies gathered at Tibble Fork Dam on Tuesday to figure out what to do about the sediment releases, which commenced sometime after the 10-acre lake began draining Saturday as part of $7.3 million project to upgrade the aging earthen structure.

The incident shocked conservationists who fear an ecological catastrophe is unfolding in one of Utah's most popular natural areas, located in the Wasatch Mountains just outside Provo.

"I think it's a $20 million cleanup and it will take years," said Mark Allen, founder of the group Protect and Preserve American Fork Canyon.

The North Utah County Water Conservancy District sponsored the project with federal matching dollars in an effort to make the dam seismically safe and extend its life for another 50 years. The lake bed is coated with 5 to 10 feet of fine-grained black sediments that have accumulated behind the dam and impaired its ability to store water, though the lake has remained a popular, well-stocked trout fishery.

A sediment release "was not unexpected, given this was a rehabilitation project," said the district's lawyer, John Jacobs. "There may have been a bit more than was anticipated. This is a 60-year-old dam, and it has a lot of sediments behind it."

During the review process, federal officials had considered dredging the lake bed as a way to restore the dam's usefulness, but testing indicated that levels of arsenic and lead exceeded safety standards and made these sediments too dangerous to move, according to the environmental assessment conducted by the Natural Resources Conservation Service.

The metals contaminating Tibble Fork originated in Live Yankee, Globe and other abandoned gold and silver mines that perforate the head of American Fork Canyon's northern branch, according to Allen. He says the state is doing too little to hold landowners accountable for these environmental "time bombs." Many of these old mines are located on land now owned by Snowbird Ski Resort in and around its Mineral Basin.

The cost of extracting and disposing of the material accumulated in the Tibble Fork lake bed would be $8.4 million, so the option was abandoned in favor of raising the dam by 9 feet. The environmental assessment insisted the contractor use "best management practices" to ensure the toxic sediments were not pushed downstream.

The measures are detailed in a construction permit issued this year by the U.S. Army Corps of Engineers, which would not immediately provide a copy of the permit. It did send personnel to the dam Tuesday to determine whether the project was in compliance with the permit.

The U.S. Environmental Protection Agency also sent emergency-response personnel to the site.

"It was so damning that they didn't want to touch the sediment," Allen said. "Your project is only as good as your most stupid backhoe operator. It said it was too toxic to remove it, but now it's in the river. How are you going to clean up 10 miles of trout streams?"

The water district hired Provo-based RB&G Engineering to design the project and Whitaker Construction, of Brigham City, to build it. RB&G's project leader, Brad Price, did not immediately return a phone message seeking comment.

Allen and members of Trout Unlimited spent Monday in the canyon, photographing the sludge pouring down the river channel, which smelled of gunpowder and rotting fish.

"In the main canyon, the water looks like Mississippi mud," said Grant Bench, an officer with a Utah County Trout Unlimited chapter. "I don't know how a cold-water fish is supposed to survive in that."

But federal and state officials were not ready to declare a disaster Tuesday.

"We are taking samples above [the dam] and below to establish baseline and impact below in the water column," said Walt Baker, director of the Utah Division of Water Quality.

Division of Wildlife Resources aquatics biologist Mike Slater zapped the creek in various places with electroshock equipment Tuesday in search of breathing fish.

WYOMING

Wildfires close Yellowstone's south entrance, burn near west entrance

(Billings Gazette)

By JORDON NIEDERMEIER jniedermeier@billingsgazette.com

All roads were open in Yellowstone National Park Tuesday despite several fires growing in the area including a blaze blocking access to the Park’s south entrance.

The West Entrance remained open. But, the Maple fire has burned more than 27,000 acres about five miles northeast of West Yellowstone and reached within a tenth-mile of the roadway to the west entrance. The fire grew more than 4,600 acres on Monday and is mostly growing on the north side of the burn area. It is not expected to cross the road to the west entrance. If fire activity or smoke increases, pilot cars will be used to guide cars through the area, said a National Park Service news release.

The release said fire activity closed a stretch of U.S. Highway 89 in Grand Teton National Park between Leeks Marina and north to Flaggs Ranch. The closure affects travelers planning to use Yellowstone National Park’s south entrance. The road closure is expected to stay in effect until Wednesday. Lizard Creek Campground has also been evacuated.

About 100 people are monitoring the Maple fire. Resources including firefighting aircraft and engines are in the area. However, the fire is not being actively suppressed as it was determined to be caused by a lightning strike and wildfires are an integral part of the Yellowstone ecosystem, said Barbara Dougan, NPS fire information officer.

Dougan said firefighters will work to keep the blaze north of the roadway and east of the Madison River, away from the town of West Yellowstone.

“At this time the fire is doing very well on that side and doing the job of reducing downed debris that’s on the ground,” she said.

Dougan said officials are still working to determine the cause of the nearby 190 acre Boundary fire but it is believed to have been caused by human activity. Firefighters worked to suppress that wildfire and it was about 85 percent contained as of Tuesday morning.

Tropical System Eyes Florida, Southeast US, May Develop Into Hurricane (USA Today)

By Doyle Rice

USA Today, August 23, 2016

What’s now just a disorganized mass of thunderstorms 1,600 miles from Miami could develop into the first hurricane to hit Florida in nearly 11 years late this weekend, forecasters warn.

There’s a 60% chance the storm system, known for now only as “99L,” could develop into a tropical depression in the Atlantic Ocean later this week. If it swirls into a tropical storm, it will be named Hermine (Her-MEEN).

The system then could rapidly intensify into a large, potentially dangerous major hurricane that would target the Southeast U.S. coast Sunday or Monday, Weather Underground meteorologist Jeff Masters said.

However, as meteorologist John Morales of NBC-6 in Miami notes, “tropical weather forecasting is a very inexact science.”

Overall, 6- or 7-day forecasts of tropical cyclone location and intensity are “generally not very good,” according to Penn State University meteorologist Jon Nese.

But whether or not the system becomes a tropical storm or hurricane, gusty winds, heavy rains, and possible flash floods and mudslides could occur over the islands of the northeastern Caribbean Sea and the Bahamas, the National Hurricane Center said.

By Sunday, the system could bring deteriorating weather and sea conditions to the east coast of Florida, AccuWeather said.

Most of the computer models meteorologists use to forecast tropical weather show the system hitting the Southeast U.S. between Florida and South Carolina sometime Sunday or later, Masters said.

One computer model, the European, shows the storm crossing Florida and emerging as a major hurricane in the Gulf of Mexico by next week, according to WeatherBell meteorologist Ryan Maue. But the American model, the GFS, does not show that movement.

The most recent hurricane to strike Florida was Wilma in October 2005, AccuWeather said.

A separate system, Tropical Storm Gaston, is projected continue spinning in the central Atlantic. It could become a hurricane later this week, weather officials say. That storm however, is expected to remain over the open Atlantic, though it could stir up strong surf along the eastern shores of Florida, said Scott Spratt, a meteorologist with the National Weather Service in Melbourne, Fla.

Louisiana Flooding Revives FM Chip Argument (Inside Radio)

Inside Radio, August 24, 2016

Each natural disaster presents its own challenges, and the floods that have inundated portions of Southern Louisiana are presenting wireless companies and federal regulators with a now-familiar picture. FM radio stepped in to fill a void left by cellphones rendered useless during an emergency.

"I just cannot thank you guys enough for getting the message out," Denham Springs, LA mayor Gerard Landry said in an appearance on Guaranty Broadcasting's "Talk 107.3" WBRP, Baton Rouge. "I haven't seen a newspaper or watched TV for eight or nine days but everybody has a radio—thank goodness for that," he added.

His comments illustrate the emergency role radio plays during natural disasters, one that broadcasters have repeatedly used as an incentive to wireless companies reluctant to activate FM chips already installed in most cellphones. It's been a tough sell.

"We had stations on the air 24/7 giving out information—this has been horrific and I guess people who are not living here don't understand," Louisiana Association of Broadcasters president Polly Prince Johnson said. "Some of these places didn't have electricity and if the FM chip was on their phones they could have been listening to our local broadcasters who were giving lifesaving information."

Helping to strengthen radio's case was the fact that AT&T suffered a massive outage across the region, leaving a large number of residents and the Louisiana State Police with phones that didn't work. Guaranty Media's Baton Rouge market manager Gordy Rush says when flooding closed a 55-mile stretch of Interstate 12 it left thousands of people stranded on the highway for more than 28 hours with radio as a lifeline after his stations jerry-rigged a connection to the state police to relay critical information to drivers stuck miles from any exit ramp. "This all played out on the radio," Rush said.

Johnson says it wasn't just stuck motorists who were impacted by the cellular outage. It was also families trying to reconnect. "People couldn't make phone calls for three or four days and then it was sporadic at best—so loved ones were calling the radio stations trying to get the information out," he explained.

While the wireless industry points out that the new Emergency Alert System sends alerts to cellphones on a localized basis, last week in Louisiana it seems the messages were having the opposite effect as intended. With frequent alerts around the clock, many people whose phones did work became annoyed and switched them off to preserve battery life. "It was a nuisance," Rush said.

More than a dozen people lost their lives during the Louisiana flooding and while industry lobbyists are likely to tread carefully so as not to appear to be capitalizing on Louisiana's suffering, those high stakes are what many broadcasters say proves the need for radio on smartphones. "If the FM chip was turned on, people are able to tell them that the water is rising and they should get their stuff and get out," Johnson said. "It's in times of disaster when it is so important and it can save lives."

Added Rush, "This is a matter of life or death."

After briefly flirting with the idea of lobbying for a federally imposed chip mandate in 2010, the National Association of Broadcasters quickly backed away from the idea. For the past six years, the NAB has instead pushed the telecom industry to activate FM chips on its own. In the ensuing period, Sprint embraced the NextRadio app—which activates the FM chip—three years ago, and by the end of this year, AT&T and T-Mobile will follow Sprint's lead. The exception is any customer that uses an iPhone since Apple doesn't include FM radio technology inside its handsets.

“NAB continues to support voluntary activation of FM chips by the carriers,” spokesman Dennis Wharton said. “This is a no-brainer from a public safety perspective, as FEMA’s [administrator] Craig Fugate has noted. We hope all the carriers—along with Apple—will look at the Baton Rouge tragedy as an opportunity to do the right thing and voluntarily light up the chips.”

Back in Louisiana, more than 100,000 households remain without power, but some things are beginning to return to normal. Rush is back at his desk after he jumped from market manager to air personality, spending 32 hours on the air from Friday until Tuesday as some staffers were coping with flooded homes.

Guaranty Media began simulcasting “Talk 107” WBRP on its 100,000-watt classic rock sister “Eagle 98.1” WDGL throughout the storm while country “100.7 The Tiger” WTGE relayed WAFB-TV with station cut-ins. Rush says for a time it looked as though WBRP may have been under threat as its transmitter building was six inches from taking on water after drainage canals backed up and overflowed into its industrial part tower site. Fortunately, the water eventually receded.

Rush, who made it through Hurricane Katrina a decade ago, says the two disasters have left him with an unmistakable conclusion. “Twice now, cellular phones have not been dependable; they’ve failed,” he said, adding, “Radio is a lifeline through this stuff.”

ANALYSIS

- **Colorado:** A rechanneling project through the Garden of the Gods is expected to remove 100 properties from the floodplain… The Colorado Springs Independent interviewed the three colleges in the area about their plans for dealing with disasters, including an active shooter…. Bridges on a county road near the Hayden Pass Fire burn scar were taken out by flooding… The *Denver Post* explains why Colorado mosquitos are not likely to carry the Zika virus.
- **Montana:** An extraordinary outbreak of a parasite killing whitefish caused the state to shut down 180 miles of the Yellowstone River to all recreational uses.
- **North Dakota:** More stories report on the pipeline protest, including one in the *NY Times*: Homeland Security Division Director Greg Wilz explains the decision to withdraw state-owned resources was because the situation is not an emergency, the protestors are not on state-owned land, plus reports of criminal activity. Water has been supplied by the tribe's road department. Protestors marched over a bridge peacefully and staying on walkways. About 30 people attended a meeting of the Mandan county commissioners; all those who spoke opposed the pipeline, and many spoke against the traffic barrier set up by law enforcement, saying it hurts local businesses and farmers, is humiliating, and prevents people from seeing the protest. Commissioners said the decision was by law enforcement and is not theirs to overturn. The tribe says a leak at the pipeline could contaminate its water supply and sacred sites. The company says construction has only stopped at this one mile of the 1,172 mile pipeline, which would be the largest source for moving Bakken crude oil. Four unions wrote to Governor Dalrymple asking that he make it safe for construction workers to do their jobs. A federal judge is expected to rule today on a request for an injunction to halt the project. Tribal leaders say they will remain peaceful, but will blockade if the ruling goes against them. So far, there have been 29 arrests for trespassing or disorderly conduct.
- **South Dakota:** A $1 million FEMA SAFER g rant will pay for nine new firefighters in Rapid City for two years… A new wildfire broke out near Angostura Reservoir.
- **Utah:** An attempt to upgrade the Tibble Fork Dam has resulted in lake sediments being released over the weekend that have contaminated the American Fork River, apparently with toxic mine waste. Environmentalists fear an ecological disaster. The presence of toxic sediments had led to an earlier decision to upgrade the dam rather than dredge the lake – but draining the lake to work on the dam appears to have done the damage.
- **Wyoming:** Several fires were burning in the area of Yellowstone National Park, though all roads within the park remained open. One fire south of the park blocked access to that entrance. The fires were caused naturally and were not being actively suppressed.
- **Other FEMA-related stories**: *USA Today* reports on possible hurricanes developing in the Atlantic. … *Inside Radio* says the Louisiana floods show the need to activate FM radio chips in cellphones, which do not work when cell towers are down.

Flood project through Garden of the Gods will reroute Colorado Springs floodplain (The Colorado Springs Gazette)

By: Matt Steiner

Two years after city officials teamed with residents of a West Side Colorado Springs neighborhood to plan flood mitigation and reconstruction of Camp Creek, a project to remove more than 100 properties from the floodplain is about to begin.

On Monday, crews could begin the first phase of the more than $30 million project rebuilding about 5,100 feet of channel through Garden of the Gods Park and the Rock Ledge Ranch.

The work could be potentially lifesaving for residents of the Pleasant Valley neighborhood when heavy rains pound the Waldo Canyon fire burn area in the mountains to the west.

"As a community, we can't let our guard down," said Colorado Springs Emergency Manager Bret Waters. "Even though we're seeing some growth, it doesn't mean the risk will go away."

The Camp Creek mitigation project discussed in the spring of 2014 attracted more than 100 residents who helped choose project priorities. The result was a total rebuild of the deteriorating concrete channel through Pleasant Valley, meaning the creek along 31st Street will be refurbished with grass, shrubs, rocks and a relocated bike path.

But first, the work upstream must be done.

"Reducing the flows (through Garden of the Gods) will allow us to build the rest of the project," said project engineer Mike Chaves.

Construction crews will first install a series of rock steps in the creek, reshape banks and plant vegetation near the channel through the ranch and the park. The cross vanes, Chaves said, are intended to slow water and debris. Erosion has been accelerating each year because of floodwaters pouring off the Waldo Canyon burn scar.

The channel stabilization will cost $1.1 million, said city spokeswoman Kim Melchor. Almost $800,000 of that comes from a Natural Resources Conservation Service grant with the rest of the money coming from the city.

That work will likely be followed by construction of a large sediment detention pond at the north end of the park in early 2017, Chaves said.

That phase will cost almost $8 million, Melchor said. It will include a large berm stretching from 30th Street to the hills in the park that can dam floodwaters.

When the entire project is complete, more than 200 Pleasant Valley residents will no longer be in the floodplain.

"The whole intent is to protect the park, protect Rock Ledge Ranch and the downstream communities," Melchor said.

Colleges and universities put emphasis on planning for disasters, including active shooters: Planning for the worst (Colorado Springs Independent)

By J. Adrian Stanley @JAdrianStanley1

On April 16, 2007, Seung-Hui Cho, a senior at Virginia Tech, killed 32 people and wounded another 17 in two separate shootings.

Until June of this year, when Omar Mateen killed 49 people and wounded 53 others in Orlando's Pulse nightclub, the Virginia Tech shooting was the deadliest by a single perpetrator in U.S. history.

Virginia Tech held sway over the country, leading to widespread grief and fear, changing gun laws, prompting deeper discussions on mental illness and leading many colleges and universities to take a second look at their emergency plans.

Back in 2007, institutions of higher education tended to have procedures for protecting their campus communities from natural disasters like fires, tornadoes, floods and earthquakes, and often some man-made accidents as well, like chemical spills. But most had dedicated less — or no — energy to drafting plans to deal with an active shooter rampaging through the campus.

That changed after Virginia Tech. Just as "duck and cover" was a part of common school instruction during the Cold War, in today's age of mass shootings, students now learn to "run, hide, fight."

What Cho did was an eyeopener for school leaders. The gunman, who had known mental health issues, fatally shot two students in a residence hall, walked away, changed his clothes, and ran errands, then calmly entered an academic hall. At some point, he chained shut the exits.

Police were dealing with the first shooting while Cho entered Norris Hall. The university, suspecting the first shooting was of a personal nature, hadn't instructed students, faculty and staff to prepare for an active shooter. In fact, students in Norris reported being simply curious when Cho peeked his head inside their classroom doors before beginning his massacre.

Once the shooting was underway, Cho's victims were largely at a loss to stop his killing spree. Some died trying to hold classroom doors closed, including Professor Liviu Librescu, an Israeli Holocaust survivor, whose body was riddled with bullets as he held his classroom door shut, allowing his students to climb out windows. All but one of the students in Room 204 survived due to his heroism.

Nevertheless, 30 people died in Norris Hall. Cho shot himself before police located him.

"A lot of the [college and university] emergency plans really stepped up after 9/11," UCCS Police Lt. Marc Pino says. "Using common terminology, working on regional resources, things like that — that sort of were identified as issues after 9/11 for responding to emergencies — I would say around that time is when we really stepped things up."

But asked when UCCS began preparing for an active-shooter scenario, Pino says, "Virginia Tech would be when we really started doing emphasis on active shooter, and also our campus developed a student response team as a response.

"Numerous people at Virginia Tech had dealings with the shooter, and no one was really talking together to find out that some larger issues were going on. So, the [UCCS] student response team was [formed] — very shortly after Virginia Tech — [and it] comprises the dean of students office, the chief of police and the head of the counseling center. We sort of field reports from faculty, staff, students, anybody that has a concern about a student. We can sort of reach them before it gets to a critical level."

The *Independent* spoke to representatives at UCCS, Colorado College and Pikes Peak Community College about their emergency plans. While plans and strategies differ, each campus has a plan, along with one or more employees in charge of preparing for emergencies.

Of the three schools, Colorado College, which has about 2,000 students, is the only one without its own police force. John Lauer, co-chair of CC's emergency preparedness group and the college's associate vice president for student life, explains that the school does have a single Colorado Springs police officer assigned to the campus, as well as a campus safety department.

The safety officers — who carry no weapons — walk the campus and look for anything unusual. If a situation warrants it, they call police, with whom the college works closely. Campus safety officers can also take anonymous tips.

The campus does have an emergency plan, last updated in 2012, and a director of campus safety and emergency preparedness — Maggie Santos, a former Colorado Springs Police lieutenant. The plan will be updated soon.

"We're always focused on continuous improvement," Lauer says.

But, he adds, the college stresses that every person has to take responsibility for knowing how to respond, saying, "We're as prepared as every individual is prepared."

CC performs regular fire drills and has started doing active-shooter trainings with resident advisors, as well as sessions open to anyone, or upon request. Lauer says it's important not to drill too often because it can desensitize people in a real emergency.

The campus does contract with a company that sends emergency texts, emails and phone calls when needed to students, staff and faculty, as well as anyone else who wants to be notified.

While not every classroom has a locking door, placards by doors give instructions on what to do in an emergency — such as barricade the door for an active shooter or go to the nearest marked shelter in case of tornado.

CC has cameras throughout campus and a loudspeaker on Palmer Hall. Lauer says the campus is considering replacing that speaker, as well as placing speakers on campus security cars for use in an emergency. Staff in residence halls also have megaphones.

Jim Barrentine is chief of police at PPCC, where he says he was hired five years ago to develop an emergency preparedness plan.

That plan is now the template for the state's community colleges.

At first, Barrentine says most folks at PPCC didn't know how to perform basic safety tasks, like using a fire extinguisher or helping a person in a wheelchair down stairs. He's focused on giving trainings and providing instructional videos for different emergency skills. The school also does lockdown drills for an active-shooter situation, as well as special training, and four or five tabletop exercises meant to mimic a real emergency.

Interestingly, of the three schools, PPCC is the only one with locks on all classroom doors. The college encourages locking those doors during class hours.

With three campuses and 20,000 students, PPCC faces unique challenges. The 18-person police department is distributed among the campuses, where they patrol during business hours.

Barrentine has set up a system so that the campus community will be notified of an emergency immediately through texts, emails, landlines and a speaker system throughout the campus. Barrentine wants to add light boards for the deaf and buzzers for the blind, to ensure they are notified, and he's working on implementing a buddy system to ensure people with disabilities are cared for in an emergency.

He also has hotlines for anonymous tips.

Barrentine says the statewide system of community colleges is working to improve emergency preparedness. But he says PPCC is lucky because unlike many other schools, police are on the scene here.

"In an active shooter [situation]," he says, "security's going to run like everyone else."
Back in 2012, UCCS' emergency plans were tested. The Waldo Canyon Fire was raging nearby, and the campus suddenly became an unofficial evacuation site.

"We had the Air Force Academy cadets here in 2012, we also housed several hundred evacuees in our campus residence halls," UCCS spokesperson Tom Hutton says. "And then in 2013 [during the Black Forest Fire], we were an official Red Cross evacuation site and I think we had half a dozen people here, so we had more when we were an unofficial evacuation site."

Since UCCS is located on a wildland-urban interface, it not only has the normal risks of a university with around 11,300 students, but it also must be prepared for wildfire. Because of that, the university has done mitigation along its borders and, in summer months, UCCS police carry fire extinguishers with water in them, better for fighting wildfires. They also patrol the campus borders on off-road motorcycles.

Like the others, UCCS has an emergency notification system that hooks up to cell phones and landlines in classrooms. The university does not have a loudspeaker system or locks on every door, but emergency instructions near doors show how to barricade a door in emergencies and find marked tornado shelters. UCCS conducts general evacuation drills.

The UCCS police department, which has 21 officers and patrols the campus 24/7, has an intergovernmental agreement with Colorado Springs police to help each other in emergencies with set enforcement boundaries. Many will remember that UCCS Officer Garrett Swasey was killed last November when he responded to a mass shooting at Planned Parenthood. Just as he responded, CSPD would provide backup to UCCS officers in case of an active shooter on campus.

UCCS police do take tips (though anonymous tips must be made online) and say students are vigilant about filing reports of anything suspicious. Police Lt. Pino says he'll often get several calls within a few minutes about an unattended backpack, for instance. That's important, because it means students spot unusual circumstances and take them seriously.

"The reason why we have a very safe campus," he says, "is because we get those reports."

UCCS has emergency phones throughout campus, and police offer free escorts — no questions asked — to anyone requesting them. UCCS staff say they plan for any emergencies, and the university has an emergency manager and several offices that deal with emergency planning, including conducting regular tabletop exercises.

"I think we have a culture of working together as a university," Dean of Students Steve Linhart says, "whatever the situation."

County Road 40 bridges washed out by flash floods (KOAA TV, Colorado Springs)

Updated: Aug 23, 2016 10:00 PM MDT
FREMONT COUNTY - County Road 40 is closed after flash flooding in the area of the Hayden Pass Fire burn scar, according to Fremont County Sheriff's Office.

The dam on County Road 40 is holding, but Butter Creek and Little Cottonwood Creek are flowing heavy with debris. All homes are intact and all residents in the area are safe.

A reverse 911 notification was sent to residents in the area of the Hayden Pass Fire burn scar for a flash flood warning Tuesday evening. The warning was in effect until 9:45 p.m.

Bridges on County Road 40 were washed out by flood water. Fremont Search and Rescue and Fremont Incident Management Team responded as a precaution.

Why Colorado's Mosquitoes Are Not Likely To Spread Zika (Denver Post)

By John Ingold

Denver Post, August 23, 2016

It was an experiment that was part "Outbreak" and part "Trading Places," but researchers at Colorado State University hoped it might answer one of the more pressing public health questions facing the state: Could the Zika virus spread here?

The conventional wisdom was that it couldn't, at least not widely, because the disease's primary vector — a ninja of a mosquito called Aedes aegypti — had no established population in the state. But no one had proved that conventional wisdom true. What if it was wrong? What if the local mosquitoes — particularly those in the Culex genus that already carry the West Nile virus — were also able to transmit Zika?

The mosquito experts at CSU's Arthropod-borne and Infectious Diseases Laboratory decided to put the conventional wisdom to the test. In their lab, they infected Culex mosquitoes with Zika. And then, for a week as the virus incubated inside their study subjects, they held their breath.

Finally, the results:

"We could not get that virus to replicate in the mosquito," CSU professor Brian Foy said of the experiment, the topic of a soon-to-be-published article.

Whew.

When it comes to being disease-carrying menaces, not all mosquitoes are created equal, and that explains why Zika is a public health crisis in Miami and a relative public health trifle in Milliken. There are 54 species of mosquitoes commonly found in Colorado, but none of them are known to be able to transmit Zika — even if they can, like the Culex mosquitoes, transmit other diseases.

"It's still kind of a mystery," Foy said. "There's a very fine-tuning match of virus and mosquito."

The reason is that a mosquito's transmission of a disease is not as simple as taking infected blood in from one person and then backwashing it into another. Instead, the virus must be capable of reproducing inside the mosquito and then making its way into the mosquito's saliva — the real source of contamination since mosquitoes digest the blood they consume as food.

"When a mosquito bites a person, it spits into the bite," Foy said.

With the local-born bugs apparently incapable of carrying Zika, then, the only chance of a mosquito-spread outbreak in Colorado comes from a moonshot: the one-in-a-billion possibility that a Zika-capable mosquito that hitchhiked to the state from elsewhere bites into a Zika-infected person who picked up the virus out of state.

So far, only 21 people in Colorado have tested positive for Zika, and all of them contracted the virus somewhere else.

The only instance of a wayward Aedes aegypti being found in the state came in 2010, in Pueblo County. Another species of mosquito possibly capable of transmitting Zika, Aedes albopictus, has been found sporadically in Weld County, most recently in 2011 and most likely was brought to the state in waste tires disposed of here. But those species are just summer tourists; they can't survive the winter.

"Remember we're in Colorado; we're not in the tropics," said Michael "Doc" Weissmann, the chief entomologist at Colorado Mosquito Control, which does monitoring and eradication for local governments.

Weissmann said none of his company's traps have snagged worrisome Aedes mosquitoes this year.

"It's just the same old, same old," he said.

Eric Aakko of the Weld County Health Department said the county's surveillance efforts have found higher-than-normal levels of West Nile-carrying mosquitoes but no Zika concerns.

That leaves only one other prominent way that the virus can spread within Colorado, and it's one Foy knows a little too well. While conducting research in the African nation of Senegal, Foy contracted Zika in 2008. He then came home and accidentally gave it to his wife, which led to a research article hypothesizing — correctly, it turns out — that Zika can spread through sex.

The experience, though, didn't change his mind about the dangers of Zika in Colorado.

"The risk of all of a sudden having a massive outbreak in Denver is, I would say, infinitesimally small," he said. "From mosquitoes, I can't see it happening."

MONTANA

Yellowstone fish-killing parasite is so prolific it's 'shocking' fish to death (Missoulian)

By BRETT FRENCH Billings Gazette

PARADISE VALLEY — A previously unidentified strain of parasite has grown so prolific in the Yellowstone River that it is overwhelming whitefish, killing thousands and prompting the state last week to close more than 180 miles of the river to all recreation.

"The sheer parasite loading itself is almost shocking the fish, that that's what's killing them," said Eileen Ryce, Montana Fish, Wildlife and Parks' hatchery section chief, during a Tuesday press conference along the banks of the Yellowstone River south of Livingston.

Scientists like Ryce believe that the parasite bloom may be so large and unprecedented in part because the Yellowstone River is experiencing near-record low flows and high water temperatures.

"We could see varying responses (of the parasite) depending on which river it gets into," said Travis Horton, Region 3 fisheries manager in Bozeman.

The nearby Madison River, where flows are dam controlled, may be more resilient to the parasite since the water's temperature is cooler, coming from the bottom of Hebgen Lake, and the flows can be maintained at a steadier rate. Likewise, outbreaks of similar parasites in Idaho that killed

whitefish in 2011 and 2012 may have been more limited because some of the streams are dam controlled, Horton said.

The FWP officials spoke to a crowd of about 50 people — anglers, local lawmakers, the media and business owners — at a fishing access site where the stench of dead whitefish rotting on the riverbank wafted through the air.

Media, business owners, anglers and others gather for a press conference on the banks of the Yellowstone River. CASEY PAGE, Gazette Staff

Acknowledging the effect of the river's closure to anglers, floaters and on all of the many businesses that service such recreationists, Gov. Steve Bullock said "the impact goes far beyond the water's edge." Yet he said "science needs to guide this."

"We need to make sure we are not only protecting this watershed and this water but indeed our entire state," he said, noting that the outdoor recreation industry creates about 64,000 jobs and $6 billion in consumer spending annually in Montana.

When Rep. Alan Redfield, R-Livingston, asked why certain portions of the river couldn't be open to fishing to ease some of the impact on local businesses, Horton said FWP hopes to contain the parasite outbreak to the Yellowstone and make its duration short-lived.

"We want to try to minimize this," Horton said. "We don't want to make this situation worse by rushing ahead."

Horton added that when the Yellowstone River's peak water temperatures drop below 55 degrees and stay there, FWP would consider lifting the river closure.

"We're not looking at it being a permanent closure," said Jeff Hagener, FWP director.

He noted the rule to enforce the closure is a temporary emergency closure good for 120 days. After that time the department is forced to re-examine the issue to decide whether the closure should be extended.

The fish kill has been documented by FWP crews from the Yellowstone National Park boundary about 100 miles downstream to just west of the town of Big Timber, Horton said. Other public reports of dead whitefish and suckers downstream from Big Timber to Laurel have not been confirmed by FWP.

The microscopic parasite that infects the fish needs two hosts to complete its life cycle, Ryce explained. It starts in a Bryozoan, a moss animal similar to a freshwater sponge. The Bryozoan releases the parasite that fish absorb through their gills. Similar parasites have caused internal bleeding and kidney failure in whitefish in other outbreaks, such as the ones in Idaho.

But the Yellowstone outbreak is different, Ryce said. There are so many spores being found inside the fish that the scientists are calling it a naive reaction.

"What we mean by that is that the immune response that the fish are expressing would suggest that they have not been exposed to this parasite previously," she said. "That has concerned us since it would suggest it's a new infection. At least we haven't seen anything on this scale previously."

"The other thing that's concerning is from the histology results there were high numbers of parasites seen in multiple tissues. That suggests to us that the infective load that's currently out in the river is very high. Why that's a concern is that the sheer volume of parasites that's out there makes it very easy for the parasite to be spread to other waters."

That's the reason FWP took the unusual step to close down much of the upper river to recreation, Horton said, calling it a "very dramatic step that we took." It's also why the agency is stressing that the best way to fight the spread of the parasite, along with other aquatic invasive species, is to clean, drain and dry all boats and fishing equipment.

FWP crews will continue to search for dead and dying fish in the Yellowstone River and its tributaries like the Stillwater and Boulder rivers to try to determine the extent of the outbreak.

"I hope we can continue to work together, recognizing that the long-term objective is to protect this valley and the river," Gov. Bullock said.

Yet Ryce noted that FWP staff doesn't expect the parasite to disappear, even with colder water temperatures and higher river flows. However, if the fish are given time to adapt they may build up some immunity to the parasite and recover.

NORTH DAKOTA

Occupying the Prairie: Tensions Rise as Tribes Move to Block a Pipeline (NY Times)

By JACK HEALY

August 23, 2016

NEAR CANNON BALL, N.D. — Horseback riders, their faces streaked in yellow and black paint, led the procession out of their tepee-dotted camp. Two hundred people followed, making their daily walk a mile up a rural highway to a patch of prairie grass and excavated dirt that has become a new kind of battlefield, between a pipeline and American Indians who say it will threaten water supplies and sacred lands.

The Texas-based company building the Dakota Access pipeline, Energy Transfer Partners, calls the project a major step toward the United States' weaning itself off foreign oil. The company says the nearly 1,170-mile buried pipeline will infuse millions of dollars into local economies and is safer than trucks and train cars that can topple and spill and crash and burn.

But the people who stood at the gates of a construction site where crews had been building an access road toward the pipeline viewed the project as a wounding intrusion onto lands where generations of their ancestors hunted bison, gathered water and were born and buried, long before treaties and fences stamped a different order onto the Plains.

People have been gathering since April, but as hundreds more poured in over the past two weeks, confrontations began rising among protesters, sheriff's officers and construction workers with the pipeline company. Local officials are struggling to handle hundreds of demonstrators filling the roads to protest and camp out in once-empty grassland about an hour south of Bismarck, the state capital.

More than 20 people have been arrested on charges including disorderly conduct and trespassing onto the construction site. The pipeline company says it was forced to shut down construction this month after protesters threatened its workers and threw bottles and rocks at contractors' vehicles.

Sheriff Kyle Kirchmeier of Morton County, who has led the law enforcement response, said at a news conference that he had received reports of weapons and gunshots around the demonstration, and that protesters were getting ready to throw pipe bombs at a line of officers standing between a rally and the construction site.

Leaders from the Standing Rock Sioux tribe, whose reservation lies just south of the pipeline's path, say the protests are peaceful. Weapons, drugs and alcohol are prohibited from the protest

camp. Children march in the daily demonstrations. The leaders believed the reports of pipe bombs were a misinterpretation of their calls for demonstrators to get out their wooden chanupa pipes — which have deep spiritual importance — and pass them through the crowd.

The conflict may reach a crucial moment on Wednesday in a federal court hearing. The tribe has sued to block the pipeline and plans to ask a judge in Washington to effectively halt construction.

The pipeline runs overwhelmingly along private land, but where it crosses bodies of water, federal rules come into play and federal approvals are required.

The tribe says the pipeline's route under the Missouri River near here could threaten its water supplies if the pipeline leaks or breaks, and it says the United States Army Corps of Engineers failed to do proper cultural and historical reviews before granting federal approvals for the pipeline.

"This is our homeland," said Phyllis Young, a member of the Standing Rock Sioux. "We are Dakota. Dakota means friend or ally. Dakota Access has taken our name."

In legal filings, the corps rejects those claims. It says it consulted extensively with tribes, including the Standing Rock Sioux, and it says that tribe has failed to describe specific cultural sites that would be damaged by the pipeline. Energy Transfer Partners says it has the necessary state and federal permits and hopes to finish construction by the end of the year. The pipeline's route starts in the Bakken oil fields of western North Dakota and ends in Illinois.

With the fate of the land here and this $3.7 billion project in the air, people here have decided to take action. They are occupying the prairie.

Echoing protests against the now-scuttled Keystone XL pipeline, environmental activists and other tribes from the Dakotas, the rest of the Great Plains and the Pacific Northwest have been arriving to camp in the open fields and protest near the parcel where the pipeline company has secured an agreement with the landowner to build.

The protesters sleep in tents and tepees, cook food in open-air kitchens and share stories and strategies around evening campfires. There is even a day care. At morning meetings, speakers warn parents to keep their children away from the Missouri River at sunset, and remind one another they are camped out in prayer.

"It's a major movement in Indian country," said CJ Clifford, a member of the Oglala Lakota, who drove up from the Pine Ridge Reservation in South Dakota. He saw the protests as part of a historical continuum reaching to Little Bighorn. This battle, he said, was being waged peacefully.

For many, the effort was about reclaiming a stake in ancestral lands that had been whittled down since the 1800s, treaty by broken treaty.

“Lands were constantly getting reduced, shaken up,” said Dave Archambault II, the tribal chairman of the Standing Rock Sioux. “I could give you a list of every wrongdoing this government did to our people. All of that is frustration pent up, and it’s being recognized.”

He added, “It’s a tipping point for our nations.”

This month, a line of sheriff’s officers retreated in the face of riders on horseback circling and yipping through the grass. (Tribal members said that the display was a Lakota gesture of introduction, and that they have no quarrel with law enforcement.)

There have been no moves so far to disband the camp or keep people from demonstrating. But Sheriff Kirchmeier told reporters that the demonstration had become an “unlawful protest,” and Gov. Jack Dalrymple, citing “public safety risks,” declared a state of emergency on Friday.

Local law enforcement officers set up a barricade on the main road leading to the pipeline site, and officials here in Morton County called a special meeting on Monday to talk about the traffic and how to handle a hundreds-strong protest that could linger for weeks or months.

At the sprawling campsite down the road from the protest site, there had been portable toilets, 500-gallon tanks of drinking water and an air-conditioned trailer with medical supplies provided by the state. But late Monday night, people at the camp said the medical trailer and water tanks had been removed, leaving them to scramble for a new water source for hundreds of people.

After a prayer ceremony at the construction site one recent afternoon, a few young men on horseback opened the gate and rode onto the land. A few days earlier they might have been arrested and accused of trespassing, but that day there were no officers to stop them.

The pipeline company said that it temporarily stopped work here this month while “law enforcement works to contain the unlawful protests,” but that construction was continuing elsewhere.

Energy Transfer Partners has sued Mr. Archambault and six other people over the protests. In a federal lawsuit filed last week, the company accused them and other protesters of blocking access to the construction site, threatening workers and trespassing onto private land.

Jon Eagle Sr., the historic preservation officer for the Standing Rock Sioux, watched from the side of the road as the young men rode into the grassy field, toward a construction floodlight and heaps of excavated dirt. He did not want the pipeline to breach this land. But he did not seem to approve of this either.

“They need to stay out,” he said. “They don’t know where the burials are. They don’t know where the sacred sites are. I’m trying my best to keep the peace.”

Emergency services recalled from Dakota Access Pipeline protest site (KFYR TV, Bismarck)

By Max Grossfeld |

Posted: Tue 4:19 PM, Aug 23, 2016 |

Updated: Tue 6:24 PM, Aug 23, 2016

BISMARCK, N.D. - Demonstrators protesting construction of the Dakota Access Pipeline had been using state resources at their camp until Monday, when the Department of Emergency Services decided to recall them.

Those resources included a mobile command trailer, a medical aid trailer and a water trailer.

A DES official says Tribal Emergency Management requested the resources, which were supposed to be used on tribal land. He says the services brought the trailers back when he heard the trailers were located on land owned by the Army Corps of Engineers.

Reports of unlawful behavior, he says, also influenced his decision.

"This isn't a flood, a fire, an icestorm. This is an event that originally needed some support for the responders dealing with it and at this stage in the game, the event's not an emergency," says Greg Wilz, Homeland Security Division director.

Wilz says all the equipment is back in Bismarck and ready to use in case of emergency.

People concerned with Highway 1806 barricade ask Morton County Commissioners for answers (KFYR TV, Bismarck)

By Megan Hahn |

Posted: Tue 9:43 PM, Aug 23, 2016 |

Updated: Wed 8:07 AM, Aug 24, 2016

MANDAN, N.D. - The Morton County Board of Commissioners heard public testimony regarding the Dakota Access Pipeline for nearly in an hour at Tuesday's meeting.

All those who chose to speak during the hearing were in opposition of the Dakota Access Pipeline.

County Commissioners say the purpose of the meeting was to give people the chance to weigh-in on the matter in a peaceful manner.

About a dozen people addressed Morton County Commissioners in front of a packed room Tuesday. The recurring frustration for many: removal of barriers along Highway 1806, which restrict access to areas south of Mandan including Cannon Ball and Fort Yates.

"I didn't appreciate it when they put up that block. I have granddaughters and daughters that work at Fort Yates and live in Bismarck. It's humiliating and intimidating when the cops come

up to your car and look in your car like we are doing something wrong," said a speaker who addressed the Commission.

"I am embarrassed for the law enforcement officers that I meet on the road, blocking people from seeing this protest," said a woman who addressed the Morton County Commission.

Highway 1806 was blocked up last Tuesday past the veteran's cemetery because of public safety concerns, according to the Morton County Sheriff's department. Sheriff Kyle Kirchmeier didn't speak at Tuesday's meeting.

While many spoke out against the traffic interception point, the Board of Commissioners deferred all questions regarding the barricade to law enforcement. The County Commission says they do not have the authority to remove the barricade.

"We thought it was very important to allow these individuals who are protesting to have a voice in a public forum. I think that's very important. As it relates to the traffic control point itself, that is a question that I'll have to refer back to county sheriff, our incident commander Kyle Kirchmeier," said Chairman Cody Schulz, Morton County Board of Commissioners.

Many of those present say they want answers from government officials.

"I don't want any part of it. I don't think that's right. And it's not fair. And that blockade, that should not be there. That's all I have to say," said another speaker.

The Board of Commissioners says they're working toward creating an open and peaceful dialogue with protesters.

Those who spoke against the blockade say not only does it affect commuters driving to work, but it's reduced business for local shops and reduced access to recreation areas.

Both the North Dakota Highway Patrol and North Dakota Department of Transportation have the authority under North Dakota Century Code to close a highway. This decision to temporarily close Highway 1806 was made by DOT and HP August 17.

Pipeline foes take fight to Bismarck, Washington D.C. (Forum News Service)

By Mike Nowatzki on Aug 23, 2016 at 6:38 p.m.

BISMARCK – Waving the flags of their tribes and singing the songs of their ancestors, more than 200 protesters marched across a Missouri River bridge in Bismarck Tuesday ahead of a federal court hearing that will determine the fate of the Dakota Access oil pipeline’s route in North Dakota.

“This water belongs to all of us,” Vic Camp, a 41-year-old from South Dakota’s Pine Ridge Reservation, said as he rallied the crowd before the march. “We all know that tomorrow in Washington they’re going to make a decision that affects every single one of us.”

The march across the 2,370-foot-long Veterans Memorial Bridge aimed to show solidarity with the 2,000-some protesters encamped about 50 miles south on the Standing Rock Sioux Reservation, near the pipeline construction site along State Highway 1806 north of Cannon Ball.

Indeed, many marchers were from the campsite, including 25-year-old Kin-sin-ta Joseph and her 16-year-old sister Kis-dya:n-te' Joseph, who got help from a portable PA system so their river song would carry over the wind and traffic noise. The members of northern California's Hoopa Valley Tribe said their chairman urged members to assist Standing Rock, and about 25 made the trip.

While they've taken part in protests before, joining a blockade against logging companies just a few months ago, the older sister said it's never been this big, with so many tribes involved.

"This is really spectacular," she said. "We've been waiting for this kind of gathering."

The Standing Rock Sioux Tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline. It would cross the Missouri River a half-mile north of the reservation and be the largest oil pipeline from the Bakken oil fields, moving 450,000 barrels per day to Patoka, Ill.

Standing Rock members oppose the river crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

Dakota Access LLC temporarily stopped construction at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct. But the protest hasn't impacted pipeline construction elsewhere along the four-state route, including in North Dakota, company spokeswoman Lisa Dillinger said via email.

"We have temporarily deferred grading activities across a short section of the right-of-way (less than 1 mile) while law enforcement works to contain the unlawful protests in light of the fact that we have the necessary permits and approvals to work at this site," she said.

A federal judge in Washington, D.C., will consider Wednesday the tribe's request for an injunction that would effectively halt construction of the 1,172-mile pipeline. A lawyer for the tribe said the judge has indicated he will rule from the bench or shortly after the hearing.

Film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside the courthouse in Washington, and actress Susan Sarandon also will speak at the rally, according to a statement.

Protesters on Tuesday blocked traffic only briefly while crossing the street to get to the bridge's pedestrian walkway, and law enforcement reported no problems with the march. Dozens of passing drivers honked their horns in solidarity, though one yelled an expletive aimed at Native Americans.

Camp said protesters will refrain from violence if the judge's ruling doesn't go their way.

“The only way violence will happen is if the cops provoke it and they attack us,” he told Forum News Service, adding, “We have our women and we have our children. We have grandparents here.”

When asked what will happen if the judge denies the injunction and Dakota Access tries to resume construction, Camp said, “Then we’ll start blockading.”

“We’ll do what we can with our bodies to keep the machines from coming in,” he said.

Four labor unions sent Gov. Jack Dalrymple a letter strongly encouraging him to use the power of his office to keep workers safe and ensure protesters are “following the letter of the law.”

The general presidents of the Laborers’ International Union of North America (LIUNA), International Union of Operating Engineers (IUOE), International Brotherhood of Teamsters (IBT), and United Association (UA), said the actions of protesters endanger not only themselves but construction workers and equipment, as well as local law enforcement who’ve bolstered their local presence.

They said the pipeline has created about 4,000 construction jobs in North Dakota along 346 miles of pipeline.

“While they may have a right to protest, we also have a right to do our jobs in a safe environment,” they said.

Protesters, insisting their actions are peaceful, appealed to the United Nations, non-governmental organizations and churches to send observers to the site. They also continued to rail against what they contend is an unnecessarily heavy law enforcement presence, including a checkpoint about six miles south of Mandan that restricts southbound traffic on Highway 1806 to emergency response vehicles and local traffic such as farmers, ranchers and homeowners.

Standing Rock Protestors Find New Resources After State Withdraws Support (KXMB TV, Bismarck)

Published 08/23 2016 04:04PM

Updated 08/23 2016 07:03PM

Protestors of the Dakota Access Pipeline are finding ways to sustain their effort after state officials pulled relief resources from their camp near Cannonball.

Ben Smith has the story.

For nearly a week.

Several state-owned trailers provided water, shelter, and a place to help those sick or hurt.

Monday morning, news came that these resources would soon be gone.

"It was shocking, it was shocking. I didn't expect that,"

"It's a little different now because everything is going to be outdoors where we had the convenience of having everything indoors in case of the rain, weather wind. Resources got taken away from us quick but we got them back," says Joenelle Leingang

As fast as they disappeared, new support came in.

Standing Rock Paramedics erected a tent in which to treat people.

The tribes road department also pitched in, delivering a giant tank of water.

"They keep this full to fill our buffalo tanks with water. We have two, three more possibly coming in from the Cheyenne River who had donated theirs so water supply is going to be back on track again," says Leingang

(Ben Smith, KX News) Not all state-resources have gone. There is one ambulance that is still here, to provide a backup for standing rock paramedics,

"They left the ambulance as an extra resource for us. Because like I said, we still provide services to all the reservation so of course our number of ambulances is limited," says DeAnn Werre, Standing Rock Paramedic

She says it's not your typical day as a Standing Rock paramedic.

"We've been able to bring in extra staff to be able to provide services,"

"We've pulled together and got our resources together and are able to provide the same services for people,"

It seems to be the theme of the effort, pulling together under one cause.

It's very overwhelming, it's great, phone calls, where can I bring it to...

I just would like the public to see for themselves. There is nothing negative going on here at all,

She says for now, this area near the Cannonball river has become a second home.

Protesters attend Morton County Commission meeting (Bismarck Tribune)

CAROLINE GRUESKIN and LEANN ECKROTH Bismarck Tribune

15 hrs ago

The Dakota Access Pipeline protests returned to the Bismarck-Mandan area Tuesday, as protesters walked across the Memorial Bridge and testified before the Morton County Commission.

Several speakers asked the commissioners to remove a roadblock that prevents drivers from traveling south on Highway 1806 from Mandan to the Standing Rock Sioux Reservation, though

commission chairman Cody Schulz said after the meeting the commission does not have authority to remove the block.

Speakers told the commissioners and the approximately 30 people who attended the meeting that the block impedes travel, punishes the tribe's economy and can be humiliating to cross.

The highway has been blocked since Aug. 17, when Morton County Sheriff Kyle Kirchmeier said the protest had become unlawful and the road unsafe, points the protesters have contested throughout the week.

Marilyn Kary, who works in Fort Yates, said the roadblock makes it difficult for teachers on the reservation who commute.

Chase Iron Eyes, the Democratic candidate for North Dakota's lone U.S. House seat, said the roadblock was intended to punish the tribe and has disadvantaged businesses in the region.

He said Native Americans and white North Dakotans tend to live in separate worlds.

"Interactions should be encouraged," he said, suggesting the block did the opposite by preventing commerce.

Cody Hall of Eagle Butte, S.D., spokesman for the Red Warrior Camp, said the blockade simply sets the wrong tone.

"It felt like what black people felt in the South," he told commissioners, adding that he was questioned at the blockade, while a white friend was not.

Clyde Bellecourt, co-founder of the American Indian Movement, asked members of the Morton County Commission to consider what future generations would think if the water were contaminated.

"I'm 80 years old. I've lived my life. I don't want my grandchildren to ever question," he said. "Grandpa, why didn't you say nothing?"

He encouraged the commissioners to visit the protest camps.

"You have nothing to be afraid of," he said.

Earlier on Tuesday, about 200 protesters took their cause to the Memorial Bridge, staging a peaceful march from Bismarck to Mandan.

Banners, bright regalia and flags of many Native American nations were presented as smart phones and a drone documented the latest chapter in the protest.

At the staging area, multiple speakers encouraged songs and prayers from participants. Drums pounded in support of discontinuing pipeline construction.

Many protesters held up bottled water mixed with oil to represent the contamination they believe the pipeline would cause to their drinking water, reminding everyone present the water had to be safe for future generations.

Shouts of "save our water" could be heard by protesters as they ascended the bridge.

There was little presence of law enforcement for most of the demonstration except for when North Dakota Highway Patrol troopers and local police briefly blocked traffic as marchers crossed to Front Avenue to reach the pedestrian portion of the bridge. The protesters kept to the walkway and held up their signs as motorists honked their horns.

Those gathered Tuesday insisted their message has been a peaceful one.

"I am here because of the water, because of the grandchildren," said Nora Old Man, who held up a water bottle and sang with her grandsons.

Sunny Red Bear, of Eagle Butte, S.D., said she was participating in the march for her 7-year-old son who joined her Tuesday.

"This is about our future. This is about thinking generationally. This is about everyone it affects, community after community. They are choosing oil, wealth and money over our future. I want to protect that the best I can and to show my son to stand up for what's right."

SOUTH DAKOTA

Rapid City may add 15 more firefighters, 9 paid by FEMA grant, six by city (Rapid City Journal)

Mike Anderson Journal staff
Rapid City Journal
Aug. 24, 2016

Rapid City will soon hire 15 new firefighters, thanks in large part to a $1 million federal grant awarded to the city fire department last week.

The new hires will fill a staffing shortage that Fire Chief Mike Maltaverne has urged the city council to address since 2014.

The Staffing for Adequate Fire and Emergency Response Grant, or SAFER, administered through the Department of Homeland Security and the Federal Emergency Management Agency, will pay the salaries and benefits of nine new firefighters for the next two years. The other six out of 15 new positions will be paid for out of the city’s budget.

“In 2014, we started to identify that, with the way our demands for service were increasing, our resources were starting to spread thin,” Maltaverne said on Tuesday. "Our firefighters were going on more and more calls and the staff increases weren’t keeping up with the demand for our services.”

In a memo to Mayor Steve Allender earlier this year, Maltaverne said that in 1995, the city’s fire department had 81 operational firefighters with an annual call volume of 3,600, or 44 calls per

firefighter. Rapid City has grown significantly in population and geographical area since the 90s, and with that growth has come more fires.

The department's annual call volumes have grown an average of 7.6 percent since then, Maltaverne said, putting last year's total call volume for the department at 17,012 for its 117 firefighters, or about 145 calls per firefighter.

Maltaverne knew it would require some extra funding to get 15 new firefighters on board to fill the service gap and ease the pressure on existing personnel. So he asked the Rapid City Council to pay for six employees if he could find a grant to pay for nine more.

"We thought that would be more realistic, that the city would be able to fund that," Maltaverne said.

The City Council has already agreed to fund three positions, and the mayor has included another three in next year's proposed budget which will be the subject of a public discussion at 6:30 p.m. today in the city council chamber.

"We clearly articulated the need for additional staffing and our elected officials along with FEMA responded, and for that we are grateful," Maltaverne said.

Though the SAFER grant will only pay the other nine new firefighters through two years of service, Maltaverne is confident that will be plenty of time for the council to figure out how to keep funding those positions indefinitely.

"What would be the point of hiring firefighters for two years and then having the city lay them off?" Maltaverne said. "That doesn't solve the long-term problem."

The grant calls for the new hires to be made within 180 days, a deadline Maltaverne has no worries about meeting. This spring, the Rapid City Fire Department went through a hiring process and compiled a selection of suitable candidates.

"We reviewed that and we feel there are a sufficient number of qualified candidates to fill those positions," he said. "We've got a really good deep list of potential employees."

Maltaverne hopes to have all 15 slots filled by Jan. 1, 2017, which is when the SAFER grant funds will be awarded to the city.

Applying for the grant was a comprehensive and competitive process, Maltaverne said, adding that he sees FEMA's decision to award the funds as a form of validation.

"Getting this grant clearly confirms that the need was there," he said.

New fire burning near Angostura Reservoir (KBHB radio)

Gary Matthews

KBHB Radio
August 23, 2016

HOT SPRINGS, S.D. - The Great Plains Fire Dispatch says federal, state and volunteer fire crews are battling a wildfire in the southern black hills.

The Maitland CA fire is located approximately 6.5 miles southwest of Angostura Reservoir.

Dispatch says the fire had reached 34.5 acres as of Tuesday afternoon.

They list the fire as human caused.

There is no word on any structures being threatened.

UTAH

American Fork fish could contain toxic mine waste (Salt Lake Tribune)

By BRIAN MAFFLY | The Salt Lake Tribune
First Published Aug 23 2016 05:30PM • Updated 57 minutes ago

Some of the sediments that have turned American Fork River's normally clear waters into a black soup could be loaded with arsenic, lead and other toxic metals associated with historical mining operations at the scenic canyon's headwaters.

Officials from several local, federal and state agencies gathered at Tibble Fork Dam on Tuesday to figure out what to do about the sediment releases, which commenced sometime after the 10-acre lake began draining Saturday as part of $7.3 million project to upgrade the aging earthen structure.

The incident shocked conservationists who fear an ecological catastrophe is unfolding in one of Utah's most popular natural areas, located in the Wasatch Mountains just outside Provo.

"I think it's a $20 million cleanup and it will take years," said Mark Allen, founder of the group Protect and Preserve American Fork Canyon.

The North Utah County Water Conservancy District sponsored the project with federal matching dollars in an effort to make the dam seismically safe and extend its life for another 50 years. The lake bed is coated with 5 to 10 feet of fine-grained black sediments that have accumulated behind the dam and impaired its ability to store water, though the lake has remained a popular, well-stocked trout fishery.

A sediment release "was not unexpected, given this was a rehabilitation project," said the district's lawyer, John Jacobs. "There may have been a bit more than was anticipated. This is a 60-year-old dam, and it has a lot of sediments behind it."

During the review process, federal officials had considered dredging the lake bed as a way to restore the dam's usefulness, but testing indicated that levels of arsenic and lead exceeded safety

standards and made these sediments too dangerous to move, according to the environmental assessment conducted by the Natural Resources Conservation Service.

The metals contaminating Tibble Fork originated in Live Yankee, Globe and other abandoned gold and silver mines that perforate the head of American Fork Canyon's northern branch, according to Allen. He says the state is doing too little to hold landowners accountable for these environmental "time bombs." Many of these old mines are located on land now owned by Snowbird Ski Resort in and around its Mineral Basin.

The cost of extracting and disposing of the material accumulated in the Tibble Fork lake bed would be $8.4 million, so the option was abandoned in favor of raising the dam by 9 feet. The environmental assessment insisted the contractor use "best management practices" to ensure the toxic sediments were not pushed downstream.

The measures are detailed in a construction permit issued this year by the U.S. Army Corps of Engineers, which would not immediately provide a copy of the permit. It did send personnel to the dam Tuesday to determine whether the project was in compliance with the permit.

The U.S. Environmental Protection Agency also sent emergency-response personnel to the site.

"It was so damning that they didn't want to touch the sediment," Allen said. "Your project is only as good as your most stupid backhoe operator. It said it was too toxic to remove it, but now it's in the river. How are you going to clean up 10 miles of trout streams?"

The water district hired Provo-based RB&G Engineering to design the project and Whitaker Construction, of Brigham City, to build it. RB&G's project leader, Brad Price, did not immediately return a phone message seeking comment.

Allen and members of Trout Unlimited spent Monday in the canyon, photographing the sludge pouring down the river channel, which smelled of gunpowder and rotting fish.

"In the main canyon, the water looks like Mississippi mud," said Grant Bench, an officer with a Utah County Trout Unlimited chapter. "I don't know how a cold-water fish is supposed to survive in that."

But federal and state officials were not ready to declare a disaster Tuesday.

"We are taking samples above [the dam] and below to establish baseline and impact below in the water column," said Walt Baker, director of the Utah Division of Water Quality.

Division of Wildlife Resources aquatics biologist Mike Slater zapped the creek in various places with electroshock equipment Tuesday in search of breathing fish.

WYOMING

Wildfires close Yellowstone's south entrance, burn near west entrance (Billings Gazette)

By JORDON NIEDERMEIER jniedermeier@billingsgazette.com

All roads were open in Yellowstone National Park Tuesday despite several fires growing in the area including a blaze blocking access to the Park's south entrance.

The West Entrance remained open. But, the Maple fire has burned more than 27,000 acres about five miles northeast of West Yellowstone and reached within a tenth-mile of the roadway to the west entrance. The fire grew more than 4,600 acres on Monday and is mostly growing on the north side of the burn area. It is not expected to cross the road to the west entrance. If fire activity or smoke increases, pilot cars will be used to guide cars through the area, said a National Park Service news release.

The release said fire activity closed a stretch of U.S. Highway 89 in Grand Teton National Park between Leeks Marina and north to Flaggs Ranch. The closure affects travelers planning to use Yellowstone National Park's south entrance. The road closure is expected to stay in effect until Wednesday. Lizard Creek Campground has also been evacuated.

About 100 people are monitoring the Maple fire. Resources including firefighting aircraft and engines are in the area. However, the fire is not being actively suppressed as it was determined to be caused by a lightning strike and wildfires are an integral part of the Yellowstone ecosystem, said Barbara Dougan, NPS fire information officer.

Dougan said firefighters will work to keep the blaze north of the roadway and east of the Madison River, away from the town of West Yellowstone.

"At this time the fire is doing very well on that side and doing the job of reducing downed debris that's on the ground," she said.

Dougan said officials are still working to determine the cause of the nearby 190 acre Boundary fire but it is believed to have been caused by human activity. Firefighters worked to suppress that wildfire and it was about 85 percent contained as of Tuesday morning.

Tropical System Eyes Florida, Southeast US, May Develop Into Hurricane (USA Today)

By Doyle Rice

USA Today, August 23, 2016

What's now just a disorganized mass of thunderstorms 1,600 miles from Miami could develop into the first hurricane to hit Florida in nearly 11 years late this weekend, forecasters warn.

There's a 60% chance the storm system, known for now only as "99L," could develop into a tropical depression in the Atlantic Ocean later this week. If it swirls into a tropical storm, it will be named Hermine (Her-MEEN).

The system then could rapidly intensify into a large, potentially dangerous major hurricane that would target the Southeast U.S. coast Sunday or Monday, Weather Underground meteorologist Jeff Masters said.

However, as meteorologist John Morales of NBC-6 in Miami notes, "tropical weather forecasting is a very inexact science."

Overall, 6- or 7-day forecasts of tropical cyclone location and intensity are "generally not very good," according to Penn State University meteorologist Jon Nese.

But whether or not the system becomes a tropical storm or hurricane, gusty winds, heavy rains, and possible flash floods and mudslides could occur over the islands of the northeastern Caribbean Sea and the Bahamas, the National Hurricane Center said.

By Sunday, the system could bring deteriorating weather and sea conditions to the east coast of Florida, AccuWeather said.

Most of the computer models meteorologists use to forecast tropical weather show the system hitting the Southeast U.S. between Florida and South Carolina sometime Sunday or later, Masters said.

One computer model, the European, shows the storm crossing Florida and emerging as a major hurricane in the Gulf of Mexico by next week, according to WeatherBell meteorologist Ryan Maue. But the American model, the GFS, does not show that movement.

The most recent hurricane to strike Florida was Wilma in October 2005, AccuWeather said.

A separate system, Tropical Storm Gaston, is projected continue spinning in the central Atlantic. It could become a hurricane later this week, weather officials say. That storm however, is expected to remain over the open Atlantic, though it could stir up strong surf along the eastern shores of Florida, said Scott Spratt, a meteorologist with the National Weather Service in Melbourne, Fla.

Louisiana Flooding Revives FM Chip Argument (Inside Radio)

Inside Radio, August 24, 2016

Each natural disaster presents its own challenges, and the floods that have inundated portions of Southern Louisiana are presenting wireless companies and federal regulators with a now-familiar picture. FM radio stepped in to fill a void left by cellphones rendered useless during an emergency.

"I just cannot thank you guys enough for getting the message out," Denham Springs, LA mayor Gerard Landry said in an appearance on Guaranty Broadcasting's "Talk 107.3" WBRP, Baton Rouge. "I haven't seen a newspaper or watched TV for eight or nine days but everybody has a radio—thank goodness for that," he added.

His comments illustrate the emergency role radio plays during natural disasters, one that broadcasters have repeatedly used as an incentive to wireless companies reluctant to activate FM chips already installed in most cellphones. It's been a tough sell.

"We had stations on the air 24/7 giving out information—this has been horrific and I guess people who are not living here don't understand," Louisiana Association of Broadcasters president Polly Prince Johnson said. "Some of these places didn't have electricity and if the FM chip was on their phones they could have been listening to our local broadcasters who were giving lifesaving information."

Helping to strengthen radio's case was the fact that AT&T suffered a massive outage across the region, leaving a large number of residents and the Louisiana State Police with phones that didn't work. Guaranty Media's Baton Rouge market manager Gordy Rush says when flooding closed a 55-mile stretch of Interstate 12 it left thousands of people stranded on the highway for more than 28 hours with radio as

a lifeline after his stations jerry-rigged a connection to the state police to relay critical information to drivers stuck miles from any exit ramp. "This all played out on the radio," Rush said.

Johnson says it wasn't just stuck motorists who were impacted by the cellular outage. It was also families trying to reconnect. "People couldn't make phone calls for three or four days and then it was sporadic at best—so loved ones were calling the radio stations trying to get the information out," he explained.

While the wireless industry points out that the new Emergency Alert System sends alerts to cellphones on a localized basis, last week in Louisiana it seems the messages were having the opposite effect as intended. With frequent alerts around the clock, many people whose phones did work became annoyed and switched them off to preserve battery life. "It was a nuisance," Rush said.

More than a dozen people lost their lives during the Louisiana flooding and while industry lobbyists are likely to tread carefully so as not to appear to be capitalizing on Louisiana's suffering, those high stakes are what many broadcasters say proves the need for radio on smartphones. "If the FM chip was turned on, people are able to tell them that the water is rising and they should get their stuff and get out," Johnson said. "It's in times of disaster when it is so important and it can save lives."

Added Rush, "This is a matter of life or death."

After briefly flirting with the idea of lobbying for a federally imposed chip mandate in 2010, the National Association of Broadcasters quickly backed away from the idea. For the past six years, the NAB has instead pushed the telecom industry to activate FM chips on its own. In the ensuing period, Sprint embraced the NextRadio app—which activates the FM chip—three years ago, and by the end of this year, AT&T and T-Mobile will follow Sprint's lead. The exception is any customer that uses an iPhone since Apple doesn't include FM radio technology inside its handsets.

"NAB continues to support voluntary activation of FM chips by the carriers," spokesman Dennis Wharton said. "This is a no-brainer from a public safety perspective, as FEMA's [administrator] Craig Fugate has noted. We hope all the carriers—along with Apple—will look at the Baton Rouge tragedy as an opportunity to do the right thing and voluntarily light up the chips."

Back in Louisiana, more than 100,000 households remain without power, but some things are beginning to return to normal. Rush is back at his desk after he jumped from market manager to air personality, spending 32 hours on the air from Friday until Tuesday as some staffers were coping with flooded homes.

Guaranty Media began simulcasting "Talk 107" WBRP on its 100,000-watt classic rock sister "Eagle 98.1" WDGL throughout the storm while country "100.7 The Tiger" WTGE relayed WAFB-TV with station cut-ins. Rush says for a time it looked as though WBRP may have been under threat as its transmitter building was six inches from taking on water after drainage canals backed up and overflowed into its industrial part tower site. Fortunately, the water eventually receded.

Rush, who made it through Hurricane Katrina a decade ago, says the two disasters have left him with an unmistakable conclusion. "Twice now, cellular phones have not been dependable; they've failed," he said, adding, "Radio is a lifeline through this stuff."

COLORADO

Cybersecurity Center in Colorado Springs to hire CEO and host national conference (Colorado Springs Gazette)

By: Wayne Heilman

The National Cybersecurity Center in Colorado Springs plans to hire a CEO next month and will host officials from across the country at a three-day conference in November at The Broadmoor.

A four-person search committee from among the center's 12 directors will conduct interviews and make a recommendation to the board, which plans to select the CEO by mid- to late September, said Eric Hopfenbeck, the center's deputy executive director. Hopfenbeck was speaking at a panel discussion Wednesday about the facility held at the DoubleTree by Hilton Hotel. The board began the nationwide search process in early July with help from Heidrick & Struggles International Inc., a Chicago-based executive search firm. The company helped create a job description and determine pay and other details about the position.

"The budget, staff and management structure (of the center) will be determined after the CEO is hired," Hopfenbeck said. "We are still in the development stage, so we are collecting contact information from consultants, partners and subject-matter experts who want to support the NCC."

The center's three-person staff is headed by retired Army Lt. Gen. Ed Anderson, who serves as interim executive director and also is executive director of strategic, military, science, space and security initiatives for University of Colorado at Colorado Springs Chancellor Pam Shockley-Zalabak.

The panel discussion was part of a two-day cybersecurity training and technology forum hosted by the Colorado Springs chapter of the Information Systems Security Association that also included a keynote address by Mark Weatherford, a NCC board member who also is a former deputy undersecretary for cybersecurity of the U.S. Department of Homeland Security.

The newly hired CEO will have a major role in organizing a three-day National Cybersecurity Institute the center will host Nov. 13-15 at The Broadmoor for invited guests that include governors and attorneys general of all 50 states plus an undisclosed number of mayors and county commissioners, Hopfenbeck said. The event will bring real-time information on the latest cyber trends, security, best practices and education resources to the elected officials to help them better protect government computer systems, networks and critical public assets.

The conference will be the center's public launch. A Rapid Response Center to help small- to mid-sized businesses, nonprofits and government agencies combat and recover from cyber attacks, and a Cyber Research, Education and Training Center that will conduct research on cybersecurity threats and develop a cybersecurity workforce through education programs at UCCS and other schools around the state and nation, are expected to begin operations by next summer. UCCS is meeting with other colleges and universities to develop a cybersecurity curriculum, Hopfenbeck said.

The center also will work with the Western Cyber Exchange and Air Force CyberWorx. The exchange is a 5-year-old group started to strengthen local cybersecurity measures, attract more workers to the industry and share information about cyber attacks and how to prevent and defend against them. The exchange also operates the nation's only Information Sharing and Analysis Organization focused on the private sector. CyberWorx, formerly the Air Force Cyber Innovation Center, does research and testing of cyber security issues and technology at the Air Force Academy.

The center has received three proposals from contractors for renovations to a former TRW manufacturing plant at 3650 N. Nevada Ave. Renovations will be funded by nearly $8 million included in legislation signed into law by Gov. John Hickenlooper in May. A contractor is expected to be selected by mid-September. The building is owned by UCCS and will become the center's permanent home when renovations are complete. The center is operating from temporary offices at 1867 Austin Bluffs Parkway, Suite 200, across from the east end of the UCCS campus.

MONTANA

Lewis and Clark among 9 Montana counties in severe drought, 11 more under alert (Helena Independent Record)

TOM KUGLIN Independent Record

State officials say Lewis and Clark County is among nine in Montana that reached “severe drought” status Thursday, while another 11 counties have hit “drought alert.”

Lt. Gov. Mike Cooney is chairman of the Governor's Drought and Water Supply Advisory Committee. He says the region has had two years of low snowpack, early runoff and little moisture under the soil.

The alert and severe designation are intended "to give high visibility to the continuing impacts of drought in affected areas, to prompt communication among stakeholders, and to direct state agencies to take the steps identified in the Montana Drought Response Plan to mitigate the impacts of drought," Cooney wrote in a letter to county commissioners.

The counties in severe drought are Lewis and Clark, Powell, Teton, Missoula, Sweet Grass, Stillwater, Carbon and Yellowstone.

The seven counties put on alert status Thursday are Broadwater, Jefferson, Silver Bow, Granite, Mineral, Park and Big Horn. Glacier, Pondera, Carter and Sanders counties were previously on drought alert.

Drought Alert - Governor's Drought Advisory Committee strongly encourages local officials to reconvene local drought committees.

Severe Drought - Local officials should have local drought planning efforts underway or should reconvene the local drought committee at the earliest opportunity.
For recommended responses, see the Montana Drought Plan

Map created August 4, 2016 based on data for the month of July

This map was created using the US Drought Monitor and the monthly NRCS Surface Water Supply Index (SWSI) as a guide. In general, a county was assigned a Moisture Status based on the highest drought category intersecting any part of the county. The map was then compared to the monthly SWSI, PRISM, and other precipitation products. The Montana Governor's Drought and Water Supply Advisory Committee, made up of experts from the National Weather Service, the Natural Resource Conservation Service, the Farm Service Agency, United States Department of Agriculture, the Montana Department of Natural Resources and Conservation, the Montana State Library, and the Montana Bureau of Mines and Geology, reviewed the map.

DNRC

Neither the alert nor the severe designations carry any official status with respect to state or federal disaster assistance programs.

The severe designation prompts county commissioners and disaster and emergency services coordinators to document any economic, health and safety emergencies that warrant either state or federal dollars, according to DNRC drought coordinator Ada Montague.

The alert status prompts local officials to document crop or livestock loss or impacts that could then trigger federal disaster assistance, she added.

"At the local level, certain watersheds have voluntarily developed local drought response plans, namely the Blackfoot, the Big Hole and the Jefferson," Montague wrote in an email. "This is where water right holders have worked together to determine proper triggers and response mechanisms for individual water bodies."

Montana's drought plan was written in 1995 and the state is currently in the process of updating it, she said.

Lewis and Clark County Disaster and Emergency Services Coordinator Paul Spengler says the driest portions of the county are in the north and along the Rocky Mountain Front. The Helena Valley is also seeing about a 2-inch shortfall on precipitation this year, he said.

The drought does affect irrigators that tap creeks or streams and dry-land farmers, but those on the Helena Valley Irrigation District drawing from the Missouri River are not limited, said Jim Foster with the district.

Irrigators depending on the Sun River, suffering from particularly low snow pack, have seen their water usage cut early this year.

NORTH DAKOTA

North Dakota Oil Pipeline Battle: Who's Fighting and Why (NY Times)

By JACK HEALYAUG. 26, 2016

A protester rode a horse through the construction site for the Dakota Access oil pipeline in south central North Dakota. Credit Daniella Zalcman for The New York Times

This week, an impassioned fight over a 1,170-mile oil pipeline moved from the prairies of North Dakota to a federal courtroom in Washington. The Standing Rock Sioux tribe, whose reservation lies just south of the pipeline's charted path across ranches and under the Missouri River, has asked a judge to halt construction. The American Indian tribe argues that a leak or spill could be ruinous.

It may take until Sept. 9 for a federal judge to decide whether to allow the Dakota Access pipeline to move ahead, or grant an injunction that would press the pause button on construction.

Here is a look at how the battle over the pipeline has become an environmental and cultural flash point, stirring passion across the Plains and drawing hundreds of protesters to camp out in rural North Dakota.

What Is Happening in North Dakota?

American Indians have been gathering since April outside Cannon Ball, a town in south central North Dakota near the South Dakota border, to protest the Dakota Access pipeline as construction commences. Starting with members of the Standing Rock Sioux tribe, the protest has since grown to several hundred people — estimates vary — most of them from tribes across the country.

The protesters have encamped in a field belonging to the United States Army Corps of Engineers. Each day, they march a mile up a highway to a construction site where preparatory work is being done for the pipeline. While the protesters say they are peaceful, there have been reports of heated confrontations with law enforcement officers and construction workers, and 20 people have been arrested. Construction on a road to the pipeline has stopped for the moment.

The pipeline company, Energy Transfer Partners, has sued several protesters, claiming they have threatened and intimidated contractors and were blocking work at the site.

What Does Each Side Want?

The Dakota Access pipeline is a $3.7 billion project that would carry 470,000 barrels of oil a day from the oil fields of western North Dakota to Illinois, where it would be linked with other pipelines. Energy Transfer says the pipeline will pump millions of dollars into local economies and create 8,000 to 12,000 construction jobs — though far fewer permanent jobs to maintain and monitor the pipeline.

Members of the Standing Rock Sioux tribe see the pipeline as a major environmental and cultural threat. They say its route traverses ancestral lands — which are not part of the reservation — where their forebears hunted, fished and were buried. They say historical and cultural reviews of the land where the pipeline will be buried were inadequate. They also worry about catastrophic environmental damage if the pipeline were to break near where it crosses under the Missouri River.

What About Protests in North Dakota?

For the moment, the mood there is calm, but anxious. North Dakota's governor has declared a state of emergency there, and law enforcement has barricaded the main highway leading to the protest site and the campers.

Hundreds of people are camped out about a mile down the road from the construction site. They say they are there to pray and protest peacefully, but some people are worried that the situation could turn volatile if work resumes at the site or the government tries to disband the camp.

Are Others Fighting the Pipeline?

Yes. State and federal agencies have approved the pipeline, and some farmers and ranchers have welcomed the thousands of dollars in payments that came with signing agreements to allow it to across their land. But others oppose the pipeline.

In Iowa, one of the four states that the pipeline would traverse, some farmers have gone to court to keep it off their land. They say that Iowa regulators were wrong to grant the pipeline company the power of eminent domain to force its way through their farms. Most landowners in the 346-

mile path of the pipeline through Iowa, however, have signed easements allowing it to be built across their land.

American Indians vs. Dakota Pipeline

The Standing Rock Sioux tribe and others are protesting the Dakota Access pipeline, which they say threatens water supplies and sacred lands.

How Many Pipelines Cross the United States?

The United States has a web of 2.5 million miles of pipelines that carry products like oil and natural gas, pumping them to processing and treatment plants, power plants, homes and businesses. Most of the lines are buried, but some run above ground.

While a natural gas line to a newly built subdivision is not likely to generate national controversy, proposed major pipelines like the Keystone XL, the Dakota Access or the Sandpiper in northern Minnesota have generated huge opposition from environmental groups and people living in their paths.

How Safe Are Pipelines?

Energy companies and their federal overseer, the Pipeline and Hazardous Materials Safety Administration, promote the safety record of pipelines. Pipeline companies say it is far safer to move oil and natural gas in an underground pipe than in rail cars or trucks, which can crash and create huge fires.

But pipeline spills and ruptures occur regularly, sometimes in small leaks and sometimes in catastrophic gushers. In 2013, a Tesoro Logistics pipeline in North Dakota broke open and spilled 865,000 gallons of oil onto a farm. In 2010, an Enbridge Energy pipeline dumped more than 843,000 gallons of oil into the Kalamazoo River in Michigan, resulting in a cleanup that lasted years and cost more than a billion dollars, according to Inside Climate News.

In a 2012 examination of pipeline safety, ProPublica reported that more than half of the country's pipelines were at least 50 years old. Critics cited aging pipelines and scant federal oversight as factors that put public health and the environment at risk.

Corps says pipeline still needs water-crossing easement (Bismarck Tribune)

- LAUREN DONOVAN Bismarck Tribune

-

Lauren Donovan

Standing Rock Sioux Chairman David Archambault II, center, is surrounded by family and friends following his address to the council fire gathering at the Dakota Access Pipeline protest encampment Thursday after returning from a federal court room in Washington, D.C.

MORTON COUNTY — While hundreds are settling in for the long haul at an encampment to protest the Dakota Access Pipeline, the U.S. Army Corps of Engineers confirmed Thursday that the pipeline developer, Energy Transfer Partners, does not yet have a written easement to build the pipeline on corps property.

Corps spokesman Larry Janis said the easement is still under review, though the agency did issue Section 408 permission in late July that allows the easement to be written.

“They can’t build the project by accessing corps property from west to east across Lake Oahe,” Janis said of any current construction.

That could partly explain the company’s decision Aug. 18 to voluntarily stop construction at its work site just north of the Standing Rock Sioux Reservation near the Missouri River-Lake Oahe, where an active protest led to 28 arrests. The company has since received a federal court restraining order to prevent all arrestees — including tribal chairman Dave Archambault — and any “Jane and John Doe” from being at the work site and places such violations in federal, not district court.

The stopped work also stopped active protest, and protesters have since held prayer circles and other gatherings in the camp area about 1 mile south.

The realization that the company still does not have an actual easement surfaced Wednesday in a federal district court in Washington, D.C., where the Sioux tribe's request for an injunction to stop the pipeline pending its suit against the corps was heard. The court judge said he wants more time to study whether the corps failed to follow the National Historic Preservation Act and other federal laws in its environmental review of the project. The judge said he will rule on the injunction Sept. 9.

"Everybody thought they had it (easement)," said attorney Carolyn Raffensperger, executive director of the Science and Environmental Health Network. "This is really important information."

Raffensperger is among four attorneys volunteering legal services to the tribe and the individuals who were or may be arrested.

They addressed several hundred circled around the council fire mid-day Thursday; a cool, breezy day that called for blankets and jackets. They said legal issues may get worse for the state of North Dakota and other agencies.

Amnesty International observers were in the camp Thursday and an observer from the United Nations is scheduled to be in camp Tuesday, said Phyllis Young, the Standing Rock camp coordinator.

Young said the tribe is alleging racial discrimination for acts including a police barricade on Highway 1806 near Mandan that detours anyone going home to the reservation, but gives access to everyone else north of the reservation, and airplane surveillance.

"We are exploring the defense of that roadblock. There's nothing to warrant that kind of lockdown," said Angela Bibens, an attorney.

The roadblock is manned 24 hours a day by North Dakota Highway Patrol troopers and other cooperating agencies. Bibens urged anyone with an outstanding warrant or unpaid child support to refrain from getting arrested to prevent their personal problems from getting worse. She said only people with a clean record should consider themselves arrest-able.

Meanwhile, camp managers met Thursday to discuss logistics now that it appears the camp, with anywhere from 500 to 2,000 people in tents and tepees, will stay active until the court's injunction decision Sept. 9.

Johnelle Leingang, an emergency manager, said a noticeable number of people left the camp after Wednesday's news that the injunction decision would be delayed.

"The majority are coming back, and the head cook said she'll provide the same amount of food for 2,500 people," Leingang said.

The camp is actually three camps: the main Seven Council camp on the north side of the Cannonball River, the Rosebud camp across the river and the original Sacred Stone Spirit camp further southeast.

Even as a small group from the Arizona Navajo Nation that brought meat and produce to the campers earlier this week packed up to go home Thursday, a group of eight Native Descendants from California rode in on motorcycles to stay through the weekend.

"It was a beautiful drive. We had the heart and the spirit to get here and, if we could stay longer, we would. This is history in the making," Anthony Cuevas, said.

Chairman Archambault, who this week had an opinion piece on the protest published in the New York Times, spoke at the council fire after returning from the D.C. court hearing.

He expressed gratitude for the support from tribal nations around the country and for the peaceful prayerful nature of the camp.

"When this is done, if it's ever done, they will remember the people who live on reservations. What I see today is unbelievable. The prayers are never-ending," said Archambault, adding that the protest has caught the attention of the nation.

Protesters adjust to camp life (Bismarck Tribune)

- CAROLINE GRUESKIN Bismarck Tribune

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It's a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere on the afternoon of Aug. 18 at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Aug. 17, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Wednesday, when a hearing was held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement on Aug. 19 no weapons were seen.

Many at the camp saw the previous days' efforts as a small victory. Often repeated was a gladness that the tribes were working together.

"It's been a long time since we all camped together," said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. "It feels natural."

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Aug. 18, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

"We knew immediately that we needed Porta Potties," said Johnelle Leingang, the tribal chairman's executive secretary and member of the emergency management task force. "That's essential."

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Native Americans Protest New Oil Pipeline In North Dakota (NPR)

August 25, 20164:26 PM ET
Heard on All Things Considered
Amy Sisk

Native Americans and environmentalists are protesting a pipeline slated to carry a half a million barrels of crude daily from North Dakota to Illinois. But the oil industry says the pipeline is safe.

KELLY MCEVERS, HOST:

A fight over the route of a new pipeline is gaining momentum while it plays out in court. Hundreds of Native Americans from tribes across the United States are protesting in North Dakota. They're setting up camp at the site where the pipeline is slated to cross under the Missouri River. Reporter Amy Sisk of the public radio collaboration Inside Energy says the group is finding an eager ally in environmental groups.

AMY SISK, BYLINE: In what's usually an empty field, there are cars, trucks, teepees and tents surrounding me in a site near the Standing Rock Sioux Reservation in south central North Dakota. Those protesting here don't want the Dakota Access pipeline built. That pipeline is permitted to cross federal land under the Missouri river a mile north of the reservation border.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: But the tribe is essentially saying not in our backyard.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: Alice Brownotter is just 12 years old. Today she's leading a crowd of hundreds of protesters.

ALICE BROWNOTTER: When it goes through - or if - and when it breaks, it will affect everyone.

SISK: Like others here, Brownotter worries that if the pipeline leaks, it will affect the drinking water on her reservation. The pipeline is approved to stretch from the Bakken oil fields of western North Dakota to Illinois. Dallas-based Energy Transfer Partners is building it and says it could carry more than half of North Dakota's daily crude production.

Kari Cutting is with the North Dakota Petroleum Council. She says state-of-the-art equipment will monitor this pipeline, which is a big part of the nation's energy strategy to deliver cheap oil.

KARI CUTTING: This is a product that they desire, they want. They have the markets. They have the people. And we're trying to get it there.

SISK: Safety experts say pipelines are a considerably better way to transport oil. Last year alone, there were more than a half dozen major oil train accidents. But still, it's pipelines that remain the focus of opposition by environmental groups.

Jason Kowalski's with the group 350.org and says environmental groups like his oppose pipelines with the hope of keeping oil in the ground. Despite their efforts, drilling continues, and the oil is transported in other ways. But the groups did successfully block the Keystone XL pipeline slated to bring tar sands crude from Canada to U.S. refineries. The Obama administration rejected it last year.

JASON KOWALSKI: People took a warm-up lap with Keystone. We all focused on one pipeline for a few years.

SISK: This pipeline is their latest target. It's here in this remote part of North Dakota where hundreds of people are now camped out in the grassy prairie close to the construction. That site is near but not on the reservation. Further north in Bismarck, trains carrying oil safely cross Missouri River bridges every day. Jon Eagle Sr. is Standing Rock's historic preservation officer. Today he's rallying the protesters with his microphone.

JON EAGLE SR: For two years, we've been holding them off, waiting for you to come. Hey, well, now you're here with us.

(SOUNDBITE OF ULULATION)

SISK: The protests forced a halt in construction last week. The Standing Rock tribe requested a preliminary injunction, arguing that the U.S. Army Corps which approved the pipeline in July failed to adequately consider its impact on sacred sites. A U.S. district court judge heard arguments yesterday and is expected to rule in two weeks.

Meanwhile, North Dakota's governor has declared an emergency in this area, and more than two dozen protesters have been arrested. But protest organizers say they're not going anywhere and are committed to protesting this pipeline peacefully. For NPR News, I'm Amy Sisk.

MCEVERS: Inside Energy is a public radio collaboration focused on America's energy issues.

Dakota Banning (snopes.com)

Social media rumors inaccurately reported water was cut off to Native Americans protesting against the Dakota Access Pipeline.

Updated: Aug 25, 2016

CLAIM: The state cut off water access to Native Americans protesting the Dakota Access Pipeline.

mostly false

WHAT'S TRUE: The state supplied two supplemental water tanks as part of ongoing support for tribal protests against the construction of the Dakota Access Pipeline, but those tanks were removed after they were determined to be at a secondary site outside the state's jurisdiction.

WHAT'S FALSE: Neither the state of North Dakota nor the federal Department of Homeland Security cut off the water supply to protesters, and the state provided aid and support to Native American protesters situated on a legal encampment.

SOUTH DAKOTA

Looking back: Flash flood soaked area one year ago (Sioux Falls Argus Leader)

Michael Klinski
Arugs Leader- Sioux Falls
Aug. 26, 2016

More than half a foot of rain fell on parts of Sioux Falls Thursday evening, sending flash floods ripping across roadways and pouring into basements. No one was hurt, but the waist-deep waters stranded scores of motorists and left hundreds mopping up wet basements.
Rainfall: More than half a foot of rain fell in parts of Sioux Falls Thursday evening, but the downpours were extremely localized. The National Weather Service recorded 2.61 inches at the airport, while Hartford had less than a quarter inch.
Vehicles: Scores of drivers were retrieving water-logged vehicles Friday morning. The phones were ringing off the hook at local towing companies. AAA reported 138 tows between 9 p.m. and 10 a.m.
Buildings: Home and business owners were mopping up after the storm. Hardware stores saw a run on sump pump and ShopVacs. HyVee on South Louise Avenue had two inches of water throughout the store.
No injuries reported. Sioux Falls Fire Rescue said Thursday night that it had no reports of injuries from the storm.
11:06 a.m. via reporter Mark Walker: A spokeswoman for the Empire Mall says rumors about a partial roof collapse are false. All but three stores were open for business. Yonkers was expected to reopen by 11:30 a.m.
11:04 a.m. via reporter Jill Callison: People with peaked roofs generally will come through a rainstorm like Thursday's with good shape, although the torrents of water may saturate the ground and flood the basement.

Homes and business with flat roofs, however, may experience damage since the water had no place to go, said Laura Woods of Woods Roofing of Canton.

"With flat roofs, it just fills up and can't get off fast enough," she said.

However, her company had received few phone calls as of Friday morning. In large part, in a catastrophic situation, it takes a few days before a situation is assessed thoroughly, Woods said.

UTAH

Utah officials still scrambling to stop flow of toxic silt down American Fork
(Salt Lake Tribune)

By BRIAN MAFFLY | The Salt Lake Tribune
First Published Aug 25 2016 07:30PM • Updated 13 minutes ago

Although "best management practices" were to be used to keep Tibble Fork Reservoir's sediments out of the American Fork River, the Utah water district that is rehabilitating the dam drained the reservoir last weekend in a manner that allowed the river to incise a deep channel through 12 feet of potentially toxic muck and push the filth down one of Utah's favorite trout streams. While the water has since cleared somewhat, the sediment releases have continued virtually unabated because water officials cannot shut off releases without dewatering the river.

The North Utah County Water Conservancy District's contractor is now digging a channel and laying pipe to divert the river's flow around 10-acre lake bed, contaminated from a legacy of gold and silver mining in the canyon's headwaters.

"They are working around the clock to do it. We said it would be within four days, and we will beat that schedule," said Brad Price of Provo-based RB&G Engineering, which designed the dam-rehab project. The river's flow should be moving around the lake by the pipe sometime Friday, he said, putting an end to the release of pollution that has been killing fish and fouling the popular canyon outside Provo for nearly a week.

Meanwhile, test results from water samples taken Monday and Tuesday had trickled back, but officials were still analyzing them late Thursday. The Utah Division of Water Quality planned to post the results once analysis was complete. Officials also are awaiting results from sediment and fish samples.

These results are crucial for advising northern Utah County water users how to respond to the crisis. The American Fork River feeds farms and secondary water systems in Highland and surrounding communities where residents were unsure whether they should keep the water off their lawns and gardens. There was enough uncertainty Wednesday that the U.S. Forest Service advised canyon visitors to stay out of the river as a matter of "common sense."

"I chased some kids out of the river [Wednesday] on my way home from work," said Jim Ireland, superintendent of Timpanogos Cave National Monument, which covers about a mile of stream in the lower reaches of the canyon. Monument personnel took water samples Monday that came back showing elevated levels of several metals, according to Ireland.

"We are concerned," he said. "We have a mission to preserve the resources of the monument and this is obviously an impact."

As of Thursday, however, the Utah County Health Department had refrained from advising residents against using the water for irrigating their yards.

Jonny Torrence, an angler who lives in American Fork, is believed to be the first to notice the fouled water when he entered the canyon Sunday evening to take his 3-year-old daughter fishing.

He had fished the canyon three days earlier and pulled 20 brown trout from the river's clear waters. But on Sunday, something was clearly wrong.

"I walked to the river and saw that it was absolutely brown," said Torrence, who snapped photos and alerted a local Trout Unlimited chapter that night. "I walked upriver and saw dead fish everywhere. It was flowing like pudding, it was so thick. By the time I got back to the road, it had gone down 3 or 4 inches because you could see the [deposited sediment] up on the banks that you couldn't see before.

"I was shocked. That's where my dad taught me to fly fish," he continued. "I would have thought it would be managed closer and they would take extreme precautions to prevent something like this."

Officials from the water district and the federal Natural Resources Conservation Service (NRCS), which helped fund the dam project, say precautions were taken and that it was expected that the reservoir draw-down would release some sediment.

However, the environmental assessment on the project indicated that no sediments should have escaped down the river. This is because levels of toxic heavy metals, such as arsenic and lead, are so elevated in the lake bed that the material could not be used as fill on the dam, whose crest will be raised 15 feet.

"The top layer of soil containing heavy metals would be tested, and any locations that exceed screening levels would not be disturbed," states the document, which the NRCS prepared. "These contaminated soils are not expected to be transported downstream and would therefore not affect the surrounding environment. Proper use of BMPs" — best management practices — "and timing of construction would almost eliminate contaminated soils from moving downstream during earth-disturbing activities."

Critics believe the heavy sediment releases would have been avoidable had the reservoir draw-down been better managed. Water flows into the reservoir at a rate of 12 cubic feet per second (cfs) from American Fork River and another 4 cfs from a side stream called Deer Creek, just a few hundred feet upstream of the dam. The plan was to release water at 40 cfs.

The actual rate of release remains a matter of dispute. But whatever the rate, it was apparently too fast, according to Brian Wimmer, president of the Trout Unlimited chapter that has been monitoring the spill and its aftermath.

A properly controlled release would have slowed the water flowing across the sediment bed once the reservoir emptied.

WYOMING

Yellowstone Park Fires [MAPS] Latest Updates on Maple, Buffalo and Fawn Fires in Wyoming, Montana Border (Latin Post)

By **Glenn Minnis** (**staff@latinpost.com**)

First Posted: Aug 25, 2016 06:45 AM EDT

The largest of four wildfires now simultaneously burning in Yellowstone Park (Maple, Buffalo, Fawn, Boundary fires) has Wyoming fire officials scrambling in a desperate effort to keep it from spreading to areas housing some of the park's tourist attractions.

As of Monday, all of the park's main tourist facilities remained open, even though the **Maple fire** (the biggest blaze among the four fires) is reported to have grown by nearly 10 square miles in a span of a few hours, prompting authorities to order more firefighters to the area. As authorities keep a vigilant eye on the nearby Madison Junction area of the park reserved for hiking, fishing and other activities, firemen are now working around the clock to contain the blaze. A 10-mile stretch of road leading to Yellowstone's South entrance has already been shuttered.

Conditions Hampering Firefighters

Thus far, warm and windy weather has hampered efforts to contain the flames, which have charred approximately 35 square miles of primarily remote forest land. The proximity of the fire is reported to be between West Yellowstone, Montana, a town of about 1,300 situated just outside the park's western boundaries, and Madison Junction, a recreational area that sits within the park's confines.

Containment Essential

"As it's pushing off to the north and east, there's not a lot of values at risk as far as infrastructure goes," said Mike Johnson, a spokesman with the National Park Service. "We're going to keep the fire to the north of the West Entrance Road, and we have plans in place that if the fire were to move to the west toward West Yellowstone."

Madison Junction is also home to a campground, some visitor facilities and staff housing. It's described as where West Entrance Road intersects with the park's Grand Loop Road, linking such major tourist attractions as Old Faithful and Yellowstone Lake.

Johnson added firefighters are also busy battling the three smaller fires that have swept across the area.

As of early in the week, the Maple fire remained confined to about three miles away from Madison Junction and about four miles from the West Yellowstone Entrance station. On Sunday, the blaze spread several thousand more acres to now consume roughly 27,000 acres in total.

Meanwhile, authorities are now monitoring the two-week old, lightening caused Fawn fire by both ground and air with the acerage of the blaze currentlyb at around 1,800 acres.

The Buffalo fire in Tatanka Complex about 3 miles northeast of Tower Junction has simmered a bit and is now being managed via monitoring and so-called point-protection strategies.

Fire and ice hinder travel into Yellowstone National Park (Billings Gazette)

YELLOWSTONE NATIONAL PARK — Both fire and ice briefly hindered travel into Yellowstone National Park on the National Park Service's centennial anniversary.

Authorities closed a portion of the Beartooth Highway Wednesday night due to snow and ice from a summer snowstorm. Crews cleared the roadway and reopened it Thursday morning.

The popular two-lane mountain highway runs from Red Lodge, Montana, over the Beartooth Pass to Yellowstone's Northeast Entrance.

At the other end of the park, a wildfire has closed a portion of the road leading to Yellowstone's South Entrance since Monday.

Visitors heading to Thursday's celebration and concert in Yellowstone from the south face an hour-long detour into Idaho.

Greens try to reassemble anti-pipe dream team (Politico.com)

By Eric Wolff

08/25/16 10:00 AM EDT

With help from Bob King and Zachary Warmbrodt

LET THEIR POWERS COMBINE TO STOP PIPELINE: Environmentalists are trying to reassemble the dream team that blocked the Keystone XL pipeline, only this time to prevent construction of the Dakota Access pipeline from North Dakota to Illinois, which is nearly as long. As Pro's Elana Schor reports, most greens have been devoting their energy to the presidential election, leaving smaller groups, and in this case the Standing Rock Sioux Tribe, to wage battles to stop infrastructure alone. "What should have happened after Keystone got rejected was a huge influx of resources to local and state groups fighting pipelines," said Bold Alliance founder Jane Kleeb, a leader of the movement against the Canada-to-U.S. pipeline who is now leading a four-state push against eminent domain for fossil-fuel projects. "That didn't happen." A Wednesday protest in D.C. featured the Sierra Club and 350.org as well as Hollywood actresses/activists Susan Sarandon, Shailene Woodley, and Riley Keough.

Freudian slip from judge? The Sioux have challenged the line, and in a hearing in federal court on Wednesday, the judge on the case may have signaled his openness to putting a temporary hold on the project. He laid out the schedule for "when I issue my injunction." Supporters of the Sioux, who feel developers did not consult them sufficiently on the project, believe the remark could signal the judge's sympathy for their views.

Follow the money: For anyone interested in seeing all the players involved in funding Dakota Access, the Bakken Pipeline Resistance Coalition has created an interactive, visual display of the different investors in the project.

…

FLOOD INSURANCE POLITICS IN LOUISIANA SENATE RACE: With the residents of Baton Rouge desperately trying to recover from flood waters, flood insurance has become a major feature of the state's senate race to replace retiring Sen. David Vitter. Louisiana Insurance Commissioner Jim Donelon endorsed Republican Rep. Charles Boustany for Senate, arguing that he is "the only candidate I trust to fight for affordable flood insurance." Congress faces a September 2017 deadline to reauthorize the government-run National Flood Insurance Program. "I look forward to working with Commissioner Donelon to write common-sense flood insurance policy as Louisiana’s next United States Senator when Congress begins work on reauthorizing the National Flood Insurance Program in 2017," Boustany said in a statement.

…

NO ONE WANTS COMMUNITY-BASED FLOOD INSURANCE: The Government Accountability Office on Wednesday backed FEMA's conclusion that community-based flood insurance isn't workable. As Finance Pro's Victoria Guida reports, FEMA was considering the option, under which communities could band together to buy flood insurance plans, but an analysis it released in March found the challenges too great to overcome. Now the GAO is supporting FEMA's conclusion. "The challenges outlined in the study outweigh any potential benefit when considered against limited community interest," GAO wrote. The National Flood insurance Program faces numerous challenges, not least its $23 billion in debt.

DECREPIT FLORIDA DIKE VULNERABLE TO LOOMING STORM: A potential tropical storm or hurricane developing in the Caribbean may be headed for Florida in the coming days, based on last night’s outlooks from the National Hurricane Center — posing exactly the scenario the Army Corps of Engineers has feared as it struggles with excessively high water levels in Lake Okeechobee. Earlier this summer, the agency reduced flows from the large inland lake amid pressure from residents and GOP Gov. Rick Scott to stem the flow of nutrient-choked runoff that fed toxic algae along the Treasure Coast. But that means lake levels remain higher than usual going into the busiest part of hurricane season — increasing the pressure on the leaky, decades-old dike that protects the lives of tens of thousands of residents.

Even a weak storm could cause big problems if it dumps tons of rain. As of Wednesday, lake levels were at 14.67 feet above sea level, while 17.5 feet is the level at which the corps believes the dike becomes unstable. The lake is the site of one of the deadliest disasters in U.S. history, a 1928 hurricane that killed more than 2,500 people.

Too little, too late: Today the corps will announce its management plans for the week ahead, but by the time you can see a storm coming it's too late to do much. "We just can't release water that fast," said John Campbell with the corps' Jacksonville district. In fact, a few days out the corps has to stop making releases from the lake so they don't flood communities downstream when the storm comes.

Florida Hurricane Forecast Remains Uncertain, But Trends In State's Favor (Yahoo News)

By Andrew Freedman

Yahoo! News, August 25, 2016

For days, a war has been raging between two of the premiere computer models used to help predict the weather. On the one side, there's the National Weather Service's Global Forecast System, or GFS, which has maintained that a tropical wave moving across Puerto Rico and Hispaniola will not intensify into a hurricane and strike Florida this weekend.

But other models have consistently outshone the GFS in both routine and high impact, high risk forecast situations.

On the other side of the battle is the European, or Euro model, which is run by the European Center for Medium Range Weather Forecasting in England.

The Euro, which gained notoriety by catching on to Hurricane Sandy's unprecedented and catastrophic left hook into New Jersey a week in advance, has rattled Florida with its depiction of an intense tropical storm or hurricane hitting the southern part of the state this weekend.

Run after run, the Euro had stuck to its guns for the past three days, insisting that the area of inclement weather designated as "Invest 99L" would soon become Hurricane Hermine, potentially going on to menace Gulf Coastal states as a major hurricane of Category 3 intensity or greater.

The battlefield may have just changed significantly, though. It's unclear if a peace treaty has been signed, or if this is just a temporary lull in the fighting, but the afternoon run of the Euro model trended toward the GFS solution of a weaker storm.

In other words, it is no longer showing an intense storm hitting Florida on Sunday, and then intensifying over the unusually warm waters of the Gulf of Mexico.

This news is being met with cautious relief on social media. For example, Miami NBC-TV meteorologist John Morales welcomed the new computer model trend.

Weather Channel meteorologist Justin Abraham comically celebrated what he sees as a potential GFS victory over the top-seeded European model.

However, Floridians shouldn't let down their guard yet, since the swirling cloud mass located north of Haiti could still persevere despite two main challenges.

Invest 99L has been contending with layers of dry air that have stifled the development of thunderstorms near the center of the storm. Such thunderstorms are needed in order for the weather system to form a closed area of low pressure at the surface and intensify.

The wind shear is forecast to diminish starting in about 24 to 36 hours, at which point it's possible both the Euro and GFS will be wrong, and the storm will intensify rapidly.

"Although upper-level winds are not conducive for significant development during the next day or so, they could become a little more favorable over the weekend or early next week when the wave is expected to approach southern Florida or the southeastern Gulf of Mexico," the National Hurricane Center said in a 2 p.m. ET statement on the weather system.

The Hurricane Center lowered Invest 99L's chances of developing into a tropical depression, tropical storm or hurricane to 70 percent through 5 days, down from 80 percent earlier in the day.

For now, Invest 99L looks like a poor excuse for a tropical weather system that is inspiring trepidation in a coastal state like Florida. Its center is exposed and comprised only of low-level clouds, and the largest thunderstorms are displaced several hundred miles away from the center.

In short, it looks like garbage, from a tropical meteorology perspective.

Whether it turns into something more impressive remains to be seen, but for now, it’s encouraging that the great model war of August 2016 may be coming to an end.

COLORADO

Cybersecurity Center in Colorado Springs to hire CEO and host national conference (Colorado Springs Gazette)

By: Wayne Heilman

The National Cybersecurity Center in Colorado Springs plans to hire a CEO next month and will host officials from across the country at a three-day conference in November at The Broadmoor.

A four-person search committee from among the center's 12 directors will conduct interviews and make a recommendation to the board, which plans to select the CEO by mid- to late September, said Eric Hopfenbeck, the center's deputy executive director. Hopfenbeck was speaking at a panel discussion Wednesday about the facility held at the DoubleTree by Hilton Hotel. The board began the nationwide search process in early July with help from Heidrick & Struggles International Inc., a Chicago-based executive search firm. The company helped create a job description and determine pay and other details about the position.

"The budget, staff and management structure (of the center) will be determined after the CEO is hired," Hopfenbeck said. "We are still in the development stage, so we are collecting contact information from consultants, partners and subject-matter experts who want to support the NCC."

The center's three-person staff is headed by retired Army Lt. Gen. Ed Anderson, who serves as interim executive director and also is executive director of strategic, military, science, space and security initiatives for University of Colorado at Colorado Springs Chancellor Pam Shockley-Zalabak.

The panel discussion was part of a two-day cybersecurity training and technology forum hosted by the Colorado Springs chapter of the Information Systems Security Association that also included a keynote address by Mark Weatherford, a NCC board member who also is a former deputy undersecretary for cybersecurity of the U.S. Department of Homeland Security.

The newly hired CEO will have a major role in organizing a three-day National Cybersecurity Institute the center will host Nov. 13-15 at The Broadmoor for invited guests that include governors and attorneys general of all 50 states plus an undisclosed number of mayors and county commissioners, Hopfenbeck said. The event will bring real-time information on the latest cyber trends, security, best practices and education resources to the elected officials to help them better protect government computer systems, networks and critical public assets.

The conference will be the center's public launch. A Rapid Response Center to help small- to mid-sized businesses, nonprofits and government agencies combat and recover from cyber attacks, and a Cyber Research, Education and Training Center that will conduct research on cybersecurity threats and develop a cybersecurity workforce through education programs at UCCS and other schools around the state and nation, are expected to begin operations by next summer. UCCS is meeting with other colleges and universities to develop a cybersecurity curriculum, Hopfenbeck said.

The center also will work with the Western Cyber Exchange and Air Force CyberWorx. The exchange is a 5-year-old group started to strengthen local cybersecurity measures, attract more workers to the industry and share information about cyber attacks and how to prevent and defend against them. The exchange also operates the nation's only Information Sharing and Analysis Organization focused on the private sector. CyberWorx, formerly the Air Force Cyber Innovation Center, does research and testing of cyber security issues and technology at the Air Force Academy.

The center has received three proposals from contractors for renovations to a former TRW manufacturing plant at 3650 N. Nevada Ave. Renovations will be funded by nearly $8 million included in legislation signed into law by Gov. John Hickenlooper in May. A contractor is expected to be selected by mid-September. The building is owned by UCCS and will become the center's permanent home when renovations are complete. The center is operating from temporary offices at 1867 Austin Bluffs Parkway, Suite 200, across from the east end of the UCCS campus.

MONTANA

Lewis and Clark among 9 Montana counties in severe drought, 11 more under alert (Helena Independent Record)

TOM KUGLIN Independent Record

State officials say Lewis and Clark County is among nine in Montana that reached “severe drought” status Thursday, while another 11 counties have hit “drought alert.”

Lt. Gov. Mike Cooney is chairman of the Governor's Drought and Water Supply Advisory Committee. He says the region has had two years of low snowpack, early runoff and little moisture under the soil.

The alert and severe designation are intended “to give high visibility to the continuing impacts of drought in affected areas, to prompt communication among stakeholders, and to direct state agencies to take the steps identified in the Montana Drought Response Plan to mitigate the impacts of drought,” Cooney wrote in a letter to county commissioners.

The counties in severe drought are Lewis and Clark, Powell, Teton, Missoula, Sweet Grass, Stillwater, Carbon and Yellowstone.

The seven counties put on alert status Thursday are Broadwater, Jefferson, Silver Bow, Granite, Mineral, Park and Big Horn. Glacier, Pondera, Carter and Sanders counties were previously on drought alert.

Drought Alert - Governor's Drought Advisory Committee strongly encourages local officials to convene local drought committees.

Severe Drought - Local officials should have local drought planning efforts underway or should reconvene the local drought committee at the earliest opportunity.
For recommended responses, see the Montana Drought Plan

Map created August 4, 2016 based on data for the month of July

This map was created using the US Drought Monitor and the monthly NRCS Surface Water Supply Index (SWSI) as a guide. In general, a county was assigned a Moisture Status based on the highest drought category intersecting any part of the county. The map was then compared to the monthly SWSI, PRISM, and other precipitation products. The Montana Governor's Drought and Water Supply Advisory Committee, made up of experts from the National Weather Service, the Natural Resource Conservation Service, the Farm Service Agency, United States Department of Agriculture, the Montana Department of Natural Resources and Conservation, the Montana State Library, and the Montana Bureau of Mines and Geology, reviewed the map.

DNRC

Neither the alert nor the severe designations carry any official status with respect to state or federal disaster assistance programs.

The severe designation prompts county commissioners and disaster and emergency services coordinators to document any economic, health and safety emergencies that warrant either state or federal dollars, according to DNRC drought coordinator Ada Montague.

The alert status prompts local officials to document crop or livestock loss or impacts that could then trigger federal disaster assistance, she added.

“At the local level, certain watersheds have voluntarily developed local drought response plans, namely the Blackfoot, the Big Hole and the Jefferson,” Montague wrote in an email. “This is where water right holders have worked together to determine proper triggers and response mechanisms for individual water bodies.”

Montana’s drought plan was written in 1995 and the state is currently in the process of updating it, she said.

Lewis and Clark County Disaster and Emergency Services Coordinator Paul Spengler says the driest portions of the county are in the north and along the Rocky Mountain Front. The Helena Valley is also seeing about a 2-inch shortfall on precipitation this year, he said.

The drought does affect irrigators that tap creeks or streams and dry-land farmers, but those on the Helena Valley Irrigation District drawing from the Missouri River are not limited, said Jim Foster with the district.

Irrigators depending on the Sun River, suffering from particularly low snow pack, have seen their water usage cut early this year.

NORTH DAKOTA

North Dakota Oil Pipeline Battle: Who’s Fighting and Why (NY Times)

By JACK HEALYAUG. 26, 2016

A protester rode a horse through the construction site for the Dakota Access oil pipeline in south central North Dakota. Credit Daniella Zalcman for The New York Times

This week, an impassioned fight over a 1,170-mile oil pipeline moved from the prairies of North Dakota to a federal courtroom in Washington. The Standing Rock Sioux tribe, whose reservation lies just south of the pipeline’s charted path across ranches and under the Missouri River, has asked a judge to halt construction. The American Indian tribe argues that a leak or spill could be ruinous.

It may take until Sept. 9 for a federal judge to decide whether to allow the Dakota Access pipeline to move ahead, or grant an injunction that would press the pause button on construction.

Here is a look at how the battle over the pipeline has become an environmental and cultural flash point, stirring passion across the Plains and drawing hundreds of protesters to camp out in rural North Dakota.

What Is Happening in North Dakota?

American Indians have been gathering since April outside Cannon Ball, a town in south central North Dakota near the South Dakota border, to protest the Dakota Access pipeline as construction commences. Starting with members of the Standing Rock Sioux tribe, the protest has since grown to several hundred people — estimates vary — most of them from tribes across the country.

The protesters have encamped in a field belonging to the United States Army Corps of Engineers. Each day, they march a mile up a highway to a construction site where preparatory work is being done for the pipeline. While the protesters say they are peaceful, there have been reports of heated confrontations with law enforcement officers and construction workers, and 20 people have been arrested. Construction on a road to the pipeline has stopped for the moment. The pipeline company, Energy Transfer Partners, has sued several protesters, claiming they have threatened and intimidated contractors and were blocking work at the site.

What Does Each Side Want?

The Dakota Access pipeline is a $3.7 billion project that would carry 470,000 barrels of oil a day from the oil fields of western North Dakota to Illinois, where it would be linked with other pipelines. Energy Transfer says the pipeline will pump millions of dollars into local economies and create 8,000 to 12,000 construction jobs — though far fewer permanent jobs to maintain and monitor the pipeline.

Members of the Standing Rock Sioux tribe see the pipeline as a major environmental and cultural threat. They say its route traverses ancestral lands — which are not part of the reservation — where their forebears hunted, fished and were buried. They say historical and cultural reviews of the land where the pipeline will be buried were inadequate. They also worry about catastrophic environmental damage if the pipeline were to break near where it crosses under the Missouri River.

What About Protests in North Dakota?

For the moment, the mood there is calm, but anxious. North Dakota’s governor has declared a state of emergency there, and law enforcement has barricaded the main highway leading to the protest site and the campers.

Hundreds of people are camped out about a mile down the road from the construction site. They say they are there to pray and protest peacefully, but some people are worried that the situation could turn volatile if work resumes at the site or the government tries to disband the camp.

Are Others Fighting the Pipeline?

Yes. State and federal agencies have approved the pipeline, and some farmers and ranchers have welcomed the thousands of dollars in payments that came with signing agreements to allow it to across their land. But others oppose the pipeline.

In Iowa, one of the four states that the pipeline would traverse, some farmers have gone to court to keep it off their land. They say that Iowa regulators were wrong to grant the pipeline company the power of eminent domain to force its way through their farms. Most landowners in the 346-mile path of the pipeline through Iowa, however, have signed easements allowing it to be built across their land.

American Indians vs. Dakota Pipeline

The Standing Rock Sioux tribe and others are protesting the Dakota Access pipeline, which they say threatens water supplies and sacred lands.

How Many Pipelines Cross the United States?

The United States has a web of 2.5 million miles of pipelines that carry products like oil and natural gas, pumping them to processing and treatment plants, power plants, homes and businesses. Most of the lines are buried, but some run above ground.

While a natural gas line to a newly built subdivision is not likely to generate national controversy, proposed major pipelines like the Keystone XL, the Dakota Access or the Sandpiper in northern Minnesota have generated huge opposition from environmental groups and people living in their paths.

How Safe Are Pipelines?

Energy companies and their federal overseer, the Pipeline and Hazardous Materials Safety Administration, promote the safety record of pipelines. Pipeline companies say it is far safer to move oil and natural gas in an underground pipe than in rail cars or trucks, which can crash and create huge fires.

But pipeline spills and ruptures occur regularly, sometimes in small leaks and sometimes in catastrophic gushers. In 2013, a Tesoro Logistics pipeline in North Dakota broke open and spilled 865,000 gallons of oil onto a farm. In 2010, an Enbridge Energy pipeline dumped more than 843,000 gallons of oil into the Kalamazoo River in Michigan, resulting in a cleanup that lasted years and cost more than a billion dollars, according to Inside Climate News.

In a 2012 examination of pipeline safety, ProPublica reported that more than half of the country's pipelines were at least 50 years old. Critics cited aging pipelines and scant federal oversight as factors that put public health and the environment at risk.

Corps says pipeline still needs water-crossing easement (Bismarck Tribune)

- LAUREN DONOVAN Bismarck Tribune

-

Standing Rock Sioux Chairman David Archambault II, center, is surrounded by family and friends following his address to the council fire gathering at the Dakota Access Pipeline protest encampment Thursday after returning from a federal court room in Washington, D.C.

MORTON COUNTY — While hundreds are settling in for the long haul at an encampment to protest the Dakota Access Pipeline, the U.S. Army Corps of Engineers confirmed Thursday that the pipeline developer, Energy Transfer Partners, does not yet have a written easement to build the pipeline on corps property.

Corps spokesman Larry Janis said the easement is still under review, though the agency did issue Section 408 permission in late July that allows the easement to be written.

"They can't build the project by accessing corps property from west to east across Lake Oahe," Janis said of any current construction.

That could partly explain the company's decision Aug. 18 to voluntarily stop construction at its work site just north of the Standing Rock Sioux Reservation near the Missouri River-Lake Oahe, where an active protest led to 28 arrests. The company has since received a federal court restraining order to prevent all arrestees — including tribal chairman Dave Archambault — and any "Jane and John Doe" from being at the work site and places such violations in federal, not district court.

The stopped work also stopped active protest, and protesters have since held prayer circles and other gatherings in the camp area about 1 mile south.

The realization that the company still does not have an actual easement surfaced Wednesday in a federal district court in Washington, D.C., where the Sioux tribe's request for an injunction to stop the pipeline pending its suit against the corps was heard. The court judge said he wants more time to study whether the corps failed to follow the National Historic Preservation Act and other federal laws in its environmental review of the project. The judge said he will rule on the injunction Sept. 9.

"Everybody thought they had it (easement)," said attorney Carolyn Raffensperger, executive director of the Science and Environmental Health Network. "This is really important information."

Raffensperger is among four attorneys volunteering legal services to the tribe and the individuals who were or may be arrested.

They addressed several hundred circled around the council fire mid-day Thursday; a cool, breezy day that called for blankets and jackets. They said legal issues may get worse for the state of North Dakota and other agencies.

Amnesty International observers were in the camp Thursday and an observer from the United Nations is scheduled to be in camp Tuesday, said Phyllis Young, the Standing Rock camp coordinator.

Young said the tribe is alleging racial discrimination for acts including a police barricade on Highway 1806 near Mandan that detours anyone going home to the reservation, but gives access to everyone else north of the reservation, and airplane surveillance.

"We are exploring the defense of that roadblock. There's nothing to warrant that kind of lockdown," said Angela Bibens, an attorney.

The roadblock is manned 24 hours a day by North Dakota Highway Patrol troopers and other cooperating agencies. Bibens urged anyone with an outstanding warrant or unpaid child support to refrain from getting arrested to prevent their personal problems from getting worse. She said only people with a clean record should consider themselves arrest-able.

Meanwhile, camp managers met Thursday to discuss logistics now that it appears the camp, with anywhere from 500 to 2,000 people in tents and tepees, will stay active until the court's injunction decision Sept. 9.

Johnelle Leingang, an emergency manager, said a noticeable number of people left the camp after Wednesday's news that the injunction decision would be delayed.

"The majority are coming back, and the head cook said she'll provide the same amount of food for 2,500 people," Leingang said.

The camp is actually three camps: the main Seven Council camp on the north side of the Cannonball River, the Rosebud camp across the river and the original Sacred Stone Spirit camp further southeast.

Even as a small group from the Arizona Navajo Nation that brought meat and produce to the campers earlier this week packed up to go home Thursday, a group of eight Native Descendants from California rode in on motorcycles to stay through the weekend.

"It was a beautiful drive. We had the heart and the spirit to get here and, if we could stay longer, we would. This is history in the making," Anthony Cuevas, said.

Chairman Archambault, who this week had an opinion piece on the protest published in the New York Times, spoke at the council fire after returning from the D.C. court hearing.

He expressed gratitude for the support from tribal nations around the country and for the peaceful prayerful nature of the camp.

“When this is done, if it’s ever done, they will remember the people who live on reservations. What I see today is unbelievable. The prayers are never-ending," said Archambault, adding that the protest has caught the attention of the nation.

Protesters adjust to camp life (Bismarck Tribune)

- CAROLINE GRUESKIN Bismarck Tribune

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere on the afternoon of Aug. 18 at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Aug. 17, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Wednesday, when a hearing was held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement on Aug. 19 no weapons were seen.

Many at the camp saw the previous days’ efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It’s been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Aug. 18, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Native Americans Protest New Oil Pipeline In North Dakota (NPR)

August 25, 20164:26 PM ET
Heard on All Things Considered

Amy Sisk

Native Americans and environmentalists are protesting a pipeline slated to carry a half a million barrels of crude daily from North Dakota to Illinois. But the oil industry says the pipeline is safe.

KELLY MCEVERS, HOST:

A fight over the route of a new pipeline is gaining momentum while it plays out in court. Hundreds of Native Americans from tribes across the United States are protesting in North Dakota. They're setting up camp at the site where the pipeline is slated to cross under the Missouri River. Reporter Amy Sisk of the public radio collaboration Inside Energy says the group is finding an eager ally in environmental groups.

AMY SISK, BYLINE: In what's usually an empty field, there are cars, trucks, teepees and tents surrounding me in a site near the Standing Rock Sioux Reservation in south central North Dakota. Those protesting here don't want the Dakota Access pipeline built. That pipeline is permitted to cross federal land under the Missouri river a mile north of the reservation border.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: But the tribe is essentially saying not in our backyard.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: Alice Brownotter is just 12 years old. Today she's leading a crowd of hundreds of protesters.

ALICE BROWNOTTER: When it goes through - or if - and when it breaks, it will affect everyone.

SISK: Like others here, Brownotter worries that if the pipeline leaks, it will affect the drinking water on her reservation. The pipeline is approved to stretch from the Bakken oil fields of western North Dakota to Illinois. Dallas-based Energy Transfer Partners is building it and says it could carry more than half of North Dakota's daily crude production.

Kari Cutting is with the North Dakota Petroleum Council. She says state-of-the-art equipment will monitor this pipeline, which is a big part of the nation's energy strategy to deliver cheap oil.

KARI CUTTING: This is a product that they desire, they want. They have the markets. They have the people. And we're trying to get it there.

SISK: Safety experts say pipelines are a considerably better way to transport oil. Last year alone, there were more than a half dozen major oil train accidents. But still, it's pipelines that remain the focus of opposition by environmental groups.

Jason Kowalski's with the group 350.org and says environmental groups like his oppose pipelines with the hope of keeping oil in the ground. Despite their efforts, drilling continues, and the oil is transported in other ways. But the groups did successfully block the Keystone XL pipeline slated to bring tar sands crude from Canada to U.S. refineries. The Obama administration rejected it last year.

JASON KOWALSKI: People took a warm-up lap with Keystone. We all focused on one pipeline for a few years.

SISK: This pipeline is their latest target. It's here in this remote part of North Dakota where hundreds of people are now camped out in the grassy prairie close to the construction. That site is near but not on the reservation. Further north in Bismarck, trains carrying oil safely cross Missouri River bridges every day. Jon Eagle Sr. is Standing Rock's historic preservation officer. Today he's rallying the protesters with his microphone.

JON EAGLE SR: For two years, we've been holding them off, waiting for you to come. Hey, well, now you're here with us.

(SOUNDBITE OF ULULATION)

SISK: The protests forced a halt in construction last week. The Standing Rock tribe requested a preliminary injunction, arguing that the U.S. Army Corps which approved the pipeline in July failed to adequately consider its impact on sacred sites. A U.S. district court judge heard arguments yesterday and is expected to rule in two weeks.

Meanwhile, North Dakota's governor has declared an emergency in this area, and more than two dozen protesters have been arrested. But protest organizers say they're not going anywhere and are committed to protesting this pipeline peacefully. For NPR News, I'm Amy Sisk.

MCEVERS: Inside Energy is a public radio collaboration focused on America's energy issues.

Dakota Banning (snopes.com)

Social media rumors inaccurately reported water was cut off to Native Americans protesting against the Dakota Access Pipeline.

Updated: Aug 25, 2016

CLAIM: The state cut off water access to Native Americans protesting the Dakota Access Pipeline.

❌ mostly false

WHAT'S TRUE: The state supplied two supplemental water tanks as part of ongoing support for tribal protests against the construction of the Dakota Access Pipeline, but those tanks were removed after they were determined to be at a secondary site outside the state's jurisdiction.

WHAT'S FALSE: Neither the state of North Dakota nor the federal Department of Homeland Security cut off the water supply to protesters, and the state provided aid and support to Native American protesters situated on a legal encampment.

SOUTH DAKOTA

Looking back: Flash flood soaked area one year ago (Sioux Falls Argus Leader)

Michael Klinski
Arugs Leader- Sioux Falls
Aug. 26, 2016

More than half a foot of rain fell on parts of Sioux Falls Thursday evening, sending flash floods ripping across roadways and pouring into basements. No one was hurt, but the waist-deep waters stranded scores of motorists and left hundreds mopping up wet basements.

Rainfall: More than half a foot of rain fell in parts of Sioux Falls Thursday evening, but the downpours were extremely localized. The National Weather Service recorded 2.61 inches at the airport, while Hartford had less than a quarter inch.

Vehicles: Scores of drivers were retrieving water-logged vehicles Friday morning. The phones were ringing off the hook at local towing companies. AAA reported 138 tows between 9 p.m. and 10 a.m.

Buildings: Home and business owners were mopping up after the storm. Hardware stores saw a run on sump pump and ShopVacs. HyVee on South Louise Avenue had two inches of water throughout the store.

No injuries reported. Sioux Falls Fire Rescue said Thursday night that it had no reports of injuries from the storm.

11:06 a.m. via reporter Mark Walker: A spokeswoman for the Empire Mall says rumors about a partial roof collapse are false. All but three stores were open for business. Yonkers was expected to reopen by 11:30 a.m.

11:04 a.m. via reporter Jill Callison: People with peaked roofs generally will come through a rainstorm like Thursday’s with good shape, although the torrents of water may saturate the ground and flood the basement.

Homes and business with flat roofs, however, may experience damage since the water had no place to go, said Laura Woods of Woods Roofing of Canton.

“With flat roofs, it just fills up and can’t get off fast enough,” she said.

However, her company had received few phone calls as of Friday morning. In large part, in a catastrophic situation, it takes a few days before a situation is assessed thoroughly, Woods said.

UTAH

Utah officials still scrambling to stop flow of toxic silt down American Fork (Salt Lake Tribune)

By BRIAN MAFFLY | The Salt Lake Tribune
First Published Aug 25 2016 07:30PM • Updated 13 minutes ago

Although "best management practices" were to be used to keep Tibble Fork Reservoir's sediments out of the American Fork River, the Utah water district that is rehabilitating the dam drained the reservoir last weekend in a manner that allowed the river to incise a deep channel through 12 feet of potentially toxic muck and push the filth down one of Utah's favorite trout streams. While the water has since cleared somewhat, the sediment releases have continued virtually unabated because water officials cannot shut off releases without dewatering the river.

The North Utah County Water Conservancy District's contractor is now digging a channel and laying pipe to divert the river's flow around 10-acre lake bed, contaminated from a legacy of gold and silver mining in the canyon's headwaters.

"They are working around the clock to do it. We said it would be within four days, and we will beat that schedule," said Brad Price of Provo-based RB&G Engineering, which designed the dam-rehab project. The river's flow should be moving around the lake by the pipe sometime Friday, he said, putting an end to the release of pollution that has been killing fish and fouling the popular canyon outside Provo for nearly a week.

Meanwhile, test results from water samples taken Monday and Tuesday had trickled back, but officials were still analyzing them late Thursday. The Utah Division of Water Quality planned to post the results once analysis was complete. Officials also are awaiting results from sediment and fish samples.

These results are crucial for advising northern Utah County water users how to respond to the crisis. The American Fork River feeds farms and secondary water systems in Highland and surrounding communities where residents were unsure whether they should keep the water off their lawns and gardens. There was enough uncertainty Wednesday that the U.S. Forest Service advised canyon visitors to stay out of the river as a matter of "common sense."

"I chased some kids out of the river [Wednesday] on my way home from work," said Jim Ireland, superintendent of Timpanogos Cave National Monument, which covers about a mile of stream in the lower reaches of the canyon. Monument personnel took water samples Monday that came back showing elevated levels of several metals, according to Ireland.

"We are concerned," he said. "We have a mission to preserve the resources of the monument and this is obviously an impact."

As of Thursday, however, the Utah County Health Department had refrained from advising residents against using the water for irrigating their yards.

Jonny Torrence, an angler who lives in American Fork, is believed to be the first to notice the fouled water when he entered the canyon Sunday evening to take his 3-year-old daughter fishing.

He had fished the canyon three days earlier and pulled 20 brown trout from the river's clear waters. But on Sunday, something was clearly wrong.

"I walked to the river and saw that it was absolutely brown," said Torrence, who snapped photos and alerted a local Trout Unlimited chapter that night. "I walked upriver and saw dead fish everywhere. It was flowing like pudding, it was so thick. By the time I got back to the road, it had gone down 3 or 4 inches because you could see the [deposited sediment] up on the banks that you couldn't see before.

"I was shocked. That's where my dad taught me to fly fish," he continued. "I would have thought it would be managed closer and they would take extreme precautions to prevent something like this."

Officials from the water district and the federal Natural Resources Conservation Service (NRCS), which helped fund the dam project, say precautions were taken and that it was expected that the reservoir draw-down would release some sediment.

However, the environmental assessment on the project indicated that no sediments should have escaped down the river. This is because levels of toxic heavy metals, such as arsenic and lead, are so elevated in the lake bed that the material could not be used as fill on the dam, whose crest will be raised 15 feet.

"The top layer of soil containing heavy metals would be tested, and any locations that exceed screening levels would not be disturbed," states the document, which the NRCS prepared. "These contaminated soils are not expected to be transported downstream and would therefore not affect the surrounding environment. Proper use of BMPs" — best management practices — "and timing of construction would almost eliminate contaminated soils from moving downstream during earth-disturbing activities."

Critics believe the heavy sediment releases would have been avoidable had the reservoir draw-down been better managed. Water flows into the reservoir at a rate of 12 cubic feet per second (cfs) from American Fork River and another 4 cfs from a side stream called Deer Creek, just a few hundred feet upstream of the dam. The plan was to release water at 40 cfs.

The actual rate of release remains a matter of dispute. But whatever the rate, it was apparently too fast, according to Brian Wimmer, president of the Trout Unlimited chapter that has been monitoring the spill and its aftermath.

A properly controlled release would have slowed the water flowing across the sediment bed once the reservoir emptied.

Yellowstone Park Fires [MAPS] Latest Updates on Maple, Buffalo and Fawn Fires in Wyoming, Montana Border (Latin Post)

By **Glenn Minnis** (**staff@latinpost.com**)

First Posted: Aug 25, 2016 06:45 AM EDT

The largest of four wildfires now simultaneously burning in Yellowstone Park (Maple, Buffalo, Fawn, Boundary fires) has Wyoming fire officials scrambling in a desperate effort to keep it from spreading to areas housing some of the park's tourist attractions.

As of Monday, all of the park's main tourist facilities remained open, even though the **Maple fire** (the biggest blaze among the four fires) is reported to have grown by nearly 10 square miles in a span of a few hours, prompting authorities to order more firefighters to the area. As authorities keep a vigilant eye on the nearby Madison Junction area of the park reserved for hiking, fishing and other activities, firemen are now working around the clock to contain the blaze. A 10-mile stretch of road leading to Yellowstone's South entrance has already been shuttered.

Conditions Hampering Firefighters

Thus far, warm and windy weather has hampered efforts to contain the flames, which have charred approximately 35 square miles of primarily remote forest land. The proximity of the fire is reported to be between West Yellowstone, Montana, a town of about 1,300 situated just outside the park's western boundaries, and Madison Junction, a recreational area that sits within the park's confines.

Containment Essential

"As it's pushing off to the north and east, there's not a lot of values at risk as far as infrastructure goes," said Mike Johnson, a spokesman with the National Park Service. "We're going to keep the fire to the north of the West Entrance Road, and we have plans in place that if the fire were to move to the west toward West Yellowstone."

Madison Junction is also home to a campground, some visitor facilities and staff housing. It's described as where West Entrance Road intersects with the park's Grand Loop Road, linking such major tourist attractions as Old Faithful and Yellowstone Lake.

Johnson added firefighters are also busy battling the three smaller fires that have swept across the area.

As of early in the week, the Maple fire remained confined to about three miles away from Madison Junction and about four miles from the West Yellowstone Entrance station. On Sunday, the blaze spread several thousand more acres to now consume roughly 27,000 acres in total.

Meanwhile, authorities are now monitoring the two-week old, lightening caused Fawn fire by both ground and air with the acerage of the blaze currentlyb at around 1,800 acres.

The Buffalo fire in Tatanka Complex about 3 miles northeast of Tower Junction has simmered a bit and is now being managed via monitoring and so-called point-protection strategies.

Fire and ice hinder travel into Yellowstone National Park (Billings Gazette)

YELLOWSTONE NATIONAL PARK — Both fire and ice briefly hindered travel into Yellowstone National Park on the National Park Service's centennial anniversary.

Authorities closed a portion of the Beartooth Highway Wednesday night due to snow and ice from a summer snowstorm. Crews cleared the roadway and reopened it Thursday morning.

The popular two-lane mountain highway runs from Red Lodge, Montana, over the Beartooth Pass to Yellowstone's Northeast Entrance.

At the other end of the park, a wildfire has closed a portion of the road leading to Yellowstone's South Entrance since Monday.

Visitors heading to Thursday's celebration and concert in Yellowstone from the south face an hour-long detour into Idaho.

Greens try to reassemble anti-pipe dream team (Politico.com)

By Eric Wolff

08/25/16 10:00 AM EDT

With help from Bob King and Zachary Warmbrodt

LET THEIR POWERS COMBINE TO STOP PIPELINE: Environmentalists are trying to reassemble the dream team that blocked the Keystone XL pipeline, only this time to prevent construction of the Dakota Access pipeline from North Dakota to Illinois, which is nearly as long. As Pro's Elana Schor reports, most greens have been devoting their energy to the presidential election, leaving smaller groups, and in this case the Standing Rock Sioux Tribe, to wage battles to stop infrastructure alone. "What should have happened after Keystone got rejected was a huge influx of resources to local and state groups fighting pipelines," said Bold Alliance founder Jane Kleeb, a leader of the movement against the Canada-to-U.S. pipeline who is now leading a four-state push against eminent domain for fossil-fuel projects. "That didn't happen." A Wednesday protest in D.C. featured the Sierra Club and 350.org as well as Hollywood actresses/activists Susan Sarandon, Shailene Woodley, and Riley Keough.

Freudian slip from judge? The Sioux have challenged the line, and in a hearing in federal court on Wednesday, the judge on the case may have signaled his openness to putting a temporary hold on the project. He laid out the schedule for "when I issue my injunction." Supporters of the Sioux, who feel developers did not consult them sufficiently on the project, believe the remark could signal the judge's sympathy for their views.

Follow the money: For anyone interested in seeing all the players involved in funding Dakota Access, the Bakken Pipeline Resistance Coalition has created an interactive, visual display of the different investors in the project.

FLOOD INSURANCE POLITICS IN LOUISIANA SENATE RACE: With the residents of Baton Rouge desperately trying to recover from flood waters, flood insurance has become a major feature of the state's senate race to replace retiring Sen. David Vitter. Louisiana Insurance Commissioner Jim Donelon endorsed Republican Rep. Charles Boustany for Senate, arguing that he is "the only candidate I trust to fight for affordable flood insurance." Congress faces a September 2017 deadline to reauthorize the government-run National Flood Insurance Program. "I look forward to working with Commissioner Donelon to write common-sense flood insurance policy as Louisiana’s next United States Senator when Congress begins work on reauthorizing the National Flood Insurance Program in 2017," Boustany said in a statement.

…

NO ONE WANTS COMMUNITY-BASED FLOOD INSURANCE: The Government Accountability Office on Wednesday backed FEMA's conclusion that community-based flood insurance isn't workable. As Finance Pro's Victoria Guida reports, FEMA was considering the option, under which communities could band together to buy flood insurance plans, but an analysis it released in March found the challenges too great to overcome. Now the GAO is supporting FEMA's conclusion. "The challenges outlined in the study outweigh any potential benefit when considered against limited community interest," GAO wrote. The National Flood insurance Program faces numerous challenges, not least its $23 billion in debt.

DECREPIT FLORIDA DIKE VULNERABLE TO LOOMING STORM: A potential tropical storm or hurricane developing in the Caribbean may be headed for Florida in the coming days, based on last night’s outlooks from the National Hurricane Center — posing exactly the scenario the Army Corps of Engineers has feared as it struggles with excessively high water levels in Lake Okeechobee. Earlier this summer, the agency reduced flows from the large inland lake amid pressure from residents and GOP Gov. Rick Scott to stem the flow of nutrient-choked runoff that fed toxic algae along the Treasure Coast. But that means lake levels remain higher than usual going into the busiest part of hurricane season — increasing the pressure on the leaky, decades-old dike that protects the lives of tens of thousands of residents.

Even a weak storm could cause big problems if it dumps tons of rain. As of Wednesday, lake levels were at 14.67 feet above sea level, while 17.5 feet is the level at which the corps believes the dike becomes unstable. The lake is the site of one of the deadliest disasters in U.S. history, a 1928 hurricane that killed more than 2,500 people.

Too little, too late: Today the corps will announce its management plans for the week ahead, but by the time you can see a storm coming it's too late to do much. "We just can't release water that fast," said John Campbell with the corps' Jacksonville district. In fact, a few days out the corps has to stop making releases from the lake so they don't flood communities downstream when the storm comes.

Florida Hurricane Forecast Remains Uncertain, But Trends In State's Favor (Yahoo News)

By Andrew Freedman

Yahoo! News, August 25, 2016

For days, a war has been raging between two of the premiere computer models used to help predict the weather. On the one side, there's the National Weather Service's Global Forecast System, or GFS, which has maintained that a tropical wave moving across Puerto Rico and Hispaniola will not intensify into a hurricane and strike Florida this weekend.

But other models have consistently outshone the GFS in both routine and high impact, high risk forecast situations.

On the other side of the battle is the European, or Euro model, which is run by the European Center for Medium Range Weather Forecasting in England.

The Euro, which gained notoriety by catching on to Hurricane Sandy's unprecedented and catastrophic left hook into New Jersey a week in advance, has rattled Florida with its depiction of an intense tropical storm or hurricane hitting the southern part of the state this weekend.

Run after run, the Euro had stuck to its guns for the past three days, insisting that the area of inclement weather designated as "Invest 99L" would soon become Hurricane Hermine, potentially going on to menace Gulf Coastal states as a major hurricane of Category 3 intensity or greater.

The battlefield may have just changed significantly, though. It's unclear if a peace treaty has been signed, or if this is just a temporary lull in the fighting, but the afternoon run of the Euro model trended toward the GFS solution of a weaker storm.

In other words, it is no longer showing an intense storm hitting Florida on Sunday, and then intensifying over the unusually warm waters of the Gulf of Mexico.

This news is being met with cautious relief on social media. For example, Miami NBC-TV meteorologist John Morales welcomed the new computer model trend.

Weather Channel meteorologist Justin Abraham comically celebrated what he sees as a potential GFS victory over the top-seeded European model.

However, Floridians shouldn't let down their guard yet, since the swirling cloud mass located north of Haiti could still persevere despite two main challenges.

Invest 99L has been contending with layers of dry air that have stifled the development of thunderstorms near the center of the storm. Such thunderstorms are needed in order for the weather system to form a closed area of low pressure at the surface and intensify.

The wind shear is forecast to diminish starting in about 24 to 36 hours, at which point it's possible both the Euro and GFS will be wrong, and the storm will intensify rapidly.

"Although upper-level winds are not conducive for significant development during the next day or so, they could become a little more favorable over the weekend or early next week when the wave is expected to approach southern Florida or the southeastern Gulf of Mexico," the National Hurricane Center said in a 2 p.m. ET statement on the weather system.

The Hurricane Center lowered Invest 99L's chances of developing into a tropical depression, tropical storm or hurricane to 70 percent through 5 days, down from 80 percent earlier in the day.

For now, Invest 99L looks like a poor excuse for a tropical weather system that is inspiring trepidation in a coastal state like Florida. Its center is exposed and comprised only of low-level clouds, and the largest thunderstorms are displaced several hundred miles away from the center.

In short, it looks like garbage, from a tropical meteorology perspective.

Whether it turns into something more impressive remains to be seen, but for now, it’s encouraging that the great model war of August 2016 may be coming to an end.

STORIES

COLORADO

Homeowners looking at major losses after hail and flooding in Colorado Springs (KOAA TV, Colorado Springs)

By Bill Folsom

The people living in areas of Colorado Springs inundated by hail and water on Monday, spent Tuesday cleaning up and assessing damage. "Literally found ourselves homeless overnight," said John Martin who lived in one of the damaged homes on Logan Avenue. Multiple residents on the street are facing so much damage their homes will be unlivable for some time.

Many homes end up with hail and water in their homes. The basements of several homes filled with hail as deep as three feet. Other rooms show water makes several feet up walls. Where water subsided it left behind a coating of mud.

Erma Medina rents out a home on Logan Avenue. It is one of the homes with hail filling the basement.

There has been flooding in the area before, but never like this. She carried FEMA flood insurance until about a year ago when she says several city storm water drains outside her property were upgraded. With this disaster she see the problem as hail, but she says her insurance company says it is flooding. Sitting on a retaining wall outside the house Medina points to the remaining kneed deep hail, "Look at that hail. You can see the hail in the basement. The windows were broken by hail and they say it was flood. I don't believe it was a flood, no. She will dispute the claim, but says insurance or no insurance help she will find a way to repair the damage.

MONTANA

Western fires take big toll on programs (Billings Gazette, reprinted in Bismarck Tribune)

The late August sun is a smoky red ball, reminding Montanans of the fires that have destroyed homes and curtailed business in the West this summer. It's so dry in parts of Montana, Wyoming, California and other Western states that big fires are likely to burn until autumn snow falls. If lightning storms and wind persist, the fires will be bigger and more numerous.

The destruction is costly, and so is the firefighting. One year ago, the U.S. Department of Agriculture reported on the rising cost of fire operations and how it affected the Forest Service's other work. The numbers indicate that the Forest Service ought to be called the "fire service" because that's how the agency spent most of its budget. The USDA summed up the problem of "the depletion of non-fire programs to pay for the ever-increasing costs of fire." This has resulted in:

- Less money for restoration work that would help prevent catastrophic fires.

- Less protection of watersheds and cultural resources.

- Reduced upkeep of programs and infrastructure that support thousands of recreation jobs and billions of dollars economic growth in rural communities.

- Reduced support for the range of multiple uses, benefits and ecosystem services.

- Less research and technical assistance.

Firefighting staff has increased from 5,700 in 1998 to more than 12,000 in 2015. Meanwhile, the non-firefighting forest workers have been reduced by 39 percent — from 18,000 employees in 1998 to fewer than 11,000 last year.

Every non-firefighting program has been slashed. Forest road-building has been reduced 46 percent. Deferred maintenance funding was cut 95 percent despite a backlog of more than $5.1 billion in dam repairs, roads, sewer and water system improvements.

Lack of funding for everything but fires has prevented the agency from doing things that would save money in the long term. Energy efficiency projects have been deferred. Funding hasn't been available for partnership programs that generate private matching funds.

The report concluded with the solution that Congress has been delaying for years: Change the way we pay for wildfire fighting. Treat wildfires as the natural disasters they are.

In June, Sen. Steve Daines, R-Mont., spoke on behalf of draft legislation called the Wildfire Budgeting, Response and Forest Management Act. The first thing it would do, according to a Daines news release, is "end the unsustainable practice of fire borrowing by enabling a transfer of limited funds to the Forest Service and the Department of Interior through a budget cap adjustment when all appropriated suppressions funding (100 percent of the 10-year average) has been exhausted."

Sen. Jon Tester, D-Mont., reaffirmed his support for the Wildfire Disaster Funding Act. Both he and Daines are co-sponsors of the act, which would "pay for catastrophic wildfires through separate emergency funding, allowing the Forest Service to devote more resources to proactive forest management like trail maintenance and timber harvest."

If S.235, which both of our U.S. senators are co-sponsoring, had been enacted and funded last year, the Forest Service would have $1.4 billion more to fight wildfires this year. But it didn't pass, so the Forest Service will again have to rob all its other operations to pay for the fiery disasters this year.

Montana's senators are in a good position to promote this bipartisan solution. Among many proposals for forest management involving timber harvest, recreation and conservation, nothing else is going to work well if the budget continues to be diverted to wildfire.

Lawmakers must stop the "fire borrowing" before another wildfire season begins. We call on Daines and Tester to work together to unite other Western senators and pass wildfire disaster legislation this year.
— Billings (Mont) Gazette

Efforts underway to help while portion of Yellowstone River is closed for businesses (KRTV, Great Falls)

By Morgan McKay - MTN News

LIVINGSTON - Governor Steve Bullock scheduled a Rapid Response Training meeting Monday for those affected by the closure of the Yellowstone River.

Many people like Chase Chapman have been left wondering how they will get through a Montana winter, since the closure of the Yellowstone has forced them to close their business.

"I don't need retraining, I'm very good at what I do," said Chapman, who is a fly fishing guide and teacher in Livingston. "When all these Congressman want to go catch a big fish, I go through Yellowstone Angler and we catch some big fish."

"So I came to this meeting today with some hope of maybe there's some grants available for a small business person, because if they opened up the river again tomorrow, I've now sold all my inventory," said Beth O'Neill, owner of SUP Montana.

Earlier today, Governor Bullock signed an executive order proclaiming an invasive species emergency to exist in the State of Montana. This order allows for different organizations to offer relief.

“We heard your concerns and taking a multi agency approach to addressing the immediate needs of workers who rely on the Yellowstone River for their livelihoods,” said Bullock.

Local and Park County government officials attended the meeting as well as representatives from agencies such as the Montana Chamber of Commerce and the Montana Department of Labor and Industry.

“We do everything from helping folks file their unemployment claims to assisting them to potentially go into training folks who may have been impacted by this or a similar event,” said Zack Medina, with Job Services.

“This isn't a handout, this isn't an entitlement program,” said Paul Martin, Bureau Chief of Unemployment Insurance. “It's a week to week eligibility program, it's funded by employers through payroll taxes.”

While unemployment insurance was one favorable option, other resources available were loans or a different temporary job placement.

“The last thing you want to do is get into debt, but there are economic injury loans, we can go up to two million (dollars),” said John Donovan, Small Business Administration.

Those businesses affected by the closure of the Yellowstone are encouraged to contact the Institute for Tourism and Recreation at the University of Montana, to help aid them in studying the full economic impact of the closure.

“Montanans I think, what makes us special, is to live here you have to learn to do several things,” said Chapman.

According to latest information released by FWP today, out of 30 trout tested in the upper Yellowstone, only two brown trout tested positive for the parasitic infection.

Officials say there is only evidence of the parasite, but not the disease. FWP also is saying there have been no trout mortalities documented from the disease.

Cloud cover keeps Copper King, Roaring Lion fires quiet (Missoulian)

- KIM BRIGGEMAN kbriggeman@missoulian.com

THOMPSON FALLS – Tuesday turned out to be a good day to fight fires in western Montana, though crews were keeping a lookout for a cool front blowing in from Oregon.

“There’s been a cloud cover over the fire this afternoon that’s kind of kept it subdued during the day,” spokesman Mike Cole said from the Copper King fire east of Thompson Falls.

A red flag warning issued for the afternoon and evening suggested dry thunderstorms might mix with temperatures in the 90s and relative humidity in the low to mid-teens and cause problems at both the Copper King and the Roaring Lion southwest of Hamilton, which turns a month old on Wednesday.

“I’m not sure if they’re actually going to produce over our area,” Lisa Keibler, public information officer at the Roaring Lion, said at 5:30 p.m. “We’ve got a lot of cloud cover and maybe some smoke from Idaho, but right now it’s pretty calm out actually.”

Neither fire is close to being out. An infrared flight in the middle of the night Monday raised the acreage of the Copper King to just under 26,000, up 1,000 acres from an estimate the evening before. It’s Montana’s largest active fire in 2016.

“Our biggest concern and kind of the linchpin of this thing is Munson Creek,” Cole said. “If we can keep this fire out of Munson Creek, that’s going to allow us to get a handle on this. But the weather has to cooperate and we have a lot of ground to cover and a lot of steep ground to try to get buttoned up.”

Munson Creek runs in a southerly direction to Highway 200 and the Clark Fork River 11 miles east of Thompson Falls and 13 miles west of Plains. Cole said crews were out until 2 a.m. Tuesday to complete a burnout operation on the north side of the fire.

During the day helicopters and an occasional fixed-wing aircraft were dropping water and retardant at the top of Munson Creek trying to keep the fire out of the deep canyon to prevent a possible run up the east side.

“We’ve been doing some structure protection work around the residences on Buffalo Bill Road,” Cole said. “If the fire did come down Munson Creek, those would be the first residences threatened, so we want to get ahead of the game.”

Some 220,000 gallons of water and 22,000 gallons of retardant were dropped on the fire Monday, when the fire west of Munson Creek burned back into the main fire toward the Big Hole Lookout. That resulted in a large column that was visible from Plains.

Tuesday’s red flag concern was rooted in an unstable air mass rated 6 on the Haines Index. The Haines Index has been used since 1988 to indicate the potential for wildfire growth. The index can range between 2 and 6, with a 6 being the driest and most unstable conditions in the lower atmosphere.

A total of 840 people are working the Copper King, which has cost an estimated $16.5 million to quell since it broke out on July 31.

Closures and evacuations remain in place. Forty-five homes have been evacuated and another 130 are on pre-evacuation notice. Log hauling is being permitted through the closure area from 4 to 6 a.m. daily.

Air quality in the Thompson Falls area climbed once again into the "very unhealthy" range Tuesday morning, spiking midway toward the top category of "hazardous" at 10 a.m. before dropping two levels to “unhealthy for sensitive groups” by 5 p.m.

"Very unhealthy" air means active children and adults, and people with respiratory disease, such as asthma, should avoid prolonged outdoor exertion; everyone else, especially children, should limit prolonged outdoor exertion.

Roughly 80 percent of hunting district 122 near Thompson Falls was closed indefinitely on Monday by the U.S. Forest Service.

Estimated containment date for the Copper King fire remains the end of October.

In Hamilton at the Roaring Lion fire, air quality remained good all day. Fifty-four people are on the fire, which was caused by unknown sources on July 31. Most of Tuesday’s action consisted of monitoring and checking the 8,533-acre fire with aerial resources to keep it within Ward Bowl, north of Camas Creek and south of Sawtooth Creek. Patrols were active on the ground to suppress spot fires over the fire line.

The Roaring Lion is expected to be contained by the end of September.

NORTH DAKOTA

Dakota Pipeline Was Approved by Army Corps Over Objections of Three Federal Agencies (Inside Climate News)

Sioux tribe's concerns were echoed in official reports by the EPA and two other agencies, but Army Corps of Engineers brushed them aside.

By Phil McKenna
Aug 30, 2016

BISMARCK, N.D.—Senior officials at the U.S. Environmental Protection Agency and two other federal agencies raised serious environmental and safety objections to the North Dakota section of the controversial Dakota Access oil pipeline, the same objections being voiced in a large protest by the Standing Rock Sioux tribe that has so far succeeded in halting construction.

But those concerns were dismissed by the U.S. Army Corps of Engineers, which relied on an environmental assessment prepared by the pipeline's developer, Dakota Access LLC, when it approved the project in July, according to public documents.

The 1,134-mile pipeline would carry approximately 500,000 barrels of crude per day from North Dakota to Illinois along a route that did not originally pass near the Standing Rock reservation, the documents show. After the company rerouted the pipeline to cross the Missouri River just a half-mile upstream of the reservation, the tribe complained that the Army Corps did not consider threats to its water supply and cultural heritage.

The EPA, the Department of the Interior and the Advisory Council on Historic Preservation echoed those concerns in public comments on the Army Corps' draft environmental assessment. Citing risks to water supplies, inadequate emergency preparedness, potential impacts to the Standing Rock reservation and insufficient environmental justice analysis, the agencies urged the Army Corps to issue a revised draft of their environmental assessment.

"Crossings of the Missouri River have the potential to affect the primary source of drinking water for much of North Dakota, South Dakota, and Tribal nations," Philip Strobel, National Environmental Policy Act regional compliance director for the EPA, wrote in a March 11 letter to the Army Corps.

The current route of the pipeline is 10 miles upstream of Fort Yates, the tribal headquarters of the Standing Rock Sioux tribe and the county seat. The Standing Rock Sioux rely on the Missouri River for drinking water, irrigation, and fish.

The EPA shared its concerns and recommended that the Army Corps undertake a new draft environmental assessment and release it for public comment. In that process, the EPA asked the Army Corps to consider "other available routes or crossing locations that would have reduced potential to water resources, especially drinking water supplies," and to carry out a "more thorough" analysis of environmental justice concerns. The other agencies also asked for further assessments and consultation with the tribes.

The Army Corps instead published its final environmental assessment four months later, which constituted final approval of the project. In it, the Corps acknowledged the agencies' comments, but said "the anticipated environmental, economic, cultural, and social effects" of the project are "not injurious to the public interest."

The Army Corps, which has jurisdiction over domestic pipelines that cross major waterways, declined a request for comment, citing ongoing litigation. Energy Transfer, owner of Dakota Access LLC, did not respond to a request for comment. The company has previously said "we are constructing this pipeline in accordance with applicable laws, and the local, state and federal permits and approvals we have received."

Tribe Takes their Complaints Public

The tribe's growing protest has gathered in a camp near Cannon Ball, N.D., and has drawn support from Native Americans from around the country as well as environmental activists. An estimated 1,200 people are camping there and Sioux leaders say 90 tribes are represented among the protesters.

The protest blocked construction equipment two weeks ago and Energy Transfer halted construction on the section of pipeline closest to the Standing Rock reservation. A federal judge said last week he will rule by September 9 on whether to grant the Standing Rock Sioux a temporary injunction. That would bar construction on sections of the pipeline where the ground hasn't yet been disturbed until a suit calling for the Army Corps to redo its permitting process can be heard.

Demographics of the Standing Rock Sioux reservation
The Standing Rock reservation spans 3,600 square miles across North and South Dakota, where 41 percent of its 8,217 residents live below the poverty level, more than triple the national average, according to a 2012 economic development report prepared for the tribe. Nearly a quarter of its population is unemployed.

In its comments calling for a re-do, the EPA said the environmental justice analysis in the Army Corps' draft environmental assessment used county-by-county or state-by-state data when the preferred level of analysis is "census block groups or census tracts."

"A screening level analysis for EJ [environmental justice] indicates there are several census block groups with substantial minority and/or low income demographics that could be potentially impacted by the project," the EPA wrote. "In addition to analyzing potential EJ impacts, Executive Order 12898 on Environmental Justice (February 16, 1994) also requires public outreach to potentially affected EJ communities."

In its final environmental assessment, the Army Corps said its analysis "contains an Environmental Justice analysis that conforms with recognized practice."

The agency also said the pipeline does not cross tribal land. "In fact, tribal land was specifically avoided as a routing mitigation measure," it said. "The Project does not anticipate any impact to water supplies along its route, and to the extent a response action is required, federal regulation will be complied with."

Route Became a Moving Target

The original route for the proposed pipeline crossed the Missouri River further north, 10 miles upstream of Bismarck, the state capital. North Dakota Public Service Commission documents show the route upstream of Bismarck in a May 29, 2014 map by Energy Transfer.

The company later rejected this route, citing a number of factors, including more road and wetland crossings, a longer pipeline, and higher costs. Also listed as a concern was the close proximity to wellheads providing Bismarck's drinking water supply.

"They moved it down to Standing Rock, which is a very remote area, but people live at Standing Rock too. There is an environmental justice component here," said Jan Hasselman, an attorney with environmental advocacy organization EarthJustice, which filed the lawsuit on behalf of the Standing Rock Tribe against the Army Corps of Engineers.

In its public comments, the Department of the Interior, the government agency responsible for the administration and management of Native American lands, called for the Army Corps to conduct an Environmental Impact Statement, a more comprehensive analysis of the potential impact of the proposed pipeline.

"We believe the Corps did not adequately justify or otherwise support its conclusion that there would be no significant impacts upon the surrounding environment and community," Lawrence Roberts, acting assistant secretary of Indian affairs at the Depart of the Interior, wrote in a letter to the Army Corps in March.

The Advisory Council on Historic Preservation (ACHP), a federal agency that promotes the preservation, enhancement, and productive use of the nation's historic resources, also expressed concern over the Army Corps' assessment.

Federal law requires federal agencies to take into account the effect a proposed project will have on historic property. The Army Corps' assessment, however lacked adequate consultation with the Standing Rock Sioux tribe and focused on a limited number of water crossings rather than on the pipeline's entire expanse, according to letters ACHP officials wrote to the Army Corps.

"Based on the inadequacies of the tribal consultation and the limited scope for identification of historic properties that may be affected, the ACHP questions the sufficiency of the Corps' identification effort, its determinations of eligibility, and assessments of effect," Reid Nelson, director of the office of federal agency programs for ACHP, wrote in a May 19 letter to the Army Corps.

In its final assessment, the Corps stated there is "no new significant information on environmental effects" as a result of comments from the EPA and others. "As such, neither a supplemental or revised EA [Environmental Assessment] for further public review nor additional NEPA [National Environmental Policy Act] compliance actions was required."

"We're talking about a broad overarching and fundamental failure which is the decision to look very narrowly at environmental impacts at a few specific locations rather than the pipeline as a whole," Hasselman said of the Army Corps' assessment.

Having their concerns dismissed by the Corps, the tribe turned next to the courts. Their lawsuit calls for a halt to construction and full consideration of the pipeline's impact on tribal lands and water.

To obtain a preliminary or "emergency" injunction, however, attorneys representing the Standing Rock tribe will have to demonstrate imminent harm to historic sites if construction proceeds.

"To the extent that people are concerned about harm from oil spills, that is still a ways off," Hasselman said. "We can't really seek emergency relief on that front. That is something that we will be seeking in the course of the lawsuit."

5 things to know about the Dakota Access Pipeline (KETV, Omaha)

Native American tribe sued the federal government over project

UPDATED 7:33 AM CDT Aug 31, 2016

(CNN) —In what looks to be a possible sequel to the Keystone XL Pipeline dispute, another fight has begun over a proposed US oil route.

The Standing Rock Sioux Tribe has sued the federal government, saying the Native American tribe was not properly consulted over the project to construct a 1,168-mile crude oil pipeline that extends over four states.

While proponents of the Dakota Access Pipeline tout its economic boost, opponents question its environmental impact.

The US Army Corps of Engineers approved the project, granting final permits in July, to the dismay of environmentalists and the Standing Rock Sioux Tribe.

1. What is the pipeline project?

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois. The pipeline is also known as the Bakken Oil Pipeline, named for the oil-rich area in North Dakota. An estimated 7.4 billion barrels of undiscovered oil is believed to be in the US portion of the Bakken Formation, according to the US Geological Survey.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

2. Why is the pipeline being constructed?

The project developer, Dakota Access, a subsidiary of Energy Transfer Crude Oil, says the pipeline would help the United States become less dependent on importing energy from unstable regions of the world. It says a pipeline is the safest, most cost-effective and environmentally responsible way to move crude oil, removing dependency on rails and trucks.

It also estimates the pipeline would bring an estimated $156 million in sales and income taxes to state and local governments as well as add 8,000 to 12,000 construction jobs.

The proposal comes as a glut of cheap oil has devastated North Dakota's economy. The state had enjoyed a major boom, but after hitting highs in 2014, it suffered a major economic downturn.

The project developers say the $3.7 billion project will "bring significant economic benefits to the region that it transverses."

3. Who is protesting?

The Standing Rock Sioux Tribe filed a complaint in federal court alleging that "the construction and operation of the pipeline ... threatens the Tribe's environmental and economic well-being, and would damage and destroy sites of great historic, religious, and cultural significance to the Tribe."

There are also concerns that digging the pipeline under the Missouri River would affect the tribe's drinking water supply. The tribe, represented by Earthjustice, a nonprofit environmental law firm, has asked for an injunction.

Based in Fort Yates, North Dakota, the Standing Rock Sioux Tribe is a federally recognized Indian tribe, a successor to the Great Sioux Nation. Other Native American tribes and nations have joined its efforts.

"We have laws that require federal agencies to consider environmental risks and protection of Indian historic and sacred sites," Dave Archambault II, the elected chairman of the Standing Rock Sioux Tribe, said in a statement.

"But the Army Corps has ignored all those laws and fast-tracked this massive project just to meet the pipeline's aggressive construction schedule."

Sen. John Hoeven of North Dakota disputes the tribe's chief complaint that the Army Corps did not properly consult it.

"If there is some way for the corps to work to meet the concerns of the tribe, they should certainly do that. But (there) has been a consultation process. If the tribe doesn't feel that that has been sufficient, again, they can protest as long as they do it peacefully and safely, but ultimately their recourse is to the courts," the Republican senator told CNN affiliate KFYR-TV in Bismarck, North Dakota.

About 30 environmental groups, including the Sierra Club and Greenpeace, signed a letter to President Barack Obama, slamming the Dakota Access Pipeline as "yet another example of an oil pipeline project being permitted without public engagement or sufficient environmental review."

They appealed to him to reject the project -- as he did with the Keystone XL pipeline.

Protests have been held in North Dakota and Washington.

Construction equipment involved in the pipeline project in Iowa was set ablaze in suspected arson fires, reports say.

4. Who's on which side?

Bernie Sanders spoke out against the pipeline in November 2015, but Democratic presidential nominee Hillary Clinton has not addressed the issue. CNN reached out to the Clinton campaign for comment on the issue and has not yet received a response.

"If candidate Clinton does nothing to address this issue yet continues into November promising Native Americans that she is our champion, then her words will be nothing but false promises -- just more bombast, more white lies to Indians," Simon Moya-Smith, a citizen of the Oglala Lakota Nation and culture editor at Indian Country Today, wrote recently in a CNN op-ed.

Celebrities such as Shailene Woodley, Susan Sarandon and Rosario Dawson have spoken out against the pipeline.

Leonardo DiCaprio tweeted that he was "inspired by the Standing Rock Sioux's efforts to halt the Dakota Access Pipeline."

5. What's next?

The tribe's actions may be the start of a lengthy, legal fight over the Dakota Access Pipeline. Meanwhile, construction work on the pipeline is ongoing.

US District Judge James Boasberg said he wants to absorb both sides of the argument before issuing a ruling, which is expected by September 9, KFYR reported.

Officials Rate 3 Weekend Tornadoes In Eastern North Dakota (AP)

Associated Press, August 30, 2016

GRAND FORKS, N.D. (AP) – A weekend tornado that caused damage in the Hillsboro area had wind speeds up to 140 mph, according to the National Weather Service.

The agency rated the Saturday evening tornado in Traill County an EF-3 on the enhanced Fujita scale. An EF2 or higher rating is considered significant.

The tornado was as wide as three football fields are long and was on the ground for 8 minutes, according to a weather service report. It smashed bins at Rahr Malting Co.'s Taft grain elevator complex and spilled tons of barley onto the ground, destroyed a garage and uprooted trees on one area farmstead. It heavily damaged a home and a metal building at another farmstead.

No one was hurt. The town of 1,600 people was lucky that the tornado missed the heart of the community, said Connor Ulness with the storm damage restoration company Aspen Exteriors.

"The tornado came in just north of the center of town," he told WDAY-TV.

Severe storms in eastern North Dakota on Saturday spawned two weaker tornadoes in neighboring Grand Forks County, according to the weather service. One with wind speeds estimated at 70 mph and rated an EF-0 touched down in an open field near Arvilla. An EF-1 tornado with wind speeds up to 110 mph uprooted trees and demolished a barn in the Pleasant View Township area.

No injuries were reported in either of those tornadoes.

SOUTH DAKOTA

County To Explore Grant Possibilities For Areas Affected By Crow Peak Fire

(Black Hills Pioneer)

By Jaci Conrad

Black Hills Pioneer

August 30,2016

DEADWOOD — Disaster prevention due to devastation caused by the Crow Peak Fire is the impetus behind the Lawrence County Commission's recent decision to give the go-ahead to the Natural Resources Conservation Service (NRCS) to provide an initial assessment of the area.

"We might discover something very important that needs to be done," said Commission Chair Daryl Johnson.

The Emergency Watershed Protection program of the conservation service is designed to help prevent damage to life or property after a natural disasters, like the Crow Peak Fire. A cost-share program, the protection program pays 75 percent of the costs to install practices such as replacing culverts identified in the Burned Area Emergency Response (BAER) report completed after the fire. If it decides the assessment is worthy of pursuing, the county, upon entering a sponsorship of the emergency grant program, would be responsible for 25 percent of the costs.

Because the county would be responsible for the operation and maintenance of any culverts installed, for the life of the culvert, commissioners were hesitant to commit to the program, asking first for an initial assessment to be brought back and reviewed before a formal commitment is made.

"You understand, our apprehension comes from the fact that we still maintain snow-removal on two bridges because we were a FEMA (Federal Emergency Management Agency) sponsor of them at one time," Johnson said.

With a 60-day deadline following the fire, which was put out on July 4, an application letter must be submitted to the conservation service by Friday, starting the information gathering process, beginning with a damage survey report. This report will identify what problems are present, how to fix any concerns, and the cost of repairing the concerns. The application letter does not commit Lawrence County to a contract.

District Conservationist Justin Boerboom addressed the commission, explaining that the NRCS is federal agency with USDA funding and takes measures to help prevent catastrophe after a natural disaster through the Emergency Watershed Program.

"We need a local sponsor to apply for assistance," Boerboom said. "We've proposed the project. The next step is to go out and evaluate what the issues are, what to address, the costs, and come back with a proposal."

NRCS State Engineer Jay Cobb said that once they evaluate, the next determination is if they can mitigate issues to gain benefits greater than the actual cost of construction.

Threats that the protection program addresses are termed watershed impairments and include, for example: debris-clogged stream channels, undermined and unstable streambanks, jeopardized water control structures and public infrastructures, wind-borne debris removal, and damaged upland sites stripped of protective vegetation by fire or drought.

Public and private landowners are eligible for assistance but must be represented by a project sponsor, such as the county, if they decide to move forward with the program.

Boerboom also presented the critical values table from the BAER report, listing all the concerns on private land. Listed as a very high risk to human life and safety is the Crow Creek Road and the threat of flash flooding with debris flows, road washout, and damage. The BAER team identified Crow Creek as an drainage of Crow Peak that would see an increase of about 50 percent over normal flows since the vegetation on the western slopes were burned.

Listed as a high threat to human life and safety are homes along Crow Creek Road; specifically, two cabins and the threat of flash flooding and debris flows.

Listed as a very high threat to property are: two road crossings with 18-inch culverts on Crow Creek Road; Crumm Driveway Crossing's 24-inch culvert; and Nicholas Cabin driveway, which crossing 24-inch culvert. The threat here is flash flooding with debris flows, debris blockage, possible failure of crossing structures, and road washout/damage.

Listed as a high threat to property are private road crossings along Higgins Gulch Road in the floodplain, with the threat of flash flooding with debris flows, road washout/damage; and culverts under driveways alongside Higgins Gulch Road.

The BAER team determined the Higgins Gulch drainage would see increased flows of about 10 percent following the fire.

There are other threats that have been identified and listed in the intermediate to low threat categories.

Yankton Co. Resident Dies From West Nile Virus (KDLT News, Pierre)

Aug 29, 2016

KDLT News- Pierre, S.D.

The South Dakota Department of Health today reported a Yankton Co. resident died of West Nile virus associated causes. It is the state's first WNV related death this season. The individual was in the 80 to 89 age group.

To date this season, South Dakota has reported 74 cases of human WNV; 12 percent have had the most serious neruoinvasive disease while 88 percent have had WNV fever. Twenty-five percent of cases have been hospitalized. There has also been a WNV-positive horse in Butte County.

"This unfortunate death is a reminder for us all that while the Zika virus is grabbing headlines, West Nile is the mosquito-borne virus of concern here in South Dakota," said Lon Kightlinger, state epidemiologist for the department. "We strongly encourage people to protect themselves and their families by using repellent and avoiding the outdoors when mosquitoes are most active."

Kightlinger said South Dakotans can reduce their risk with the following precautions:

- Apply mosquito repellents (DEET, picaridin, oil of lemon eucalyptus or IR3535) to clothes and exposed skin. Limit exposure by wearing pants and long sleeves in the evening.

- Limit time outdoors from dusk to midnight when Culex mosquitoes, the primary carrier of WNV in South Dakota, are most active.
- Get rid of standing water that gives mosquitoes a place to breed. Regularly change water in bird baths, outside pet dishes, and drain water from flower pots and garden containers.
- Support local mosquito control efforts.

UTAH

Next step for American Fork River: Measure the risks with an eye toward spring (KSL TV, Salt Lake City)

By Amy Joi O'Donoghue | Posted Aug 30th, 2016 @ 7:02pm

SALT LAKE CITY — State water quality officials will insist on an action plan to prevent further contamination of the American Fork River from lead-laden sediment that killed thousands of fish in a two-mile stretch.

That plan will be put together by the North Utah Water Conservancy District with an eye toward preventing sediment from being stirred up by rain or spring runoff, said Walt Baker, director of the Utah Division of Water Quality.

He said the division also expects to get an estimate from project engineers on the amount of sediment that washed into the river as a result of the Tibble Fork Dam's $7.3 million rehabilitation and expansion project.

"We have moved sediment from point A to point B over a six-mile expanse," Baker said. "There needs to be an assessment of how bad it is and what steps need to be taken to remediate it."

It's the latest plan following completion by project engineers of a diversion channel that placed a 200-foot pipeline to reroute flows into the nearly empty Tibble Fork basin to prevent another sediment flush while work continues on the dam.

Baker said a lot of factors will come into play to mitigate the impacts of the sludge, especially given that high flows from spring runoff.

"Mother Nature is going to come with spring runoff regardless of any planning we do," he said. "We need to know what needs to be done."

Dave Brown, the Utah state conservationist with the U.S. Department of Agriculture's Natural Resources Conservation Service, said an aerial drone flew over the site Monday to quantify the amount of material that washed into the river.

"There is a very clear mini-canyon that is exposed now," he said. "The engineer indicated they could use survey technology to calculate how much sediment was deposited."

Dam project

The NRCS is the federal agency on the Tibble Fork rehabilitation project, which rose as a priority after a 2004 assessment found that 1960s-era dam did not meet safety standards. Work began in June, with the NRCS advising downstream users that as the reservoir began draining around Aug. 19, people could expect to see elevated levels of sediment in the river.

Brown said continuing inflows into the basin released larger amounts of sediment than anticipated. The result was a two-mile section of the river just below the dam that lost all its fish populations due to suffocation.

The Utah Division of Wildlife Resources said historically, there are about 1,000 to 2,000 fish per mile in that section of the river.

While water samples taken by the state show metal concentrations within screening values for health, recreation and aquatic life downstream, the sediment showed high levels of lead that likely resulted from legacy mining operations in the Wasatch Mountains.

Several hundred abandoned mines dot the mountains, some experiencing acid mine drainage and an unknown number are within proximity of perennial stream flows.

Baker said his division has worked in partnership with the Utah Division of Oil, Gas and Mining, to craft a blueprint of where there may be water quality risks — a concern accentuated with the disastrous Gold King Mine spill of 2015.

In that incident, EPA-led contractors bungled efforts to open a mine portal and sent a 3-million gallon torrent of mustard-colored mine waste into the Animas River above Silverton, Colo. The breach contaminated water in Colorado, New Mexico, Utah and the Navajo Nation in an environmental catastrophe critics say was avoidable.

Baker said the Gold King mine disaster underscores the need for Utah officials to get a handle on potential problems, sooner rather than later.

"It ought to be enough of a concern that we do some investigation," he said. "My greatest concern is if there needs to be an action plan and if these are time bombs waiting to go off."

Abandoned mines

While state officials over abandoned mine reclamation have mapped the hundreds of mines and their owners — if available — with work done in the 1990s, Baker said it is not clear how many of them pose risks to waterways.

"If, in fact, they do have flows and there are responsible parties, we can issue a permit and get an idea of the water quality of the mines' drainage," he said. "We will be way ahead to know if we have a problem or not."

The mining division closes up abandoned mines if there is a public safety risk, and Baker's division can enforce the Clean Water Act if water is at risk, but there is no state regulatory oversight absent those factors.

"We really don't know the extent," said Steve Fluke, administrator over the state's abandoned mine reclamation program. "We are trying to figure out how many are discharging and may be an environmental issue in light of Gold King."

While there is funding in place to deal with the cleanup of abandoned coal mines, no funding exists for other mines.

"There is no such law for cleaning up hard rock mine sites," Fluke said.

Mark Allen of Protect and Preserve American Fork Canyon sees the potential for another Gold King Mine spill in the Wasatch Mountains because he said no one is properly addressing the risks.

"The Wasatch Mountains have a bunch of ticking time bombs and no one wants to talk about them," he said.

Allen said the U.S. Environmental Protection Agency should step in and declare the Tibble Fork sediment release into American Fork River a Superfund site.

EPA had a response team in Utah County last week, but the federal agency has not disclosed what its employees determined about the Tibble Fork Dam release.

"We will continue to coordinate with Utah and federal agencies to evaluate data, information, and potential next steps related to the sediment release," said EPA spokesman Rich Mylott.

"We're certainly aware of concerns related to historic mining and metals impacts in the American Fork watershed and have worked with state and local partners on previous assessment and cleanup projects in the basin."

Allen is leading a tour to legacy mine sites mid-month that Baker and Fluke said they plan to attend.

"I have been barking pretty loud," he said. "We're taking everybody up there who has some stewardship and asking them to figure out what to do."

Baker and several members of his staff are touring the New Yankee Mine on Snowbird property Wednesday to assess any downstream impacts.

The division is also looking at the resort's expansion into Mary Ellen Gulch, an approval granted earlier this year that requires water quality monitoring for two years before any construction on ski lifts or other facilities begins.

WYOMING

Route To Yellowstone Reopens, But Fire Danger Remains High (Wyoming Public Radio)

By CAROLINE BALLARD • 16 HOURS AGO

Northwest Wyoming continues to struggle with high fire danger as eleven wild fires currently burn in that part of the state.

Bill Swartley, a public information officer for the Yellowstone fire team, said Phase 2 fire restrictions will likely go into effect in Yellowstone National Park on Wednesday. That means any kind of open flame may be banned in the park.

Swartley said preventing any human caused fires is their top priority.

“These fires are lightning caused and for that reason are being managed for ecological benefits to the park,” said Swartley. “However, human caused fires are a total different type of ignition.”

With temperatures reaching into the 80s and low relative humidity, weather conditions are prime for even more fire growth.

Some progress has been made, though. Highway 191/89/287 between Leek's Marina and Yellowstone's South Entrance was closed because of the Berry Fire but has now reopened. Highway pull outs along that stretch remain closed.

Swartley said there may be areas of light haze or smoke in the park that could make it hard to see.

"We're just recommending people adjust their speed and turn on their headlights, increase their visibility as they pass through those areas of smoke," said Swartley.
He added that people with respiratory sensitivity may want to check air quality at airnow.gov before heading into the park.

OTHER FEMA NEWS

NBC: Severe Weather. NBC Nightly News (8/30, lead story, 2:30, Guthrie, 16.61M) reported, "Make no mistake, we are in the fall throes of hurricane season now. And if you're a storm watcher at the weather service looking at the US map tonight, there's a lot to keep your eye on. Three big storms threatening the US coastline at this hour. Parts of Florida just placed under a hurricane watch, bracing for up to 10 inches of rain. A tropical storm warning for sections of North Carolina. And Hawaii gearing up for a possible one-two punch. The Big Island facing a hurricane warning at this hour. Gabe Gutierrez starts us off tonight in North Carolina storm zone." NBC (**Gutierrez**) added, "Tonight, the view from the International Space Station is stunning: massive hurricanes swirling across the globe. Hurricane Madeleine in the Pacific, threatening Hawaii. It's followed by Hurricane Lester. Churning in the Atlantic, Hurricane Gaston, not expected to affect the US but now the Carolina and Florida coasts are bracing for separate tropical systems." **Unidentified speaker**: "The storm is an uncertainty, but we are preparing for it." **Gutierrez**: "In Florida, tropical depression number nine is forecast to turn towards the Gulf Coast, bringing heavy rain and even isolated tornadoes over the next few days." **Rick Scott**, Florida Governor: "Everybody has to be careful. We don't want anybody to be injured. We don't want any loss of life." **Gutierrez**: "Another system, tropical depression number eight, is grazing North Carolina's Outer Banks, where a tropical storm warning is in effect. The concern here, rip currents – fast-moving water that moves away from shore. Swimmers are pulled out to sea and panic while trying to swim against current, back to the beach." **Drew Pearson**, NC Emergency Management: "Rip currents are dangerous. They've taken three lives here in the Outer Banks Just this past summer. There's a high threat of them right now." **Gutierrez**: "Young Payton Waller got caught up in one but managed to escape." **Payton Waller**, swimmer: "It's really rough and all these waves just crashing." **Gutierrez**: "Other tourists on this tail end of summer are taking the offshore storm in stride." **Unidentified speaker**: "I mean, one to three inches. Back home, this is what you call a thunderstorm." **Gutierrez**: "Though neither of the storms closest to the eastern US are expected to strengthen into major hurricanes, it has suddenly become a busy season in the tropics." **Rick Knabb**, National Hurricane Center: "Don't focus so much on the strength or the category, because the water hazards might end up being the most dangerous." **Gutierrez**: "As Florida prepares for flooding, here in North Carolina's Outer Banks, things may seem calm. But, there is rough surf and dangerous rip currents up and down the eastern seaboard as far north as New England, possibly extending into the holiday weekend."

CDC Will Run Out Of Money To Fight Zika In US Next Month (Washington Post)

By Lena Sun

Washington Post, August 30, 2016

The federal agency leading the public health response to the Zika virus in the United States will run out of funding to combat the mosquito-borne virus by late September, its director said Monday.

"The cupboard is bare," said Tom Frieden, who heads the Centers for Disease Control and Prevention. "Basically, we're out of money, and we need Congress to act to allow us to respond effectively."

Of the $222 million that the CDC was allocated for domestic Zika response this year, about $200 million has been committed, Frieden said during a media roundtable in Washington. "The rest will be gone by the end of September."

The timing further raises the threat for high-risk states along the Gulf Coast, particularly if Congress again fails to act on the Obama administration's emergency funding request when lawmakers return to Washington next month.

"We're in peak mosquito season" – which typically lasts through the end of October in the United States – and if transmission starts occurring more broadly, CDC "might not have the resources" to respond and send teams to support local and state officials, Frieden said.

The CDC has already issued unprecedented travel advisories for two areas in Florida where mosquitoes are actively spreading the virus: a one-square-mile section of Miami's Wynwood neighborhood and a 1.5-square-mile zone in Miami Beach. Pregnant women are urged to stay out of both areas because of the danger Zika poses to a fetus.

Negotiations in Congress over a $1.9 billion Zika spending package fell apart in late June. Federal health officials have shifted money from elsewhere in the Department of Health and Human Services to fund the domestic response. That includes $38 million from fighting Ebola, $44 million from general public health emergency funds and, most recently, $81 million from programs at the National Institutes of Health and the Biomedical Advanced Research and Development Authority.

The money has gone to help states track the virus, provide assistance about birth defects caused by Zika and increase mosquito-control efforts. Within CDC itself, officials also have pulled resources from programs on immunization, disease infection and HIV outreach, including prevention treatment for people at risk of getting HIV, Frieden said.

Researchers continue to detail ever-graver consequences for babies born to mothers infected with Zika. A report from Brazil, published last week in the New England Journal of Medicine, described a newborn in Sao Paolo who had Zika virus in his blood for more than two months. While the baby had no obvious illness or visible birth defects at birth or when doctors examined him at about eight weeks, by six months he had developed severe Zika-related brain damage.

The first trimester of pregnancy is thought to be when Zika infection poses the greatest risk. In this case, however, the baby's mother was infected late in her second trimester.

At the same time, the virus continues to spread to the rest of the world. The latest outbreak is in Singapore, a Southeast Asia travel hub, which typically has 500 full-time inspectors working to eliminate standing water where mosquitoes can breed. The fact that Zika is spreading there, with at least 56 cases now confirmed, shows how "it's going to be really tough" for other places to control, he said.

During the coming weeks in the United States, Frieden expects there will be more cases of infants born with Zika-related neurological problems. As of mid-August, 17 babies infected in utero had been diagnosed with microcephaly, a condition defined by an abnormally small head and often serious brain damage.

In hard-hit Puerto Rico, the CDC estimates that 6,000 to 10,000 pregnant women will become infected during this mosquito season and that at least 100 to 270 infants will be born with microcephaly.

Without additional funding, Frieden said, the CDC won't be able to undertake key projects to better understand and control the virus, including Zika's longterm impact on infants and diagnostics to identify if a person has been previously infected.

In Puerto Rico, the agency also won't be able to help the island establish its own vector control program. Without one, the island has not been able to conduct effective surveillance, mosquito control or public engagement, even though Puerto Rico is experiencing a Zika epidemic and has had a history of other vector-borne diseases.

Frieden said the few additional cases that have surfaced in other parts of South Florida are considered single cases that don't represent a greater spread of the virus.

The travel advisories will be lifted after 45 days with no new cases from local transmission – the equivalent of three mosquito incubation periods. The Wynwood area is about halfway through that period, he said, but Miami Beach is still experiencing new cases.

COLORADO

Homeowners looking at major losses after hail and flooding in Colorado Springs (KOAA TV, Colorado Springs)

By Bill Folsom

The people living in areas of Colorado Springs inundated by hail and water on Monday, spent Tuesday cleaning up and assessing damage. “Literally found ourselves homeless overnight,” said John Martin who lived in one of the damaged homes on Logan Avenue. Multiple residents on the street are facing so much damage their homes will be unlivable for some time.

Many homes end up with hail and water in their homes. The basements of several homes filled with hail as deep as three feet. Other rooms show water makes several feet up walls. Where water subsided it left behind a coating of mud.

Erma Medina rents out a home on Logan Avenue. It is one of the homes with hail filling the basement.

There has been flooding in the area before, but never like this. She carried FEMA flood insurance until about a year ago when she says several city storm water drains outside her property were upgraded. With this disaster she see the problem as hail, but she says her insurance company says it is flooding. Sitting on a retaining wall outside the house Medina points to the remaining kneed deep hail, "Look at that hail. You can see the hail in the basement. The windows were broken by hail and they say it was flood. I don't believe it was a flood, no. She will dispute the claim, but says insurance or no insurance help she will find a way to repair the damage.

MONTANA

Western fires take big toll on programs (Billings Gazette, reprinted in Bismarck Tribune)

The late August sun is a smoky red ball, reminding Montanans of the fires that have destroyed homes and curtailed business in the West this summer. It's so dry in parts of Montana, Wyoming, California and other Western states that big fires are likely to burn until autumn snow falls. If lightning storms and wind persist, the fires will be bigger and more numerous.

The destruction is costly, and so is the firefighting. One year ago, the U.S. Department of Agriculture reported on the rising cost of fire operations and how it affected the Forest Service's other work. The numbers indicate that the Forest Service ought to be called the "fire service" because that's how the agency spent most of its budget. The USDA summed up the problem of "the depletion of non-fire programs to pay for the ever-increasing costs of fire." This has resulted in:

- Less money for restoration work that would help prevent catastrophic fires.

- Less protection of watersheds and cultural resources.

- Reduced upkeep of programs and infrastructure that support thousands of recreation jobs and billions of dollars economic growth in rural communities.

- Reduced support for the range of multiple uses, benefits and ecosystem services.

- Less research and technical assistance.

Firefighting staff has increased from 5,700 in 1998 to more than 12,000 in 2015. Meanwhile, the non-firefighting forest workers have been reduced by 39 percent — from 18,000 employees in 1998 to fewer than 11,000 last year.

Every non-firefighting program has been slashed. Forest road-building has been reduced 46 percent. Deferred maintenance funding was cut 95 percent despite a backlog of more than $5.1 billion in dam repairs, roads, sewer and water system improvements.

Lack of funding for everything but fires has prevented the agency from doing things that would save money in the long term. Energy efficiency projects have been deferred. Funding hasn't been available for partnership programs that generate private matching funds.

The report concluded with the solution that Congress has been delaying for years: Change the way we pay for wildfire fighting. Treat wildfires as the natural disasters they are.

In June, Sen. Steve Daines, R-Mont., spoke on behalf of draft legislation called the Wildfire Budgeting, Response and Forest Management Act. The first thing it would do, according to a Daines news release, is "end the unsustainable practice of fire borrowing by enabling a transfer of limited funds to the Forest Service and the Department of Interior through a budget cap adjustment when all appropriated suppressions funding (100 percent of the 10-year average) has been exhausted."

Sen. Jon Tester, D-Mont., reaffirmed his support for the Wildfire Disaster Funding Act. Both he and Daines are co-sponsors of the act, which would "pay for catastrophic wildfires through separate

emergency funding, allowing the Forest Service to devote more resources to proactive forest management like trail maintenance and timber harvest."

If S.235, which both of our U.S. senators are co-sponsoring, had been enacted and funded last year, the Forest Service would have $1.4 billion more to fight wildfires this year. But it didn't pass, so the Forest Service will again have to rob all its other operations to pay for the fiery disasters this year.

Montana's senators are in a good position to promote this bipartisan solution. Among many proposals for forest management involving timber harvest, recreation and conservation, nothing else is going to work well if the budget continues to be diverted to wildfire.

Lawmakers must stop the "fire borrowing" before another wildfire season begins. We call on Daines and Tester to work together to unite other Western senators and pass wildfire disaster legislation this year.
— *Billings (Mont) Gazette*

Efforts underway to help while portion of Yellowstone River is closed for businesses (KRTV, Great Falls)

By Morgan McKay - MTN News

LIVINGSTON - Governor Steve Bullock scheduled a Rapid Response Training meeting Monday for those affected by the closure of the Yellowstone River.

Many people like Chase Chapman have been left wondering how they will get through a Montana winter, since the closure of the Yellowstone has forced them to close their business.

"I don't need retraining, I'm very good at what I do," said Chapman, who is a fly fishing guide and teacher in Livingston. "When all these Congressman want to go catch a big fish, I go through Yellowstone Angler and we catch some big fish."

"So I came to this meeting today with some hope of maybe there's some grants available for a small business person, because if they opened up the river again tomorrow, I've now sold all my inventory," said Beth O'Neill, owner of SUP Montana.

Earlier today, Governor Bullock signed an executive order proclaiming an invasive species emergency to exist in the State of Montana. This order allows for different organizations to offer relief.

"We heard your concerns and taking a multi agency approach to addressing the immediate needs of workers who rely on the Yellowstone River for their livelihoods," said Bullock.

Local and Park County government officials attended the meeting as well as representatives from agencies such as the Montana Chamber of Commerce and the Montana Department of Labor and Industry.

"We do everything from helping folks file their unemployment claims to assisting them to potentially go into training folks who may have been impacted by this or a similar event," said Zack Medina, with Job Services.

“This isn't a handout, this isn't an entitlement program,” said Paul Martin, Bureau Chief of Unemployment Insurance. “It's a week to week eligibility program, it's funded by employers through payroll taxes.”

While unemployment insurance was one favorable option, other resources available were loans or a different temporary job placement.

“The last thing you want to do is get into debt, but there are economic injury loans, we can go up to two million (dollars),” said John Donovan, Small Business Administration.

Those businesses affected by the closure of the Yellowstone are encouraged to contact the Institute for Tourism and Recreation at the University of Montana, to help aid them in studying the full economic impact of the closure.

“Montanans I think, what makes us special, is to live here you have to learn to do several things,” said Chapman.

According to latest information released by FWP today, out of 30 trout tested in the upper Yellowstone, only two brown trout tested positive for the parasitic infection.

Officials say there is only evidence of the parasite, but not the disease. FWP also is saying there have been no trout mortalities documented from the disease.

Cloud cover keeps Copper King, Roaring Lion fires quiet (Missoulian)

- KIM BRIGGEMAN kbriggeman@missoulian.com

THOMPSON FALLS – Tuesday turned out to be a good day to fight fires in western Montana, though crews were keeping a lookout for a cool front blowing in from Oregon.

“There’s been a cloud cover over the fire this afternoon that’s kind of kept it subdued during the day,” spokesman Mike Cole said from the Copper King fire east of Thompson Falls.

A red flag warning issued for the afternoon and evening suggested dry thunderstorms might mix with temperatures in the 90s and relative humidity in the low to mid-teens and cause problems at both the Copper King and the Roaring Lion southwest of Hamilton, which turns a month old on Wednesday.

“I’m not sure if they’re actually going to produce over our area,” Lisa Keibler, public information officer at the Roaring Lion, said at 5:30 p.m. “We’ve got a lot of cloud cover and maybe some smoke from Idaho, but right now it’s pretty calm out actually.”

Neither fire is close to being out. An infrared flight in the middle of the night Monday raised the acreage of the Copper King to just under 26,000, up 1,000 acres from an estimate the evening before. It’s Montana’s largest active fire in 2016.

“Our biggest concern and kind of the linchpin of this thing is Munson Creek,” Cole said. “If we can keep this fire out of Munson Creek, that’s going to allow us to get a handle on this. But the weather has to cooperate and we have a lot of ground to cover and a lot of steep ground to try to get buttoned up.”

Munson Creek runs in a southerly direction to Highway 200 and the Clark Fork River 11 miles east of Thompson Falls and 13 miles west of Plains. Cole said crews were out until 2 a.m. Tuesday to complete a burnout operation on the north side of the fire.

During the day helicopters and an occasional fixed-wing aircraft were dropping water and retardant at the top of Munson Creek trying to keep the fire out of the deep canyon to prevent a possible run up the east side.

“We’ve been doing some structure protection work around the residences on Buffalo Bill Road,” Cole said. “If the fire did come down Munson Creek, those would be the first residences threatened, so we want to get ahead of the game.”

Some 220,000 gallons of water and 22,000 gallons of retardant were dropped on the fire Monday, when the fire west of Munson Creek burned back into the main fire toward the Big Hole Lookout. That resulted in a large column that was visible from Plains.

Tuesday’s red flag concern was rooted in an unstable air mass rated 6 on the Haines Index. The Haines Index has been used since 1988 to indicate the potential for wildfire growth. The index can range between 2 and 6, with a 6 being the driest and most unstable conditions in the lower atmosphere.

A total of 840 people are working the Copper King, which has cost an estimated $16.5 million to quell since it broke out on July 31.

Closures and evacuations remain in place. Forty-five homes have been evacuated and another 130 are on pre-evacuation notice. Log hauling is being permitted through the closure area from 4 to 6 a.m. daily.

Air quality in the Thompson Falls area climbed once again into the "very unhealthy" range Tuesday morning, spiking midway toward the top category of "hazardous" at 10 a.m. before dropping two levels to “unhealthy for sensitive groups” by 5 p.m.

"Very unhealthy" air means active children and adults, and people with respiratory disease, such as asthma, should avoid prolonged outdoor exertion; everyone else, especially children, should limit prolonged outdoor exertion.

Roughly 80 percent of hunting district 122 near Thompson Falls was closed indefinitely on Monday by the U.S. Forest Service.

Estimated containment date for the Copper King fire remains the end of October.

In Hamilton at the Roaring Lion fire, air quality remained good all day. Fifty-four people are on the fire, which was caused by unknown sources on July 31. Most of Tuesday’s action consisted of monitoring and checking the 8,533-acre fire with aerial resources to keep it within Ward Bowl, north of Camas Creek and south of Sawtooth Creek. Patrols were active on the ground to suppress spot fires over the fire line.

The Roaring Lion is expected to be contained by the end of September.

NORTH DAKOTA

Dakota Pipeline Was Approved by Army Corps Over Objections of Three Federal Agencies (Inside Climate News)

Sioux tribe's concerns were echoed in official reports by the EPA and two other agencies, but Army Corps of Engineers brushed them aside.

By Phil McKenna

Aug 30, 2016

BISMARCK, N.D.—Senior officials at the U.S. Environmental Protection Agency and two other federal agencies raised serious environmental and safety objections to the North Dakota section of the controversial Dakota Access oil pipeline, the same objections being voiced in a large protest by the Standing Rock Sioux tribe that has so far succeeded in halting construction.

But those concerns were dismissed by the U.S. Army Corps of Engineers, which relied on an environmental assessment prepared by the pipeline's developer, Dakota Access LLC, when it approved the project in July, according to public documents.

The 1,134-mile pipeline would carry approximately 500,000 barrels of crude per day from North Dakota to Illinois along a route that did not originally pass near the Standing Rock reservation, the documents show. After the company rerouted the pipeline to cross the Missouri River just a half-mile upstream of the reservation, the tribe complained that the Army Corps did not consider threats to its water supply and cultural heritage.

The EPA, the Department of the Interior and the Advisory Council on Historic Preservation echoed those concerns in public comments on the Army Corps' draft environmental assessment. Citing risks to water supplies, inadequate emergency preparedness, potential impacts to the Standing Rock reservation and insufficient environmental justice analysis, the agencies urged the Army Corps to issue a revised draft of their environmental assessment.

"Crossings of the Missouri River have the potential to affect the primary source of drinking water for much of North Dakota, South Dakota, and Tribal nations," Philip Strobel, National Environmental Policy Act regional compliance director for the EPA, wrote in a March 11 letter to the Army Corps.

The current route of the pipeline is 10 miles upstream of Fort Yates, the tribal headquarters of the Standing Rock Sioux tribe and the county seat. The Standing Rock Sioux rely on the Missouri River for drinking water, irrigation, and fish.

The EPA shared its concerns and recommended that the Army Corps undertake a new draft environmental assessment and release it for public comment. In that process, the EPA asked the Army Corps to consider "other available routes or crossing locations that would have reduced potential to water resources, especially drinking water supplies," and to carry out a "more thorough" analysis of environmental justice concerns. The other agencies also asked for further assessments and consultation with the tribes.

The Army Corps instead published its final environmental assessment four months later, which constituted final approval of the project. In it, the Corps acknowledged the agencies' comments, but said "the anticipated environmental, economic, cultural, and social effects" of the project are "not injurious to the public interest."

The Army Corps, which has jurisdiction over domestic pipelines that cross major waterways, declined a request for comment, citing ongoing litigation. Energy Transfer, owner of Dakota Access LLC, did not respond to a request for comment. The company has previously said "we are constructing this pipeline in accordance with applicable laws, and the local, state and federal permits and approvals we have received."

Tribe Takes their Complaints Public

The tribe's growing protest has gathered in a camp near Cannon Ball, N.D., and has drawn support from Native Americans from around the country as well as environmental activists. An estimated 1,200 people are camping there and Sioux leaders say 90 tribes are represented among the protesters.

The protest blocked construction equipment two weeks ago and Energy Transfer halted construction on the section of pipeline closest to the Standing Rock reservation. A federal judge said last week he will rule by September 9 on whether to grant the Standing Rock Sioux a temporary injunction. That would bar construction on sections of the pipeline where the ground hasn't yet been disturbed until a suit calling for the Army Corps to redo its permitting process can be heard.

Demographics of the Standing Rock Sioux reservation
The Standing Rock reservation spans 3,600 square miles across North and South Dakota, where 41 percent of its 8,217 residents live below the poverty level, more than triple the national average, according to a 2012 economic development report prepared for the tribe. Nearly a quarter of its population is unemployed.

In its comments calling for a re-do, the EPA said the environmental justice analysis in the Army Corps' draft environmental assessment used county-by-county or state-by-state data when the preferred level of analysis is "census block groups or census tracts."

"A screening level analysis for EJ [environmental justice] indicates there are several census block groups with substantial minority and/or low income demographics that could be potentially impacted by the project," the EPA wrote. "In addition to analyzing potential EJ impacts, Executive Order 12898 on Environmental Justice (February 16, 1994) also requires public outreach to potentially affected EJ communities."

In its final environmental assessment, the Army Corps said its analysis "contains an Environmental Justice analysis that conforms with recognized practice."

The agency also said the pipeline does not cross tribal land. "In fact, tribal land was specifically avoided as a routing mitigation measure," it said. "The Project does not anticipate any impact to water supplies along its route, and to the extent a response action is required, federal regulation will be complied with."

Route Became a Moving Target

The original route for the proposed pipeline crossed the Missouri River further north, 10 miles upstream of Bismarck, the state capital. North Dakota Public Service Commission documents show the route upstream of Bismarck in a May 29, 2014 map by Energy Transfer.

The company later rejected this route, citing a number of factors, including more road and wetland crossings, a longer pipeline, and higher costs. Also listed as a concern was the close proximity to wellheads providing Bismarck's drinking water supply.

"They moved it down to Standing Rock, which is a very remote area, but people live at Standing Rock too. There is an environmental justice component here," said Jan Hasselman, an attorney with environmental advocacy organization EarthJustice, which filed the lawsuit on behalf of the Standing Rock Tribe against the Army Corps of Engineers.

In its public comments, the Department of the Interior, the government agency responsible for the administration and management of Native American lands, called for the Army Corps to conduct an

Environmental Impact Statement, a more comprehensive analysis of the potential impact of the proposed pipeline.

"We believe the Corps did not adequately justify or otherwise support its conclusion that there would be no significant impacts upon the surrounding environment and community," Lawrence Roberts, acting assistant secretary of Indian affairs at the Depart of the Interior, wrote in a letter to the Army Corps in March.

The Advisory Council on Historic Preservation (ACHP), a federal agency that promotes the preservation, enhancement, and productive use of the nation's historic resources, also expressed concern over the Army Corps' assessment.

Federal law requires federal agencies to take into account the effect a proposed project will have on historic property. The Army Corps' assessment, however lacked adequate consultation with the Standing Rock Sioux tribe and focused on a limited number of water crossings rather than on the pipeline's entire expanse, according to letters ACHP officials wrote to the Army Corps.

"Based on the inadequacies of the tribal consultation and the limited scope for identification of historic properties that may be affected, the ACHP questions the sufficiency of the Corps' identification effort, its determinations of eligibility, and assessments of effect," Reid Nelson, director of the office of federal agency programs for ACHP, wrote in a May 19 letter to the Army Corps.

In its final assessment, the Corps stated there is "no new significant information on environmental effects" as a result of comments from the EPA and others. "As such, neither a supplemental or revised EA [Environmental Assessment] for further public review nor additional NEPA [National Environmental Policy Act] compliance actions was required."

"We're talking about a broad overarching and fundamental failure which is the decision to look very narrowly at environmental impacts at a few specific locations rather than the pipeline as a whole," Hasselman said of the Army Corps' assessment.

Having their concerns dismissed by the Corps, the tribe turned next to the courts. Their lawsuit calls for a halt to construction and full consideration of the pipeline's impact on tribal lands and water.

To obtain a preliminary or "emergency" injunction, however, attorneys representing the Standing Rock tribe will have to demonstrate imminent harm to historic sites if construction proceeds.

"To the extent that people are concerned about harm from oil spills, that is still a ways off," Hasselman said. "We can't really seek emergency relief on that front. That is something that we will be seeking in the course of the lawsuit."

5 things to know about the Dakota Access Pipeline (KETV, Omaha)

Native American tribe sued the federal government over project

UPDATED 7:33 AM CDT Aug 31, 2016

(CNN) —In what looks to be a possible sequel to the Keystone XL Pipeline dispute, another fight has begun over a proposed US oil route.

The Standing Rock Sioux Tribe has sued the federal government, saying the Native American tribe was not properly consulted over the project to construct a 1,168-mile crude oil pipeline that extends over four states.

While proponents of the Dakota Access Pipeline tout its economic boost, opponents question its environmental impact.

The US Army Corps of Engineers approved the project, granting final permits in July, to the dismay of environmentalists and the Standing Rock Sioux Tribe.

1. What is the pipeline project?

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois. The pipeline is also known as the Bakken Oil Pipeline, named for the oil-rich area in North Dakota. An estimated 7.4 billion barrels of undiscovered oil is believed to be in the US portion of the Bakken Formation, according to the US Geological Survey.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

2. Why is the pipeline being constructed?

The project developer, Dakota Access, a subsidiary of Energy Transfer Crude Oil, says the pipeline would help the United States become less dependent on importing energy from unstable regions of the world. It says a pipeline is the safest, most cost-effective and environmentally responsible way to move crude oil, removing dependency on rails and trucks.

It also estimates the pipeline would bring an estimated $156 million in sales and income taxes to state and local governments as well as add 8,000 to 12,000 construction jobs.

The proposal comes as a glut of cheap oil has devastated North Dakota's economy. The state had enjoyed a major boom, but after hitting highs in 2014, it suffered a major economic downturn.

The project developers say the $3.7 billion project will "bring significant economic benefits to the region that it transverses."

3. Who is protesting?

The Standing Rock Sioux Tribe filed a complaint in federal court alleging that "the construction and operation of the pipeline ... threatens the Tribe's environmental and economic well-being, and would damage and destroy sites of great historic, religious, and cultural significance to the Tribe."

There are also concerns that digging the pipeline under the Missouri River would affect the tribe's drinking water supply. The tribe, represented by Earthjustice, a nonprofit environmental law firm, has asked for an injunction.

Based in Fort Yates, North Dakota, the Standing Rock Sioux Tribe is a federally recognized Indian tribe, a successor to the Great Sioux Nation. Other Native American tribes and nations have joined its efforts.

"We have laws that require federal agencies to consider environmental risks and protection of Indian historic and sacred sites," Dave Archambault II, the elected chairman of the Standing Rock Sioux Tribe, said in a statement.

"But the Army Corps has ignored all those laws and fast-tracked this massive project just to meet the pipeline's aggressive construction schedule."

Sen. John Hoeven of North Dakota disputes the tribe's chief complaint that the Army Corps did not properly consult it.

"If there is some way for the corps to work to meet the concerns of the tribe, they should certainly do that. But (there) has been a consultation process. If the tribe doesn't feel that that has been sufficient, again, they can protest as long as they do it peacefully and safely, but ultimately their recourse is to the courts," the Republican senator told CNN affiliate KFYR-TV in Bismarck, North Dakota.

About 30 environmental groups, including the Sierra Club and Greenpeace, signed a letter to President Barack Obama, slamming the Dakota Access Pipeline as "yet another example of an oil pipeline project being permitted without public engagement or sufficient environmental review."

They appealed to him to reject the project -- as he did with the Keystone XL pipeline.

Protests have been held in North Dakota and Washington.

Construction equipment involved in the pipeline project in Iowa was set ablaze in suspected arson fires, reports say.

4. Who's on which side?

Bernie Sanders spoke out against the pipeline in November 2015, but Democratic presidential nominee Hillary Clinton has not addressed the issue. CNN reached out to the Clinton campaign for comment on the issue and has not yet received a response.

"If candidate Clinton does nothing to address this issue yet continues into November promising Native Americans that she is our champion, then her words will be nothing but false promises -- just more bombast, more white lies to Indians," Simon Moya-Smith, a citizen of the Oglala Lakota Nation and culture editor at Indian Country Today, wrote recently in a CNN op-ed.

Celebrities such as Shailene Woodley, Susan Sarandon and Rosario Dawson have spoken out against the pipeline.

Leonardo DiCaprio tweeted that he was "inspired by the Standing Rock Sioux's efforts to halt the Dakota Access Pipeline."

5. What's next?

The tribe's actions may be the start of a lengthy, legal fight over the Dakota Access Pipeline. Meanwhile, construction work on the pipeline is ongoing.

US District Judge James Boasberg said he wants to absorb both sides of the argument before issuing a ruling, which is expected by September 9, KFYR reported.

Officials Rate 3 Weekend Tornadoes In Eastern North Dakota (AP)

Associated Press, August 30, 2016

GRAND FORKS, N.D. (AP) – A weekend tornado that caused damage in the Hillsboro area had wind speeds up to 140 mph, according to the National Weather Service.

The agency rated the Saturday evening tornado in Traill County an EF-3 on the enhanced Fujita scale. An EF2 or higher rating is considered significant.

The tornado was as wide as three football fields are long and was on the ground for 8 minutes, according to a weather service report. It smashed bins at Rahr Malting Co.'s Taft grain elevator complex and spilled tons of barley onto the ground, destroyed a garage and uprooted trees on one area farmstead. It heavily damaged a home and a metal building at another farmstead.

No one was hurt. The town of 1,600 people was lucky that the tornado missed the heart of the community, said Connor Ulness with the storm damage restoration company Aspen Exteriors.

"The tornado came in just north of the center of town," he told WDAY-TV.

Severe storms in eastern North Dakota on Saturday spawned two weaker tornadoes in neighboring Grand Forks County, according to the weather service. One with wind speeds estimated at 70 mph and rated an EF-0 touched down in an open field near Arvilla. An EF-1 tornado with wind speeds up to 110 mph uprooted trees and demolished a barn in the Pleasant View Township area.

No injuries were reported in either of those tornadoes.

SOUTH DAKOTA

County To Explore Grant Possibilities For Areas Affected By Crow Peak Fire (Black Hills Pioneer)

By Jaci Conrad

Black Hills Pioneer

August 30,2016

DEADWOOD — Disaster prevention due to devastation caused by the Crow Peak Fire is the impetus behind the Lawrence County Commission's recent decision to give the go-ahead to the Natural Resources Conservation Service (NRCS) to provide an initial assessment of the area.

"We might discover something very important that needs to be done," said Commission Chair Daryl Johnson.

The Emergency Watershed Protection program of the conservation service is designed to help prevent damage to life or property after a natural disasters, like the Crow Peak Fire. A cost-share program, the protection program pays 75 percent of the costs to install practices such as replacing culverts identified in the Burned Area Emergency Response (BAER) report completed after the fire. If it decides the assessment is worthy of pursuing, the county, upon entering a sponsorship of the emergency grant program, would be responsible for 25 percent of the costs.

Because the county would be responsible for the operation and maintenance of any culverts installed, for the life of the culvert, commissioners were hesitant to commit to the program, asking first for an initial assessment to be brought back and reviewed before a formal commitment is made.

"You understand, our apprehension comes from the fact that we still maintain snow-removal on two bridges because we were a FEMA (Federal Emergency Management Agency) sponsor of them at one time," Johnson said.

With a 60-day deadline following the fire, which was put out on July 4, an application letter must be submitted to the conservation service by Friday, starting the information gathering process, beginning with a damage survey report. This report will identify what problems are present, how to fix any concerns, and the cost of repairing the concerns. The application letter does not commit Lawrence County to a contract.

District Conservationist Justin Boerboom addressed the commission, explaining that the NRCS is federal agency with USDA funding and takes measures to help prevent catastrophe after a natural disaster through the Emergency Watershed Program.

"We need a local sponsor to apply for assistance," Boerboom said. "We've proposed the project. The next step is to go out and evaluate what the issues are, what to address, the costs, and come back with a proposal."

NRCS State Engineer Jay Cobb said that once they evaluate, the next determination is if they can mitigate issues to gain benefits greater than the actual cost of construction.

Threats that the protection program addresses are termed watershed impairments and include, for example: debris-clogged stream channels, undermined and unstable streambanks, jeopardized water control structures and public infrastructures, wind-borne debris removal, and damaged upland sites stripped of protective vegetation by fire or drought.

Public and private landowners are eligible for assistance but must be represented by a project sponsor, such as the county, if they decide to move forward with the program.

Boerboom also presented the critical values table from the BAER report, listing all the concerns on private land. Listed as a very high risk to human life and safety is the Crow Creek Road and the threat of flash flooding with debris flows, road washout, and damage. The BAER team identified Crow Creek as an drainage of Crow Peak that would see an increase of about 50 percent over normal flows since the vegetation on the western slopes were burned.

Listed as a high threat to human life and safety are homes along Crow Creek Road; specifically, two cabins and the threat of flash flooding and debris flows.

Listed as a very high threat to property are: two road crossings with 18-inch culverts on Crow Creek Road; Crumm Driveway Crossing's 24-inch culvert; and Nicholas Cabin driveway, which

crossing 24-inch culvert. The threat here is flash flooding with debris flows, debris blockage, possible failure of crossing structures, and road washout/damage.

Listed as a high threat to property are private road crossings along Higgins Gulch Road in the floodplain, with the threat of flash flooding with debris flows, road washout/damage; and culverts under driveways alongside Higgins Gulch Road.

The BAER team determined the Higgins Gulch drainage would see increased flows of about 10 percent following the fire.

There are other threats that have been identified and listed in the intermediate to low threat categories.

Yankton Co. Resident Dies From West Nile Virus (KDLT News, Pierre)

Aug 29, 2016

KDLT News- Pierre, S.D.

The South Dakota Department of Health today reported a Yankton Co. resident died of West Nile virus associated causes. It is the state's first WNV related death this season. The individual was in the 80 to 89 age group.

To date this season, South Dakota has reported 74 cases of human WNV; 12 percent have had the most serious neruoinvasive disease while 88 percent have had WNV fever. Twenty-five percent of cases have been hospitalized. There has also been a WNV-positive horse in Butte County.

"This unfortunate death is a reminder for us all that while the Zika virus is grabbing headlines, West Nile is the mosquito-borne virus of concern here in South Dakota," said Lon Kightlinger, state epidemiologist for the department. "We strongly encourage people to protect themselves and their families by using repellent and avoiding the outdoors when mosquitoes are most active."

Kightlinger said South Dakotans can reduce their risk with the following precautions:

- Apply mosquito repellents (DEET, picaridin, oil of lemon eucalyptus or IR3535) to clothes and exposed skin. Limit exposure by wearing pants and long sleeves in the evening.

- Limit time outdoors from dusk to midnight when Culex mosquitoes, the primary carrier of WNV in South Dakota, are most active.

- Get rid of standing water that gives mosquitoes a place to breed. Regularly change water in bird baths, outside pet dishes, and drain water from flower pots and garden containers.

- Support local mosquito control efforts.

UTAH

Next step for American Fork River: Measure the risks with an eye toward spring (KSL TV, Salt Lake City)

By Amy Joi O'Donoghue | Posted Aug 30th, 2016 @ 7:02pm

SALT LAKE CITY — State water quality officials will insist on an action plan to prevent further contamination of the American Fork River from lead-laden sediment that killed thousands of fish in a two-mile stretch.

That plan will be put together by the North Utah Water Conservancy District with an eye toward preventing sediment from being stirred up by rain or spring runoff, said Walt Baker, director of the Utah Division of Water Quality.

He said the division also expects to get an estimate from project engineers on the amount of sediment that washed into the river as a result of the Tibble Fork Dam's $7.3 million rehabilitation and expansion project.

"We have moved sediment from point A to point B over a six-mile expanse," Baker said. "There needs to be an assessment of how bad it is and what steps need to be taken to remediate it."

It's the latest plan following completion by project engineers of a diversion channel that placed a 200-foot pipeline to reroute flows into the nearly empty Tibble Fork basin to prevent another sediment flush while work continues on the dam.

Baker said a lot of factors will come into play to mitigate the impacts of the sludge, especially given that high flows from spring runoff.

"Mother Nature is going to come with spring runoff regardless of any planning we do," he said. "We need to know what needs to be done."

Dave Brown, the Utah state conservationist with the U.S. Department of Agriculture's Natural Resources Conservation Service, said an aerial drone flew over the site Monday to quantify the amount of material that washed into the river.

"There is a very clear mini-canyon that is exposed now," he said. "The engineer indicated they could use survey technology to calculate how much sediment was deposited."

Dam project

The NRCS is the federal agency on the Tibble Fork rehabilitation project, which rose as a priority after a 2004 assessment found that 1960s-era dam did not meet safety standards. Work began in June, with the NRCS advising downstream users that as the reservoir began draining around Aug. 19, people could expect to see elevated levels of sediment in the river.

Brown said continuing inflows into the basin released larger amounts of sediment than anticipated. The result was a two-mile section of the river just below the dam that lost all its fish populations due to suffocation.

The Utah Division of Wildlife Resources said historically, there are about 1,000 to 2,000 fish per mile in that section of the river.

While water samples taken by the state show metal concentrations within screening values for health, recreation and aquatic life downstream, the sediment showed high levels of lead that likely resulted from legacy mining operations in the Wasatch Mountains.

Several hundred abandoned mines dot the mountains, some experiencing acid mine drainage and an unknown number are within proximity of perennial stream flows.

Baker said his division has worked in partnership with the Utah Division of Oil, Gas and Mining, to craft a blueprint of where there may be water quality risks — a concern accentuated with the disastrous Gold King Mine spill of 2015.

In that incident, EPA-led contractors bungled efforts to open a mine portal and sent a 3-million gallon torrent of mustard-colored mine waste into the Animas River above Silverton, Colo. The breach contaminated water in Colorado, New Mexico, Utah and the Navajo Nation in an environmental catastrophe critics say was avoidable.

Baker said the Gold King mine disaster underscores the need for Utah officials to get a handle on potential problems, sooner rather than later.

"It ought to be enough of a concern that we do some investigation," he said. "My greatest concern is if there needs to be an action plan and if these are time bombs waiting to go off."

Abandoned mines

While state officials over abandoned mine reclamation have mapped the hundreds of mines and their owners — if available — with work done in the 1990s, Baker said it is not clear how many of them pose risks to waterways.

"If, in fact, they do have flows and there are responsible parties, we can issue a permit and get an idea of the water quality of the mines' drainage," he said. "We will be way ahead to know if we have a problem or not."

The mining division closes up abandoned mines if there is a public safety risk, and Baker's division can enforce the Clean Water Act if water is at risk, but there is no state regulatory oversight absent those factors.

"We really don't know the extent," said Steve Fluke, administrator over the state's abandoned mine reclamation program. "We are trying to figure out how many are discharging and may be an environmental issue in light of Gold King."

While there is funding in place to deal with the cleanup of abandoned coal mines, no funding exists for other mines.

"There is no such law for cleaning up hard rock mine sites," Fluke said.

Mark Allen of Protect and Preserve American Fork Canyon sees the potential for another Gold King Mine spill in the Wasatch Mountains because he said no one is properly addressing the risks.

"The Wasatch Mountains have a bunch of ticking time bombs and no one wants to talk about them," he said.

Allen said the U.S. Environmental Protection Agency should step in and declare the Tibble Fork sediment release into American Fork River a Superfund site.

EPA had a response team in Utah County last week, but the federal agency has not disclosed what its employees determined about the Tibble Fork Dam release.

"We will continue to coordinate with Utah and federal agencies to evaluate data, information, and potential next steps related to the sediment release," said EPA spokesman Rich Mylott.

"We’re certainly aware of concerns related to historic mining and metals impacts in the American Fork watershed and have worked with state and local partners on previous assessment and cleanup projects in the basin."

Allen is leading a tour to legacy mine sites mid-month that Baker and Fluke said they plan to attend.

"I have been barking pretty loud," he said. "We're taking everybody up there who has some stewardship and asking them to figure out what to do."

Baker and several members of his staff are touring the New Yankee Mine on Snowbird property Wednesday to assess any downstream impacts.

The division is also looking at the resort's expansion into Mary Ellen Gulch, an approval granted earlier this year that requires water quality monitoring for two years before any construction on ski lifts or other facilities begins.

WYOMING

Route To Yellowstone Reopens, But Fire Danger Remains High (Wyoming Public Radio)

By CAROLINE BALLARD • 16 HOURS AGO

Northwest Wyoming continues to struggle with high fire danger as eleven wild fires currently burn in that part of the state.

Bill Swartley, a public information officer for the Yellowstone fire team, said Phase 2 fire restrictions will likely go into effect in Yellowstone National Park on Wednesday. That means any kind of open flame may be banned in the park.

Swartley said preventing any human caused fires is their top priority.

“These fires are lightning caused and for that reason are being managed for ecological benefits to the park,” said Swartley. “However, human caused fires are a total different type of ignition.” With temperatures reaching into the 80s and low relative humidity, weather conditions are prime for even more fire growth.

Some progress has been made, though. Highway 191/89/287 between Leek’s Marina and Yellowstone’s South Entrance was closed because of the Berry Fire but has now reopened. Highway pull outs along that stretch remain closed.

Swartley said there may be areas of light haze or smoke in the park that could make it hard to see.

“We’re just recommending people adjust their speed and turn on their headlights, increase their visibility as they pass through those areas of smoke,” said Swartley.

He added that people with respiratory sensitivity may want to check air quality at airnow.gov before heading into the park.

OTHER FEMA NEWS

NBC: Severe Weather. NBC Nightly News (8/30, lead story, 2:30, Guthrie, 16.61M) reported, "Make no mistake, we are in the fall throes of hurricane season now. And if you're a storm watcher at the weather service looking at the US map tonight, there's a lot to keep your eye on. Three big storms threatening the US coastline at this hour. Parts of Florida just placed under a hurricane watch, bracing for up to 10 inches of rain. A tropical storm warning for sections of North Carolina. And Hawaii gearing up for a possible one-two punch. The Big Island facing a hurricane warning at this hour. Gabe Gutierrez starts us off tonight in North Carolina storm zone." NBC (**Gutierrez**) added, "Tonight, the view from the International Space Station is stunning: massive hurricanes swirling across the globe. Hurricane Madeleine in the Pacific, threatening Hawaii. It's followed by Hurricane Lester. Churning in the Atlantic, Hurricane Gaston, not expected to affect the US but now the Carolina and Florida coasts are bracing for separate tropical systems." **Unidentified speaker**: "The storm is an uncertainty, but we are preparing for it." **Gutierrez**: "In Florida, tropical depression number nine is forecast to turn towards the Gulf Coast, bringing heavy rain and even isolated tornadoes over the next few days." **Rick Scott**, Florida Governor: "Everybody has to be careful. We don't want anybody to be injured. We don't want any loss of life." **Gutierrez**: "Another system, tropical depression number eight, is grazing North Carolina's Outer Banks, where a tropical storm warning is in effect. The concern here, rip currents – fast-moving water that moves away from shore. Swimmers are pulled out to sea and panic while trying to swim against current, back to the beach." **Drew Pearson**, NC Emergency Management: "Rip currents are dangerous. They've taken three lives here in the Outer Banks Just this past summer. There's a high threat of them right now." **Gutierrez**: "Young Payton Waller got caught up in one but managed to escape." **Payton Waller**, swimmer: "It's really rough and all these waves just crashing." **Gutierrez**: "Other tourists on this tail end of summer are taking the offshore storm in stride." **Unidentified speaker**: "I mean, one to three inches. Back home, this is what you call a thunderstorm." **Gutierrez**: "Though neither of the storms closest to the eastern US are expected to strengthen into major hurricanes, it has suddenly become a busy season in the tropics." **Rick Knabb**, National Hurricane Center: "Don't focus so much on the strength or the category, because the water hazards might end up being the most dangerous." **Gutierrez**: "As Florida prepares for flooding, here in North Carolina's Outer Banks, things may seem calm. But, there is rough surf and dangerous rip currents up and down the eastern seaboard as far north as New England, possibly extending into the holiday weekend."

CDC Will Run Out Of Money To Fight Zika In US Next Month (Washington Post)

By Lena Sun

Washington Post, August 30, 2016

The federal agency leading the public health response to the Zika virus in the United States will run out of funding to combat the mosquito-borne virus by late September, its director said Monday.

"The cupboard is bare," said Tom Frieden, who heads the Centers for Disease Control and Prevention. "Basically, we're out of money, and we need Congress to act to allow us to respond effectively."

Of the $222 million that the CDC was allocated for domestic Zika response this year, about $200 million has been committed, Frieden said during a media roundtable in Washington. "The rest will be gone by the end of September."

The timing further raises the threat for high-risk states along the Gulf Coast, particularly if Congress again fails to act on the Obama administration's emergency funding request when lawmakers return to Washington next month.

"We're in peak mosquito season" – which typically lasts through the end of October in the United States – and if transmission starts occurring more broadly, CDC "might not have the resources" to respond and send teams to support local and state officials, Frieden said.

The CDC has already issued unprecedented travel advisories for two areas in Florida where mosquitoes are actively spreading the virus: a one-square-mile section of Miami's Wynwood neighborhood and a 1.5-square-mile zone in Miami Beach. Pregnant women are urged to stay out of both areas because of the danger Zika poses to a fetus.

Negotiations in Congress over a $1.9 billion Zika spending package fell apart in late June. Federal health officials have shifted money from elsewhere in the Department of Health and Human Services to fund the domestic response. That includes $38 million from fighting Ebola, $44 million from general public health emergency funds and, most recently, $81 million from programs at the National Institutes of Health and the Biomedical Advanced Research and Development Authority.

The money has gone to help states track the virus, provide assistance about birth defects caused by Zika and increase mosquito-control efforts. Within CDC itself, officials also have pulled resources from programs on immunization, disease infection and HIV outreach, including prevention treatment for people at risk of getting HIV, Frieden said.

Researchers continue to detail ever-graver consequences for babies born to mothers infected with Zika. A report from Brazil, published last week in the New England Journal of Medicine, described a newborn in Sao Paolo who had Zika virus in his blood for more than two months. While the baby had no obvious illness or visible birth defects at birth or when doctors examined him at about eight weeks, by six months he had developed severe Zika-related brain damage.

The first trimester of pregnancy is thought to be when Zika infection poses the greatest risk. In this case, however, the baby's mother was infected late in her second trimester.

At the same time, the virus continues to spread to the rest of the world. The latest outbreak is in Singapore, a Southeast Asia travel hub, which typically has 500 full-time inspectors working to eliminate standing water where mosquitoes can breed. The fact that Zika is spreading there, with at least 56 cases now confirmed, shows how "it's going to be really tough" for other places to control, he said.

During the coming weeks in the United States, Frieden expects there will be more cases of infants born with Zika-related neurological problems. As of mid-August, 17 babies infected in utero had been diagnosed with microcephaly, a condition defined by an abnormally small head and often serious brain damage.

In hard-hit Puerto Rico, the CDC estimates that 6,000 to 10,000 pregnant women will become infected during this mosquito season and that at least 100 to 270 infants will be born with microcephaly.

Without additional funding, Frieden said, the CDC won't be able to undertake key projects to better understand and control the virus, including Zika's longterm impact on infants and diagnostics to identify if a person has been previously infected.

In Puerto Rico, the agency also won't be able to help the island establish its own vector control program. Without one, the island has not been able to conduct effective surveillance, mosquito control or public engagement, even though Puerto Rico is experiencing a Zika epidemic and has had a history of other vector-borne diseases.

Frieden said the few additional cases that have surfaced in other parts of South Florida are considered single cases that don’t represent a greater spread of the virus.

The travel advisories will be lifted after 45 days with no new cases from local transmission – the equivalent of three mosquito incubation periods. The Wynwood area is about halfway through that period, he said, but Miami Beach is still experiencing new cases.

COLORADO

FEMA awards Colorado $1 million wildfire grant (Loveland Reporter-Herald)

By Dana Rieck
Reporter-Herald Staff Writer
Posted: 08/20/2016 05:25:56 PM MDT

Republican Sen. Cory Gardner's office announced this week that the Federal Emergency Management Agency is awarding $1,194,483.86 to the Colorado Division of Fire Prevention and Control.

Matthew Branch, the Northeast Regional Fire Management officer for the Colorado Department of Public Safety Division of Fire Prevention and Control, said the money is a reimbursement for costs associated with past fires.

It is called a fire management assistance grant, which is something states apply for after responding to large fires.

"Most of these costs are borne by the local fire department and the county," he wrote in an email. "These entities bill the state and we reimburse them out of the state budget. Several years later we get the money back from the federal government."

Once approved, according to Branch, the grants can pay for 75 percent of the costs associated with fighting those fires.

"I welcome more than $1 million from FEMA to assist with wildfire response efforts in Colorado," said Gardner in the news release. "I'm confident the state of Colorado will maximize the federal grant to both preempt and mitigate the destruction caused by wildfires. I'll continue to advocate at the federal level to ensure Colorado receives the resources it needs to keep our communities safe."

Manitou Incline Closed for Construction (KOAA TV, Colorado Springs)
8/22/16

COLORADO SPRINGS - The Manitou Incline is now closed as the cities of Colorado Springs and Manitou Springs start phase 2 of improvements to the popular trail.

Construction is expected to last around 4 months with the main goals of: improving safety, enhancing the hiking experience, improving the long-term sustainability of the trail and increasing accessibility.

They will also clean up debris along the trail and add new drainage structures to protect the trail from eroding away.

Colorado Springs is responsible for the general oversight of the trail, and the improvements are being funded by a FEMA Hazard Mitigation Grant and Trail, Open Space and Parks Funding.

Beaver Creek fire evacuation order lifted; two Colorado wildfires 100 percent contained (Denver Post)

By Ellis Arnold | earnold@denverpost.com

August 21, 2016 at 4:36 pm

An evacuation order was lifted in the Beaver Creek fire area near Walden and the Wyoming state line yesterday, said John Abernathy, spokesman for the Denver Fire Department.

Some evacuees from 50 total residences have begun to return to their homes, Abernathy said, but low relative humidity and winds up to 25 mph are expected to create critical burn conditions Monday and Tuesday. The fire, which is 53 percent contained, started June 19. Total containment is expected Oct. 21.

Heavy beetle-killed timber in the area has been fueling the fire, which has required continued ground and air efforts. Recent cool, moist weather aided the fight, but warming is expected until Wednesday. Season-ending wet weather is likely the only factor that will put out the fire, Abernathy said.

The fire has burned 36,961 acres, and the cause of the fire is still under investigation. A total of 17 structures, including one residence, have been lost, Abernathy said.

The lightning-caused Spring Creek 2 fire south of Parachute burned 621 acres but was 100 percent contained as of Friday, according to federal agencies. There have been no injuries attributed to the fire, which started Aug. 12, and no primary residences were lost despite the fire moving within a few feet of several homes. Four buildings, three vehicles and three trailers were damaged or destroyed, and evacuation orders covering about 20 homes were lifted Aug. 14.

The Hayden Pass fire southeast of Salida was 60 percent contained as of Aug. 4, according to federal agencies, with recent monsoonal weather dropping moisture in the area. The 16,754-acre lightning-caused fire started July 8, and it may present a runoff issue because of the rain. All evacuations ended as of July 21 after people were ordered to clear out of 140 residences in the area. The fire is expected to be contained Oct. 1.

Fire crews contained the Blair fire 100 percent as of Aug. 1, said David Boyd, spokesman for the federal Bureau of Land Management. Lightning started the fire near Colorado 64 between Rangely and Meeker; about 1,140 acres have burned since June 29.

Crews focused on keeping the fire from moving north and east, where a power-line corridor, oil and gas pipeline and the highway would have been vulnerable. There were no injuries or evacuations, Boyd said, as the fire was in a remote area.

MONTANA

FEMA and Montana Disaster Emergency Services Visit Baker
(Fallon County Times)

SEVERE SUMMER WEATHER

Laurie Hassell and Kent Atwood display a weather map tracking severe weather storms throughout Montana.

Laurie Hassell, Federal Emergency Management Agency (FEMA), External Affairs Specialist; Kent Atwood, CFM, Montana Disaster & Emergency Services, Hazard Mitigation Officer and Tim Tennis, Recovery Bureau Chief, Montana Disaster & Emergency Services were in Baker on August 9.

By Sherry Vogel

They were conducting a briefing to Fallon County and City of Baker applicants as they proceed to set-up documentation to receive federal funding after Baker was designated to receive a Presidential Disaster Declaration.

Atwood explained how the entire process works. Tennis expounded on how to apply for the funds. They both covered the scope of work for the Project Worksheet (PW) using the actual tornado documentation including cleanup and debris removal reports.

The preliminary final damage assessment is at $1.5 million. This amount surpasses the $1.4 million required for a Presidential Disaster Declaration. This final figure of the disaster damage could actually be more in the final analysis.

Whereas Hassell was in Baker to represent the Response and Recovery standpoint. Atwood was focused on the mitigation perspective of the disaster. **Mitigation meaning to identify and reduce the severity of the next natural disaster.

Officials estimate the Copper King Fire doubled in size Sunday afternoon (NBC TV, Helena)

By: KECI Staff
Updated: Aug 21, 2016 08:07 PM MDT

MISSOULA, Mont. - The Copper King Fire burning near Montana Highway 200 and Thompson River Road in Sanders County is now estimated to have burned over 6,000 acres. The fire had burned just over 3,400 acres as of Sunday morning.

Fire officials tell NBC Montana that the fire expanded to the northeast, chewing through around 3,000 acres. The explosive growth meant a cloud of thick smoke spread as far north as Creston and parts of the Swan Valley as of 8 p.m. on Sunday. The new growth is away from structures immediately threatened by the fire.

Officials with the Lolo National Forest say there is poor road access and firefighters and public safety remains the top priority. Fire crews are busy on the south and west sides of the fire near Highway 200 and Thompson River Road where structures are threatened.

The 297 people working to contain the fire will continue to focus on structure protection and keeping Highway 200 open to traffic. A Red Flag Warning is in effect for the fire on Monday afternoon, meaning more explosive growth is possible due to dry and windy weather.

NORTH DAKOTA

Morton County declares emergency with pipeline protest

LEANN ECKROTH Bismarck Tribune 12 hrs ago

With the protest against the Dakota Access Pipeline swelling to 2,000 people near Cannon Ball, Morton County officials may seek to access emergency funds to pay overtime to their deputies and other law enforcement agencies assisting Morton County in keeping the protest boundaries safe.

Protesters oppose the pipeline beneath the Missouri River because they fear it could contaminate their water supplies.

A special Morton County meeting will be held 4 p.m. Monday to address the emergency declaration, signed by Cody Schulz, chairman of the board, last week.

"This is to maintain public safety and to make sure the legal rights of everyone is enforced," Schulz said Sunday. "This has required a great deal of law enforcement manpower and time."

Schulz signed the declaration Aug. 15 and state law requires the remainder of the county board ratify the declaration within seven days to keep it binding.

County Commissioner Bruce Strinden said Sunday the declaration will allow the county to use its own emergency funds to pay deputies and other law enforcement for overtime tied to the protest.

"Without an emergency declaration, we cannot access those fund," said Strinden, who estimated the county may have banked about $125,000 in emergency funds. "We're getting help from neighboring counties and cities' law enforcement through mutual aid agreements, and appreciate it, but that help doesn't come free. We have to compensate them for food, lodging and of course pay. We're only a week into this."

Protesters said they are keeping the demonstration peaceful. Yet, the protest has challenged the county's enforcement capacity.

"This is a very large protest -- 2,000. So a protest of that size is of a concern to us," Strinden said. "People have a right to protest. The law enforcement will support legal activity in a protest unless it goes the other way."

"Right now, our primary goal is keeping everyone safe," he added, speaking of the need to close Highway 1806 during the protest. "There were vehicles parking on both sides of 1806. We don't want anyone injured or accidents."

Gov. Jack Dalrymple signed a declaration of emergency Friday. Strinden believes the state will pay for a large portion of North Dakota Highway Patrol troopers enforcing the highway because it lies in their jurisdiction, he said the county at this point will have to reimburse other law agencies for their assistance.

"At this point, we aren't seeking additional funds from the state," Schulz said. "The governor's declaration allows us to request extra resources, manpower or equipment from the state."

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Protesters settle into camp life

CAROLINE GRUESKIN Bismarck Tribune

Aug 19, 2016

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere Thursday afternoon at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Wednesday, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Aug. 24, when a hearing will be held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement Friday no weapons were seen.

Many at the camp saw the previous days' efforts as a small victory. Often repeated was a gladness that the tribes were working together.

"It's been a long time since we all camped together," said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. "It feels natural."

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Thursday, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

"We knew immediately that we needed Porta Potties," said Johnelle Leingang, the tribal chairman's executive secretary and member of the emergency management task force. "That's essential."

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Water district's eminent domain attempt for F-M diversion stalls, but case not dismissed

By Helmut Schmidt on Aug 19, 2016 at 2:52 p.m.

FARGO — An East Central District judge has ruled that the Cass County Joint Water Resource District, which is trying to get a permanent right-of-way easement for 80 acres of farmland for the Fargo-Moorhead diversion, has not followed the proper procedures for eminent domain proceedings, court documents show.

At the same time, Judge John Irby denied a motion by Donald Cossette and the Angela R. Cossette Revocable Living Trust to dismiss the water district's attempt to use eminent domain for the Horace-area land, documents show.

According to court records:

The water resource district is trying to get a permanent right-of-way easement on 79.34 acres owned by Donald Cossette and the Angela R. Cossette Revocable Living Trust to build a F-M diversion inlet.

The district extended a final offer of $476,040 for the land on May 18, 2016. That offer was rejected.

Irby ruled the water resource district failed to file a needed petition in the case, provide appropriate public notice and a hearing, allow interested parties to answer the petition, and have the court hear the case, allow the petition to be amended as needed and issue its findings and assess costs.

Irby said the district was also walking a line between taking right-of-way sufficient for its purposes while avoiding a purchase of the land, or fee simple, which is not eligible for "quick take" eminent domain.

Irby ruled that the district will have to amend its eminent domain complaint.

Cossette's attorney, Jonathan Garaas of the Garaas Law Firm in Fargo, said Friday, Aug. 19, that he does not comment on cases still being litigated.

SOUTH DAKOTA

The Flood: One Year Later (KELO TV, Sioux Falls)

Don Jorgensen
KELOLAND, Sioux Falls
August 19, 2016

Sioux Falls, SD

One year ago, Sioux Falls was inundated by major flooding.

The hardest hit area was in the southwest part of the city where seven inches of rain fell in one hour. It was a night many of us won't soon forget.

The night was August 27th. The skies opened up over Sioux Falls and dumped more rain than the city had seen in recent memory.

Streets flooded quickly. Vehicles stalled out and many businesses flooded out, including the Signature Salon.

When we last met the owner, Jeff From, he was busy cleaning up what mother nature destroyed in minutes.

Today, From is back in business....

"It's hard to believe it's been a year," From said.

....but not without a lot of hard work along the way.

"It was a good eight months of solid; morning, noon and night trying to get things in place," From said.

The downpour and flooding that followed, caught many off guard.

The city had spent millions of dollars upgrading the drainage systems, but in some parts of town, seven inches of rain in a short amount of time was too much for it to handle.

"It was a large event", Public Works director Mark Cotter said.

Cotter says the drainage system worked as well as it could, but following the event, he knew more could be done.

"Probably the first thing and most important thing we did was take a rate case to the city council and they did support us to continually raise rates through 2019," Cotter said.

Cotter says those rate increases will help pay for more improvements; plus conduct more drainage studies.

"So when neighbors call and say 'this just doesn't drain right,' we set aside more dollars now to go out and do an updated hydro study, so we can understand what's happening and ultimately look at some alternatives to improve it," Cotter said.

Plus, the city began taking a closer look at drainage easements around town. It identified a few where the homeowners, over the years, had made improvements to those easements with landscaping, trees and bushes.

But in reality, those beautification improvements, became obstructions and didn't allow water to flow freely to designated detention ponds.

So, this past year, the city worked with the homeowners to remove those obstructions and regraded the land. That way during a heavy rain storm like last year, the water will go where it's supposed to go.

But in one area of town, around 35th and Duluth which always seems to have water problems during torrential rains, drainage improvements are hard to come by.

So, instead of investing millions of dollars in trying to upgrade the infrastructure, the city bought a number of the homes and is now in the process of tearing them down.

It's going to reclaim the land and turn it into green space with detention ponds.

And finally, the city implemented new building codes, so homeowners shouldn't have to worry about flooding if they live near one of those drainage easements.

Cotter shows us why using this handsketched diagram.

"If this is a drainage way in the backyard, we used to recommend that the water surface, we used to recommend that the lowest floor of the house be two feet above that water surface elevation, now we don't recommend, it's a standard," Cotter said.

Don: Builders know this now? That it's a standard,
Mark: Yes.
Don: They can't wiggle their way around it.
Mark: That's right,"

From has made his own improvements to his salon that he hopes will protect it if the city ever gets hit with another 100 year flood.

Using concrete, he added more height around his window wells and built up around his stairwell leading to his basement, where most of the water came in last year.

"Hopefully if that were to ever happen again, it wouldn't be able to," From said.

Only time will tell, but for now he's just glad to be back in business.

"I try not to even remember and think about it anymore, people ask me about it today and it's like something you want to forget," From said.

From's damages totaled in the hundreds of thousands of dollars. He says very little of that was covered by flood insurance. He hasn't decided yet if he's going to sue the city to try recover some of his money.

Ranch Life Celebrated In Union Center Gathering Three Years After Storm (KELO TV, Sioux Falls)

Kevin Woster
KELOLAND, Sioux Falls
August 20, 2016

The Rancher Round-up in Union Center, S.D., is an annual celebration of ranch life. But it's also a testament to survival in a beautiful-but-harsh landscape.

Professional survival skills were tested in unprecedented ways almost three years ago when western South Dakota was hit by an early October blizzard that killed tens of thousands of cattle and other livestock.

Republican state Sen. Gary Cammack of Union Center, who also ranches and owns a ranch-supply store, had to bury more than 100 cattle in a hastily dug pit in his pasture after the storm. Other ranchers lost several times that many cattle.

"If there's anything akin to a gut punch for the whole cattle industry, that was it," Cammack says. "It was just an amazing hit. When the storm broke, within 35 miles there were 20,000 dead cattle. It was just beyond imagination."

Help came from the government, private relief funds, cattle donations from other ranchers and from higher market prices for remaining cattle.

“The generosity of cattlemen from all over the U.S. and neighboring states was overwhelming,” Cammack said. “The stories that will never be told of generosity cattleman to cattleman, just overwhelming.”

A South Dakota Rancher Relief Fund raised and distributed millions of dollars and avoided the kind of questions or controversy that sometimes can plague such efforts.

“That should be a blueprint for fundraising and helping in natural disasters,” Cammack said. “I never heard one bad thing about that. It was just run very smoothly, very fair, the way they put that thing together, and the generosity was overwhelming.”

With a perfect joining of forces and sources of assistance, the recovery came much faster than Cammack expected.

"With the generosity of the markets and some help from the federal government, I'd say, really, within about 24 months, most folks had enough of a boost that they were back and economically viable,” he said.

So the heavy rains in Union Center Friday didn't dampen enthusiasm for the annual rancher rodeo and fair at Cammack's store. They just made it all more complicated. But it was a tiny challenge compared to the big ones faced in ranch country.

Besides, they needed the moisture. They usually do.

Silvia Christen, executive director of the South Dakota Stockgrowers Association, was at the celebration at Cammack’s. She said she continues to be amazed at the recovery effort and how ranchers responded after the big blizzard.

“Grit is really the word that describes most of it,” she said. “These ranch families at so at the mercy of the weather, and so at the mercy of the elements. And when you have a loss like we did with Winter Storm Atlas, many of them had a 50-percent loss overnight.

“And their faith and their commitment and their dedication and their trust that they can rebuild and then just get to work, that was a lot of it,” she said.

Almost three years after Winter Storm Atlas devastated the livestock industry here, the Ranch Round-UP celebrates the land, its people and the spirit of survival.

"There was so much great help that came in in the form of money and prayers and all that," Christen said. "But at the end of the day it came down to these families getting out and getting to work and putting it back together."

Cammack says he has mixed feelings now when he looks at the hilltop in his pasture where more than 100 cattle are buried.

“You can’t help but have some memories when you drive past that point,” he said. “But having said that, that nob we excavated and buried all those cattle on is recovered and starting to get the native grass back on there. And today when you and I went out there, there's cattle that came right up and they're grazing right on there -- the living standing above the dead. So the country can be cruel, but it heals faster than you think."

So do the ranchers.

Home demolition aimed at keeping neighborhood dry (Sioux Falls Argus Leader)

Joe Sneve
Argus Leader, Sioux Falls
August 20, 2016

City Hall hopes tearing down a group of flood-prone homes in central Sioux Falls will help other houses in the neighborhood stay dry the next time the city gets dumped on with torrential rains.

It’s not uncommon for homes in the area around Augustana University to have their basements flooded when Sioux Falls gets rain events. That’s despite thousands being spent in recent years to divert the run off into newly constructed holding ponds and other infrastructure upgrades.

So about five years ago, Sioux Falls Public Works set its sights on creating more green space along Covell Avenue between 28th and 33rd Streets. But that meant existing homes would need to come out.

“Based on how steep this particular watershed was, there wasn’t an alternative that was a better fit than just to go in and start asking for voluntary buy outs. … But they just weren’t ready.” said Mark Cotter, director of Public Works.

But after last August’s torrential rains, the phone started ringing and Public Works has since acquired nine properties along Covell Avenue, which were demolished last week.

Cotter said once razed, the foundations will be filled in with sand to allow for a more permeable and absorbent surface.

“Over time as we capture more homes that are willing to sell voluntarily, if it makes sense we’ll develop a detention pond so we can hold and slowly release (the storm drainage).”

Only time will tell if the program will be enough to dry up the neighborhood. Cotter said engineers will continue to buy more homes if necessary. For now, about 14 other homes on the west side of Covell Avenue have been targeted, with 10 homeowners entertaining the idea of selling.

They can’t all be bought at once, though, due to budgetary restriction. Andy Berg, storm water manager in Public Work’s environmental division, said about $1.2 million has been spent so far acquiring the nine homes that were demolished last week.

Because Public Works doesn’t specifically budget for the project – it’s difficult to know how many homeowners will be willing to sell in the following year when the City Council passes its budget – Berg couldn’t say how many more homes will come out next year. Instead, Public Works diverts savings from other expenses that come in under expected costs toward the program.

“We’ve identified three that we’re going to have the appraisal process done on. So if we have the dollars … we can do a closing on those.”

UTAH

Utah brothers born, raised in Louisiana work with businesses to help flood victims (KUTV, Salt Lake City)

by Heidi Hatch |

Friday, August 19th 2016

(KUTV) Today the Red Cross announces -the catastrophic flooding in Louisiana is the worst natural disaster to strike the United States since Hurricane Sandy.

Pleasant Grove’s Ben Moak grew up in the Louisiana neighborhoods hit hardest. He moved to Utah 20 years ago with his large family, he set down roots and now owns Firebird Pizza and Pasta on Main Street in the small town.

“I have a friend that posted on Facebook saying only thing he has is his job, his family, and his truck -- and eight feet of water in his house. He lost everything.”

The flooding of hurricane Katrina was hard to watch, and now this time, the flooding hits close to home again and that’s why he “wanted to do something 1500 miles away --to help our friends and family out.”

Some of the worst hit neighborhoods are streets he and his siblings know well.

“We grew up in Louisiana, ,Walker Denham Springs is where we were born and raised.”

The southern influence of his youth is evident in his kitchen, with a row of hot sauces and southern spices available to add kick to his Italian eatery.

He will start fundraising Tuesday night with a spaghetti dinner from 6 to 9 p.m. It will be $10 for a large plate of spaghetti , soda and breadsticks. “One hundred percent of the proceeds go to the people down there,” he said.

Just across the parking lot from Firebirds is Chubby's Cafe, owned by Moak’s brother who will be cooking up a little southern hospitality with a catfish fry next Saturday. The fry money will also go straight to the victims in Louisiana.

Jessica Erin is helping organize the event with the southern brothers and three other area restaurants including Cravings Cupcakes and Cravings Bistro.

“We got this huge trailer donated by Andrews Transportation and we are going to try and fill this baby up.”

All of the restaurants involved are accepting monetary donations, food, clothing, diapers --you name it -- for the flood victims. Donations will be accepted during business hours through Saturday Aug. 27 at 9 p.m.

“We are excited to get this thing filled up and take it down to Louisiana.”

All the business involved are just off Main Street in Pleasant Grove near the North Shore Shaved Ice shack, also giving a portion of their proceeds from Friday night to the cause. Lorri Jonas who worked at Chubby’s and now owns the ice shack said, “I want to help because my heart is full.”

Moak looks forward to community participation saying “the more the merrier, if you have to wait -wait, but the more the merrier.”

Southern Utah University extends cybersecurity degree to Vietnam (St. George News)

August 20, 2016

CEDAR CITY — Southern Utah University classes will soon be taught in Vietnam through an international partnership with FPT Corporation, the largest Vietnamese telecommunication company.

The university will make its Master of Science in cybersecurity and information assurance available to students attending FPT University and its online counterpart, Funix University.

FPT Corporation is to southeast Asia what Verizon Communications Inc. is to the United States.

With many smaller entities comprising the company, FPT University has shown a pioneering spirit and a proactive approach to online student education and an increased international presence.

“This partnership extends the reach of SUU and the CSIS Department into Vietnam,” said Dr. Robert Robertson, department chair and associate professor. “It will bring individuals into the program whose perspectives will enhance and benefit fellow students at an international level.”

As the first online educational opportunity offered in Vietnam, FPT University and Southern Utah University are promoting the process of international cooperation in education.

In May, FPT University leaders and dignitaries from Southern Utah University, including President Scott L. Wyatt, signed the agreement to help increase professional training opportunities available to FPT students. At the end of June, university representatives Dr. Rob Robertson, Dr. Roger LaMarca, director of online admissions, and Dr. Stephen Allen traveled to Vietnam to train FPT University on the structure and implementation of the master’s degree program.

An attractive facet of the program is the online component, allowing students to attend school while still living, learning and working in their country.

"Students will receive the same experience and personalized instruction as a traditional SUU classroom while preparing themselves for the rapidly growing field of cybersecurity," LaMarca said.

Cybersecurity professionals who battle cyberattacks that bleed companies and governments dry are in high demand. It costs an average $11.6 million per cybercrime incident, according to Info Security. Keeping these facts in mind, it's no surprise that 42 percent of organizations are actively seeking information technology positions in information security, more than any other job, according to a LinkedIn Talent Search.

"They will receive a wide variety of instruction and coursework from this program," LaMarca said, "including cybersecurity and IT policy; information, vulnerability and threat assessment; physical, personnel and operational security; and contingency, redundancy, emergency and disaster planning."

Online Vietnamese students will have access to all the resources and materials available to students in a traditional learning environment. Throughout the program, which will begin this fall, these students will have access to a library, tutor and lecturer. They will be educated by leading experts in the cybersecurity industry and will also have opportunities to study alongside American students at Southern Utah University.

FPT Corporation is a multinational information technology company based in Vietnam, branching out to 19 different countries. Smaller entities of the corporation include software outsourcing, telecommunication, property management, education and financial services.

The Vietnam National Technology Research Institute founded the Food Processing Technology Company – the original full name of FPT – in 1988. In 1990 the company switched its core business to information technology and changed the unabbreviated name to Corporation for Financing and Promoting Technology.

The cybersecurity program has been tailored to achieve the highest efficiency and educational quality available online. This new partnership will help further available education in Vietnam and will increase Southern Utah University's international presence.

With a comprehensive international environment and a wealth of knowledge taught by high profile cybersecurity professionals, including NUIX's Chris Pogue, Southern Utah University is helping to advance all of its students in this fast-growing career field. The university works hard to make it possible for nontraditional students and working professionals to earn a master's degree.

Those who are interested in this program can contact Southern Utah University's online admissions team at 435-865-8665 or onlineadmissions@suu.edu.

Our Views: Not Our First Recovery Rodeo (Baton Rouge Advocate)

Baton Rouge (LA) Advocate, August 21, 2016

In Louisiana, the emotional and physical impact of what may be a 1,000-year flood event is still being absorbed.

What our leaders cannot afford to do, though, is to let the future take care of itself.

As Gov. John Bel Edwards said Tuesday, the rescue and comfort of the displaced is the first priority. "Saving life is the most important priority we have," Edwards said Tuesday. "We will dedicate every resource to that effort until it is no longer needed."

But he also said he would take the opportunity to talk long-term recovery with Craig Fugate, head of the Federal Emergency Management Agency.

That's smart.

FEMA is under different and we believe much improved management since the hapless Michael Brown at the time of hurricanes Katrina and Rita in 2005. The high-profile impact of Hurricane Sandy in the northeast in 2012 also refocused attention on the Stafford Act, the federal law governing disaster aid.

Louisiana is better placed than in earlier disasters, but that doesn't mean it's easy sailing.

U.S. Rep. Garret Graves, of Baton Rouge — whose district was the hardest-hit — was busy visiting shelters and seeing his constituents. But he said in a telephone interview Tuesday that Congress needs to assess whether existing law is enough to deal with an event of this magnitude.

Graves said he's already talking with U.S. House members of both parties about federal recovery assistance. "We're not going to get there without national attention," Graves said, in an echo of Fugate's comments that the American people generally have probably been more focused on the Olympics and the national election than the Louisiana flood.

Fugate said that FEMA would respond unhesitatingly whether the national media spotlight comes or goes.

That's encouraging, but we know from the struggles of a decade ago that bureaucratic tangles and the dueling political parties on Capitol Hill can get in the way of help that Louisiana needs.

The spirit of unity and generosity, including from people and institutions across Louisiana and the nation, remains critical in this time of trouble. Job one of the recovery, as Edwards emphasized, is for the affected households to register with disasterassistance.gov. Quantifying the damage is important to achieve appropriate federal response.

But leaders are right to worry about the future, and plan for it.

FEMA Halts $30M To State (Jackson, MS, Clarion Ledger)

By Therese Apel And Geoff Pender

Jackson (MS) Clarion Ledger, August 19, 2016

The Federal Emergency Management Agency has halted $29.9 million in reimbursements to the state of Mississippi for retrofitting homes after Hurricane Katrina, saying the state has failed to provide documentation, overspent and appears to have had lax oversight over the program.

The Department of Homeland Security's Office of the Inspector General released a report that states that the Mississippi Emergency Management Agency has not been able to provide documentation for around $30.5 million that was paid to contractors to retrofit 985 homes on the coast. The original program was approved to retrofit 2,000 homes for $29.9 million.

The OIG has recommended, and FEMA agreed, that the federal government "deobligate" the money until Mississippi can reconcile what it claims it spent. If Mississippi can't convince the feds its spending was proper, the state could be on the hook for all or part of the spending.

MEMA Director Lee Smithson released a statement Thursday after 6 p.m. stressing that he was not over the agency when the mismanagement occurred.

"We are confident that most of the money will be deemed eligible by FEMA and the remaining funds will be recovered by the state," he said.

Gov. Phil Bryant in a statement Thursday night said he agrees with Smithson the spending "will be eligible for reimbursement" and "the state will aggressively seek to recover the remainder of the funds."

"I appreciate director Smithson taking swift action upon discovering the issues outlined in the report," Bryant said. "It is important to note that the employees repsonsible for the retrofit program for the period OIG examined are no longer at MEMA.

The OIG report says that although Mississippi became aware of improper oversight of the program as early as December 2014, it did not take any action to address the problem until February of this year.

Smithson said the money that was actually put toward the construction should end up being reimbursed by FEMA, and that the state will get the rest of the money out of ARA, the primary contractor on the jobs.

State guidelines and general accounting practices require that more than one person have oversight of similar programs. The state Department of Financial Administration gave oversight to one employee, who came with the program to MEMA when the program was moved over in 2012.

Then-MEMA Director Robert Latham said he was not comfortable with the program having no oversight.

"When the Coastal Retrofit program came to MEMA and I found out there wasn't any oversight, I said, "I want Horne involved in this, get them to start looking at all the invoices and processing it, and they were doing it as a courtesy because it wasn't in their contract. They agreed to start looking at it."

The report states that the employee who had oversight of the program, Deb Biggers, would not turn over some of the invoices to Horne CPA or to investigators.

Smithson said since he took office, Biggers has been terminated and he has hosted conference calls with Horne accountants and the Office of the Inspector General every week in order to keep them up to date with the progress of the audit.

"I don't want to speculate whether there was any graft or corruption on the part of Ms. Biggers or anyone else at MEMA," Smithson said, adding, "Deb Biggers should hace known that the payments that were made to ARA were improper. She modified the scope of work with the original contract with FEMA without getting FEMA permission and allowed ARA to inflate their program costs."

Latham said when he raised questions about the payments and the program, he was assured by his staff that everything was on the up-and-up.

"I'm concerned that if this is in fact true and it shakes out like it sounds, obviously I've got staff that let me down. When I consistently asked questions about these different things I was assured that FEMA was involved and that we were paying in accordance with a contract," he said.

Latham's Chief of Staff was Bill Brown, who he said he went to with any questions about the program.

"When issues would come up I'd get Bill to handle it, and if I thought I wasn't getting answers, I'd bring in Deb" and an employee who handled mitigation, Latham said.

OIG findings:

Some key findings of the OIG audit of Mississippi's spending on the Katrina retrofit program:

Mississippi allowed one employee complete authority over the program, which goes against basic accounting and oversight principles including Mississippi's own agency accounting rules.

The program was approved at $29.9 million to help retrofit an estimated 2,000 homes. The state claims to have spent $31.5 million on 945 homes.

The state has not provided documentation for $30.5 million it says it paid to contractors.

Although Mississippi became aware of improper oversight as early as December 2014, OIG says it did not take any action to address the problem until February of this year.

While working for state DFA and MEMA, the employee in charge approved $31.5 million in payments, more than the amount of the grant, and did not allow a hired accounting firm to reconcile more than $30 million in invoices. "However, no one above the employee's authority questioned the situation," the report says.

Retrofitting 2,000 homes was estimated to cost $14,944 each, but Mississippi spent $33,308 on average, and MEMA "did not provide any substantial evidence to justify the increase in costs.

The employee over the program, the OIG said, would not allow federal or Mississippi officials access to more than $30 million worth of contractors' invoices. This led OIG to question MEMA, whose new director contacted the state attorney general's office.

MEMA contends it has completed work on 945 homes for $31.5 million, but has to date provided invoices for only 12 homes, at $958,000. DFA records as of May only show $20.4 million being spent on the program.

Of the $958,000 in invoices provided so far, only $640,000 represented actual work on homes, with $318,000 in temporary employee salaries and administrative costs.

Whose Lives Should Be Saved? To Help Shape Policy, Researchers In Maryland Ask The Public (NY Times)

By Sheri Fink

New York Times, August 21, 2016

BALTIMORE — In a church basement in a poor East Baltimore neighborhood, a Johns Hopkins doctor enlisted residents to help answer one of the most fraught questions in public health: When a surge of patients — from a disaster, disease outbreak or terrorist attack — overwhelms hospitals, how should you ration care? Whose lives should be saved first?

For the past several years, Dr. Lee Daugherty Biddison, a critical care physician at Johns Hopkins, and colleagues have led an unusual public debate around Maryland, from Zion Baptist Church in East Baltimore to a wellness center in wealthy Howard County to a hospital on the rural Eastern Shore. Preparing to make recommendations for state officials that could serve as a national model, the researchers heard hundreds of citizens discuss whether a doctor could remove one patient from lifesaving equipment, like a ventilator, to make way for another who might have a better chance of recovering, or take age into consideration in setting priorities.

At that first public forum in 2012 in East Baltimore, Cierra Brown, a former Johns Hopkins Hospital custodian, said she favored a random approach like a lottery. "I don't think any of us should choose whether a person should live or die," she said.

Alex Brecht, a youth program developer sitting across from her, said he thought children should be favored over adults. "Just looking at them, seeing their smiles, they have so much potential," he said.

"Who's going to raise them?" asked Tiffany Jackson, another participant.

The effort is among the first times, Dr. Daugherty Biddison said, that a state has gathered informed public opinion on these questions before devising policy on them. “I don’t want to be in a position of making these decisions without knowing what you think,” she told the residents. “We as providers,” she said, “don’t want to make those decisions in isolation.”

Rationing already occurs in delivering medical care in the United States, though some practices are little acknowledged. Committees struggle regularly over policies for allocating scarce organs for transplant.

During widespread drug shortages in recent years, doctors have sometimes chosen among cancer patients for proven chemotherapy regimens and among surgical patients for the most effective anesthetics. And doctors sometimes have to choose among patients who need treatment in intensive care units, which are often filled to capacity.

In emergencies, the choices can have immediate life-or-death consequences. After Hurricane Katrina in 2005, doctors made ad hoc decisions about which groups of patients to evacuate from hospitals when floodwaters rose, the power failed and heat climbed. At one medical center, many of the sickest, chosen to go last, died. During the H1N1 influenza pandemic in 2009, thousands of young people developed severe respiratory distress. For some of the most critical cases, doctors tried treatment on heart-lung bypass machines. Rationing took place because the costly and resource-intensive therapy, which doctors were not sure would help, was available in only about 120 hospitals.

Similar scenarios have developed in other countries, wealthy and poor. After the 2011 earthquake and nuclear disaster in Fukushima, Japan, some patients at nearby hospitals, including babies, were selected for flights to safety, while others languished for days as medical supplies dwindled. At one hospital, dozens of older patients were apparently abandoned, according to a report in The Lancet, and many died.

And during the 2014 Ebola epidemic in West Africa, when doctors and nurses could spend only so many minutes inside hot biohazard suits, they struggled with impossible choices over which patients to give care.

Dr. Daugherty Biddison, a vice chairwoman in the department of medicine at Johns Hopkins, said she had first encountered scarce medical resources while doing missionary work overseas. She realized that even Johns Hopkins Hospital, a 1,145-bed facility anchoring the $7.7 billion Johns Hopkins Medicine enterprise, would fail to meet demand in a severe pandemic. When asked to help draw up a plan, she said, she felt uncomfortable with health professionals’ making life-or-death judgments without knowing the values of the broader public.

At least 18 states from New York to California, and numerous hospitals, including the 152 medical centers operated by the Department of Veterans Affairs, have already developed protocols. Some efforts, including Maryland’s, have received funding from a federal program supporting hospital preparedness. But relatively few people know about the plans for allocating scarce resources, and fewer still have been consulted.

Some of these guidelines are nuanced and flexible to context. But others call for doctors to categorically refuse hospital admittance to older adults and those with certain existing medical conditions, such as kidney failure or advanced cancer, in a severe pandemic.

In Maryland, participants in the forums, designed with the help of Carnegie Mellon University’s program for deliberative democracy, tended to favor saving the most lives or years of life by prioritizing people who were expected to survive their current illness or live the longest after being treated. However, many also said that a lottery or first-come-first-served approach would be appropriate for patients who had roughly equal chances of benefiting.

“If you have one ventilator and five people who are good candidates, there’s going to have to be a random sort of chance aspect to it,” said Dr. Eric Toner, a senior associate at the UPMC Center for Health Security and one of the project’s leaders.

Unexpected questions emerged in the discussions: Should an undocumented immigrant be eligible to get a ventilator? What about a drug or alcohol abuser, or a prisoner? After being told by a facilitator that discrimination would not be allowed, one participant asked whether using age, one of the principles under discussion, would not also be a form of discrimination.

Taking ventilators from patients who did not appear to be improving was "the single most contentious issue," Dr. Toner said. Maryland's attorney general released an opinion in December that lifesaving medical technology, including ventilators, could be removed from patients during a catastrophic emergency and reassigned to others who could potentially benefit more from them. Dr. Toner said it would be hard for any system to work without reallocation.

But at the forums, many expressed reservations. One woman said that she had been in a coma, on a ventilator, and that her family had been encouraged to turn it off and let her die. "Health care providers are not God," another said. "I've seen it firsthand where they thought one thing and the outcome was different."

To avoid rationing, a woman proposed a "Susan G. Komen for disaster preparedness," a reference to the ubiquitous fund-raising movement for a breast cancer cure. Some said they would voluntarily refuse a ventilator to save the lives of other people, such as children or family members. A man questioned whether doctors would even have the time in an emergency to engage in formal rationing. Some with lower incomes said that health care rationing was already occurring based on the ability to pay.

Translating all these ideas into recommendations for the state, most likely in mid-2017, will be challenging. The organizers said that despite the complexity, they were now in a better position to provide the guidelines.

"We have a much fuller appreciation of what the community wants," said Howard Gwon, the director of the office of emergency management at Johns Hopkins Hospital.

Charles Blattberg, a professor of political philosophy at the University of Montreal, said he worried that the effort could result in overly precise guidelines.

"The kind of judgment that's required to arrive at a good decision in these situations needs to be extremely sensitive to the context," he said. "It's not about just abandoning one lone doctor to their own devices to make it up on the spot, but we can't go the other extreme in thinking we have the solution to the puzzle already; just follow these instructions. That works for technical problems. These are moral, political problems."

Ruth Faden, the founder of Johns Hopkins's Berman Institute of Bioethics, which participated in the project, said she saw value in the exercise far beyond a pandemic.

"It's a novel and important attempt," she said, "to turn extremely complicated core ethical considerations into something people can make sense of and struggle with in ordinary language."

ANALYSIS

- **Colorado:** The state received an FMAG reimbursement of more than $1 million… An HMGP grant is helping with reconstruction of the Manitou Incline… Fires in the state are now more under control.
- **Montana:** The *Fallon County Times* did another story on recent visits by DES and FEMA officials related to the Baker tornado recovery… The Copper King Fire almost doubled in size Sunday, with red flag conditions expected today.
- **North Dakota:** Three stories focus on the growing protest, led by Native American tribes, against construction of an oil pipeline near the Standing Rock Sioux reservation. Greg Wilz, director of the Homeland Security division of the North Dakota DES, estimates state law enforcement, health and transportation costs related to the protest may approach $1 million over the next few weeks. Approximately 1500-2000 protestors are at the site… An attempt to use eminent domain to take some land for the proposed Fargo-Moorhead Diversion Project was stalled by a judge who said it had not been properly done.
- **South Dakota:** KELO TV did a story on the flood in Sioux Falls one year ago and the community's response to it, and another story on the Atlas winter storm three years ago that killed many cattle in western South Dakota, and how that area has responded… The TV story on Sioux Falls mentioned local buyouts to prevent flooding issues, and an *Argus Leader* story focused just on the local buyout program in an area with poor drainage.
- **Utah:** Brothers in Pleasant Grove who were born and raised in Louisiana are doing a fundraiser and donations drive for flood survivors in their home state… Southern Utah University will be offering an online master's program in cybersecurity through a partnership with a Vietnamese telecommunications company.
- **Other FEMA-related stories**: The *Baton Rouge Advocate* says FEMA is improved, but additional federal aid may be needed… Several stories reported on FEMA suspending $30 million in payments to Mississippi for problems with its program retrofitting homes after Hurricane Katrina; this story from the *Jackson Clarion Ledger* specifies the procedures and employee in question… *The New York Times* reported on a survey of public attitudes by Johns Hopkins University on what criteria should be used to determine who lives or who gets priority for emergency care when medical staff and equipment are overwhelmed in a catastrophic incident.

COLORADO

FEMA awards Colorado $1 million wildfire grant (Loveland Reporter-Herald)

By Dana Rieck

Reporter-Herald Staff Writer
Posted: 08/20/2016 05:25:56 PM MDT

Republican Sen. Cory Gardner's office announced this week that the Federal Emergency Management Agency is awarding $1,194,483.86 to the Colorado Division of Fire Prevention and Control.

Matthew Branch, the Northeast Regional Fire Management officer for the Colorado Department of Public Safety Division of Fire Prevention and Control, said the money is a reimbursement for costs associated with past fires.

It is called a fire management assistance grant, which is something states apply for after responding to large fires.

"Most of these costs are borne by the local fire department and the county," he wrote in an email. "These entities bill the state and we reimburse them out of the state budget. Several years later we get the money back from the federal government."

Once approved, according to Branch, the grants can pay for 75 percent of the costs associated with fighting those fires.

"I welcome more than $1 million from FEMA to assist with wildfire response efforts in Colorado," said Gardner in the news release. "I'm confident the state of Colorado will maximize the federal grant to both preempt and mitigate the destruction caused by wildfires. I'll continue to advocate at the federal level to ensure Colorado receives the resources it needs to keep our communities safe."

Manitou Incline Closed for Construction (KOAA TV, Colorado Springs)

8/22/16

COLORADO SPRINGS - The Manitou Incline is now closed as the cities of Colorado Springs and Manitou Springs start phase 2 of improvements to the popular trail.

Construction is expected to last around 4 months with the main goals of: improving safety, enhancing the hiking experience, improving the long-term sustainability of the trail and increasing accessibility.

They will also clean up debris along the trail and add new drainage structures to protect the trail from eroding away.

Colorado Springs is responsible for the general oversight of the trail, and the improvements are being funded by a FEMA Hazard Mitigation Grant and Trail, Open Space and Parks Funding.

Beaver Creek fire evacuation order lifted; two Colorado wildfires 100 percent contained (Denver Post)

By Ellis Arnold | earnold@denverpost.com

August 21, 2016 at 4:36 pm

An evacuation order was lifted in the Beaver Creek fire area near Walden and the Wyoming state line yesterday, said John Abernathy, spokesman for the Denver Fire Department.

Some evacuees from 50 total residences have begun to return to their homes, Abernathy said, but low relative humidity and winds up to 25 mph are expected to create critical burn conditions Monday and Tuesday. The fire, which is 53 percent contained, started June 19. Total containment is expected Oct. 21.

Heavy beetle-killed timber in the area has been fueling the fire, which has required continued ground and air efforts. Recent cool, moist weather aided the fight, but warming is expected until Wednesday. Season-ending wet weather is likely the only factor that will put out the fire, Abernathy said.

The fire has burned 36,961 acres, and the cause of the fire is still under investigation. A total of 17 structures, including one residence, have been lost, Abernathy said.

The lightning-caused Spring Creek 2 fire south of Parachute burned 621 acres but was 100 percent contained as of Friday, according to federal agencies. There have been no injuries attributed to the fire, which started Aug. 12, and no primary residences were lost despite the fire moving within a few feet of several homes. Four buildings, three vehicles and three trailers were damaged or destroyed, and evacuation orders covering about 20 homes were lifted Aug. 14.

The Hayden Pass fire southeast of Salida was 60 percent contained as of Aug. 4, according to federal agencies, with recent monsoonal weather dropping moisture in the area. The 16,754-acre lightning-caused fire started July 8, and it may present a runoff issue because of the rain. All evacuations ended as of July 21 after people were ordered to clear out of 140 residences in the area. The fire is expected to be contained Oct. 1.

Fire crews contained the Blair fire 100 percent as of Aug. 1, said David Boyd, spokesman for the federal Bureau of Land Management. Lightning started the fire near Colorado 64 between Rangely and Meeker; about 1,140 acres have burned since June 29.

Crews focused on keeping the fire from moving north and east, where a power-line corridor, oil and gas pipeline and the highway would have been vulnerable. There were no injuries or evacuations, Boyd said, as the fire was in a remote area.

MONTANA

FEMA and Montana Disaster Emergency Services Visit Baker

(Fallon County Times)

SEVERE SUMMER WEATHER

Laurie Hassell and Kent Atwood display a weather map tracking severe weather storms throughout Montana.

Laurie Hassell, Federal Emergency Management Agency (FEMA), External Affairs Specialist; Kent Atwood, CFM, Montana Disaster & Emergency Services, Hazard Mitigation Officer and Tim Tennis, Recovery Bureau Chief, Montana Disaster & Emergency Services were in Baker on August 9.

By Sherry Vogel

They were conducting a briefing to Fallon County and City of Baker applicants as they proceed to set-up documentation to receive federal funding after Baker was designated to receive a Presidential Disaster Declaration.

Atwood explained how the entire process works. Tennis expounded on how to apply for the funds. They both covered the scope of work for the Project Worksheet (PW) using the actual tornado documentation including cleanup and debris removal reports.

The preliminary final damage assessment is at $1.5 million. This amount surpasses the $1.4 million required for a Presidential Disaster Declaration. This final figure of the disaster damage could actually be more in the final analysis.

Whereas Hassell was in Baker to represent the Response and Recovery standpoint. Atwood was focused on the mitigation perspective of the disaster. **Mitigation meaning to identify and reduce the severity of the next natural disaster.

Officials estimate the Copper King Fire doubled in size Sunday afternoon (NBC TV, Helena)

By: KECI Staff
Updated: Aug 21, 2016 08:07 PM MDT

MISSOULA, Mont. - The Copper King Fire burning near Montana Highway 200 and Thompson River Road in Sanders County is now estimated to have burned over 6,000 acres. The fire had burned just over 3,400 acres as of Sunday morning.

Fire officials tell NBC Montana that the fire expanded to the northeast, chewing through around 3,000 acres. The explosive growth meant a cloud of thick smoke spread as far north as Creston and parts of the Swan Valley as of 8 p.m. on Sunday. The new growth is away from structures immediately threatened by the fire.

Officials with the Lolo National Forest say there is poor road access and firefighters and public safety remains the top priority. Fire crews are busy on the south and west sides of the fire near Highway 200 and Thompson River Road where structures are threatened.

The 297 people working to contain the fire will continue to focus on structure protection and keeping Highway 200 open to traffic. A Red Flag Warning is in effect for the fire on Monday afternoon, meaning more explosive growth is possible due to dry and windy weather.

NORTH DAKOTA

Morton County declares emergency with pipeline protest

LEANN ECKROTH Bismarck Tribune 12 hrs ago

With the protest against the Dakota Access Pipeline swelling to 2,000 people near Cannon Ball, Morton County officials may seek to access emergency funds to pay overtime to their deputies and other law enforcement agencies assisting Morton County in keeping the protest boundaries safe.

Protesters oppose the pipeline beneath the Missouri River because they fear it could contaminate their water supplies.

A special Morton County meeting will be held 4 p.m. Monday to address the emergency declaration, signed by Cody Schulz, chairman of the board, last week.

"This is to maintain public safety and to make sure the legal rights of everyone is enforced," Schulz said Sunday. "This has required a great deal of law enforcement manpower and time."

Schulz signed the declaration Aug. 15 and state law requires the remainder of the county board ratify the declaration within seven days to keep it binding.

County Commissioner Bruce Strinden said Sunday the declaration will allow the county to use its own emergency funds to pay deputies and other law enforcement for overtime tied to the protest.

"Without an emergency declaration, we cannot access those fund," said Strinden, who estimated the county may have banked about $125,000 in emergency funds. "We're getting help from neighboring counties and cities' law enforcement through mutual aid agreements, and appreciate it, but that help doesn't come free. We have to compensate them for food, lodging and of course pay. We're only a week into this."

Protesters said they are keeping the demonstration peaceful. Yet, the protest has challenged the county's enforcement capacity.

"This is a very large protest -- 2,000. So a protest of that size is of a concern to us," Strinden said. "People have a right to protest. The law enforcement will support legal activity in a protest unless it goes the other way."

"Right now, our primary goal is keeping everyone safe," he added, speaking of the need to close Highway 1806 during the protest. "There were vehicles parking on both sides of 1806. We don't want anyone injured or accidents."

Gov. Jack Dalrymple signed a declaration of emergency Friday. Strinden believes the state will pay for a large portion of North Dakota Highway Patrol troopers enforcing the highway because it lies in their jurisdiction, he said the county at this point will have to reimburse other law agencies for their assistance.

"At this point, we aren't seeking additional funds from the state," Schulz said. "The governor's declaration allows us to request extra resources, manpower or equipment from the state."

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Protesters settle into camp life

CAROLINE GRUESKIN Bismarck Tribune

Aug 19, 2016

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere Thursday afternoon at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Wednesday, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Aug. 24, when a hearing will be held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement Friday no weapons were seen.

Many at the camp saw the previous days' efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It's been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Thursday, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Water district's eminent domain attempt for F-M diversion stalls, but case not dismissed

By Helmut Schmidt on Aug 19, 2016 at 2:52 p.m.

FARGO — An East Central District judge has ruled that the Cass County Joint Water Resource District, which is trying to get a permanent right-of-way easement for 80 acres of farmland for the Fargo-Moorhead diversion, has not followed the proper procedures for eminent domain proceedings, court documents show.

At the same time, Judge John Irby denied a motion by Donald Cossette and the Angela R. Cossette Revocable Living Trust to dismiss the water district's attempt to use eminent domain for the Horace-area land, documents show.

According to court records:

The water resource district is trying to get a permanent right-of-way easement on 79.34 acres owned by Donald Cossette and the Angela R. Cossette Revocable Living Trust to build a F-M diversion inlet.

The district extended a final offer of $476,040 for the land on May 18, 2016. That offer was rejected.

Irby ruled the water resource district failed to file a needed petition in the case, provide appropriate public notice and a hearing, allow interested parties to answer the petition, and have the court hear the case, allow the petition to be amended as needed and issue its findings and assess costs.

Irby said the district was also walking a line between taking right-of-way sufficient for its purposes while avoiding a purchase of the land, or fee simple, which is not eligible for "quick take" eminent domain.

Irby ruled that the district will have to amend its eminent domain complaint.

Cossette's attorney, Jonathan Garaas of the Garaas Law Firm in Fargo, said Friday, Aug. 19, that he does not comment on cases still being litigated.

SOUTH DAKOTA

The Flood: One Year Later (KELO TV, Sioux Falls)

Don Jorgensen
KELOLAND, Sioux Falls
August 19, 2016

Sioux Falls, SD

One year ago, Sioux Falls was inundated by major flooding.

The hardest hit area was in the southwest part of the city where seven inches of rain fell in one hour. It was a night many of us won't soon forget.

The night was August 27th. The skies opened up over Sioux Falls and dumped more rain than the city had seen in recent memory.

Streets flooded quickly. Vehicles stalled out and many businesses flooded out, including the Signature Salon.

When we last met the owner, Jeff From, he was busy cleaning up what mother nature destroyed in minutes.

Today, From is back in business....

"It's hard to believe it's been a year," From said.

....but not without a lot of hard work along the way.

"It was a good eight months of solid; morning, noon and night trying to get things in place," From said.

The downpour and flooding that followed, caught many off guard.

The city had spent millions of dollars upgrading the drainage systems, but in some parts of town, seven inches of rain in a short amount of time was too much for it to handle.

"It was a large event", Public Works director Mark Cotter said.

Cotter says the drainage system worked as well as it could, but following the event, he knew more could be done.

"Probably the first thing and most important thing we did was take a rate case to the city council and they did support us to continually raise rates through 2019," Cotter said.

Cotter says those rate increases will help pay for more improvements; plus conduct more drainage studies.

"So when neighbors call and say 'this just doesn't drain right,' we set aside more dollars now to go out and do an updated hydro study, so we can understand what's happening and ultimately look at some alternatives to improve it," Cotter said.

Plus, the city began taking a closer look at drainage easements around town. It identified a few

where the homeowners, over the years, had made improvements to those easements with landscaping, trees and bushes.

But in reality, those beautification improvements, became obstructions and didn't allow water to flow freely to designated detention ponds.

So, this past year, the city worked with the homeowners to remove those obstructions and regraded the land. That way during a heavy rain storm like last year, the water will go where it's supposed to go.

But in one area of town, around 35th and Duluth which always seems to have water problems during torrential rains, drainage improvements are hard to come by.

So, instead of investing millions of dollars in trying to upgrade the infrastructure, the city bought a number of the homes and is now in the process of tearing them down.

It's going to reclaim the land and turn it into green space with detention ponds.

And finally, the city implemented new building codes, so homeowners shouldn't have to worry about flooding if they live near one of those drainage easements.

Cotter shows us why using this handsketched diagram.

"If this is a drainage way in the backyard, we used to recommend that the water surface, we used to recommend that the lowest floor of the house be two feet above that water surface elevation, now we don't recommend, it's a standard," Cotter said.

Don: Builders know this now? That it's a standard,
Mark: Yes.
Don: They can't wiggle their way around it.
Mark: That's right,"

From has made his own improvements to his salon that he hopes will protect it if the city ever gets hit with another 100 year flood.

Using concrete, he added more height around his window wells and built up around his stairwell leading to his basement, where most of the water came in last year.

"Hopefully if that were to ever happen again, it wouldn't be able to," From said.

Only time will tell, but for now he's just glad to be back in business.

"I try not to even remember and think about it anymore, people ask me about it today and it's like something you want to forget," From said.

From's damages totaled in the hundreds of thousands of dollars. He says very little of that was

covered by flood insurance. He hasn't decided yet if he's going to sue the city to try recover some of his money.

Ranch Life Celebrated In Union Center Gathering Three Years After Storm (KELO TV, Sioux Falls)

Kevin Woster
KELOLAND, Sioux Falls
August 20, 2016

The Rancher Round-up in Union Center, S.D., is an annual celebration of ranch life. But it's also a testament to survival in a beautiful-but-harsh landscape.

Professional survival skills were tested in unprecedented ways almost three years ago when western South Dakota was hit by an early October blizzard that killed tens of thousands of cattle and other livestock.

Republican state Sen. Gary Cammack of Union Center, who also ranches and owns a ranch-supply store, had to bury more than 100 cattle in a hastily dug pit in his pasture after the storm. Other ranchers lost several times that many cattle.

"If there's anything akin to a gut punch for the whole cattle industry, that was it," Cammack says. "It was just an amazing hit. When the storm broke, within 35 miles there were 20,000 dead cattle. It was just beyond imagination."

Help came from the government, private relief funds, cattle donations from other ranchers and from higher market prices for remaining cattle.

“The generosity of cattlemen from all over the U.S. and neighboring states was overwhelming,” Cammack said. “The stories that will never be told of generosity cattleman to cattleman, just overwhelming.”

A South Dakota Rancher Relief Fund raised and distributed millions of dollars and avoided the kind of questions or controversy that sometimes can plague such efforts.

“That should be a blueprint for fundraising and helping in natural disasters,” Cammack said. “I never heard one bad thing about that. It was just run very smoothly, very fair, the way they put that thing together, and the generosity was overwhelming.”

With a perfect joining of forces and sources of assistance, the recovery came much faster than Cammack expected.

"With the generosity of the markets and some help from the federal government, I'd say, really, within about 24 months, most folks had enough of a boost that they were back and economically viable,” he said.

So the heavy rains in Union Center Friday didn't dampen enthusiasm for the annual rancher rodeo and fair at Cammack's store. They just made it all more complicated. But it was a tiny challenge compared to the big ones faced in ranch country.

Besides, they needed the moisture. They usually do.

Silvia Christen, executive director of the South Dakota Stockgrowers Association, was at the celebration at Cammack's. She said she continues to be amazed at the recovery effort and how ranchers responded after the big blizzard.

"Grit is really the word that describes most of it," she said. "These ranch families at so at the mercy of the weather, and so at the mercy of the elements. And when you have a loss like we did with Winter Storm Atlas, many of them had a 50-percent loss overnight.

"And their faith and their commitment and their dedication and their trust that they can rebuild and then just get to work, that was a lot of it," she said.

Almost three years after Winter Storm Atlas devastated the livestock industry here, the Ranch Round-UP celebrates the land, its people and the spirit of survival.

"There was so much great help that came in in the form of money and prayers and all that," Christen said. "But at the end of the day it came down to these families getting out and getting to work and putting it back together."

Cammack says he has mixed feelings now when he looks at the hilltop in his pasture where more than 100 cattle are buried.

"You can't help but have some memories when you drive past that point," he said. "But having said that, that nob we excavated and buried all those cattle on is recovered and starting to get the native grass back on there. And today when you and I went out there, there's cattle that came right up and they're grazing right on there -- the living standing above the dead. So the country can be cruel, but it heals faster than you think."

So do the ranchers.

Home demolition aimed at keeping neighborhood dry (Sioux Falls Argus Leader)

Joe Sneve
Argus Leader, Sioux Falls
August 20, 2016

City Hall hopes tearing down a group of flood-prone homes in central Sioux Falls will help other houses in the neighborhood stay dry the next time the city gets dumped on with torrential rains.

It's not uncommon for homes in the area around Augustana University to have their basements flooded when Sioux Falls gets rain events. That's despite thousands being spent in recent years to divert the run off into newly constructed holding ponds and other infrastructure upgrades.

So about five years ago, Sioux Falls Public Works set its sights on creating more green space along Covell Avenue between 28th and 33rd Streets. But that meant existing homes would need to come out.

“Based on how steep this particular watershed was, there wasn’t an alternative that was a better fit than just to go in and start asking for voluntary buy outs. … But they just weren’t ready.” said Mark Cotter, director of Public Works.

But after last August’s torrential rains, the phone started ringing and Public Works has since acquired nine properties along Covell Avenue, which were demolished last week.

Cotter said once razed, the foundations will be filled in with sand to allow for a more permeable and absorbent surface.

“Over time as we capture more homes that are willing to sell voluntarily, if it makes sense we’ll develop a detention pond so we can hold and slowly release (the storm drainage).”

Only time will tell if the program will be enough to dry up the neighborhood. Cotter said engineers will continue to buy more homes if necessary. For now, about 14 other homes on the west side of Covell Avenue have been targeted, with 10 homeowners entertaining the idea of selling.

They can’t all be bought at once, though, due to budgetary restriction. Andy Berg, storm water manager in Public Work’s environmental division, said about $1.2 million has been spent so far acquiring the nine homes that were demolished last week.

Because Public Works doesn’t specifically budget for the project – it’s difficult to know how many homeowners will be willing to sell in the following year when the City Council passes its budget – Berg couldn’t say how many more homes will come out next year. Instead, Public Works diverts savings from other expenses that come in under expected costs toward the program.

“We’ve identified three that we’re going to have the appraisal process done on. So if we have the dollars … we can do a closing on those.”

UTAH

Utah brothers born, raised in Louisiana work with businesses to help flood victims (KUTV, Salt Lake City)

by Heidi Hatch |

Friday, August 19th 2016

(KUTV) Today the Red Cross announces -the catastrophic flooding in Louisiana is the worst natural disaster to strike the United States since Hurricane Sandy.

Pleasant Grove’s Ben Moak grew up in the Louisiana neighborhoods hit hardest. He moved to Utah 20 years ago with his large family, he set down roots and now owns Firebird Pizza and Pasta on Main Street in the small town.

“I have a friend that posted on Facebook saying only thing he has is his job, his family, and his truck -- and eight feet of water in his house. He lost everything.”

The flooding of hurricane Katrina was hard to watch, and now this time, the flooding hits close to home again and that's why he "wanted to do something 1500 miles away --to help our friends and family out."

Some of the worst hit neighborhoods are streets he and his siblings know well.

"We grew up in Louisiana, ,Walker Denham Springs is where we were born and raised."

The southern influence of his youth is evident in his kitchen, with a row of hot sauces and southern spices available to add kick to his Italian eatery.

He will start fundraising Tuesday night with a spaghetti dinner from 6 to 9 p.m. It will be $10 for a large plate of spaghetti , soda and breadsticks. "One hundred percent of the proceeds go to the people down there," he said.

Just across the parking lot from Firebirds is Chubby's Cafe, owned by Moak's brother who will be cooking up a little southern hospitality with a catfish fry next Saturday. The fry money will also go straight to the victims in Louisiana.

Jessica Erin is helping organize the event with the southern brothers and three other area restaurants including Cravings Cupcakes and Cravings Bistro.

"We got this huge trailer donated by Andrews Transportation and we are going to try and fill this baby up."

All of the restaurants involved are accepting monetary donations, food, clothing, diapers --you name it -- for the flood victims. Donations will be accepted during business hours through Saturday Aug. 27 at 9 p.m.

"We are excited to get this thing filled up and take it down to Louisiana."

All the business involved are just off Main Street in Pleasant Grove near the North Shore Shaved Ice shack, also giving a portion of their proceeds from Friday night to the cause. Lorri Jonas who worked at Chubby's and now owns the ice shack said, "I want to help because my heart is full."

Moak looks forward to community participation saying "the more the merrier, if you have to wait -wait, but the more the merrier."

Southern Utah University extends cybersecurity degree to Vietnam (St. George News)

August 20, 2016

CEDAR CITY — Southern Utah University classes will soon be taught in Vietnam through an international partnership with FPT Corporation, the largest Vietnamese telecommunication company.

The university will make its Master of Science in cybersecurity and information assurance available to students attending FPT University and its online counterpart, Funix University.

FPT Corporation is to southeast Asia what Verizon Communications Inc. is to the United States.

With many smaller entities comprising the company, FPT University has shown a pioneering spirit and a proactive approach to online student education and an increased international presence.

“This partnership extends the reach of SUU and the CSIS Department into Vietnam,” said Dr. Robert Robertson, department chair and associate professor. “It will bring individuals into the program whose perspectives will enhance and benefit fellow students at an international level.”

As the first online educational opportunity offered in Vietnam, FPT University and Southern Utah University are promoting the process of international cooperation in education.

In May, FPT University leaders and dignitaries from Southern Utah University, including President Scott L. Wyatt, signed the agreement to help increase professional training opportunities available to FPT students. At the end of June, university representatives Dr. Rob Robertson, Dr. Roger LaMarca, director of online admissions, and Dr. Stephen Allen traveled to Vietnam to train FPT University on the structure and implementation of the master’s degree program.

An attractive facet of the program is the online component, allowing students to attend school while still living, learning and working in their country.

“Students will receive the same experience and personalized instruction as a traditional SUU classroom while preparing themselves for the rapidly growing field of cybersecurity,” LaMarca said.

Cybersecurity professionals who battle cyberattacks that bleed companies and governments dry are in high demand. It costs an average $11.6 million per cybercrime incident, according to Info Security. Keeping these facts in mind, it’s no surprise that 42 percent of organizations are actively seeking information technology positions in information security, more than any other job, according to a LinkedIn Talent Search.

“They will receive a wide variety of instruction and coursework from this program,” LaMarca said, “including cybersecurity and IT policy; information, vulnerability and threat assessment; physical, personnel and operational security; and contingency, redundancy, emergency and disaster planning.”

Online Vietnamese students will have access to all the resources and materials available to students in a traditional learning environment. Throughout the program, which will begin this fall, these students will have access to a library, tutor and lecturer. They will be educated by leading experts in the cybersecurity industry and will also have opportunities to study alongside American students at Southern Utah University.

FPT Corporation is a multinational information technology company based in Vietnam, branching out to 19 different countries. Smaller entities of the corporation include software outsourcing, telecommunication, property management, education and financial services.

The Vietnam National Technology Research Institute founded the Food Processing Technology Company – the original full name of FPT – in 1988. In 1990 the company switched its core business to information technology and changed the unabbreviated name to Corporation for Financing and Promoting Technology.

The cybersecurity program has been tailored to achieve the highest efficiency and educational quality available online. This new partnership will help further available education in Vietnam and will increase Southern Utah University's international presence.

With a comprehensive international environment and a wealth of knowledge taught by high profile cybersecurity professionals, including NUIX's Chris Pogue, Southern Utah University is helping to advance all of its students in this fast-growing career field. The university works hard to make it possible for nontraditional students and working professionals to earn a master's degree.

Those who are interested in this program can contact Southern Utah University's online admissions team at 435-865-8665 or onlineadmissions@suu.edu.

Our Views: Not Our First Recovery Rodeo (Baton Rouge Advocate)

Baton Rouge (LA) Advocate, August 21, 2016

In Louisiana, the emotional and physical impact of what may be a 1,000-year flood event is still being absorbed.

What our leaders cannot afford to do, though, is to let the future take care of itself.

As Gov. John Bel Edwards said Tuesday, the rescue and comfort of the displaced is the first priority. "Saving life is the most important priority we have," Edwards said Tuesday. "We will dedicate every resource to that effort until it is no longer needed."

But he also said he would take the opportunity to talk long-term recovery with Craig Fugate, head of the Federal Emergency Management Agency.

That's smart.

FEMA is under different and we believe much improved management since the hapless Michael Brown at the time of hurricanes Katrina and Rita in 2005. The high-profile impact of Hurricane Sandy in the northeast in 2012 also refocused attention on the Stafford Act, the federal law governing disaster aid.

Louisiana is better placed than in earlier disasters, but that doesn't mean it's easy sailing.

U.S. Rep. Garret Graves, of Baton Rouge — whose district was the hardest-hit — was busy visiting shelters and seeing his constituents. But he said in a telephone interview Tuesday that Congress needs to assess whether existing law is enough to deal with an event of this magnitude.

Graves said he's already talking with U.S. House members of both parties about federal recovery assistance. "We're not going to get there without national attention," Graves said, in an echo of Fugate's comments that the American people generally have probably been more focused on the Olympics and the national election than the Louisiana flood.

Fugate said that FEMA would respond unhesitatingly whether the national media spotlight comes or goes.

That's encouraging, but we know from the struggles of a decade ago that bureaucratic tangles and the dueling political parties on Capitol Hill can get in the way of help that Louisiana needs.

The spirit of unity and generosity, including from people and institutions across Louisiana and the nation, remains critical in this time of trouble. Job one of the recovery, as Edwards emphasized, is for the affected households to register with disasterassistance.gov. Quantifying the damage is important to achieve appropriate federal response.

But leaders are right to worry about the future, and plan for it.

FEMA Halts $30M To State (Jackson, MS, Clarion Ledger)

By Therese Apel And Geoff Pender

Jackson (MS) Clarion Ledger, August 19, 2016

The Federal Emergency Management Agency has halted $29.9 million in reimbursements to the state of Mississippi for retrofitting homes after Hurricane Katrina, saying the state has failed to provide documentation, overspent and appears to have had lax oversight over the program.

The Department of Homeland Security's Office of the Inspector General released a report that states that the Mississippi Emergency Management Agency has not been able to provide documentation for around $30.5 million that was paid to contractors to retrofit 985 homes on the coast. The original program was approved to retrofit 2,000 homes for $29.9 million.

The OIG has recommended, and FEMA agreed, that the federal government "deobligate" the money until Mississippi can reconcile what it claims it spent. If Mississippi can't convince the feds its spending was proper, the state could be on the hook for all or part of the spending.

MEMA Director Lee Smithson released a statement Thursday after 6 p.m. stressing that he was not over the agency when the mismanagement occurred.

"We are confident that most of the money will be deemed eligible by FEMA and the remaining funds will be recovered by the state," he said.

Gov. Phil Bryant in a statement Thursday night said he agrees with Smithson the spending "will be eligible for reimbursement" and "the state will aggressively seek to recover the remainder of the funds."

"I appreciate director Smithson taking swift action upon discovering the issues outlined in the report," Bryant said. "It is important to note that the employees repsonsible for the retrofit program for the period OIG examined are no longer at MEMA.

The OIG report says that although Mississippi became aware of improper oversight of the program as early as December 2014, it did not take any action to address the problem until February of this year.

Smithson said the money that was actually put toward the construction should end up being reimbursed by FEMA, and that the state will get the rest of the money out of ARA, the primary contractor on the jobs.

State guidelines and general accounting practices require that more than one person have oversight of similar programs. The state Department of Financial Administration gave oversight to one employee, who came with the program to MEMA when the program was moved over in 2012.

Then-MEMA Director Robert Latham said he was not comfortable with the program having no oversight.

"When the Coastal Retrofit program came to MEMA and I found out there wasn't any oversight, I said, "I want Horne involved in this, get them to start looking at all the invoices and processing it, and they were doing it as a courtesy because it wasn't in their contract. They agreed to start looking at it."

The report states that the employee who had oversight of the program, Deb Biggers, would not turn over some of the invoices to Horne CPA or to investigators.

Smithson said since he took office, Biggers has been terminated and he has hosted conference calls with Horne accountants and the Office of the Inspector General every week in order to keep them up to date with the progress of the audit.

"I don't want to speculate whether there was any graft or corruption on the part of Ms. Biggers or anyone else at MEMA," Smithson said, adding, "Deb Biggers should hace known that the payments that were made to ARA were improper. She modified the scope of work with the original contract with FEMA without getting FEMA permission and allowed ARA to inflate their program costs."

Latham said when he raised questions about the payments and the program, he was assured by his staff that everything was on the up-and-up.

"I'm concerned that if this is in fact true and it shakes out like it sounds, obviously I've got staff that let me down. When I consistently asked questions about these different things I was assured that FEMA was involved and that we were paying in accordance with a contract," he said.

Latham's Chief of Staff was Bill Brown, who he said he went to with any questions about the program.

"When issues would come up I'd get Bill to handle it, and if I thought I wasn't getting answers, I'd bring in Deb" and an employee who handled mitigation, Latham said.

OIG findings:

Some key findings of the OIG audit of Mississippi's spending on the Katrina retrofit program:

Mississippi allowed one employee complete authority over the program, which goes against basic accounting and oversight principles including Mississippi's own agency accounting rules.

The program was approved at $29.9 million to help retrofit an estimated 2,000 homes. The state claims to have spent $31.5 million on 945 homes.

The state has not provided documentation for $30.5 million it says it paid to contractors.

Although Mississippi became aware of improper oversight as early as December 2014, OIG says it did not take any action to address the problem until February of this year.

While working for state DFA and MEMA, the employee in charge approved $31.5 million in payments, more than the amount of the grant, and did not allow a hired accounting firm to reconcile more than $30 million in invoices. "However, no one above the employee's authority questioned the situation," the report says.

Retrofitting 2,000 homes was estimated to cost $14,944 each, but Mississippi spent $33,308 on average, and MEMA "did not provide any substantial evidence to justify the increase in costs.

The employee over the program, the OIG said, would not allow federal or Mississippi officials access to more than $30 million worth of contractors' invoices. This led OIG to question MEMA, whose new director contacted the state attorney general's office.

MEMA contends it has completed work on 945 homes for $31.5 million, but has to date provided invoices for only 12 homes, at $958,000. DFA records as of May only show $20.4 million being spent on the program.

Of the $958,000 in invoices provided so far, only $640,000 represented actual work on homes, with $318,000 in temporary employee salaries and administrative costs.

Whose Lives Should Be Saved? To Help Shape Policy, Researchers In Maryland Ask The Public (NY Times)

By Sheri Fink

New York Times, August 21, 2016

BALTIMORE — In a church basement in a poor East Baltimore neighborhood, a Johns Hopkins doctor enlisted residents to help answer one of the most fraught questions in public health: When a surge

of patients — from a disaster, disease outbreak or terrorist attack — overwhelms hospitals, how should you ration care? Whose lives should be saved first?

For the past several years, Dr. Lee Daugherty Biddison, a critical care physician at Johns Hopkins, and colleagues have led an unusual public debate around Maryland, from Zion Baptist Church in East Baltimore to a wellness center in wealthy Howard County to a hospital on the rural Eastern Shore. Preparing to make recommendations for state officials that could serve as a national model, the researchers heard hundreds of citizens discuss whether a doctor could remove one patient from lifesaving equipment, like a ventilator, to make way for another who might have a better chance of recovering, or take age into consideration in setting priorities.

At that first public forum in 2012 in East Baltimore, Cierra Brown, a former Johns Hopkins Hospital custodian, said she favored a random approach like a lottery. “I don’t think any of us should choose whether a person should live or die,” she said.

Alex Brecht, a youth program developer sitting across from her, said he thought children should be favored over adults. “Just looking at them, seeing their smiles, they have so much potential,” he said.

“Who’s going to raise them?” asked Tiffany Jackson, another participant.

The effort is among the first times, Dr. Daugherty Biddison said, that a state has gathered informed public opinion on these questions before devising policy on them. “I don’t want to be in a position of making these decisions without knowing what you think,” she told the residents. “We as providers,” she said, “don’t want to make those decisions in isolation.”

Rationing already occurs in delivering medical care in the United States, though some practices are little acknowledged. Committees struggle regularly over policies for allocating scarce organs for transplant.

During widespread drug shortages in recent years, doctors have sometimes chosen among cancer patients for proven chemotherapy regimens and among surgical patients for the most effective anesthetics. And doctors sometimes have to choose among patients who need treatment in intensive care units, which are often filled to capacity.

In emergencies, the choices can have immediate life-or-death consequences. After Hurricane Katrina in 2005, doctors made ad hoc decisions about which groups of patients to evacuate from hospitals when floodwaters rose, the power failed and heat climbed. At one medical center, many of the sickest, chosen to go last, died. During the H1N1 influenza pandemic in 2009, thousands of young people developed severe respiratory distress. For some of the most critical cases, doctors tried treatment on heart-lung bypass machines. Rationing took place because the costly and resource-intensive therapy, which doctors were not sure would help, was available in only about 120 hospitals.

Similar scenarios have developed in other countries, wealthy and poor. After the 2011 earthquake and nuclear disaster in Fukushima, Japan, some patients at nearby hospitals, including babies, were selected for flights to safety, while others languished for days as medical supplies dwindled. At one hospital, dozens of older patients were apparently abandoned, according to a report in The Lancet, and many died.

And during the 2014 Ebola epidemic in West Africa, when doctors and nurses could spend only so many minutes inside hot biohazard suits, they struggled with impossible choices over which patients to give care.

Dr. Daugherty Biddison, a vice chairwoman in the department of medicine at Johns Hopkins, said she had first encountered scarce medical resources while doing missionary work overseas. She realized that even Johns Hopkins Hospital, a 1,145-bed facility anchoring the $7.7 billion Johns Hopkins Medicine enterprise, would fail to meet demand in a severe pandemic. When asked to help draw up a plan, she said, she felt uncomfortable with health professionals’ making life-or-death judgments without knowing the values of the broader public.

At least 18 states from New York to California, and numerous hospitals, including the 152 medical centers operated by the Department of Veterans Affairs, have already developed protocols. Some efforts,

including Maryland's, have received funding from a federal program supporting hospital preparedness. But relatively few people know about the plans for allocating scarce resources, and fewer still have been consulted.

Some of these guidelines are nuanced and flexible to context. But others call for doctors to categorically refuse hospital admittance to older adults and those with certain existing medical conditions, such as kidney failure or advanced cancer, in a severe pandemic.

In Maryland, participants in the forums, designed with the help of Carnegie Mellon University's program for deliberative democracy, tended to favor saving the most lives or years of life by prioritizing people who were expected to survive their current illness or live the longest after being treated. However, many also said that a lottery or first-come-first-served approach would be appropriate for patients who had roughly equal chances of benefiting.

"If you have one ventilator and five people who are good candidates, there's going to have to be a random sort of chance aspect to it," said Dr. Eric Toner, a senior associate at the UPMC Center for Health Security and one of the project's leaders.

Unexpected questions emerged in the discussions: Should an undocumented immigrant be eligible to get a ventilator? What about a drug or alcohol abuser, or a prisoner? After being told by a facilitator that discrimination would not be allowed, one participant asked whether using age, one of the principles under discussion, would not also be a form of discrimination.

Taking ventilators from patients who did not appear to be improving was "the single most contentious issue," Dr. Toner said. Maryland's attorney general released an opinion in December that lifesaving medical technology, including ventilators, could be removed from patients during a catastrophic emergency and reassigned to others who could potentially benefit more from them. Dr. Toner said it would be hard for any system to work without reallocation.

But at the forums, many expressed reservations. One woman said that she had been in a coma, on a ventilator, and that her family had been encouraged to turn it off and let her die. "Health care providers are not God," another said. "I've seen it firsthand where they thought one thing and the outcome was different."

To avoid rationing, a woman proposed a "Susan G. Komen for disaster preparedness," a reference to the ubiquitous fund-raising movement for a breast cancer cure. Some said they would voluntarily refuse a ventilator to save the lives of other people, such as children or family members. A man questioned whether doctors would even have the time in an emergency to engage in formal rationing. Some with lower incomes said that health care rationing was already occurring based on the ability to pay.

Translating all these ideas into recommendations for the state, most likely in mid-2017, will be challenging. The organizers said that despite the complexity, they were now in a better position to provide the guidelines.

"We have a much fuller appreciation of what the community wants," said Howard Gwon, the director of the office of emergency management at Johns Hopkins Hospital.

Charles Blattberg, a professor of political philosophy at the University of Montreal, said he worried that the effort could result in overly precise guidelines.

"The kind of judgment that's required to arrive at a good decision in these situations needs to be extremely sensitive to the context," he said. "It's not about just abandoning one lone doctor to their own devices to make it up on the spot, but we can't go the other extreme in thinking we have the solution to the puzzle already; just follow these instructions. That works for technical problems. These are moral, political problems."

Ruth Faden, the founder of Johns Hopkins's Berman Institute of Bioethics, which participated in the project, said she saw value in the exercise far beyond a pandemic.

"It's a novel and important attempt," she said, "to turn extremely complicated core ethical considerations into something people can make sense of and struggle with in ordinary language."

ANALYSIS

- **Colorado:** Construction will begin on a million-dollar bridge over a spillway at Button Rock Preserve. The previous bridge was destroyed in the 2013 floods, and it will be paid for by FEMA, state and local money.
- **Montana:** *The Billings Gazette* carried a summary of the 35 large wildfires burning in the West at present… About 40 people turned out for a protest in solidarity with the Indians protesting an oil pipeline project in North Dakota.
- **North Dakota:** More stories report on the pipeline protest: Standing Rock Sioux Chairman David Archambault II has an opinion piece in the *NY Times* explaining the tribe's stand: BBC News carried a piece on the protest; *The Hill*, the D.C. political paper and web site, carried a piece on the lawsuit seeking to stop the project. ("Dakota Access can't begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn't immediately urgent.") Amnesty International will come to observe the protest, citing concerns about law enforcement withdrawing water supplies for the protestors. *The Bismarck Tribune* also carried a piece on the court action in Washington, where the judge said he would rule by September 9.
- **South Dakota:** No FEMA-related stories.
- **Utah:** Utah gave a $1 million grant to its Department of Environmental Quality to study a pervasive algae bloom that has raised public health concerns in the state… A new state director for the BLM has been appointed. He faces a number of challenges in the state, which are highlighted below. … An AP fire roundup noted a Utah fire near the Beaver Mountain ski resort has crossed into Idaho.
- **Wyoming:** Four wildfires are burning within Yellowstone National Park, and a fire in neighboring Grand Teton National Park has caused a one-hour detour through Idaho to access Yellowstone, though all roads within Yellowstone remain open. Both parks are hosting events this week to celebrate the 100th anniversary of the National Park Service.

Construction to start on spillway bridge at Longmont's Button Rock Preserve (Longmont Times-Call)

By Karen Antonacci
Staff Writer

Posted: 08/24/2016 06:24:00 PM MDT

Crews with Lawrence Construction will start work on a new bridge spanning the spillway at Button Rock Preserve in September, according to a city news release.

There used to be a way across the spillway, but it was destroyed in the September 2013 flood.

The new bridge will cost $1,081,000 and is being paid for from Federal Emergency Management Agency, city and state money, Longmont Spokeswoman Jennifer Loper said.

FEMA will reimburse the city for 75 percent of the cost, while Longmont and Colorado will each cover 12.5 percent of the $1,081,000, Loper said.

Lawrence Construction, based in Littleton, also built the Martin Street bridge, Loper said.

Water enters the spillway from Ralph Price Reservoir in order to keep water from overflowing Button Rock Dam.

Construction on the spillway bridge is scheduled to start Sept. 7 and last until May.

"An area west of Longmont Dam Road to the top of the spillway will be closed throughout the work period," Longmont engineer Jason Elkins said in the news release.

Hiking trails within the preserve will remain open throughout construction, but hikers will be rerouted to access the popular North Shore Trail that takes people around the reservoir.

"We will lower the water level at the reservoir to create an access point to North Shore Trail at the top of the spillway," Elkins said in the news release.

Button Rock Preserve is a 3,000-acre property that Longmont owns west of Lyons. The preserve is a protected watershed that provides the majority of the drinking water for Longmont and Lyons.

Many hiking trails and infrastructure at the preserve were wiped out in the flood. The preserve reopened to the public in June 2015.

Crews battling 35 large, uncontained wildfires in the West (Bozeman Daily Chronicle)

Updated 4 hrs ago

BOISE, Idaho (AP) — Thirty-five large, uncontained wildfires were burning in the West, and firefighters were making initial attacks on another 112 new blazes to prevent them from spreading.

Firefighters in the region mostly faced windy, dry conditions that have fanned flames that destroyed buildings and forced evacuations in California, Washington, Idaho and elsewhere.

Late last week, the National Interagency Fire Center in Boise, Idaho, upped what it calls the National Preparedness Level to 4, one shy of the highest level, as competition for limited firefighting resources increased.

Here’s a look at the major wildfires in the West:

CALIFORNIA

Authorities say a wildfire that destroyed 45 homes on California’s central coast was not intentionally set but they were still trying to determine the cause.

Cal Fire says arson has been ruled out in the 10-day blaze that has charred 64 square miles of dry brush and timber.

The fire was 39 percent surrounded and at least 2,400 people were under evacuation orders in San Luis Obispo and Monterey counties. Additional warnings for people to be ready to flee were issued Wednesday and one arm of Lake Nacimiento was closed to boaters.

Cal Fire's Rich Eagan says flames were more than two miles from Hearst Castle, which remains closed but was no longer at immediate risk.

A fire burning for a month north of Big Sur grew again to 135 square miles. Hundreds of homes remain threatened by the fire in rugged wilderness coast along Highway 1. The blaze was sparked by an illegal campfire. It is 60 percent contained.

___

IDAHO

A fast-moving rangeland wildfire in eastern Idaho expanded to nearly 70 square miles Wednesday, forcing evacuations, threatening a windfarm and burning habitat needed by sage grouse, a federally protected bird.

The Bonneville County Sheriff's Office says evacuations are in place, with up to 70 buildings along U.S. Highway 26 threatened.

Officials say the human-caused fire reported Sunday about 7 miles east of Idaho Falls is making wind-driven runs to the north and east.

Officials say high winds are again predicted Wednesday along with low humidity.

In central Idaho, a 160-square-mile wildfire in a remote, mountainous area continues to defy containment and burn through timbered slopes that are difficult for firefighters to reach.

___

MONTANA

Cooler weather has slowed Montana's largest wildfire, though 45 homes are still evacuated and 130 more are on alert.

The fire northeast of Thompson Falls had burned 33 square miles as of Wednesday morning.

Fire officials say crews have made progress in securing fire lines and protecting structures. The weather was cooperating again Wednesday with lighter winds and higher relative humidity forecast.

Minimal fire activity is also being reported from a fire burning west of Lakeside.

About 75 homes and other structures are within a half-mile of the fire's perimeter. No evacuations have been ordered.

___

UTAH

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

Connect with the Chronicle on Facebook for the latest news, links and more.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WASHINGTON

Favorable weather conditions helped crews make progress Wednesday against a series of wildfires in Eastern Washington that have burned at least 18 homes this week.

A fire burning on the Spokane Indian Reservation was 30 percent contained. That fire covered more than 27 square miles and had destroyed at least 13 homes on the reservation, said Jamie Sijohn, a spokeswoman for the tribe.

“The devastating fire jumped the Spokane River from Lincoln County onto the Spokane reservation in three separate locations,” Sijohn said.

It roared toward the town of Wellpinit, forcing the evacuation of the entire town on Sunday. But that order has since been lifted, Sijohn said.

Meanwhile, a fire near the town of Davenport in Lincoln County covered 6.5 square miles, and was 20 percent contained.

Another fire south of Spokane, in the Valleyford area, was 50 percent contained. It had burned more than 10 square miles and destroyed at least five homes, officials said. Mandatory evacuations ended on that fire on Tuesday night.

___

WYOMING

Some tourists heading to Yellowstone National Park during the busy summer season were facing an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone’s South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hope cooler weather slows the flames over the next couple of days.

Crowd turns out in Billings for North Dakota pipeline protest (Billings Gazette)

By MIKE KORDENBROCK mkordenbrock@billingsgazette.com

Dozens of people in Billings turned out Wednesday to protest the construction of a $3.8 billion pipeline beginning in North Dakota, standing in solidarity with the hundreds who have been protesting the pipeline with the Standing Rock Sioux tribe.

At its height, around 40 people stood on the sidewalk near the Yellowstone County Courthouse lawn holding signs encouraging supporters to honk and chanting, "Water is sacred, water is life." That was double the people event organizer Bailey Brown had expected.

The Dakota Access Pipeline is proposed to transport Bakken crude to Illinois, passing under the Missouri River.

The importance of clean water and clean air were on the mind of Tajin Perez, a Billings resident who helped Brown with the event.

"Clean air and clean water should be a right to everybody, not just those who can afford it," Perez said. "That's why people are here. They've been drawn out to the same call to stand up for what's right, for what's fair for everyone, especially those who have been disadvantaged for so long in regards to contemporary issues between the U.S. government and the Native peoples of this country."

Gerald Sherman and his wife, Jael Kampfe, made the drive from Bearcreek with four coolers of meat for Brown to deliver along with other supplies to protesters when she heads to North Dakota on Friday in a rented van.

“I’m not against oil, but I’m against a pipeline crossing the river,” said Sherman, a banking industry retiree and Oglala Sioux tribal member. “These pipelines have a history of breaking. It happened in the Yellowstone.”

When he and his wife heard about the protest in Billings, they posted their plans to attend on Facebook, and three families from Red Lodge responded by donating meat for them to take.

Sherman and Kampfe joined Lucky’s Market, Natural Grocers and others who have provided camping supplies and food for Brown to transport.

“I’m really impressed,” Brown said of the turnout. “Especially the people honking.”

Collette Montclair, a member of the Standing Rock Sioux Tribe who has lived in Billings for two years, said she’s proud of the efforts of her family and friends who have been protesting in North Dakota and that she is sad that she can’t join them. Work has interfered with her plans to return home, Montclair said, and she expected she wouldn't make the journey until October.

Like Brown, she also noted how honking car horns raised her spirit.

“I love all the support, everybody going by honking their horns,” she said.

Joining Monclair was her 4-year-old daughter, Ayasha.

“We want her to be a part of everything,” Montclair said of her daughter, who was seated on the sidewalk with a sign.

As challenges to the pipeline and its protesters continue to play out, it’s unclear what Montclair will tell her daughter when she grows older, but she offered some thoughts about what she hopes she can say.

“That everybody stood up for what’s right, stood up for what’s ours, and that we were all a part of it.”

NORTH DAKOTA

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe's cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company's assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it’s gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America’s prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.
David Archambault II is the chairman of the Standing Rock Sioux tribe.

Protests over huge N Dakota oil pipeline (BBC)

24 August 2016

More than 100 protesters have gathered in Washington DC to express their fears about a huge oil pipeline which will cross four states in the western US.

The $3.7bn (£2.8bn) Dakota Access pipeline has prompted huge protests, notably in North Dakota where Native Americans have halted its construction.

It will run 1,168 miles through Iowa, Illinois, and North and South Dakotas.

US District Judge James Boasberg said on Wednesday he will make a decision on the issue by 9 September.

Outside the court in the US capital, environmental activists made their feelings clear.

They believe the transporting of up to 570,000 barrels of crude oil a day will imperil local waterways.

The company behind the pipeline, Energy Transport Partners, has said the project will boost local economies and is much safer than transporting oil by rail or road. But protesters disagree.

Activists Desiree Fairooz and Lenny Bianchi were among the demonstrators outside the court, where a federal judge was set to consider the Standing Rock Sioux tribe's request for an injunction that would effectively block the pipeline's construction.

"We're concerned about the Native Americans and the threat to their water supply but we're also concerned about the fossil fuel issue," said Mr Bianchi, a Blue Mountain, Virginia native.

"We don't feel that we should be building pipelines, we feel that the money should instead be spent on alternative sources of energy."

Protesters gather outside the US District Court while awaiting a judge's decision on whether to issue an injunction against the construction of the Dakota Access pipeline.

Dozens of protesters convened outside the US District Court, with environmental activists and members of the Standing Rock Sioux tribe uniting behind one message - water is life.

The crowd was studded with signs bearing the words "native lives matter", "water is life" and "be on the right side of history, no DAPL [Dakota Access pipeline]."

Valentine Little Shield, a member of the Cheyenne River Sioux tribe in South Dakota, took a bus to Washington to show her support for the Standing Rock Nation Tribe.

Ms Little Shield describes the contested pipeline as personal. Her grandchildren use the waters where the pipeline poses a threat to swim, fish and bathe their horses.

"I'm here because of my grandkids and what they're going to go through," she said. "They can't drink the oil, they can't take a bath in the oil."

Generations of native Americans, both young and old, took turns sharing personal accounts of why halting the pipeline was important to them as crowd broke into battle cries and pounded tribal drums.

"We're not here to protest, we're here to protect," said Lance Frazier, a member of the Cheyenne River Sioux Tribe in Eagle Butte, South Dakota.

But for many, the pipeline symbolises a deeper issue among Native Americans.

Denise Desiderio, the policy director for the National Congress of American Indians, called the unilateral support of tribes across the country a "historic" moment.

"We need to make sure our tribal voice is heard and when we raise our voice, we need to make sure it transcends this issue," she said, noting the important symbolism of land to the Native American community.

"We have had enough lands taken away, we can't let what we have left be destroyed."

Hundreds of people have been occupying one of the construction sites in North Dakota, where tensions have been running high between demonstrators, police and builders.

Judge hears tribe's argument against ND pipeline (The Hill)

By Devin Henry - 08/24/16 04:13 PM EDT

Opponents of a major North Dakota pipeline project brought their case to federal court Wednesday.

The Standing Rock Sioux tribe told a federal district judge that the government didn't consult the tribe before approving a route for the pipeline of energy company Dakota Access, which is to run close to sacred and environmental sites in North Dakota.

They worry a breach in the pipeline will imperil the Missouri River, which runs near the project.

The tribe last month sued the Army Corps of Engineers, which approved the pipeline route. On Wednesday, lawyers for the tribe asked District Judge James Boasberg to block construction on the project until the tribe can conduct more assessments of its route.

"The law gives the tribes the opportunity to go out and evaluate the impact on important sites," Jan Hasselmen, the Earthjustice lawyer representing the tribes, said. "The tribe and other tribes are concerned about impacts all along the length of the pipeline."

Federal attorneys dismissed the complaint, saying they offered the Standing Rock Sioux the chance to assess the pipeline with them and that the tribe declined, while other tribes in the region took them up on the offer.

"The Corps followed procedure in this case when it actively worked to engage with the plaintiffs, the Standing Rock Sioux," said federal lawyer Matthew Marinelli.

Dakota Access said it has taken steps to avoid damaging culturally important areas in the region. The company's attorney, William Leone, told the court, "This is not a cowboy process."

Early construction on the pipeline route is mostly complete in North Dakota, and the focal point of Wednesday's hearing was on its route under the Lake Oahe segment of the Missouri River.

Dakota Access can't begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn't immediately urgent. Boasberg said he will try to decide the case within two weeks.

The 1,170-mile, $3.7 billion Dakota Access project would carry 570,000 barrels of Bakken crude oil from North Dakota to Illinois. Tribal groups have waged legal battles against the pipeline for months, and the project has drawn protests from tribes in North Dakota and anti-pipeline activists around the country.

Wednesday's hearing was preceded by a rally outside the federal district court building in Washington, D.C., with tribal representatives and allies slamming federal energy policies that they say minimize tribal input. The protest drew celebrity activists like actresses Susan Sarandon and Shailene Woodley.

In North Dakota, protests against Dakota Access have landed up to 20 people in jail. Construction on the pipeline has stopped, and a federal judge in North Dakota has issued a restraining order against protesters at the site.

He will hear arguments on issuing an injunction against the protests in early September.

Amnesty International to observe pipeline protest (Bismarck Tribune)

JENNY SCHLECHT Bismarck Tribune

Amnesty International has sent a delegation of human rights observers to monitor the law enforcement response to the camp protesting the construction of the Dakota Access Pipeline under the Missouri River.

Thousands of people, including members of at least 60 Native American tribes, have camped out south of Mandan near the construction site of the pipeline -- which, if completed, will take Bakken oil to Illinois.

Tarah Demant, a spokeswoman for the delegation, said the international human rights organization has been concerned about reports that the state of North Dakota took away water resources that had been provided to protesters.

“We are concerned about the health and safety of protesters,” she said.

State-owned trailers and water tanks were removed earlier this week from the protest camp after reports of unlawful activity stoked fears among state officials that equipment would not be secure.

Amnesty International sent identical letters to North Dakota Highway Patrol Col. Michael Gerhart and Morton County Sheriff Kyle Kirchmeier to remind them of how officials are called upon to act during protests according to international human rights standards and the U.S. Constitution.

The letters discuss use of force, decisions to break up protests and how those decisions should be communicated, the use of detention and other issues.

Demant said Amnesty International only recently began sending observers to protests within the United States to ensure that law enforcement officials were protecting the right to peaceful protest, though the organization has a long history of such observations internationally. It has not previously visited North Dakota for that purpose.

The delegation arrived in Bismarck midafternoon Wednesday and had not yet traveled to the protest camp.

“Our hope is that we won’t have anything to report,” Demant said.

North Dakota Highway Patrol Lt. Tom Iverson and Donnell Preskey, a spokeswoman for the Morton County Sheriff’s Department, said they were not aware of any communications between local enforcement and Amnesty International. The group's arrival will not change anything about how the patrol approaches the protest, Iverson said.

"Our message remains the same," he said. "We need to keep everybody safe and promote safety for everybody involved — protesters, workers, law enforcement and the motoring public."

Federal judge to rule Sept. 9 on Dakota Access injunction (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

"A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million," the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.

Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

"Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court," Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe's historic preservation officer and many general tribal members.

"It highlighted how important this is to the tribe; this is not a small issue to them," Tsosie said.

UTAH

$1 million hardship grant awarded for Utah Lake study (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 3:50 p.m. MDT

Algae is seen floating near the shoreline at Utah Lake State Park in Provo on Friday, July 15, 2016. Public health officials decided to close the lake due to the large bloom. It was reopened on July 28, 2016. *Spenser Heaps, Deseret News*

Summary

The Water Quality Board awarded $1 million in a hardship grant to the Utah Department of Environmental Quality to continue its nutrient pollution probe of Utah Lake. This summer's pervasive algal bloom has created widespread public health worries.

SALT LAKE CITY —The second phase of a Utah Lake nutrient study to probe the algal bloom problem will begin thanks to a $1 million hardship grant awarded Wednesday to the Utah Department of Environmental Quality.

Members of the Utah Water Quality Board voted to approve the emergency grant in light of the extensive and pervasive spread of cyanobacteria at Utah's third largest lake — a problem that began early in the season and has been unprecedented in its scope.

“It’s time for us to take a hard look at the impacts of nutrients on Utah Lake,” said Walt Baker, director of the Division of Water Quality. “This study will provide us with the data and tools we need to evaluate the complex chemical and biological factors at play in the lake and make decisions that improve and protect this valuable resource.”

The funding continues a two-phase, four-year water quality study that will evaluate water quality data and look at the nutrient loads — or the amount of phosphorus and nitrogen in the lake — that is the cause of the harmful algal bloom.

Additional goals include developing tools for effective decision-making and involving partners and interested groups in stewardship of the lake's health.

Utah Lake was closed to public access for two weeks in mid-July because of an algal bloom that covered most of its surface. Lincoln Beach has been posted off-limits since the outbreak. The cyanobacteria can produce toxins that can be deadly to domestic animals and cause severe symptoms in people.

The bloom eventually spread to the Jordan River, and subsequent blooms have been reported at Payson Lake and Scofield Reservoir.

Multiple southern Salt Lake County communities suspended delivery of secondary water over fear the contamination would pose a health risk to people or make irrigated crops and gardens unsafe for consumption. The Utah Department of Agriculture and Food has since received lab results that showed no toxins in the produce that may have come in contact with the water.

This week, the Utah County Health Department upgraded two of its advisories based on new test results, elevating the public health warnings at the Saratoga Springs Marina and at Sandy Beach.

Conditions this summer have been ideal for the formation of the blooms. Utah Lake is 4 feet lower than what is typical, and the combination of heat and sunlight helps to foster the growth of algae.

In 2014, the Utah Water Quality Board approved a rule regulating the amount of phosphorus that wastewater treatment plants can discharge into water, including at Utah Lake. The rule, which does not take effect until 2020, requires technology upgrades at the plants to reduce the nutrient's presence in treated effluent.

“The challenges facing Utah Lake affect all of us,” Baker said. "We believe a collaborative, informed and science-based approach is our best hope for finding solutions that meet the needs of the lake, its users and the aquatic life that depend on a healthy lake for their survival.”

BLM gets new Utah director, and land challenges await (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 4:00 p.m. MDT

Summary

A 37-year veteran of the Bureau of Land Management has been selected to lead state operations in Utah, a position that has been without a permanent head for a year. Edwin Roberson was director of the BLM's National Operations Center.

SALT LAKE CITY — The Bureau of Land Management announced Wednesday that an agency veteran will lead Utah operations, filling the shoes of Juan Palma, who left more than a year ago.

Edwin L. Roberson, a 37-year career leader with the BLM, comes to the Utah post after serving as director of the BLM National Operations Center in Denver, where he oversaw the agency's operational and technical support for information technology, finance and human resources.

Roberson also served in top leadership roles in New Mexico and held senior level positions in Washington, D.C., including a seven-year tenure as the BLM's assistant director for renewable resources and planning, a position that oversees a number of BLM resource programs.

"Ed is a good listener, a proven coalition-builder and a natural leader. We are fortunate to have his experience and expertise in Utah," said BLM Director Neil Kornze. "Ed has guided some of the agency's most important work during his career, and his experience working with local communities makes him the perfect fit for this job."

Roberson will lead an agency at the forefront of the public lands controversy in Utah, where frustrated rural leaders have challenged BLM road closures by participating in ATV rides that left them with federal criminal convictions.

In Salt Lake City, the Utah BLM offices became the first in the country to postpone an oil and gas lease sale because of a protest planned by the Keep It in the Ground Movement.

Law enforcement contracts between the BLM and local sheriff offices have also been a source of rural strife, with multiple county commissioners traveling to Washington, D.C., to demand personnel changes due to accusations of a "rogue" agent who has soured relations.

Ranchers have also sued the U.S. Department of Interior over what they say is mismanagement of the wild horse and burro populations that have degraded rangeland conditions and threatened their livelihood.

On the flip side, the BLM has been a tempest for wild horse enthusiasts who say the agency favors grazers over native horse populations and institutes "cruel" roundups that injure or kill the horses.

Utah, too, is among several states in the West that are suing over BLM management plans on the imperiled sage grouse. States say cornerstones of their own sage grouse conservation plans were ignored in federal plans they assert are too restrictive and not based on science.

As head of the often embattled agency, Roberson will lead a team that administers 23 million acres of public lands and 32 million acres of minerals and energy resources in Utah.

Roberson, who begins his new job Oct. 3, has bachelor's and master's degrees in urban planning from Auburn University in Alabama.

The Latest: Fire Near Utah Ski Resort Crosses Idaho Border (AP)

Associated Press, August 24, 2016

SAN SIMEON, Calif. — The Latest on wildfires burning in the West (all times local):

11:50 a.m.

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WYOMING

Yellowstone tourists face detour for fire but landmarks open (Associated Press)

YELLOWSTONE NATIONAL PARK — Some tourists heading to Yellowstone National Park during the busy summer season faced an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hoped cooler weather would help slow the flames over the next couple of days.

"Yellowstone National Park is open for business," fire spokesman Bill Swartley said.

U.S. Interior Secretary Sally Jewell is set to visit Yellowstone on Thursday, and no changes have been made to her plans because of the fire, Swartley said.

The fire in Grand Teton has burned about 11 square miles since lightning sparked it last month, forcing the evacuation of about 50 people from a lodge and cabin operation and several campgrounds. Thirty horses also have been evacuated.

Meanwhile, four fires were burning inside Yellowstone, but all major visitor areas and roads were open.

The largest blaze spans about 42 square miles between the community of West Yellowstone, Montana, and Madison Junction, an area in the park with a campground, visitor facilities and staff housing. Lightning ignited it Aug. 8.

Swartley said the fires were mostly being allowed to burn because they were not threatening major tourist areas.

"These fires are being managed as basically a good fire for the ecology and then, of course, if there's anything getting close to cultural resources or public resources, structures, the fire is being engaged," he said.

A 10-mile stretch of U.S. 89/191/287 has been closed since Monday after flames leaped across it and were burning near the highway. The prospects for reopening the route are "not good in the near future" because the fire was close to the highway, fire spokeswoman Karen Miranda said.

Travelers coming from the south via the Jackson Hole area can still access Yellowstone through Idaho and the West Entrance. The detour adds a little over an hour to the drive to Old Faithful.

The fire is burning on both sides of the northern portion of Jackson Lake, but no buildings have been lost. More than 100 firefighters, supported by helicopters, are battling the flames.

Cooler temperatures and higher humidity were expected over the next couple of days and should help firefighters, Miranda said.

COLORADO

Construction to start on spillway bridge at Longmont's Button Rock Preserve

(Longmont Times-Call)

By Karen Antonacci
Staff Writer

Posted: 08/24/2016 06:24:00 PM MDT

Crews with Lawrence Construction will start work on a new bridge spanning the spillway at Button Rock Preserve in September, according to a city news release.

There used to be a way across the spillway, but it was destroyed in the September 2013 flood.

The new bridge will cost $1,081,000 and is being paid for from Federal Emergency Management Agency, city and state money, Longmont Spokeswoman Jennifer Loper said.

FEMA will reimburse the city for 75 percent of the cost, while Longmont and Colorado will each cover 12.5 percent of the $1,081,000, Loper said.

Lawrence Construction, based in Littleton, also built the Martin Street bridge, Loper said.

Water enters the spillway from Ralph Price Reservoir in order to keep water from overflowing Button Rock Dam.

Construction on the spillway bridge is scheduled to start Sept. 7 and last until May.

"An area west of Longmont Dam Road to the top of the spillway will be closed throughout the work period," Longmont engineer Jason Elkins said in the news release.

Hiking trails within the preserve will remain open throughout construction, but hikers will be rerouted to access the popular North Shore Trail that takes people around the reservoir.

"We will lower the water level at the reservoir to create an access point to North Shore Trail at the top of the spillway," Elkins said in the news release.

Button Rock Preserve is a 3,000-acre property that Longmont owns west of Lyons. The preserve is a protected watershed that provides the majority of the drinking water for Longmont and Lyons.

Many hiking trails and infrastructure at the preserve were wiped out in the flood. The preserve reopened to the public in June 2015.

MONTANA

Crews battling 35 large, uncontained wildfires in the West (Bozeman Daily Chronicle)

Updated 4 hrs ago

BOISE, Idaho (AP) — Thirty-five large, uncontained wildfires were burning in the West, and firefighters were making initial attacks on another 112 new blazes to prevent them from spreading.

Firefighters in the region mostly faced windy, dry conditions that have fanned flames that destroyed buildings and forced evacuations in California, Washington, Idaho and elsewhere.

Late last week, the National Interagency Fire Center in Boise, Idaho, upped what it calls the National Preparedness Level to 4, one shy of the highest level, as competition for limited firefighting resources increased.

Here's a look at the major wildfires in the West:

CALIFORNIA

Authorities say a wildfire that destroyed 45 homes on California's central coast was not intentionally set but they were still trying to determine the cause.

Cal Fire says arson has been ruled out in the 10-day blaze that has charred 64 square miles of dry brush and timber.

The fire was 39 percent surrounded and at least 2,400 people were under evacuation orders in San Luis Obispo and Monterey counties. Additional warnings for people to be ready to flee were issued Wednesday and one arm of Lake Nacimiento was closed to boaters.

Cal Fire's Rich Eagan says flames were more than two miles from Hearst Castle, which remains closed but was no longer at immediate risk.

A fire burning for a month north of Big Sur grew again to 135 square miles. Hundreds of homes remain threatened by the fire in rugged wilderness coast along Highway 1. The blaze was sparked by an illegal campfire. It is 60 percent contained.

—–

IDAHO

A fast-moving rangeland wildfire in eastern Idaho expanded to nearly 70 square miles Wednesday, forcing evacuations, threatening a windfarm and burning habitat needed by sage grouse, a federally protected bird.

The Bonneville County Sheriff's Office says evacuations are in place, with up to 70 buildings along U.S. Highway 26 threatened.

Officials say the human-caused fire reported Sunday about 7 miles east of Idaho Falls is making wind-driven runs to the north and east.

Officials say high winds are again predicted Wednesday along with low humidity.

In central Idaho, a 160-square-mile wildfire in a remote, mountainous area continues to defy containment and burn through timbered slopes that are difficult for firefighters to reach.

—–

MONTANA

Cooler weather has slowed Montana's largest wildfire, though 45 homes are still evacuated and 130 more are on alert.

The fire northeast of Thompson Falls had burned 33 square miles as of Wednesday morning.

Fire officials say crews have made progress in securing fire lines and protecting structures. The weather was cooperating again Wednesday with lighter winds and higher relative humidity forecast.

Minimal fire activity is also being reported from a fire burning west of Lakeside.

About 75 homes and other structures are within a half-mile of the fire's perimeter. No evacuations have been ordered.

—–

UTAH

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

Connect with the Chronicle on Facebook for the latest news, links and more.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WASHINGTON

Favorable weather conditions helped crews make progress Wednesday against a series of wildfires in Eastern Washington that have burned at least 18 homes this week.

A fire burning on the Spokane Indian Reservation was 30 percent contained. That fire covered more than 27 square miles and had destroyed at least 13 homes on the reservation, said Jamie Sijohn, a spokeswoman for the tribe.

"The devastating fire jumped the Spokane River from Lincoln County onto the Spokane reservation in three separate locations," Sijohn said.

It roared toward the town of Wellpinit, forcing the evacuation of the entire town on Sunday. But that order has since been lifted, Sijohn said.

Meanwhile, a fire near the town of Davenport in Lincoln County covered 6.5 square miles, and was 20 percent contained.

Another fire south of Spokane, in the Valleyford area, was 50 percent contained. It had burned more than 10 square miles and destroyed at least five homes, officials said. Mandatory evacuations ended on that fire on Tuesday night.

—–

WYOMING

Some tourists heading to Yellowstone National Park during the busy summer season were facing an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hope cooler weather slows the flames over the next couple of days.

Crowd turns out in Billings for North Dakota pipeline protest (Billings Gazette)

By MIKE KORDENBROCK mkordenbrock@billingsgazette.com

Dozens of people in Billings turned out Wednesday to protest the construction of a $3.8 billion pipeline beginning in North Dakota, standing in solidarity with the hundreds who have been protesting the pipeline with the Standing Rock Sioux tribe.

At its height, around 40 people stood on the sidewalk near the Yellowstone County Courthouse lawn holding signs encouraging supporters to honk and chanting, "Water is sacred, water is life." That was double the people event organizer Bailey Brown had expected.

The Dakota Access Pipeline is proposed to transport Bakken crude to Illinois, passing under the Missouri River.

The importance of clean water and clean air were on the mind of Tajin Perez, a Billings resident who helped Brown with the event.

"Clean air and clean water should be a right to everybody, not just those who can afford it," Perez said. "That's why people are here. They've been drawn out to the same call to stand up for what's right, for what's fair for everyone, especially those who have been disadvantaged for so long in regards to contemporary issues between the U.S. government and the Native peoples of this country."

Gerald Sherman and his wife, Jael Kampfe, made the drive from Bearcreek with four coolers of meat for Brown to deliver along with other supplies to protesters when she heads to North Dakota on Friday in a rented van.

“I’m not against oil, but I’m against a pipeline crossing the river,” said Sherman, a banking industry retiree and Oglala Sioux tribal member. “These pipelines have a history of breaking. It happened in the Yellowstone.”

When he and his wife heard about the protest in Billings, they posted their plans to attend on Facebook, and three families from Red Lodge responded by donating meat for them to take.

Sherman and Kampfe joined Lucky’s Market, Natural Grocers and others who have provided camping supplies and food for Brown to transport.

“I’m really impressed,” Brown said of the turnout. “Especially the people honking.”

Collette Montclair, a member of the Standing Rock Sioux Tribe who has lived in Billings for two years, said she’s proud of the efforts of her family and friends who have been protesting in North Dakota and that she is sad that she can’t join them. Work has interfered with her plans to return home, Montclair said, and she expected she wouldn't make the journey until October.

Like Brown, she also noted how honking car horns raised her spirit.

“I love all the support, everybody going by honking their horns,” she said.

Joining Monclair was her 4-year-old daughter, Ayasha.

“We want her to be a part of everything,” Montclair said of her daughter, who was seated on the sidewalk with a sign.

As challenges to the pipeline and its protesters continue to play out, it’s unclear what Montclair will tell her daughter when she grows older, but she offered some thoughts about what she hopes she can say.

“That everybody stood up for what’s right, stood up for what’s ours, and that we were all a part of it.”

NORTH DAKOTA

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe’s cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company’s assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small

construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it's gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America's prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see

that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

Protests over huge N Dakota oil pipeline (BBC)

24 August 2016

More than 100 protesters have gathered in Washington DC to express their fears about a huge oil pipeline which will cross four states in the western US.

The $3.7bn (£2.8bn) Dakota Access pipeline has prompted huge protests, notably in North Dakota where Native Americans have halted its construction.

It will run 1,168 miles through Iowa, Illinois, and North and South Dakotas.

US District Judge James Boasberg said on Wednesday he will make a decision on the issue by 9 September.

Outside the court in the US capital, environmental activists made their feelings clear.

They believe the transporting of up to 570,000 barrels of crude oil a day will imperil local waterways.

The company behind the pipeline, Energy Transport Partners, has said the project will boost local economies and is much safer than transporting oil by rail or road. But protesters disagree.

Activists Desiree Fairooz and Lenny Bianchi were among the demonstrators outside the court, where a federal judge was set to consider the Standing Rock Sioux tribe's request for an injunction that would effectively block the pipeline's construction.

"We're concerned about the Native Americans and the threat to their water supply but we're also concerned about the fossil fuel issue," said Mr Bianchi, a Blue Mountain, Virginia native.

"We don't feel that we should be building pipelines, we feel that the money should instead be spent on alternative sources of energy."

Protesters gather outside the US District Court while awaiting a judge's decision on whether to issue an injunction against the construction of the Dakota Access pipeline.

Dozens of protesters convened outside the US District Court, with environmental activists and members of the Standing Rock Sioux tribe uniting behind one message - water is life.

The crowd was studded with signs bearing the words "native lives matter", "water is life" and "be on the right side of history, no DAPL [Dakota Access pipeline]."

Valentine Little Shield, a member of the Cheyenne River Sioux tribe in South Dakota, took a bus to Washington to show her support for the Standing Rock Nation Tribe.

Ms Little Shield describes the contested pipeline as personal. Her grandchildren use the waters where the pipeline poses a threat to swim, fish and bathe their horses.

"I'm here because of my grandkids and what they're going to go through," she said. "They can't drink the oil, they can't take a bath in the oil."

Generations of native Americans, both young and old, took turns sharing personal accounts of why halting the pipeline was important to them as crowd broke into battle cries and pounded tribal drums.

"We're not here to protest, we're here to protect," said Lance Frazier, a member of the Cheyenne River Sioux Tribe in Eagle Butte, South Dakota.

But for many, the pipeline symbolises a deeper issue among Native Americans.

Denise Desiderio, the policy director for the National Congress of American Indians, called the unilateral support of tribes across the country a "historic" moment.

"We need to make sure our tribal voice is heard and when we raise our voice, we need to make sure it transcends this issue," she said, noting the important symbolism of land to the Native American community.

"We have had enough lands taken away, we can't let what we have left be destroyed."

Hundreds of people have been occupying one of the construction sites in North Dakota, where tensions have been running high between demonstrators, police and builders.

Judge hears tribe's argument against ND pipeline (The Hill)

By Devin Henry - 08/24/16 04:13 PM EDT

Opponents of a major North Dakota pipeline project brought their case to federal court Wednesday.

The Standing Rock Sioux tribe told a federal district judge that the government didn’t consult the tribe before approving a route for the pipeline of energy company Dakota Access, which is to run close to sacred and environmental sites in North Dakota.

They worry a breach in the pipeline will imperil the Missouri River, which runs near the project.

The tribe last month sued the Army Corps of Engineers, which approved the pipeline route. On Wednesday, lawyers for the tribe asked District Judge James Boasberg to block construction on the project until the tribe can conduct more assessments of its route.

“The law gives the tribes the opportunity to go out and evaluate the impact on important sites,” Jan Hasselmen, the Earthjustice lawyer representing the tribes, said. “The tribe and other tribes are concerned about impacts all along the length of the pipeline.”

Federal attorneys dismissed the complaint, saying they offered the Standing Rock Sioux the chance to assess the pipeline with them and that the tribe declined, while other tribes in the region took them up on the offer.

“The Corps followed procedure in this case when it actively worked to engage with the plaintiffs, the Standing Rock Sioux,” said federal lawyer Matthew Marinelli.

Dakota Access said it has taken steps to avoid damaging culturally important areas in the region. The company’s attorney, William Leone, told the court, “This is not a cowboy process.”

Early construction on the pipeline route is mostly complete in North Dakota, and the focal point of Wednesday’s hearing was on its route under the Lake Oahe segment of the Missouri River.

Dakota Access can’t begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn’t immediately urgent. Boasberg said he will try to decide the case within two weeks.

The 1,170-mile, $3.7 billion Dakota Access project would carry 570,000 barrels of Bakken crude oil from North Dakota to Illinois. Tribal groups have waged legal battles against the pipeline for months, and the project has drawn protests from tribes in North Dakota and anti-pipeline activists around the country.

Wednesday’s hearing was preceded by a rally outside the federal district court building in Washington, D.C., with tribal representatives and allies slamming federal energy policies that they say minimize tribal input. The protest drew celebrity activists like actresses Susan Sarandon and Shailene Woodley.

In North Dakota, protests against Dakota Access have landed up to 20 people in jail. Construction on the pipeline has stopped, and a federal judge in North Dakota has issued a restraining order against protesters at the site.

He will hear arguments on issuing an injunction against the protests in early September.

Amnesty International to observe pipeline protest (Bismarck Tribune)

JENNY SCHLECHT Bismarck Tribune

Amnesty International has sent a delegation of human rights observers to monitor the law enforcement response to the camp protesting the construction of the Dakota Access Pipeline under the Missouri River.

Thousands of people, including members of at least 60 Native American tribes, have camped out south of Mandan near the construction site of the pipeline -- which, if completed, will take Bakken oil to Illinois.

Tarah Demant, a spokeswoman for the delegation, said the international human rights organization has been concerned about reports that the state of North Dakota took away water resources that had been provided to protesters.

“We are concerned about the health and safety of protesters,” she said.

State-owned trailers and water tanks were removed earlier this week from the protest camp after reports of unlawful activity stoked fears among state officials that equipment would not be secure.

Amnesty International sent identical letters to North Dakota Highway Patrol Col. Michael Gerhart and Morton County Sheriff Kyle Kirchmeier to remind them of how officials are called upon to act during protests according to international human rights standards and the U.S. Constitution.

The letters discuss use of force, decisions to break up protests and how those decisions should be communicated, the use of detention and other issues.

Demant said Amnesty International only recently began sending observers to protests within the United States to ensure that law enforcement officials were protecting the right to peaceful protest, though the organization has a long history of such observations internationally. It has not previously visited North Dakota for that purpose.

The delegation arrived in Bismarck midafternoon Wednesday and had not yet traveled to the protest camp.

“Our hope is that we won’t have anything to report,” Demant said.

North Dakota Highway Patrol Lt. Tom Iverson and Donnell Preskey, a spokeswoman for the Morton County Sheriff’s Department, said they were not aware of any communications between local enforcement and Amnesty International. The group’s arrival will not change anything about how the patrol approaches the protest, Iverson said.

“Our message remains the same,” he said. “We need to keep everybody safe and promote safety for everybody involved — protesters, workers, law enforcement and the motoring public.”

Federal judge to rule Sept. 9 on Dakota Access injunction (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

“A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million,” the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.

Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

“Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court,” Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe’s historic preservation officer and many general tribal members.

“It highlighted how important this is to the tribe; this is not a small issue to them,” Tsosie said.

$1 million hardship grant awarded for Utah Lake study (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 3:50 p.m. MDT

Algae is seen floating near the shoreline at Utah Lake State Park in Provo on Friday, July 15, 2016. Public health officials decided to close the lake due to the large bloom. It was reopened on July 28, 2016. *Spenser Heaps, Deseret News*

Summary
The Water Quality Board awarded $1 million in a hardship grant to the Utah Department of Environmental Quality to continue its nutrient pollution probe of Utah Lake. This summer's pervasive algal bloom has created widespread public health worries.

SALT LAKE CITY —The second phase of a Utah Lake nutrient study to probe the algal bloom problem will begin thanks to a $1 million hardship grant awarded Wednesday to the Utah Department of Environmental Quality.

Members of the Utah Water Quality Board voted to approve the emergency grant in light of the extensive and pervasive spread of cyanobacteria at Utah's third largest lake — a problem that began early in the season and has been unprecedented in its scope.

“It’s time for us to take a hard look at the impacts of nutrients on Utah Lake,” said Walt Baker, director of the Division of Water Quality. “This study will provide us with the data and tools we need to evaluate the complex chemical and biological factors at play in the lake and make decisions that improve and protect this valuable resource.”

The funding continues a two-phase, four-year water quality study that will evaluate water quality data and look at the nutrient loads — or the amount of phosphorus and nitrogen in the lake — that is the cause of the harmful algal bloom.

Additional goals include developing tools for effective decision-making and involving partners and interested groups in stewardship of the lake's health.

Utah Lake was closed to public access for two weeks in mid-July because of an algal bloom that covered most of its surface. Lincoln Beach has been posted off-limits since the outbreak. The cyanobacteria can produce toxins that can be deadly to domestic animals and cause severe symptoms in people.

The bloom eventually spread to the Jordan River, and subsequent blooms have been reported at Payson Lake and Scofield Reservoir.

Multiple southern Salt Lake County communities suspended delivery of secondary water over fear the contamination would pose a health risk to people or make irrigated crops and gardens unsafe for consumption. The Utah Department of Agriculture and Food has since received lab results that showed no toxins in the produce that may have come in contact with the water.

This week, the Utah County Health Department upgraded two of its advisories based on new test results, elevating the public health warnings at the Saratoga Springs Marina and at Sandy Beach.

Conditions this summer have been ideal for the formation of the blooms. Utah Lake is 4 feet lower than what is typical, and the combination of heat and sunlight helps to foster the growth of algae.

In 2014, the Utah Water Quality Board approved a rule regulating the amount of phosphorus that wastewater treatment plants can discharge into water, including at Utah Lake. The rule, which does not take effect until 2020, requires technology upgrades at the plants to reduce the nutrient's presence in treated effluent.

“The challenges facing Utah Lake affect all of us,” Baker said. "We believe a collaborative, informed and science-based approach is our best hope for finding solutions that meet the needs of the lake, its users and the aquatic life that depend on a healthy lake for their survival.”

BLM gets new Utah director, and land challenges await (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 4:00 p.m. MDT

Summary

A 37-year veteran of the Bureau of Land Management has been selected to lead state operations in Utah, a position that has been without a permanent head for a year. Edwin Roberson was director of the BLM's National Operations Center.

SALT LAKE CITY — The Bureau of Land Management announced Wednesday that an agency veteran will lead Utah operations, filling the shoes of Juan Palma, who left more than a year ago.

Edwin L. Roberson, a 37-year career leader with the BLM, comes to the Utah post after serving as director of the BLM National Operations Center in Denver, where he oversaw the agency's operational and technical support for information technology, finance and human resources.

Roberson also served in top leadership roles in New Mexico and held senior level positions in Washington, D.C., including a seven-year tenure as the BLM's assistant director for renewable resources and planning, a position that oversees a number of BLM resource programs.

"Ed is a good listener, a proven coalition-builder and a natural leader. We are fortunate to have his experience and expertise in Utah," said BLM Director Neil Kornze. "Ed has guided some of the agency's most important work during his career, and his experience working with local communities makes him the perfect fit for this job."

Roberson will lead an agency at the forefront of the public lands controversy in Utah, where frustrated rural leaders have challenged BLM road closures by participating in ATV rides that left them with federal criminal convictions.

In Salt Lake City, the Utah BLM offices became the first in the country to postpone an oil and gas lease sale because of a protest planned by the Keep It in the Ground Movement.

Law enforcement contracts between the BLM and local sheriff offices have also been a source of rural strife, with multiple county commissioners traveling to Washington, D.C., to demand personnel changes due to accusations of a "rogue" agent who has soured relations.

Ranchers have also sued the U.S. Department of Interior over what they say is mismanagement of the wild horse and burro populations that have degraded rangeland conditions and threatened their livelihood.

On the flip side, the BLM has been a tempest for wild horse enthusiasts who say the agency favors grazers over native horse populations and institutes "cruel" roundups that injure or kill the horses.

Utah, too, is among several states in the West that are suing over BLM management plans on the imperiled sage grouse. States say cornerstones of their own sage grouse conservation plans were ignored in federal plans they assert are too restrictive and not based on science.

As head of the often embattled agency, Roberson will lead a team that administers 23 million acres of public lands and 32 million acres of minerals and energy resources in Utah.

Roberson, who begins his new job Oct. 3, has bachelor's and master's degrees in urban planning from Auburn University in Alabama.

The Latest: Fire Near Utah Ski Resort Crosses Idaho Border (AP)

Associated Press, August 24, 2016

SAN SIMEON, Calif. — The Latest on wildfires burning in the West (all times local):

11:50 a.m.

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WYOMING

Yellowstone tourists face detour for fire but landmarks open (Associated Press)

YELLOWSTONE NATIONAL PARK — Some tourists heading to Yellowstone National Park during the busy summer season faced an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hoped cooler weather would help slow the flames over the next couple of days.

"Yellowstone National Park is open for business," fire spokesman Bill Swartley said.

U.S. Interior Secretary Sally Jewell is set to visit Yellowstone on Thursday, and no changes have been made to her plans because of the fire, Swartley said.

The fire in Grand Teton has burned about 11 square miles since lightning sparked it last month, forcing the evacuation of about 50 people from a lodge and cabin operation and several campgrounds. Thirty horses also have been evacuated.

Meanwhile, four fires were burning inside Yellowstone, but all major visitor areas and roads were open.

The largest blaze spans about 42 square miles between the community of West Yellowstone, Montana, and Madison Junction, an area in the park with a campground, visitor facilities and staff housing. Lightning ignited it Aug. 8.

Swartley said the fires were mostly being allowed to burn because they were not threatening major tourist areas.

"These fires are being managed as basically a good fire for the ecology and then, of course, if there's anything getting close to cultural resources or public resources, structures, the fire is being engaged," he said.

A 10-mile stretch of U.S. 89/191/287 has been closed since Monday after flames leaped across it and were burning near the highway. The prospects for reopening the route are “not good in the near future” because the fire was close to the highway, fire spokeswoman Karen Miranda said.

Travelers coming from the south via the Jackson Hole area can still access Yellowstone through Idaho and the West Entrance. The detour adds a little over an hour to the drive to Old Faithful.

The fire is burning on both sides of the northern portion of Jackson Lake, but no buildings have been lost. More than 100 firefighters, supported by helicopters, are battling the flames.

Cooler temperatures and higher humidity were expected over the next couple of days and should help firefighters, Miranda said.

MAIN FEMA NEWS

NATIONAL NEWS

Fugate-Louisiana Flooding. CNN's New Day (8/19, 7:52 a.m. EST, 226K) reported, "The historic and catastrophic flooding in Louisiana, now being called the worst natural disaster since Superstorm Sandy. President Obama, under fire from some for not visiting the region because he is on vacation. Mike Pence will tour the damage. Joining us is FEMA Administrator Craig Fugate. Thank you so much for being with me. It is incredibly, incredibly troubling when you look at 20,000 people rescued, 13 people died. Thirty-one inches of rainfall in a single day. We saw some of these incredible rescue operations from vehicles as they were sinking. Give us your assessment of the devastation now, as the floodwaters are receding, and also, Craig, if you think anything could have been done to prevent the magnitude of what has happened." **Administrator Fugate**: "Well, I think, you know, the response from the governor, the local parish officials and neighbors helping neighbors really kept the death toll down. Our big challenge, I think, for everybody, including the survivors is most people didn't have flood insurance. And we know that the FEMA programs won't make them whole, so the immediate issues are how do we get people somewhere to stay, and begin the process of recovery and understand this will require assistance and programs. This will be a long-term recovery. Nothing that will get fixed overnight." **CNN Anchor**: "Could anything have been done to prevent the level of flooding, the level of devastation? Anything with levies, et cetera, or was this just the fact that so much rain fell so fast and the ground was just full of water, and couldn't absorb more?" **Fugate**: "Yeah this is classic, when you get this much rain over this area any where in the country. It is going to be devastating. It is hard to build for events people are calling 700 year or one, 000 year flood events. We've seen this in too many places. But we do know that this is increasing in frequency. When we rebuild, we won't build back to the past, but to the future risk." **CNN Anchor**: "They'll be there to tour the area today, we'll see if a contribution is made, as Michael just mentioned. It should not just be a photo op. What can they do on this visit to help?" **Fugate**: "Well, I think one is draw attention to all of the volunteer agencies that are out there, again, FEMA has our role to play, but we have a lot of volunteers, Red Cross, Salvation Army and others, nationally, people need to support these organizations so they can help these survivors. So if anything, call attention to the great work what we call the voluntary organizations, faith based, get people to contribute generously to help out. This hasn't been on national news. Most people didn't know how bad it was. So I think these organizations can use that kind of support." **CNN Anchor**: "I know we were covering it starting on my show Saturday night. The magnitude was, you know, hard for people to wrap their heads around. It didn't come on with a bang like a hurricane. When was the last time you spoke with President Obama about this?" **Fugate**: "I talked to him Wednesday, and again, his direction to me was, you know, making sure we had everything moving that we needed to move and as we anticipated, challenges coming up, his encourage. If it is a 50/50 decision, don't hold back." **CNN Anchor**: "This is seen as the worst disaster since Superstorm sandy. Did you encourage the were he is to come tour the area and help out?" **Fugate**: "Well, again, I refer back to the governor, as he pointed out, we have response operations going on. We've had people working nonstop since this started." **CNN Anchor**: "But did you talk to the bless about it? Did he ask you should I come down?" **Fugate**: "No, he was wanting to make sure that we were doing everything on our part to get our resources moving in there. But again, it's one of those issues that to move the President into a disaster area, actually takes away sometimes from the response and focus on what we're trying to do to save people." **CNN Anchor**: "No question. First and foremost, you don't want the President and his extra security his visit might bring, but let me read you part of what was written in an editorial in a local paper, the advocate there. Peter Kovac wrote this. The optics of Obama golfing while people in floodwaters is striking. The passive federal response to the state's agony in 2005, a chapter of history no one should repeat, talking about former President Bush and Katrina. Should the President be there?" **Fugate**: "Well, again, I'll take issue with the term passive federal response. This has not been a passive federal response. We were on the ground when this incident started. The Coast Guard was doing thousands of rescues." **CNN Anchor**: "Just to be clear, the passive response is 2005 in the wake of Hurricane Katrina." **Fugate**: "Well, they're trying to draw the conclusion that it is about the response and the response is basically in support of the governor. So I would defer to others about that, but I want to keep focused on what we're doing to support the survivors and the fact that Governor Edwards and his team, this is an ongoing event. We have rivers that are crested, but haven't come back down. We still have an active response going on in the midst of all this." **CNN Anchor**: "The most important thing is the victims, aside from the politics. Its about the people, all those homes, just destroyed. As you said, almost all of those people do not have flood insurance. If you're watching and want to help the victims of the Louisiana flooding, go to CNN.Com/impact." This closed captioning transcript was provided by CNN.

FEMA Chief Craig Fugate Tours Louisiana Flooding

NPR, August 19, 2016

The Federal Emergency Management Agency is working to accommodate more than 6,000 people who have been forced out of their homes by flooding. Renee Montagne talks to FEMA administrator Craig Fugate.

Obama Criticized For Golfing While Louisiana Grapples With Deadly Flooding

Los Angeles Times, August 18, 2016

President Obama is facing a backlash for continuing his annual Martha's Vineyard vacation as widespread flooding has damaged tens of thousands of homes and killed at least 13 people in Louisiana.

A newspaper in the state editorialized that Obama ought to cut his vacation short to visit "the most anguished state in the union" and show "his solidarity with suffering Americans."

"We've seen this story before in Louisiana, and we don't deserve a sequel," the Advocate wrote Wednesday. "In 2005, a fly-over by a vacationing President George W. Bush became a symbol of official neglect for the victims of Hurricane Katrina. The current president was among those making political hay out of Bush's aloofness."

Obama has received regular briefings on the storm, declared it a federal disaster earlier in the week, and dispatched Homeland Security Secretary Jeh Johnson to the region.

But conservative voices juxtaposed pictures of the floodwaters with images of Obama golfing on Thursday. A Fox News headline read: "Bias alert: Media that ripped Bush on Katrina ignores Obama on La. flooding."

Some residents also said they would appreciate a presidential visit.

"It would be great if he could come, give us moral support," said Mary Green King, as she rested at a shelter south of Baton Rouge in flood-ravaged Ascension Parish. "He's been to disaster areas."

King, 67, had just been informed by her landlord that she had 48 hours to move her belongings from her home in the bedroom community of Gonzalez, La. But when Republican U.S. Rep. Bill Cassidy visited the shelter with some aides, King shared her problems with them and felt encouraged.

"He said they would see what they can do," she said from her cot in the shelter that's still housing 524 people.

GOP presidential nominee Donald Trump plans to visit the state Friday, and opened his Thursday evening rally by talking about the tragedy.

"Our prayers are with the families who have lost loved ones, and we send them our deepest condolences," he told supporters in Charlotte, N.C. "Though words cannot express the sadness one feels at times like this, I hope everyone in Louisiana knows that our country is praying for them and standing with them to help them in these difficult hours."

La. Newspaper Asks Obama To Cut Vacation Short As Floods Ravage State

By Rebecca Savransky

The Hill, August 18, 2016

A Louisiana newspaper is calling on President Obama to cut his vacation short and visit the state to address the devastation occurring as a result of severe flooding.

"A disaster this big begs for the personal presence of the President at ground zero," said an editorial published in The Advocate on Thursday.

"In coming here, the President can decisively demonstrate that Louisiana's recovery is a priority for his administration — and the United States of America."

Obama is vacationing at his Martha's Vineyard getaway. His vacation is scheduled to end on Sunday, but the paper called for the president to "pack his bags now."

"Pay a call on communities who need to know that in a national catastrophe, they are not alone," the editorial said.

"The President's presence is already late to this crisis, but it's better later than never."

The newspaper said the president continued his vacation at a "playground for the posh and well-connected" last week as the rain brought "death, destruction and misery" to the state of Louisiana.

"Sometimes, presidential visits can get in the way of emergency response, doing more harm than good," the editorial said.

"But we don't see that as a factor now that flood waters are subsiding, even if at an agonizing pace. It's past time for the president to pay a personal visit, showing his solidarity with suffering Americans."

Crises don't follow any calendar, the editorial said, noting this is what the president signed up for when he took the job.

"The optics of Obama golfing while Louisiana residents languished in flood waters was striking," the editorial said.

"It evoked the precedent of the passive federal response to the state's agony in 2005, a chapter of history no one should ever repeat," it added, referring to Hurricane Katrina, when President George W. Bush was criticized for responding too slowly to the devastation.

The editorial said the president acted "prudently" in declaring a disaster for the area. It said the state has been "heartened" by the involvement of Craig Fugate, head of the Federal Emergency Management Agency.

Homeland Security Secretary Jeh Johnson is also planning to visit the site to "review the ongoing response," according to CNN.

But there have been no plans announced for the president to end his vacation and make a visit to the state.

Since the federal disaster was declared, more than 70,000 people have registered for individual assistance and more than 9,000 have filed flood insurance claims, according to CNN.

National Media Criticized Over Louisiana Flooding Coverage

By Frank Pallotta

CNN Money, August 18, 2016

Between August 8 and August 14, Louisiana was battered by roughly 6.9 trillion gallons of rain. As the flooding there continues, 40,000 homes have been damaged; 13 people are dead. And some observers are wondering when the national media is going to truly take notice.

One such critical voice was FEMA administrator Craig Fugate.

"You have the Olympics. You got the election. If you look at the national news, you're probably on the third or fourth page," Fugate said Tuesday. "FEMA understands this is a very large disaster impacting tens of of thousands of people. Irregardless of whether it is getting in the national coverage, we know this has had a significant impact in Louisiana."

People in Louisiana media have also been criticizing their counterparts at publications outside the state. Mike Scott, a movie critic for NOLA.com | The Times-Picayune, wrote in a column that did get national attention that the national media had "by and large, rendered the flood a secondary story at best."

"It's a matter of raising awareness," Scott told CNNMoney. "Even though this storm doesn't have a name, even though there's a lot going on out there as far as the Olympics and the circus that is our presidential election, this needs to be in front of everybody."

Mark Lorando, the editor and vice president of content for NOLA.com | The Times-Picayune, said that attention from the media could help with the recovery.

"The reality is that recovery purse strings are tied to America's heart strings," he said. "The recovery that occurred in New Orleans after Hurricane Katrina, for example, would not have been possible if viewers and readers and consumers of news across the country had not been completely and emotionally drawn into what was happening here. If people are not aware of what's happening in Louisiana and the scale of the devastation then donations to relief efforts don't flow."

He added that "Nobody here is complaining that no one is paying attention to them. People here are concerned that our recovery is going to be stunted by the lack of awareness of what's happening." National media outlets like the New York Times have been criticized for its coverage of the historic flooding taking place in Louisiana.

Some people might argue that the sad truth in 2016 is that an event in which only 13 people were killed and that does not involve a mass shooting or terror is not worthy of blanket coverage – and might point to other natural disasters, like tornadoes in the Midwest, that have also caused massive destruction and not gotten much attention. But according to meteorologists like Eric Holthaus, the storm and flooding is undoubtedly worthy of national news.

"It's equivalent to a major hurricane making landfall, it's equivalent to a forest fire burning down a city, it's on the same scale of some of these other weather stories that did make national and world news," Holthaus said. "I mean if there was a terrorist attack that leveled 40,000 homes in an American city that would obviously be front page news."

Some in the national media are looking inward and be critical of their own coverage. Liz Spayd, the public editor of one of the nation's biggest media outlets, the New York Times, devoted a recent column to The Times' delayed response to Louisiana.

"The Times is not the only news organization being criticized for doing too little too late on the floods," she wrote. "Even so, from my scanning of the media's reaction, The Times's performance seems particularly weak."

Asked by Spayd about the coverage, the Times' national editor, Marc Lacey, said that the paper could have done more and will do more.

"No doubt this is a busy news period, and the fact that it is August compounds the usual challenges of getting available staff to the site of the news," Spayd wrote. "But a news organization like The Times — rich with resources and eager to proclaim its national prominence — surely can find a way to cover a storm that has ravaged such a wide stretch of the country's Gulf Coast."

BIAS ALERT: Media That Ripped Bush On Katrina Ignores Obama On La. Flooding

Fox News, August 18, 2016

President George W. Bush was torn to shreds in 2005 by mainstream media commentators for his initial response to Hurricane Katrina – yet President Obama's detached response to the recent Louisiana floods has been met with resounding silence from those same outlets.

"George Bush doesn't care about black people" was the shocking charge by singer Kanye West about President Bush's response to Katrina. West's was a particularly blunt assessment, but echoed a growing narrative pushed by mainstream media outlets that Bush's response was out of touch, inept and most of all, he didn't care about people on the ground.

Much of the media coverage at the time not only criticized Bush for the difficulties the federal government faced in responding to the disaster, but also lambasted him for taking too long to return from vacation and to visit the site on the ground.

When he did return early from vacation, just two days after the disaster hit, he faced further criticism for flying over New Orleans on his way back to Washington D.C. before flying out to visit the victims of the tragedy.

Mainstream media condemned Bush's alleged lack of compassion, immediately predicting it would destroy his entire legacy. A USA Today article written at the time summarized it this way:

"President Bush has shown that he can be empathetic, sensitive and decisive. But those qualities eluded him for days after Hurricane Katrina, and the lapse could become a defining moment of his White House tenure," the analysis said.

The Washington Post would later go on to brand Bush's response the second worst moment of his entire presidency.

Such concerns have been almost entirely absent from media coverage of the Louisiana floods in recent days. At least 13 people have died, while at least 85,000 have registered for disaster aid.

While nowhere near as devastating as the hurricane, the floods have wrought significant destruction on the area. Meanwhile, Obama's response has been significantly more tepid than Bush's.

Obama has still not returned from his vacation at Martha's Vineyard, and the White House said Thursday Obama would spend the day golfing. While a White House spokeswoman said the president also spoke with FEMA Administrator Craig Fugate to get an update after Fugate's visit to the area, there are currently no confirmed plans for Obama to end his vacation early.

A local paper has been one of the few voices to criticize Obama's response, reflecting growing annoyance at his response on the ground. In particular, it took aim at Obama's decision to attend a Hillary Clinton fundraiser Monday.

"[I]f the president can interrupt his vacation for a swanky fundraiser for fellow Democrat Hillary Clinton, as he did on Monday, then surely he can make time to show up for a catastrophe that's displaced thousands," the editorial in The Advocate said.

"The optics of Obama golfing while Louisiana residents languished in flood waters was striking. It evoked the precedent of the passive federal response to the state's agony in 2005, a chapter of history no one should ever repeat," the paper wrote.

So far, there have been no mainstream media outlets criticizing Obama's apparent lack of response, nor have there been any celebrities claiming Obama doesn't care about the people on the ground.

Explained: Why The News Was Late To Louisiana

Houston Chronicle, August 18, 2016

As tens of thousands of people waded from swamped homes to flag down rescue boats in Louisiana this weekend, national newspapers and TV channels didn't give the wall-to-wall coverage typical of calamity. And people noticed.

The Houston Chronicle didn't put the Louisiana floods on its front page until Monday, with the headline "Thousands homeless in Louisiana flooding."

The Chronicle wasn't alone. The New York Times admitted in a web post Tuesday that "On Gulf

Coast flooding, the Times is late to the scene," and published input from a handful of readers who wondered why the unfolding catastrophe wasn't getting the attention it deserved.

"You have the Olympics. You got the election. If you look at the national news, (the flood is) probably on the third or fourth page," FEMA administrator Craig Fugate said Tuesday in Louisiana. "Just because the national media hasn't picked up on this—making it a headline—we think it is a national headline disaster."

Somehow, the Louisiana floods didn't turn to trending news as they happened. That was bad news for the victims, who depend on media publicity to spur federal and volunteer aid.

In an atmosphere so hostile to so-called "mainstream media," the episode highlighted the vital, irreplaceable role that professional journalists and publications play in covering disasters—even in the age of camera phones, Twitter and Facebook Live. The public loudly declared: the coverage was insufficient without the mainstream media on the ground.

"It's an interesting time where journalism is both vilified and craved," said Al Tompkins at the Poynter Institute. "In this day and time, when there are so many ways to get news, I think we're suggesting that it still matters whether or not the cameras and the reporters are there."

So why were the newsrooms so late to the scene? It's not became they didn't have warning. Forecasts for a monster storm emerged late in the week, while much of the national televised discourse focused on Donald Trump's false assertion that President Barack Obama "founded" the Islamic State.

The rain started Friday. Newsrooms use the same work schedule as the rest of the country: Monday through Friday, with scaled back crews on Saturday and Sunday. Mobilizing coverage of a widespread disaster is tough on the weekends—especially with print newsroom staff nationwide at less than 60 percent what it was in 2000. That trend has followed a decline in print revenue, prompted by the move of advertising to online and reader preference for free news.

It's been a strenuous summer for national news. Publications put up a lot of money to dispatch staff to big news events, like the two recent major political party conventions, aftermath of repeated shootings of black men and police, or the Olympics in Brazil.

"The fact of the matter is this stuff is really expensive to cover, I mean really expensive."

When disaster strikes, victims depend on national media to make the case that they need aid. Without publicity, help doesn't seem to arrive in quite the same vigorous way, whether from the federal government, volunteer groups or other charity funds.

Even with a slew of smart phone footage, photos and other information available online, Tompkins said, the public depends on professional journalists to package it, make sense of it, sort fact from fiction and say what it all means.

Our Views: Louisiana Deserves More From Obama – Not A Sequel To Bush's Neglect

Baton Rouge (LA) Advocate, August 19, 2016

After Hurricane Betsy ravaged Louisiana in 1965, President Lyndon Baines Johnson flew to New Orleans to comfort the victims. Standing in one evacuee shelter darkened by an electrical outage, LBJ shined a flashlight into his face so that his fellow Americans could see the leader of the free world who had come to bring them hope. Speaking into a megaphone, he offered encouragement to residents who had lost everything.

"My name is Lyndon Baines Johnson," he told weary listeners. "I am your president. I am here to make sure you have the help you need."

[Flashback, 1964: Listen to phone conversation between Sen. Russell Long and President Johnson as the senator begs for the president's help.]

Now that the flood waters ravaging Louisiana are receding, it's time for President Barack Obama to visit the most anguished state in the union.

Last week, as torrential rains brought death, destruction and misery to Louisiana, the president continued his vacation at Martha's Vineyard, a playground for the posh and well-connected.

We've seen this story before in Louisiana, and we don't deserve a sequel. In 2005, a fly-over by a vacationing President George W. Bush became a symbol of official neglect for the victims of Hurricane Katrina. The current president was among those making political hay out of Bush's aloofness.

Johnson knew that presidents can powerfully demonstrate what they stand for by where they stand. In standing shoulder to shoulder with citizens who had borne the brunt of a terrible storm, he let them know that in their misery, they were not alone.

Johnson's megaphone moment is a case study in how presidents should answer the anguish of national tragedies, and it's a lesson that leaders ignore at their peril.

Alas, there has been no megaphone moment for President Barack Obama in his response to the catastrophe plaguing south Louisiana this week. In the wake of a storm that displaced thousands and flooded huge swaths of the region, Obama continued his vacation at Martha's Vineyard.

To his credit, the president declared a disaster for the affected areas, which should speed the flow of federal aid. He also dispatched important surrogates, FEMA director Craig Fugate and Homeland Security Secretary Jeh Johnson, to Louisiana to help.

He was right to do so, but like Johnson, Obama should recognize that leadership involves symbolism as well as substance. In times of profound need, people need to see their president up close. A president's presence can underscore the urgency of relief efforts, goading a sluggish federal bureaucracy into action. In disasters as in so much of life, the old proverb is true: Showing up is half the game.

Presidents don't always get these things right. President George W. Bush's reluctance to leave his Texas ranch after Hurricane Katrina is well known, but another instructive precedent was Calvin Coolidge's low profile after the Great Flood of 1927 submerged a large part Louisiana.

Silent Cal, so nicknamed for his reticence, should have showed up quickly back then and spoken louder.

Obama, for that matter, should have been here by now, too.

Presidential Briefings On Louisiana Flood Of 2016 Aren't Enough: Editorial

New Orleans Times-Picayune, August 18, 2016

FEMA administrator Craig Fugate came to Louisiana Tuesday (Aug. 16) and promised that the federal government understands the magnitude of the disaster here. He then went back and briefed President Barack Obama on the historic flooding, according to the White House website.

"The President directed Administrator Fugate to utilize all resources available to assist in the response and recovery and asked to be regularly briefed on the ongoing response," the online update dated Aug. 17 says.

That should provide some comfort to the tens of thousands of people who have been driven from their homes by this epic storm.

But, no disrespect to Mr. Fugate, his promises and an online statement are not enough. As with the damage to New Orleans from Hurricane Katrina and the levee breaches in 2005, this disaster needs to be seen to be fully understood.

President Obama ought to make a trip to Louisiana himself.

Like Congress, the president in on vacation at the moment. But he should interrupt that holiday to spend some time with victims of the worst disaster this country has seen since Superstorm Sandy four years ago.

The raw numbers are startling: a "1,000-year" rainfall; 30,000 people rescued; 40,000 homes damaged, many severely; 75 percent of homes damaged in Livingston Parish alone. But a stat sheet cannot fully capture miles and miles of flood-ravaged homes, businesses, schools and churches or the heartbreak of thousands of Louisianians.

President Obama only has five months left in office and will turn the White House over to a new president in January.

But the next five months are crucial to the recovery here. The damage, which covers some entire parishes, is likely too vast for FEMA's typical resources to repair it. Most of the people whose homes were damaged didn't have flood insurance, many because they weren't considered to be in a danger zone.

Those homeowners and the state of Louisiana almost certainly will need extra help from the federal government. That will take a commitment from President Obama and from Congress.

Charitable giving also will be essential to recovery, as it was after Katrina. Some of the nation's private foundations are already pledging major contributions to help flood victims, and we are truly grateful for that.

But this storm has not captured the attention of America yet. "When you have a storm that is unnamed — it wasn't a hurricane, it wasn't a tropical event — people underestimate the impact that it would have," Gov. John Bel Edwards said Tuesday.

Mr. Fugate acknowledged the scant national coverage of the storm at a press conference with Gov. Edwards.

"You have the Olympics. You got the election. If you look at the national news, you're probably on the third or fourth page," Mr. Fugate said. "FEMA understands this is a very large disaster impacting tens of thousands of people." Regardless of whether it is getting sufficient national media coverage, "we know this has had a significant impact in Louisiana," he said.

The way to truly show that the White House understands the breadth of this disaster is for President Obama to get in a boat with the Cajun Navy to see the damage for himself.

The president can bring attention to this disaster as no one else can. He also can bring a level of comfort to people suffering here that his aides cannot.

Mr. President, Louisiana needs you here with us.

Louisiana Flooding: 10 Things You Need To Know On Thursday Night

By Julia O'Donoghue

New Orleans Times-Picayune, August 18, 2016

Another round of federal officials visited the sites of the Louisiana Flood of 2016 on Thursday (Aug. 18).

Homeland Security Secretary Jeh Johnson was taken the Lamar Dixon Expo Center and some of the flooded areas in Ascension Parish. The Federal Emergency Management Agency administrator Craig Fugate came to Louisiana earlier this week.

Here's what you need to know about the disaster on Thursday night:

The flooding hasn't necessarily stopped.

It's been six days since the water started to rise in the Baton Rouge area, and while the flood has receded in several parts of the state, it is actually still getting worse in others.

The state is still dealing with rising water in southern Ascension Parish as well as St. James, Acadia, Jefferson Davis and potentially St. John the Baptist. The state is still having to deal with search and rescue missions, albeit on a smaller scale.

"As I've been saying for six days now, this is ongoing event," Gov. John Bel Edwards said at a press conference Thursday.

Over 4,000 people are still in shelters, but the number has been dropping.

At the highest point, around 11,000 people were staying in shelters. Just in the last 24 hours, the number of people staying in temporary shelters had fallen by half.

But that doesn't necessarily mean that people have been able to move back into their homes. More likely, they have gone to a hotel or are staying with friends or family.

Longer-term, temporary housing hasn't been sorted out yet.

Edwards said the state is still devising its longer-term solution to the housing crisis that has accompanied the flood. Around 75 percent of homes have been called a "total loss" in Livingston Parish alone.

Edwards said the state is still looking at all options for temporary housing. He said the plan will have to be complicated because the flood affected people of varying income levels across a large portion of the state. Also, some people have flood insurance and others don't, which will affect their ability to get back in their homes quickly.

"We can't get the right mix determined until we know more about the population that is affected," Edwards said. "When we have a better feel, we will know whether and how many manufactured housing units to order."

The governor said his staff and federal officials were working as quickly as possible to gather information about the people in need of housing. He hoped to have announcement about what housing options might be available on Friday.

"Housing will certainly be a major issue," Edwards said.

Some people should be getting money from FEMA in the next 48 hours.

Edwards said an initial group of people had already been approved for financial relief from FEMA, which means they should be getting some money over the next two days. The length of time to receive the money will depend on whether you can get your check through the mail or have to have it electronically transferred, according to the governor.

950 FEMA personnel are on the ground. 750 FEMA workers are coming.

Johnson, the head of Homeland Security, said even more staff could be deployed in the future. They are still evaluating what is needed.

Around 86,500 people have registered for flood relief with FEMA so far. The agency set up its first "small business center" in Livingston Thursday.

The Red Cross expects to spend $30 million on Louisiana Flood efforts.

Gail McGovern, head of the Red Cross, said her organization has already served 100,000 meals and snacks at the shelters it is running. By the end of their time in Louisiana, they believe a total of 1.2 million meals will be given out through the Red Cross.

The Red Cross says this is the biggest disaster since Superstorm Sandy.

It's not even close. The scope of the disaster and the range of the crisis makes it the biggest relief effort the Red Cross has had to run since Sandy, which was in 2012.

Disaster food assistance will be available on Monday, but not everywhere.

Edwards said the program will only launch in seven parishes next week, even though 20 parishes have been declared federal disaster areas. There was no word on when the benefits – call the disaster supplemental nutritional assistance program or DSNAP – will be available to everyone else.

52 people had been stuck in Livingston Parish homes during the flood.

Door-to-door checks on people started yesterday in Livingston Parish. Over 800 homes were inspected and in 30 residences, people who hadn't been able to get out during the flood and weren't accounted for were found.

The governor said the 52 people were primarily elderly and frail. The body of one person who had died already also was discovered. The door-to-door checks in Livingston Parish were almost over on Thursday night, but will continue in other parts of the state.

"It is critically important that we go door to door," he said.

The governor believes lack of media attention has lead to fewer donations.

Edwards thinks the Red Cross would have received more financial support if the national media had paid attention to the Louisiana Flood earlier.

"The only downside to not being prominently displayed in the news across the country as it relates to this event, is that perhaps the national attention isn't on it as it relates to donations," Edwards said.

Needed In Louisiana As Flood Waters Ebb: 40,000 New Homes

By Rowena Lindsay

Christian Science Monitor, August 18, 2016

As the flood water in Louisiana begins to recede, the true extend of the damage caused by rain storms that dumped more than two feet of water on Baton Rouge and Lafayette in just two days is becoming clear. With an estimated 40,000 homes damaged by the deluge, thousands of people have been displaced from their homes, staying in overflowing shelters, with relatives and friends, and in trailers.

Those with flood insurance will need places to stay while they rebuild. Those without flood insurance have the even greater challenge of relocating completely – a process the state hopes will go more smoothly than it did following Hurricane Katrina.

"Thousands of people in Louisiana have lost everything they own and need our help now," Brad Kieserman, the vice president of disaster services operations and logistics for the Red Cross, said in a statement.

Volunteers have rushed to pitch in, as have companies and celebrities: Airbnb has encouraged its hosts to offer rooms for free, and singer Taylor Swift announced a $1 million donation on Tuesday.

In addition to volunteer organizations like the Red Cross, President Barack Obama has called in The Federal Emergency Management Agency (FEMA), which provides resources for housing, contacting loved ones, and filing flood relief claims. More that 9,000 claims have already been filed, according to FEMA, and 70,000 have registered for federal disaster assistance.

However, most homes in the areas hit the hardest by the flooding were not covered by flooding insurance. Only 12 percent of homes in Baton Rouge and 14 percent in Lafayette were insured against flooding, Louisiana Insurance Commissioner Jim Donelon told the Associated Press.

State officials are encouraging landlords to offer short term leases, and asking homeowners to rent out any space they can spare for people displaced by the flooding.

"If you have a unit that's an old mother-in-law suite and you can rent it out, let us know," said Keith Cunningham, who heads the Louisiana's housing agency.

Airbnb, the popular home-sharing vacation rental site, has provided a platform for hosts to offer their rental properties to victims of the flooding for free, as The Christian Science Monitor reported on Wednesday. So far more than 180 Airbnb hosts across the state are hosting people displaced by the flood.

This system actually began in 2012, after hurricane Sandy struck the Eastern seaboard. Since then, Airbnb has expanded the program to help victims of wildfires, floods, earthquakes, and terror attacks around the world, Airbnb spokesman Nick Shapiro told the Monitor.

Now, once a disaster hits, Airbnb waives its fees and emails hosts in the affected areas to let them know about the program.

"The generosity, compassion and caring, to take from their own income and welcome strangers into their property. There are just no words for that. There are no words," Kim Stewart, whose east Baton Rouge home was destroyed and who is now staying in an Airbnb home, told the Monitor. "I truly believe it's a Southern thing."

But all of these are temporary solutions.

"Nobody wants to do a long-term shelter," Terri Ricks, the deputy secretary for the Department of Children and Family Services, told the Associated Press. Ricks is helping organize long-term shelters at parishes where people can stay while they rebuild. "We want to get people in a more permanent situation."

This report includes material from Reuters and the Associated Press.

More Federal Agencies Reach Out To Louisiana Flood Victims

By Kellie Lunney

Government Executive, August 18, 2016

The Housing and Urban Development Department is expediting housing disaster relief aid to flood-ravaged Louisiana, including rebuilding grants, mortgage insurance for homeowners and assistance to low-income renters.

"Families who may have been forced from their homes need to know that help is available to begin the rebuilding process," said HUD Secretary Julian Castro on Wednesday. "Whether it's foreclosure relief for FHA-insured families or helping these counties to recover, HUD stands ready to help in any way we can."

The department said it was talking to state and local officials in Louisiana to see if they could streamline the Community Development Block Grant and HOME programs to speed the repair and replacement of damaged housing. The CDBG program in particular played a major role in helping to rebuild New Orleans and Mississippi after Hurricane Katrina in 2005. The federal grants are a favorite among state and local officials because they can be used for a variety of rebuilding and development projects.

HUD also is granting storm victims a 90-day moratorium on foreclosures and forbearance on foreclosures for home mortgages insured by the Federal Housing Administration; providing FHA mortgage assistance to those who have lost their homes and have to rebuild; and offering federally-guaranteed loans to the state and local governments for housing rehab, economic development, and public infrastructure repair. The department also announced that it "will share information with FEMA and the state on housing providers that may have available units in the impacted counties," including public housing agencies.

The excessive rainfall that battered Louisiana and parts of southwest Mississippi between Aug. 11 and Aug. 14 has affected tens of thousands of people and homes in the Gulf Coast region, and has killed at least 13 people. More than 20 inches of rain fell within 72 hours in some parts of southeastern and south central Louisiana. Approximately 20,000 people have been rescued by first responders and agencies including the Coast Guard and the Louisiana National Guard; roughly 86,000 residents already have applied for disaster assistance from the Federal Emergency Management Agency. President Obama has declared 20 Louisiana parishes in the Baton Rouge area major disasters, making them eligible for federal assistance.

FEMA Administrator W. Craig Fugate and Louisiana Gov. John Bel Edwards have been urging affected residents to apply for disaster assistance as soon as possible. FEMA is only one of several agencies that administer disaster assistance: At the federal level alone, there are dozens of programs that deal somehow with disaster relief and recovery stemming from natural disasters and terrorism, spanning at least 14 agencies, according to the website DisasterAssistance.gov.

The Agriculture Department also has released a fact sheet listing all the forms of disaster assistance it offers ranging from crop insurance to farm emergency loans and debris removal. And the Small Business Administration on Thursday opened a business recovery center in Walker, Louisiana, to help small businesses owners navigate the types of disaster assistance available from that agency.

"Consultants at the center will provide counseling on a wide variety of matters designed to help small business owners re-establish their operations, overcome the effects of the disaster and plan for their future," according to an SBA press release. "Services include assessing business economic injury, evaluating the business's strength, cash flow projections and most importantly, a review of all options to ensure each business makes decisions that are appropriate for its situation."

The Advocate, a Louisiana news outlet based in Baton Rouge, published an Aug. 17 editorial urging President Obama – who has been vacationing on Martha's Vineyard – to visit the disaster area. "Sometimes, presidential visits can get in the way of emergency response, doing more harm than good," the op-ed said. "But we don't see that as a factor now that flood waters are subsiding, even if at an agonizing pace."

Referring to Hurricane Katrina and the inattention the disaster received from government, politicians, and much of the country in the disaster's immediate aftermath, Advocate editors wrote: "We've seen this story before in Louisiana, and we don't deserve a sequel. In 2005, a fly-over by a vacationing President George W. Bush became a symbol of official neglect for the victims of Hurricane Katrina."

Homeland Security Secretary Jeh Johnson visited Baton Rouge on Thursday. For updates on federal disaster response and recovery efforts in Louisiana, click here.

86,500 Sign Up For FEMA Aid

WWL-TV New Orleans, August 18, 2016

More than 86,000 Louisiana flood victims had registered for individual federal assistance Wednesday, while the White House said Homeland Security Director Jeh Johnson will visit the state Thursday to survey the damage and the government's response in a disaster that has claimed 13 lives.

White House deputy Press Secretary Jen Friedman said Federal Emergency Management Craig Fugate briefed President Obama following Fugate's trip to Louisiana Tuesday.

"The president directed Administrator Fugate to utilize all resources available to assist in the response and recovery and asked to be regularly briefed on the ongoing response," Friedman said in an email statement.

The latest by the numbers: 3,332 people in shelters; more than 40,000 houses damaged or destroyed; 30,000 people rescued; 20 parishes included in the federal disaster declaration; 70,000 plus FEMA registrants; 115 state highways closed; and thousands of pets — dogs, cats, birds, a turtle and pigs — at shelters throughout southern Louisiana, among them Blackham Coliseum in Lafayette.

State offices will remain closed in 14 parishes Thursday, including Acadia, Ascension, East Baton Rouge, East Feliciana, Iberville, Lafayette, Livingston, St. Helena, St. James, St. John, St. Martin, Tangipahoa, Vermilion and West Feliciana.

"A decision on Friday closures will be made early Thursday," Commissioner of Administration Jay Dardenne said.

"I ask and encourage state employees without damage to assist their co-workers who sustained damage," Dardenne said.

Gov. John Bel Edwards also issued an executive order Wednesday imposing an emergency suspension of all deadlines for legal proceedings in state courts, administrative agencies and boards.

Edwards toured damage in Livingston and Ascension parishes Thursday afternoon, as well as visited the Lamar Dixon Expo Center.

Trump, Pence To Tour Flood Damage In Louisiana

By Jesse Byrnes

The Hill, August 18, 2016

Republican presidential nominee Donald Trump and his running mate Mike Pence are reportedly traveling to disaster-stricken Louisiana on Friday.

Trump and Pence will head to the flood-ravaged area of Baton Rouge, La., according to ABC News and CNN.

Trump opened his speech at a rally in Charlotte, N.C., on Thursday night by remarking on the "heartbreak and devastation in Louisiana," and offered his condolences.

"We are one nation. When one state hurts, we all hurt – and we must all work together to lift each other up. Working, building, restoring together," he said.

President Obama on Wednesday received a briefing from the Federal Emergency Management Agency (FEMA) on the deadly floods that washed over Louisiana.

About 40,000 homes had seen damage from the flooding and more than 70,000 people had registered for FEMA assistance, according to the White House.

The White House announced that Homeland Security Secretary Jeh Johnson would visit the state on Thursday to review the scene after Obama on Sunday declared it a federal disaster.

Obama, who received his briefing by phone during his vacation to Martha's Vineyard, Mass., has received criticism for not visiting the site of the severe flooding and storms, which has left 13 people dead.

A Louisiana newspaper on Thursday called for Obama to cut his vacation short, saying, "A disaster this big begs for the personal presence of the President at ground zero."

Baton Rouge is also the site where three police officers were killed and three more wounded in a shooting last month in a city that had been in the spotlight over the police-involved shooting of a black man during a traffic stop.

In A Flooded Louisiana Parish, A 3-mile Journey Down The River To Answer The Question: Did Our House Survive?

By Molly Hennessy-Fiske

Los Angeles Times, August 18, 2016

The little blond girl in striped rubber rain boots and a bright pink shirt knew things could be bad at the house she shared with her grandparents. Floodwaters had consumed much of their Baton Rouge suburb, and some of her classmates' homes had water to the roofs.

"If my house has water in it, I'm pretty sure my room has water," said 11-year-old London Guidry as she clambered aboard a small motorboat to check the family ranch house with her grandfather and his friend and fellow riverboat pilot, Josh Boogaerts.

The sun was high, the air sultry as they set off Wednesday afternoon into the storm-swollen Amite River beneath a canopy of cypress and oak. Muddy eddies swirled around them.

"How bad is the current?" London asked, wide-eyed.

"Y'all are all gonna see firsthand in just a second," Boogaerts said as the aluminum boat cruised past a submerged street sign and thudded against something as he muttered, unfazed, "mailbox."

Similar scenes are playing out across the state's eight Florida Parishes, part of a former Spanish colony clustered to the east of the Mississippi River. Residents are returning to waterlogged neighborhoods wondering whether their house survived. London and her grandfather, Dugan Phillips, would get their answer after traveling three miles downriver.

Fatal flooding unleashed by record rains crept this week from Baton Rouge to suburbs like French Settlement in Livingston Parish. A dank tide of murky swamp water destroyed up to 80% of the homes of the parish's 140,000 residents and left others gutted, smelling of dead fish.

So far, 13 people have died. Two feet of rain fell in a 24-hour stretch, swelling the Amite beyond its banks and breaking a rainfall record set in 1962. More than 70,000 people have registered for Federal Emergency Management Agency assistance; more than 9,000 have filed flood insurance claims.

"This is biblical," Boogaerts said as he steered the boat, gesturing to the submerged home of a friend.

"He's burnt out. He's done. He just put in a new game room," Boogaerts said of the friend, whose Camaro also was flooded.

They passed two men in another small boat, and Phillips, recognizing a neighbor, waved and shouted, "Good luck to you guys!"

They soon floated toward Boogaerts' own house, two stories tall and pale pink. Water had swamped the first floor and a shed packed with equipment.

"The bottom of my floor joists are gone. It's unsellable," the 43-year-old father of two said, haggard and unshaven after days of these trips. He said he plans to leave: His wife can't stand the risk on the river.

"All she has to do is hear French Settlement and flooding in the same sentence, and she's gone. Last time, she left the dog on the chain," he said. "I just can't keep dumping money into it. But it's breaking my heart to leave here."

Floodwaters washed out nearby interstates, closed more than a dozen parish schools indefinitely, opened graves and cut off this and other bayou communities for days. Gas and other staples were scarce in the village that claims to be the region's capital for "sauce patate," Cajun potato stew. The governor deployed the National Guard, but sometimes even the guard's heavy equipment became mired in bayou muck.

Stranded locals summoned their own "Cajun navy" (T-shirts now available online) — hundreds of volunteer boaters like Boogaerts who aided law enforcement in rescuing more than 15,000, many from attics and rooftops. They also delivered donated sausage to a shelter at St. Joseph Catholic Church.

The makeshift donation center, soup kitchen and shelter refused to close its doors even when the electricity and air conditioning failed, with volunteers still serving up pastalaya (jambalaya with pasta), gumbo, red beans and rice. Father Jason Palermo, a police chaplain who carries his gun in an ankle holster, coordinated shipments of water and other supplies.

"Town hall is waist-deep," Mayor Toni Guitrau said as she stopped by the church to check on relief efforts after cleaning her own home, which flooded. She said her daughter, a sheriff's deputy, was on "looter patrol."

The village was settled in 1809 as part of a Spanish land grant, and sawmills soon sprouted to process local cypress. A descendant of those pioneers, 64-year-old Dale Aydell, was among those waiting to get back to his house on Goodtimes Road, once home to Goodtimes Sawmill. The water in his home was waist-deep — not much of a good time, he added. There once was a Hardtimes Sawmill here too.

"I can't get in until probably tomorrow," he said.

The village's volunteer fire chief said he expects to see more rescues later this week. Livingston Parish President Layton Ricks, whose home in Denham Springs flooded, had to be boated back to his house to pick up blood pressure medication.

Ricks has met with the governor and federal emergency management officials, who he said have started assessing damages.

FEMA is a concern here, where many feel the agency bungled the Hurricane Katrina response. So many resettled here after Katrina, a subdivision was nicknamed "St. Bernard" after their New Orleans-area parish, Ricks said.

Out on the river, London, Phillips and Boogaerts had almost ended their journey. London covered her eyes. She couldn't look.

Then, as the boat neared a white house with dark green shutters, the girl squealed.

"Our trampoline is still there!"

Phillips' heart also leaped. The water had reached only their porch.

"It's completely dry. Yes!" London shouted as she scaled the front railing.

"Well, not completely dry, baby. We'll see," said Phillips, 61, sounding tired as he added, "The wife was hoping to get a new floor out of this."

Phillips has flood insurance and plans to rebuild — and he'll make sure the house, already elevated 4 1/2 feet off the ground, is even higher. "It's going to get raised. I'm not going to live like this no more. It's too nerve-wracking," he said.

On the porch, London passed a "Welcome to Da River" sign, some American flags and a Confederate flag (nearly every house here has one, including Boogaerts') to check on her stranded black-and-white cat, Angel. They made sure he had food before setting off.

On the way back, they saw a snake in the water, and debated whether it looked venomous. London worried aloud about looters. Her grandfather reassured her: "There's no riffraff back here."

Soon after, the motor sputtered. Boogaerts wondered whether they had run out of gas.

"How are you going to get out of here? We're going to hit another mailbox!" London said.

"I'm not even sure that was a mailbox," he replied.

Then the motor caught and came back to life. London spent the rest of the trip pointing out displaced items in the water, which showed no signs of receding: a refrigerator, a washing machine, a gas tank.

She and her grandparents would spend the night at the nearby Pelican Inn. As Boogaerts pulled up to where they had left their trucks, a text arrived from London's grandmother.

She had wanted them to leave a note on the house asking officials not to break down the door like they did in New Orleans after the hurricane, when FEMA marked houses with an "X" — search codes noting what was found inside and symbols that became known as "Katrina crosses."

Phillips reassured his granddaughter that this time, they wouldn't have to do that. The damage was not as bad as he had feared, not as bad as the homes of others who waited anxiously along the road for Boogaerts to take them out just as soon as he found some more gas.

Taylor Swift Donates $1 Million To Louisiana Flood Victims

By Christie D'zurilla

Los Angeles Times, August 18, 2016

Taylor Swift has opened her wallet to the tune of $1 million to assist victims of severe flooding in Louisiana.

The "Shake It Off" singer played the first two dates of her current world tour in that state's Bossier City and Baton Rouge.

"We began the 1989 World Tour in Louisiana, and the wonderful fans there made us feel completely at home," Swift told the Associated Press in an exclusive statement Tuesday. "The fact that so many people in Louisiana have been forced out of their own homes this week is heartbreaking.

"I encourage those who can to help out and send your love and prayers their way during this devastating time."

Thirteen people have died and tens of thousands evacuated or have had to be rescued after more than 20 inches of rain fell in three days. The Red Cross said the flooding was likely the worst natural disaster in the U.S. since Superstorm Sandy hit the East Coast in 2012.

"We've been through Hurricane Gustav, Katrina, Isaac and Rita, but this without a doubt is the roughest we've ever had in this parish," Livingston Parish Sheriff Jason Ard told The Times.

Though recent headlines have focused on the "Shake It Off" singer's love life and feud with Kanye West, Swift has been known over the years to drop big bucks to help others. Among the assists: a $4-million pledge in 2013 to Nashville's Country Music Hall of Fame for a music education center, a $100,000 Red Cross donation for victims of the 2008 flooding in Iowa, $15,000 in 2015 to a Texas firefighter who wound up saving his own family when he responded to a car crash and $50,000 in 2015 to help the cancer-stricken nephew of one of her dancers.

Meanwhile, despite its severity, the flooding in Louisiana seems to be taking a back seat, news-wise, to other stories. "You have the Olympics, you got the election," said Craig Fugate, administrator of the Federal Emergency Management Agency, speaking to Louisianans. "If you look at the national news, you're probably on the third or fourth page. FEMA understands this is a very large disaster impacting tens of thousands of people. Regardless of what it may be getting in the national coverage, we know there has been a significant impact here in Louisiana."

Extreme Floods May Be The New Normal

Scientific American, August 18, 2016

Over the past year alone, catastrophic rain events characterized as once-in-500-year or even once-in-1,000-year events have flooded West Virginia, Texas, Oklahoma, South Carolina and now Louisiana, sweeping in billions of dollars of property damage and deaths along with the high waters.

These extreme weather events are forcing many communities to confront what could signal a new climate change normal. Now many are asking themselves: Are they doing enough to plan for and to adapt to large rain events that climate scientists predict will become more frequent and more intense as global temperatures continue to rise?

The answer in many communities is no, it's not enough.

They could be doing much, much more to adapt—not just people and how they respond to climate change, but homes, buildings, roads, and levees and other infrastructure, said Gavin Smith, director of the Department of Homeland Security's Coastal Resilience Center of Excellence and a research professor at the University of North Carolina's Department of City and Regional Planning.

One of the first shifts that must happen, many experts in hazard mitigation say, is to stop using the climate of the past to plan for the future.

"One of the great challenges is to recognize that a lot of communities, a lot of cities, a lot of human settlements in general were designed to reflect the climate of the past," said Smith, who also served as the director of the Mississippi Office of Recovery and Renewal after Hurricane Katrina.

"These issues, they are happening and they're going to become worse, and the changes are occurring within a context where we've designed cities to reflect a previous climate," he said.

The 39-hour rain event in Louisiana, which killed at least nine people and flooded upward of 40,000 homes, was a radical weather system that would have done plenty of damage, global warming or no. The same was true for a July 30 flash flood in Ellicott City, Md., which killed two people and swept a wave of destruction through the historic downtown when 6 inches of rain fell over several hours.

Yet climate change also likely played a role, if mostly to intensify the amount of rainfall because of an increased amount of water vapor in the atmosphere caused by higher temperatures. It's an emerging field of study, but climate scientists are working on models that could determine whether specific extreme weather events are caused by climate change (ClimateWire, June 14).

What climate scientists do know is that the intensity of extreme precipitation events is on the rise. With rising global temperatures, the 2014 National Climate Assessment predicts that many communities will see such extreme precipitation events more frequently.

More frequent events could defy traditional methods of planning for floods, like using 100- and 500-year floodplain maps to plan communities and develop flood insurance rates and who has to have it. It could also radically shift how engineers and architects design buildings. Coupled with sea-level rise in some places, such rain events could also affect how emergency response teams issue storm warnings or prepare people for weather events.

They're all factors that communities must consider as climate change creates uncertain weather patterns, said Susan Cutter, a geography professor and director of the Hazards and Vulnerability Research Institute at the University of South Carolina.

"How many of those people have built infrastructures to withstand flooding? Are they building homes in the 100- and 500-year floodplains?" said Cutter, who has helped create a federal framework for measuring community resilience to climate change and other hazards. Today's 500-year floodplain, tomorrow's 100-year floodplain?

Some communities in Louisiana have already begun such adaptation, including requiring higher minimum elevation of new structures and requiring older ones to be raised higher to qualify for lower flood insurance rates. In some communities where Superstorm Sandy flooded homes and businesses, building codes now require construction of what's known as freeboard, the space between where 100-year flood levels are projected to rise to in major storms or floods and the start of the building.

Cities and counties thinking about development patterns could go even further, she said. By mitigating short-term hazards like the floods they know they'll have, they can develop the adaptive capacity for longer-term changes.

"The resilient approach would be to take the next step and say, 'OK, we know that there's some climate sensitivity to this. Why don't we develop strategies for that 500-year floodplain?'" she said. "Thinking that perhaps that 500-year floodplain today might be tomorrow's 100-year floodplain because of climate change."

This will require a major shift in thinking, said Richard Wright, who heads the American Society of Civil Engineers' climate adaptation committee. The society releases a report card every four years identifying old, outdated and deteriorated infrastructure across the United States. Engineers now must also think about change climate models.

"We do have our standards on minimum design loads for buildings and other structures, and our standards on flood resistance, which does look at providing adequate margins of safety," he said. "But the difficulty is that these are based on the historical records. And the thing that the climate and weather science community tells us is we can't expect the climate weather extremes of the future to be defined by those of the past.

"We say to them, 'That's a problem for us. Our design criteria are based on the historical records. What will the climate and weather extremes of the future be?' And the answer we get is: 'We don't know,'" he said. "This gives us a very challenging situation."

He calls for an adaptive risk management approach to make buildings and infrastructure strong enough for what science knows about climate change, and adaptable to what is unknown. Adaptive risk management, which he and other engineers once called "low-regret decisionmaking," gives local, state and federal governments more wiggle room to change things if they need to make additional adaptations to a changing climate.

"We need to work with the climate weather science community to get forecasts of what these extreme events will be over the 50- and 100-year service lives of our infrastructure," he said. "Because our design criteria, our load and resistance factors, are carefully calibrated to provide the intended level of safety. So what we need to do is understand: What will the 50- and 100-year flood be 50 and 100 years from now, not just today?"

A report issued earlier this summer by the Rand Corp. for the Department of Homeland Security urges U.S. policymakers to incorporate additional climate change risk assessment into infrastructure planning (ClimateWire, July 14).

Climate change could expose vast swaths of U.S. infrastructure to additional natural hazards that are likely to intensify as sea levels rise, temperatures increase and precipitation patterns shift, the report found. Power transmission lines, ports, refineries and wastewater treatment facilities across the country are vulnerable to climate change.

Communities do have several tools at their disposal to protect infrastructure and plan for more extreme weather, said UNC's Smith. One tool is what are known as hazard mitigation plans. States are required to submit the plans to the Federal Emergency Management Agency in order to qualify for federal money when disasters occur. The plans require communities to document areas of weakness and, when done well, help states figure out how to minimize damage from natural disasters.

The plans often address how to respond to flooding, whether it's by changing development patterns, making homes and businesses less vulnerable to floodwaters, or by moving people and homes out of harm's way with buyouts. Flooding is the most common and costly natural disaster in the United States, according to the Insurance Information Institute, and it is the most frequent reason for declaring a federal disaster.

Smith has studied the effectiveness of state hazard mitigation plans. He and his research partner found that even if communities identified their risks, there's not often action on policies and projects to reduce their risks.

Few addressed land-use planning as a tool, for example, he said.

"These plans could be and can be a powerful tool to think about where and how to build within relations to hazards and, also within reason, to try to limit development in areas that we know are flood-prone," he said. "These plans should be proactive, not reactive." When history is no longer a guide to the future

Last year, the Natural Resources Defense Council was among the organizations that successfully petitioned FEMA to require states to consider the effects of climate change when they update their hazard mitigation plans.

Until now, most states have looked at past disaster experiences and used that information as the basis of determining what their future disaster experiences are going to be, said Rebecca Hammer, a staff attorney at the NRDC's water program.

"And as we know, climate change is rendering that assumption completely void," she said. "So looking backward is not a good way to develop these plans anymore, because when you take future risk into account, the strategies that you're going to use are going to be different than if you were just planning for your past disasters."

The first state to submit a hazard mitigation plan with climate change factored into its response was Maryland. The recently submitted plan has not yet been made public—a weakness in the process, the NRDC says, since the public doesn't have a chance to weigh in.

Hazard mitigation plans could be effective tools for adapting communities to climate change, especially flooding that could be prevented. Congress often makes money available after a natural disaster, Hammer said, but it's "often less politically palatable in a lot of places nowadays to invest in pre-emptive resilience action."

That's unfortunate, Hammer said.

"We know it's more cost-effective to take these actions up front instead of just waiting for a disaster to strike," she said. "It's just a matter of political will and funding. That's why we don't see as much of this happening as we need to."

It's never easy for communities to tackle such issues, though, especially when people are still trying to stay safe from floodwaters, mourn the loss of loved ones, and to repair their homes and businesses so they can return to work or school.

"Addressing these really complex, sometimes contentious policy issues can take years to try to think through," Smith said. "Thinking through how to make these big policy choices when people are suffering is really difficult to achieve."

But it can be vital for communities to consider such questions if they want to thrive as they adapt to climate change, he said. As they confront a new normal, asking themselves the tough questions can lead to lasting societal change in the form of lower flood insurance rates and safer, more equitable and even greener communities.

"Oftentimes the metric of success in recovery is speed. How quickly can we get back to what we knew?" Smith said. "Well, getting back to what you knew, maybe it was high risk, inequitable, a degraded environment and a poor economy. Is that what you want to return to? Changing the status quo and changing it in the aftermath of a disaster is extremely difficult."

Resilient communities will have to look beyond the next election cycle and even the inertia of human nature to adapt to climate change, Cutter said.

"At the one level it's a political problem, it's a resource and economic problem, but it's also a cultural problem," she said. "We're not thinking about protecting these assets down the line. We don't think in the future, we think in the present."

FEMA Halts Katrina Payments In Mississippi Over Mismanagement Allegations

By Tony Pugh

McClatchy, August 18, 2016

The Federal Emergency Management Agency will suspend reimbursement of nearly $30 million to the state of Mississippi for disaster mitigation work because of lax state oversight and financial irregularities in a program to strengthen homes against wind damage following Hurricane Katrina.

An audit report by the Office of Inspector General for the Department of Homeland Security claims the Mississippi Emergency Management Agency has been unable to provide documentation for $30.5 million in state funds that were supposedly paid to contractors for work on 945 homes in Hancock, Harrison and Jackson counties as part of the state's Coastal Retrofit Program.

The contractor invoices are now being held by MEMA because Mississippi is investigating the program and looking for documents to validate the contractor payments.

Because the state could still seek nearly $30 million in federal reimbursement for the expenditures, the inspector general called on FEMA to put the brakes on further payments for program.

The program estimated that each of the retrofits would cost, on average, nearly $15,000. The actual cost to repair the 945 homes averaged more than $33,000 apiece.

"We recommend that FEMA deobligate or suspend the entire $29.9 million (in reimbursements) until Mississippi provides proper oversight of the program and reasonable assurance that federal funds can be properly accounted for and expended in accordance with federal regulations and FEMA guidelines," the report said.

In a July 14 response, a FEMA regional administrator, Gracia Szczech, said the agency will suspend payments until proper documentation is provided. The agency will also require Mississippi to verify that the contractors' work has been completed and complies with federal regulations. And FEMA will require Mississippi to explain cost overruns in the program.

In a statement, MEMA Executive Director Lee Smithson said "the Mississippi Emergency Management Agency has ongoing audits of the entire Coastal Retrofit Mississippi Program. We cannot comment on the OIG report until those audits are complete."

After Hurricane Katrina in 2005, FEMA approved nearly $29.9 million for the program, which was designed to shore up 2,000 homes against wind damage from future disasters. The first home fix-ups began in February 2012.

The program estimated that each of the retrofits would cost, on average, nearly $15,000. The actual cost to repair the 945 homes averaged more than $33,000 apiece.

But despite state guidelines that call for more than one person to oversee the program in order to reduce fraud and error, the state department of finance – which oversaw the program for MEMA – gave one employee total control over the program, including the approval of contractors' work and authorization of payment, the audit said.

Made aware of the improper program oversight in December 2014, state officials didn't take action "to stop or mitigate the problem until February 2016 – after we initiated this audit," the report stated.

This lone employee, while working for MEMA and the state department of finance, "approved and influenced other state employees to process nearly $31.5 million in payments – more than the amount of the ($29.9 million) grant," the report said. Doing so "may have circumvented the state's accounting controls," the report found.

Even though the $31.5 million surpassed the amount that FEMA would reimburse, the money only repaired 945 of the estimated 2,000 homes slated for improvement.

In addition, MEMA claimed the work on the 945 homes was completed by May 2015. But state department of finance records through May 2016, show that MEMA had paid only $20.5 million for the program – not $31.5 million as was reported.

The state has sought FEMA reimbursement for only about $958,000 of the contractor payments, leaving some $30.5 million unaccounted for because the employee "did not allow a contracted accounting firm to reconcile payments of $30.5 million in invoices," the report said. "However, no one above the employee's authority questioned the situation."

The program estimated that each of the retrofits would cost, on average, nearly $15,000. The actual cost to repair the 945 homes averaged more than $33,000 apiece. The actual cost was about 123 percent more than estimated.

The report said MEMA provided no substantial evidence to support the cost increases and the employee who had complete control of the program "would not allow us or Mississippi officials access to the contractors' invoices totaling $30.5 million."

"The lack of access to documents prompted us to question MEMA and other Mississippi officials and led the newly appointed executive director of MEMA (Lee Smithson) to contact the Mississippi State Attorney General's Office," the report said.

Rachael Ring, a spokesman for State Attorney General Jim Hood, did not respond immediately to a request for comment.

In The Rockaways, Dancing By The Surf And Sand

By Melena Ryzik

New York Times, August 18, 2016

Anyone who has turned a cartwheel in the sand or sprinted along a shoreline can identify: Something about the beach feels invitingly kinetic.

That was part of the inspiration for the Beach Sessions Dance Series in Rockaway Beach, Queens.

"People running, playing sports, the waves moving and the sea gulls flying — there's a lot of movement," said Sasha Okshteyn, the founder and curator of the series, now in its second year. "That's a pretty perfect background for a dance performance."

On a stage set up on the sand near Beach 86th Street, she has invited several contemporary choreographers and young troupes to perform free for beachgoers this Saturday and next. "One of the missions of Beach Sessions is to show the creative capacity of the Rockaways," said Ms. Okshteyn, a Rockaway resident who spends her days as a digital marketing manager for the Stephen Petronio Company and a curator for her family's Bushwick gallery.

With a stage open on all sides and vast seating capacity, audience members can enjoy numerous vantage points — without putting on their shoes or giving up their umbrellas. Boardwalk spectators are encouraged. The informal setting gives viewers "more agency than people sitting in a theater seat, and the possibility of more empathy," said Kora Radella, the choreographer and a founder of the group Boomerang, which is on the bill for the first show.

Although the group's piece "Repercussion" was not commissioned for the site, the surf views have already seeped in. "It's an aesthetically liberating space, unsanctioned by right angles and buildings," said Matty Davis, a dancer and an artistic director of Boomerang. "It's a little bit of an oasis."

Boomerang's collaborators include Greg Saunier, the drummer for the indie band Deerhoof, who will accompany the group's beach set with live percussion, and perhaps get himself — or his instruments — involved with the dance, too. During a photo shoot for the show, "I was in the ocean, up to my neck, wielding the cymbal and seeing how it sticks in the sand," Mr. Davis said.

Also this Saturday, the choreographer Laurie Berg will present her work "The Mineralogy of Objects," whose star, the critic Brian Seibert wrote in a review in The New York Times last year, is "an inflatable sex doll named Tanya."

Ms. Berg and her fellow dancers "engage her in an absurdly acrobatic ballroom duet," Mr. Seibert wrote. "They roll with her on the ground as she deflates."

Fear not: Tanya is not left behind, nor, if the dancers have anything to do with it, is any other plastic. Performances end with an invitation for audience members to participate in a beach cleanup in partnership with the Surfrider Foundation. (They'll be rewarded with a drink ticket for a nearby brewery.) While Ms. Okshteyn financed the first dance series through Kickstarter, she has received support and funding from Queens arts organizations and the Parks Department for this installment, and she hopes that Beach Sessions will grow into a more formidable event locally.

Though the peninsula has lately welcomed a new surge of artists — Ms. Okshteyn moved there after Hurricane Sandy — it's not yet thought of as a place for dance-making. "Choreographers always go to residencies upstate, and in really rural areas, but I think it would be really interesting to have residency capabilities in the Rockaways," Ms. Okshteyn said, "where you can make dance inspired by this unique environment — it's a beach town but urban, really Irish, and hipster. I think that could inspire amazing work."

For Ms. Radella of Boomerang, it's already primed for dance. Part of their choreography, she said, "is deliberately having some rawness stay intact, and this environment really goes along with that. Bring your sunburn; go in the water; drink a beer. It's really natural, and it's fitting."

Wildfire Near Santa Barbara Burns 600 Acres, Prompting Evacuations

By Matt Hamilton

Los Angeles Times, August 18, 2016

A wildfire that erupted Thursday afternoon near a campground north of Santa Barbara quickly spread to 600 acres and threatened homes in the rugged area, authorities said.

The Rey fire was reported about 3:30 p.m. near the White Rock Campground off Paradise Road amid strong winds and temperatures in the 90s, said Mike Eliason, spokesman for the Santa Barbara County Fire Department.

Some mountain cabins and homes along Paradise Road were evacuated, but precise figures on evacuation numbers were not immediately available. Several motorists were trying to flee the area as the blaze quickly spread, Eliason said.

A portion of Highway 154 was briefly closed between Santa Barbara and Santa Ynez, but has since been reopened. Paradise Road remains closed.

The blaze was 20% contained as of 9 p.m.

The fire was burning in a remote, rugged area near the Santa Ynez River. Firefighters had difficulty reaching the burn area with engines, prompting a strong aerial attack that included two helicopters and four air tankers, according to a statement issued by county officials.

Firefighters were trying to dump retardant across the northern flank of the fire to slow the growth of the blaze, Eliason said.

Winds were pushing the fire toward the north and west, away from the more populated areas along the county's scenic coast and further into Los Padres National Forest, Eliason said.

The last massive wildfire to occur in the area was the Zaca fire in 2007, which charred more than 375 square miles and became one of the largest fires in California history.

In the Rey fire, no structures have been lost, but an unknown number of structures were threatened.

An evacuation center opened at Santa Ynez Valley Union High School. Residents who need help evacuating animals should call (805) 681-4332.

This story will be updated as more information becomes available.

This article was updated with additional details about the growth of the fire.

More Than 1,500 Firefighters Are Battling The Blue Cut Blaze

Los Angeles Times, August 18, 2016

More than 1,500 firefighters continue to battle the Blue Cut fire on Thursday as flames ripped through canyons and flatlands and reduced homes to ash and rubble.

Although crews made some progress against the blaze, which was 4% contained as of 6:30 a.m., a red flag warning is still in effect, meaning weather conditions are prime for a fast-moving, destructive wildfire.

"We Got Our Butts Kicked," Firefighters Say As Blue Cut Fire Defies Containment

By Angel Jennings, Bettina Boxall And Paloma Esquivel

Los Angeles Times, August 17, 2016

All the ingredients were there. Dry heat, gusting winds in a mountain pass cloaked in dead grass and drought-shriveled chaparral.

All it needed was a spark. It came at 10:36 Tuesday morning near Kenwood Avenue west of Interstate 15. The Blue Cut fire was born.

"It all aligned. The wind, the fuel and the topography," said Capt. Howard Deets of the Mill Creek hotshot crew based in the San Bernardino National Forest. "When that happens there's nothing you can do about it. You could throw the world's fire fighting resources at it and it's just going to keep going."

That's what the Blue Cut did, chewing through 25,626 acres by Wednesday night, forcing mass evacuations and shutting down one of the most heavily used routes through the mountains that form the untamed backdrop to the sprawl of the Los Angeles Basin.

The terrain near where the fire started is so rugged and steep that "it's like wadded up paper" said incident commander Michael Wakoski, a battalion chief with the San Bernardino County Fire Department. "It's almost impossible to move up and down the slopes. It makes containment of the fire very difficult.

When firefighters arrived Tuesday morning, a freight train stood idle on the tracks, abandoned by the engineer, who fled the fast-moving fire.

Gusts of 20 to 30 mph pushed the blaze north in the Cajon Pass, a natural wind tunnel, tossing embers a half-mile ahead of the flame front. The fire jumped the freeway.

Firefighting crews were left on the defense, struggling to protect homes as flames consumed chaparral, pine trees and yucca.

"We got our butts kicked," Wakoski said.

The firefighting effort is complicated by the patchwork of crucial infrastructure that runs through the pass: Electrical lines that provide power to the basin, rail lines, high-pressure gas lines, a fiber-optic network — even a pipeline that carries jet fuel.

The cause of the blaze is under investigation, but most wildfires in Southern California are caused by people, accidentally or intentionally. According to Caltrans, an average of 156,000 vehicles a day pass the Kenwood Avenue area — a endless source of sparking tail pipes, engine fires and discarded cigarette butts.

Richard Halsey, director of the California Chaparral Institute, drove through the pass earlier this summer.

"It was very stunning to me to see how much of that landscape through the Cajon Pass had been burned multiple times and was filled with invasive grasses."

Native chaparral shrubs can't survive repeated fires over a short time span. They yield to invasive grasses that ignite easily and burn quickly, increasing the fire threat.

"It's not how we fight the fires. It's how do we stop them from starting in the first place," argued Halsey, who thinks Caltrans should consider placing concrete K-rail barriers along the freeway in the pass to stop sparks from flying into roadside vegetation.

The Blue Cut fire is but the latest reminder that "we're living where it burns," said Char Miller, a Pomona College professor of environmental analysis. Noting the huge evacuations ordered for the fire — some 83,000 people have been told to leave their homes — he questioned the wisdom of allowing so much development at the edge of high-fire zones.

"We don't allow it in flood plains, we prevent earthquake damage, but we don't do it with fire," he added.

Five stubborn years of drought have made Southern California's naturally flammable landscape even more fire prone.

"We have an amazing amount of standing dead shrubs in addition to extraordinarily low live-fuel moisture," noted Marti Witter, a fire ecologist with the Santa Monica Mountains National Recreation Area.

"I'm really, really concerned about what's going to happen" this fall if the region doesn't get early rains and it's a season of strong Santa Ana winds, she said. "We would be lined up for another firestorm year."

This article was updated with additional details on the size of the fire.

California Reopens Some Commercial Routes As Wildfire Rages

Raging Blue Cut Fire Leaves Some Homes In Smoldering Ruins, But Scope Of Loss Still A Mystery

By Brittny Mejia, Angel Jennings, Ruben Vives And Corina Knoll

Los Angeles Times, August 18, 2016

The tiny stone home was little more than a blackened shell. The only hint of its former occupants: a metal bed frame, a shattered toilet seat, charred tin cans.

Nestled along Lone Pine Canyon Road, a narrow, twisting thoroughfare, it was a bleak symbol of all that has surrendered to the raging fire that continues to terrorize the Cajon Pass.

But for all the devastation that the Blue Cut fire has wreaked, officials have had difficulty determining the damage left by explosive flames that quickly overtook nearly 36,000 acres.

Damage assessors have been hindered from surveying the destruction because of erratic fire behavior and intense flames that broke through retardants dropped by air crews, Eric Sherwin, an incident-response spokesman with the San Bernardino County Fire Department, said Thursday.

Fire swept through numerous remote hillsides and canyons, burning some structures to the ground but sparing others nearby.

Officials continue to say only that “numerous” buildings have been lost but are unable to estimate how many of those are homes. They said among the hardest hit were in West Cajon Valley and Swarthout Canyon, where deputies arrested three people suspected of stealing a vehicle from a residence.

On Thursday, there was a chilling silence in some areas where the fire had marched. The earth around a section of Highway 138 was scorched, power poles blackened, their wood splintered. A gentle wind stirred up ash, sending it swirling along the ruins.

A pinwheel spun in a backyard, near the smoldering carcass of a home. Nearby, in a garden, a sign creaked, swaying gently in the breeze.

“The kiss of the sun for pardon
The song of the birds for mirth
One is nearer God’s heart in a garden
Than any place else on earth”

Crews are now focused on communities west of the fire, such as Lytle Creek and the mountain resort town of Wrightwood, which is dotted with apartments and small homes and has the highest housing density in the area.

Firefighters have centered efforts on Lone Pine Canyon Road, the back door into Wrightwood, in hopes of preventing the blaze from jumping over the ridge. Still, gusty winds, high temperatures and low humidity persist and could create the same challenges that have haunted crews since the fire broke out Tuesday.

Although the Blue Cut fire calmed slightly overnight and halted its march north and east, it spread more than 4,000 acres Thursday, measuring 35,969 acres. The fire is just 22% contained, and a red flag warning remains in effect.

Some signs of progress were evident Thursday. Mandatory evacuations were lifted in several communities, and Caltrans reopened the 15 Freeway, a key trucking and commuter route that runs from San Diego, through the Inland Empire and across the Mojave Desert into Nevada. Its two-day closure had contributed to massive congestion, creating nightmares for both travelers and those trying to evacuate.

Highway 138, another major roadway in the area, was expected to remain closed until further notice, according to the CHP.

Along Lytle Creek Road on Thursday, sunlight highlighted fire retardant-covered ridges and caution tape fluttered in a light breeze outside evacuated homes.

Resident Maria Hadaway, who chose to stay, likened the deserted stillness to an episode of “SpongeBob SquarePants” in which the eponymous cartoon character wakes up alone in his town.

“That’s me. I’m SpongeBob in Bikini Bottom,” she said. “I’m hoping they let everyone [back] up here, because I don’t like being alone.”

Still in her pajamas, the 62-year-old sat in front of her home with a neighbor.

Hadaway said she stayed because of her dogs. She’s been feeding neighbors’ dogs as well, she said.

When authorities arrived to ask residents to evacuate, Hadaway locked the door, closed the drapes and didn’t answer.

Those who evacuated find themselves mired in uncertainty.

“I don’t want to be blindsided again,” said Sheri Sladwick, 46, who lost a home to fire 13 years ago.

Now she hears conflicting reports about whether fire ran through her neighborhood in Lytle Creek and doesn’t know what to believe. She is frustrated that there have been few specifics about the damage.

Fire crews in the Cajon Pass have likely had difficulty determining the number of homes lost because of safety concerns and protocol that grants wildland firefighters the right of way over those damage assessors, according to fire experts.

“Engines have to get to the homes and other areas,” said Sam Lanier, a former fire captain who founded a site that offers real-time updates on wildfires throughout the country. "If multiple vehicles are there, it's hard to get out."

The standard guidelines say that life is prioritized first, followed by property conservation and environmental protection, Lanier said. When it comes to protecting specific areas, crews look at what will help mitigate the firefight, never at what is considered the most valuable.

"There is no pre-made map to say we're going to protect this area first. Firefighters are blind to the cost. The job is to go and save as much as possible."

The California wildfire season, once confined to autumn, has found itself stretched earlier and later, with hundreds of homes and eight people killed in wildfires already this year.

Fire agencies have been overworked, some of its firefighters working with no sleep while thrown into battles fueled by triple-digit temperatures, wind and desiccated tinder.

James Bailey, who has lived near the Cajon Pass for about 40 years, drove up to an area community center Thursday. He was relieved to find it still standing, although its surroundings had been singed.

"Everything around it is just like a moonscape," he later informed his wife.

The couple had stayed put in their trailer park mobile home having faith in its metal frame and concrete base, although took care to douse the property with water.

A day earlier, Bailey had marveled at the flames, smoke and fire coming from behind Mountain Lakes Resort.

"When it came over the hill, it had to have been 100 feet tall," Bailey said. "I can't believe how big the flames were. The whole mountain was red."

The activity taking place around them for the last two days has been unsettling.

Water drops from air tankers, sirens from fire engines, blades rotating on helicopters — all sounded eerily, they said, like war.

This article was updated with current statistics on the size and containment of the Blue Cut fire.

This article was updated throughout with additional details and editing.

This article was updated throughout with new information from fire officials and details from residents.

Northbound 15 Freeway Reopens Through Cajon Pass After Devastating Wildfire, CHP Says

Los Angeles Times, August 17, 2016

The northbound lanes of the 15 Freeway through the Cajon Pass reopened late Wednesday, according to the California Highway Patrol.

The freeway, a key trucking and commuter route that connects Southern California with Nevada, was closed after the 25,626-acre Blue Cut fire erupted Monday in San Bernardino County.

The CHP reopened the connector road between the northbound 15 Freeway and the 215 Freeway about 10:15 p.m. Shortly thereafter, the northbound 15 Freeway lanes were reopened.

Several off-ramps from the freeway remain closed, including Kenwood Avenue, Cleghorn Road, Highway 138 and Oak Hill Road, according to the state Department of Transportation.

The southbound lanes of the 15 Freeway, as well as Highway 138, another major roadway in the area, were expected to remain closed until further notice, according to the CHP.

Caltrans crews were working to repair guardrails and sections of the road damaged by the massive fire.

The freeway runs from San Diego, through the Inland Empire and across the Mojave Desert into Nevada. The reopening of the roadway will probably ease congestion prompted by the massive evacuation of residents around the Blue Cut fire's burn area.

Caltrans advised motorists to drive with a full tank of gas and to be prepared for delays.

Columns Of Smoke From The Blue Cut Fire Are Visible From Space

Los Angeles Times, August 18, 2016

A NASA satellite passed over Southern California just before noon on Wednesday, and it captured a bird's-eye view of the 25,600-acre wildfire in the mountains of San Bernardino County.

From high above, the Blue Cut fire appears as three plumes of smoke from the mountains east of Los Angeles. The urban sprawl of L.A. and its surrounding cities look like a stretch of gray abutting the deep blue ocean.

NASA said the cloud of smoke spreads northeastward over the eastern boundary of California and extends into Nevada.

The imaging tool used to capture the snapshot of the smoky blaze was built and is managed by NASA's Jet Propulsion Laboratory in La Cañada Flintridge. The satellite on which the imaging instrument is affixed is managed by a NASA office in Maryland.

Why So Many Refuse To Evacuate As Wildfires Approach

By Louis Sahagun, Ruben Vives And Joe Mozingo

Los Angeles Times, August 17, 2016

Trucks and SUVs hurtled out of the canyons in clouds of dust, loaded to the headliners with keepsakes and valuables, towing ATVs and old Jeeps.

As if there weren't enough smoke in the air, Leo Paguin took a drag from a cigarette and watched his neighbors flee.

"Those are the smart ones, I guess," he said.

Paguin, 66, with a deep-creased desert face and grizzled gray beard, watched the black smoke rise from the mountains a mile away from his little house in Pinon Hills.

All day Wednesday, unstable winds twisted flames into fiery tornadoes as the Blue Cut fire tore through 30,000 acres of dry foothill and desert vegetation. Officials kept Interstate 15 — a major artery into Southern California — closed for more than a day and ordered an estimated 80,000 people to evacuate.

But many, like Paguin, refused to go, much to fire officials' chagrin.

Lynne Tolmachoff, a spokeswoman for the California Department of Forestry and Fire Protection, warned that people misjudge how suddenly fires can be upon them, leaving no time or route to escape.

"The way the fires are moving in this drought-stricken state, they are more explosive, and they move much quicker through the dry vegetation. So the danger is increased," Tolmachoff said.

There is no doubt that residents who have ignored evacuation orders have saved homes, putting out smoldering embers with a garden hose or summoning firefighters to a burning house. But the risk is extreme. And firefighters may have to risk their lives to save those trapped in a conflagration.

Even the slightest hesitation with deciding whether to evacuate can mean the difference between life and death.

"People that evacuate late in a fire when the fire is reaching them are the most vulnerable to being killed," said Scott Stephens, a professor of fire science at UC Berkeley. "Most people underestimate the fury that comes."

People here in the high, wind-raked valleys cleaved by the San Andreas fault can be a stubborn, independent sort. And living in the scrublands, they have dealt with fire before.

They take into account what authorities tell them to do, but can smell a whiff of overcautiousness as much as other people smell the smoke.

Paguin, who stays at the house as a handyman, said he'd stay to put out any spot fires from wind-borne embers that can reach far beyond the flame front.

"There is no way I'm leaving this place without trying as hard as I can to save it — I'd feel guilty the rest of my life," he said. "I owe it to the property owner, who has personal treasures, collected over many years here. "

He held up a football-sized chunk of agate. "Things like this beautiful rock, pieces of petrified wood and a collection of old grammar school textbooks."

He said he'd leave only if the flames were roaring through his chain-link fence.

"When it gets that close, I'll fill a sack with my credit cards, my cold beers, some dog bones and a roll of toilet paper and start walking down Highway 138," Paguin said.

On the other side of the Cajon Pass in Lytle Creek, Cheryl Anaya, 67, pledged Tuesday to stay as long as possible to protect her two-story log cabin and other homes in the neighborhood.

On Wednesday afternoon, she had kept to that pledge, even as firefighters fought to protect homes just across the road.

"We're still holding our own," she said in a phone interview.

The night before, she said, it looked like the fire was calming down.

"We slept so good," she said. "Then we woke up to helicopters and planes because it broke out again."

Earlier in the afternoon, she said, she and others in the neighborhood stopped a man trying to steal a rifle and other items from a neighbor's house. They called 911, but weren't expecting deputies to come around.

"We're not even supposed to be here," she said. "We'll go when we have to."

In the mountain community of Wrightwood, Angela Adams, 48, was a bit more cautious. She warily watched the flames on Circle Mountain a mile east of her home.

"I don't like this view at all," she said.

But she planned to stay until the fire got closer. Her firefighter friends were updating her on the blaze. She wanted to make sure homes belonging to the families who left weren't broken into.

But her main reason to stay was more emotional. She did not want to leave the snowboards, skateboards, hats and clothes that belonged to her 17-year-old son, who died in a solo car accident in March. She said he swerved to avoid hitting a person who was crossing the highway at night.

"I just needed more time to pack," she said. "I just have to have his stuff."

On a hillside in Wild Horse Canyon, near the intersection of Highways 138 and 2, a group of neighbors watched as a large plume of smoke billowed nearby and discussed when they would leave.

Gilbert De Leon, his brother and several family members, including an 87-year-old grandmother, have lived in the area for several years, enough to have already survived a number of fires — including one that came dangerously close to his backyard several years ago.

That time, he said, he'd stuck around until firefighters arrived and set up to protect his home.

This time, the family was staying put, at least for the time being, on Wednesday afternoon.

"I'll leave when I see flames coming over that hill," De Leon said, pointing nearby.

He owns his home outright and doesn't have fire insurance, he said.

"I'm one of those guys," he said. "I should have got it a lot earlier."

Before he leaves, he wants to douse the home with a hose to protect it as much as possible. But he said he wasn't sticking around just to save his property.

"If it burns, it burns," he said.

His main reason for staying as the fire appeared ever closer was simple:

"Nobody wants to be displaced," he said. "Not until you have to."

Even though he's been through a number of fires, this one was different. "This is bad. It's one of the worst I've seen here," he said.

As he spoke, a neighbor who was driving down the hill stopped to offer a warning.

From his home near the top, the neighbor said, he could see flames coming over a ridge.

"You can see that thing glowing on the other side now," he said. "Just point your vehicles ready to go out."

Gigi Marek and her son were carrying groceries out of a Stater Bros. in Phelan on Wednesday morning. Pale brown smoke clouded the sky and ash trickled onto her hair and clothes.

They had evacuated their home in Wrightwood on Tuesday evening and come to Phelan to stay with Marek's mother-in-law.

But Marek's husband and adult daughter had chosen to stay behind, even after a sheriff's deputy knocked on their door at about 8 p.m. and told them they should go.

Marek's husband, a retired Los Angeles city firefighter, told her the wind wasn't blowing in the right direction to affect their home, but Marek was concerned.

"I'm worried for them," she said. "I think they should get out of there. But I trust his judgment."

But as she packed her groceries into her SUV, she said she really wanted them to go.

"The wind can change so fast," she said. "He's the one that's always telling me that."

Blue Cut Fire: Should California Evacuations Be Mandatory?

By Weston Williams

Christian Science Monitor, August 18, 2016

The Blue Cut fire raging in southern California burned nearly 50 square miles of land and forced the evacuation of 82,000 people.

But while many mandatory evacuation orders have been issued since the fire began burning out of control on Tuesday, many people are choosing to ignore them. In hopes of protecting their homes and their belongings, many residents have opted to take their chances at home. That's an impulse fire officials say they sympathize with but also caution could divert firefighters away from the front lines of the blaze if residents who stay behind later need to be rescued.

Despite the "mandatory" label, refusing to evacuate in the event of a conflagration such as the Blue Cut fire will likely bring little to no legal repercussions to those who refuse to leave. Each state has different laws about mandatory evacuation, but those laws tend to go unenforced more often than not.

According to an "Evacuation Tips" pamphlet published by the California Department of Forestry and Fire Protection, refusal to comply with an order by police to leave an "area where a menace to public health or safety exists due to a calamity such as flood, storm, fire, earthquake, explosion, accident or other disaster" is a misdemeanor.

In California, a misdemeanor is punishable by fines up to $1,000, up to one year in jail, or both, according to the Superior Court of California's Santa Clara website.

In many states, however, punishments for refusing a mandatory evacuation are rarely carried out.

When Hurricane Sandy hit the East Coast in 2012, New York Mayor Bloomberg announced that those who refused the evacuation order would not face arrest, despite a law on the books carrying up to three months of jail time for those who chose to stay, according to Avvo, a legal services marketplace.

The reason mandatory evacuation punishments are rarely carried through is because of the nature of the misdemeanor. An article in the journal Health Affairs examining mandatory evacuation orders noted that mandatory evacuation certainly has the potential to save lives, particularly those of children or others not capable of making informed decisions to stay home in an evacuation situation. However, it also noted that most people who refuse are not causing harm to others, and many people view government interference at that level as overly paternalistic.

Glen Barley, Unit Chief at the fires Incident Command Post, would disagree. He said in an interview with NPR discussing the Blue Cut fire that "All too frequently we see people go and they look out the window and think, 'Oh, it's not too bad right now,' and then the condition changes so rapidly that when it's suddenly so bad it's too late." At that point, firefighters would have to put themselves in more danger in order to rescue anyone who refused to evacuate.

In spite of this, mandatory evacuations are still hard to enforce, and efforts to do so are compounded when large numbers of people refuse to leave.

In Wrightwood, Calif., the encroaching flames are doing little to keep a large portion of the town's 4,500 residents from staying, according to ABC7. Even Wrightwood's local sandwich shop and bakery remain open as the flames come ever closer to the town.

"We've had worse, and we've stayed through it." Sherri Hannon, a resident of Wrightwood, told ABC7. "I'm staying."

For some in Wrightwood, the decision to stay lies with the feeling that the risk is not yet high enough to be worth the effort and of evacuating. For Ms. Hannon, the decision is more personal.

"I don't want to leave the house. My parents built it in '89, and it's all I have left of them."

The decision to stay is risky. As of Thursday morning, the fire has only been 4 percent contained, according to a local fire tracker.

While many people might initially ignore evacuation orders for now, the size and ferocity of the fire will likely send many more packing before the fire is finally out.

FEMA HOUSING

Fact Sheet: How FEMA Rental Assistance Helps Louisiana Flood Survivors

Lafayette (LA) Daily Advertiser, August 18, 2016

What is the first step flood survivors must take to get FEMA assistance for a temporary place to stay?

Both homeowners and renters must first apply with FEMA to determine eligibility for temporary rental assistance. They can register online at DisasterAssistance.gov or by calling toll-free 800-621-3362 from 7 a.m. to 10 p.m. daily. Multilingual operators are available. Survivors who are deaf, hard of hearing or have a speech disability and use a TTY may call 800-462-7585. Those who use 711 or Video Relay Service may call 800-621-3362.

What can Louisiana flood survivors do if their residence is uninhabitable?

Some Louisiana flood survivors may receive temporary rental assistance from FEMA to pay for a place to stay. If they are unable to find a house or apartment for rent, FEMA may consider on a case-by-case basis reimbursing survivors for temporary stays at other lodging.

How do eligible applicants receive assistance to pay for a temporary place to stay?

Survivors have two ways to receive financial help to pay for temporary rental assistance. They can choose to have the funds electronically transferred to them or receive paper checks. If the postal service cannot deliver to an affected residence then it will hold the check at the post office for survivors to pick up.

It is important for survivors to keep banking and contact information current so they receive the grant funds. They can update information online at DisasterAssistance.gov or by calling 800-621-3362.

How long does temporary rental assistance last?

The first installment of temporary rental assistance funds is for two months if a FEMA inspector determines the home is uninhabitable due to damage caused by the disaster.

If the home is uninhabitable due to a power outage or is inaccessible, they may be eligible for one month of rental assistance.

What must eligible applicants do if they need temporary rental assistance for more than two months?

Eligible applicants will receive a packet from FEMA about 15 days after receiving their first temporary rental assistance grant. The packet contains instructions on how applicants must demonstrate to FEMA their continued financial need for temporary housing assistance. FEMA will continue to send the packets if an applicant continues to receive temporary housing assistance.

It is important for survivors to keep their contact information current so they receive the packet. They can update their contact information online at DisasterAssistance.gov or by calling 800-621-3362.

If survivors receive housing assistance through their insurance company, can they also receive temporary rental assistance from FEMA?

By federal law FEMA cannot duplicate housing benefits if the insurance company provides assistance. However, if a survivor exhausts housing assistance funds from their insurance company, FEMA may then be able to provide temporary rental assistance.

Do survivors need to keep receipts if they receive temporary rental assistance?

Yes. Survivors must keep receipts so they can prove the FEMA temporary rental assistance grant was used for its intended purpose.

How do eligible applicants locate available rental resources?

FEMA routinely updates an online housing portal that lists available rental resources. They can access the portal online at asd.fema.gov/inter/hportal/home.htm.

Applicants may also call 800-621-3362 or visit a disaster recovery center. They may locate their closest center by visiting asd.fema.gov/inter/locator/home.htm or by calling 800-621-3362.

Survivors can learn more about centers by watching a video at the following link: http://www.fema.gov/media-library/assets/videos/79681

Applicants can also locate housing on their own that is within the temporary rental assistance grant FEMA provides to them.

What if Louisiana flood survivors have housing needs FEMA cannot meet?

FEMA may refer survivors to charitable or volunteer groups to address unmet housing needs. Survivors who have registered with FEMA can discuss charitable or volunteer referrals by calling 800-621-3362 or visiting a disaster recovery center. They may locate their closest center by visiting asd.fema.gov/inter/locator/home.htm or by calling 800-621-3362.

How can Louisiana flood survivors locate charitable or volunteer groups on their own?

Louisiana211.org lists instructions how to obtain help and resources for parts of Louisiana. Survivors can also contact their local emergency management officials. They can get contact information for their local emergency management office online at gohsep.la.gov/about/parishpa.

Do survivors have to pay taxes on this assistance?

FEMA assistance is a grant and taxes do not need to be paid.

NEWS AROUND THE COUNTRY

ZIKA VIRUS

Volunteers Sought As Race To Develop A Zika Vaccine Heats Up

By Lauran Neergaard

Associated Press, August 18, 2016

WASHINGTON (AP) – Wanted: Volunteers willing to be infected with the Zika virus for science.

It may sound bizarre, but researchers are planning just such a study – this winter, when mosquitoes aren't biting – to help speed development of much-needed Zika vaccines.

The quest for a vaccine began less than a year ago as Brazil's massive outbreak revealed that Zika, once dismissed as a nuisance virus, can harm a fetus' brain if a woman is infected during pregnancy.

Now, researchers in the United States have begun safety testing of two vaccine candidates, and more experimental shots are poised to enter that preliminary testing soon. Any that seem promising will have to be tested in thousands of people in parts of Latin America and the Caribbean that are hard-hit by the mosquito-borne virus – the only way to prove if an experimental vaccine really protects.

Even if all goes well, a vaccine wouldn't be available for general use any time soon.

But a different kind of research also can offer clues for vaccine development. It's called a human challenge study, when healthy – and nonpregnant – people agree to be injected deliberately with a virus, mimicking natural infection while scientists track how their bodies react.

The first question is even more basic: How much of the virus does it take to infect someone?

If government regulators agree, researchers could find out by injecting paid volunteers with different amounts of lab-grown Zika virus as early as December in a Baltimore hospital. That information will help the researchers later, when they're ready to test an experimental Zika vaccine.

"We're looking at these human challenge protocols not only as an important step in vaccine development but as a means to learn more about Zika," said Dr. Anna Durbin of Johns Hopkins Bloomberg School of Public Health, who is leading the work. "We can look at things that you just can't do in someone who's naturally infected."

Some questions and answers about the development of Zika vaccines:

Q: Which potential vaccines are first in line?

A: Two so-called DNA vaccines have begun preliminary safety testing, one made by the National Institutes of Health and the other by Pennsylvania-based Inovio Pharmaceuticals.

They mark a new kind of technology. Traditionally, vaccines are made using a dead or weakened virus to train the body's immune system to recognize that infection and fight it off. DNA vaccines may be easier to make. Scientists used a circular piece of DNA, called a "plasmid," to carry genes that prompt the body itself to produce certain Zika virus proteins, alerting the immune system.

That piece of trickery worked in animals. The phase 1 studies in dozens of people will check for safety, and whether the vaccinations rev up human immunity enough to justify further tests.

Q: What else is in the pipeline?

A: "We are right now in a race of time to get the best vaccine," said Dr. Anthony Fauci, director of NIH's National Institute of Allergy and Infectious Diseases.

Multiple candidates are important as there's no way to predict which kind will work best. The DNA vaccines simply were ready for human testing first.

In October, safety tests are set to begin using the more traditional killed-virus vaccine, developed by the Walter Reed Army Institute of Research.

The NIH also is developing a vaccine using live-but-weakened virus, the type thought to trigger particularly long-lasting immune protection. That's the kind used to protect against rubella, which back in the 1960s caused an epidemic of birth defects.

Q: If the first candidates are safe, what happens next?

A: Fauci expects to open next-step studies in January, enrolling 2,400 to 5,000 people in areas where Zika still is spreading widely to test if the vaccinated are less likely than the unvaccinated to become infected.

Q: Are vaccines aimed at pregnant women?

A: Not at this point. It's hard to test new products during pregnancy. Plus, a fetus can be vulnerable to Zika even before a woman realizes she's pregnant.

The goal instead is to vaccinate women of childbearing age and their sexual partners – because Zika also can be transmitted through sex – well before pregnancy ever occurs.

Q: Where do the human challenge studies come in?

A: Jabbing someone with Zika is faster than waiting around for a mosquito to bite them to see if an experimental vaccine provides protection. But first Durbin must find what dose of Zika causes infection, to be sure she's giving a vaccine enough of a challenge.

That's what the study planned for December would do. Volunteers given different amounts of Zika would be kept in a Hopkins hospital unit for 12 days, to be sure the virus had cleared the bloodstream, and would have to agree to use condoms for a while afterward to avoid any possibility of sexual transmission. Because Zika usually causes few if any symptoms, those infected might expect a rash or low fever.

The second round of the research would recruit volunteers who'd received an experimental vaccine, trying to infect them with Zika six months after their shot.

The extra benefit: Tracking people from the moment they're exposed to Zika also could shed important new light on how the virus affects the body – such as how long it's infectious in blood, semen and other bodily fluids, and just how the immune system fights it off.

Q: Has this been done before?

A: Human challenge studies are rare because they're difficult to perform and expensive. But Durbin recently did just such research to test a potential vaccine against dengue, a dangerous cousin of Zika, and doesn't expect difficulty recruiting volunteers for the Zika study once regulators are satisfied it can be conducted safely.

Q: What about the fight over federal funding for Zika?

A: In February, the Obama administration requested $1.9 billion for the nation's fight against Zika, including vaccine development, but Congress hasn't approved any of it. With existing money running out, federal health officials are taking funds meant for other diseases to get by until the end of the year – but Fauci said NIH alone will need $196 million more in 2017 to avoid delays in the vaccine research.

Rare Zika Complication Hits 30 In Puerto Rico; CDC Expects More

By Maggie Fox

NBC News, August 18, 2016

Thirty people have been diagnosed with a rare paralyzing condition caused by Zika virus infection in Puerto Rico, the territory's health department said Thursday.

And Centers for Disease Control and Prevention director Dr. Thomas Frieden says he expects even more cases of Guillain-Barre syndrome in Puerto Rico because the virus is infecting so much of the population.

"We think there will be as many as 200 additional cases, given the overall number of infections there," Frieden told NBC News.

A flyer that reads, "Questions and answers: Zica virus infection during pregnancy" is seen posted outside a doctor's office, at a public hospital in San Juan, Puerto Rico, February 3, 2016. ?(C) Alvin Baez / Reuters / Reuters file

"We expect there will be a fair number of cases."

He said Guillain-Barre is usually seen in about every 5,000 to 10,000 infections like Zika.

Puerto Rico's health secretary, Ana Rius Armendariz, reported the 30 cases in an update to the territory's government Thursday.

Guillain-Barre is a rare complication of many different types of infections. It's a usually temporary paralysis that can become serious if people's breathing muscles become affected. With treatment, most patients recover. "We think there will be as many as 200 additional cases, given the overall number of infections there."

Zika's usually not serious but it can very rarely cause fatal complications – a Puerto Rico man died in April. The biggest risk is to pregnant women, whose fetuses can become infected if their mothers catch it.

ika's now known to cause profound birth defects and there is no cure for the fetus once affected. Babies can be born with microcephaly – a small head caused by the destruction of brain tissue. They can also die in the womb, or they can suffer other defects from malformed limbs to subtle brain damage.

The CDC has reported 529 pregnancies affected by Zika in the continental U.S. and another 691 in U.S. territories, mostly Puerto Rico.

In the U.S., 16 babies have been born with birth defects caused by Zika and five have died, miscarried or been aborted because of Zika damage.

The spread's so bad in Puerto Rico that the U.S. declared a state of emergency there last week.

But Clarisa Jimenez, the CEO of the Puerto Rico Hotel & Tourism Association, accused CDC of exaggerating the threat. "Unfortunately, when babies start to be born with microcephaly, that will change perceptions."

"From the very beginning the numbers that were given were based on projections. The reality is that as of today, less than half of 1 percent of the population has the virus," Jimenez told CNBC Thursday.

Frieden pushed back. "Unfortunately, when babies start to be born with microcephaly, that will change perceptions," he said.

"We projected, based on the chikungunya experience, that Zika might infect a quarter of the population in the first year and it is very much on track to do that," Frieden said.

Chikungunya is closely related to Zika and carried by the same Aedes mosquitoes. It's hardly ever deadly but extremely painful, so people remember getting it. Zika, on the other hand, doesn't cause symptoms in most people.

"People in Puerto Rico are saying Zika isn't like chikungunya," Frieden said. But he said it's just that people notice it less.

"There is a lot we don't know about Zika," Frieden added.

Armendariz said about a quarter of people infected in Puerto Rico are noticing Zika symptoms, including headache, rash, conjunctivitis and joint pain.

She's advising everyone to use mosquito repellent.

"I always say use it like perfume," she told NBC News. "Nothing replaces that."

"Wear light clothes, long sleeves, pants," she said, adding women should avoid sandals even though it's hot. She said pregnant women should make sure their partners use condoms. "You don't know if he has been bitten," she said. "If you are pregnant, protect yourself."

Will Zika Concerns Override American Fears Over GMOs?

By Lucy Schouten

Christian Science Monitor, August 18, 2016

A biotech company has modified the DNA of mosquitoes to combat the Zika virus in Florida, but cautious locals are not yet certain that concerns about Zika outweigh their mistrust of genetically engineered insects.

The British company Oxitec has spent years creating a means for combatting mosquito-borne viruses, receiving a Federal Drug Administration clearance on Aug. 5, but uproar from Floridians led local officials to send the issue to a nonbinding referendum in November, NPR reported.

The debate in Florida touches on two key fears that are prevalent in many American's minds: a still-evolving concern over Zika and a persistent resistance to genetic engineering. Both issues evoke strong emotional responses for many Americans. Despite scientific evidence that anxieties may be overblown, the unknown remains a potent source of fear.

"I think the American public in general ... get a lot of their genetic information from movies like 'Jurassic Park,' so they are frightened very easily by those kinds of things," Joe Conlon, a technical advisor for the American Mosquito Control Association (AMCA), tells The Christian Science Monitor. "But the Oxitec way of doing things is very safe – it should be tried."

Although Zika cases only recently surfaced in Wynwood, Fla., this is not the first time that concerns about disease have forced scientists to confront the public mistrust of genetic tinkering. Oxitec started its bid to release disease-fighting mosquitoes in the Florida Keys nearly two years ago.

The idea is to release the genetically engineered mosquitoes into the wild, where they will breed with healthy females and produce offspring that die before reaching adulthood. In theory, only male mosquitoes, which don't bite humans, are released, and the company has successfully tested the model in Brazil and the Cayman Islands.

But protests on the ground – and a Change.org petition with more than 169,000 supporters – cite the chance of escaped females biting humans, the unexpected consequences of previous genetic experiments, and the fact, which Mr. Conlon acknowledged, that this is merely one part of a package to combat mosquito-borne disease.

"There are too many questions," Mara Daly, a salon owner and protest organizer told US News and World Report. "My biggest concern is that we don't know the unintended consequences of this trial."

Although Zika has inspired bipartisan unity from Florida politicians, the protests over a genetically engineered weapon against Zika finds a parallel in the Congressional inaction. Both stalemates have the same root cause: No one is worried enough. Too few Americans care enough about Zika to overcome the anxiety-inducing concessions required to combat it, as the Christian Science Monitor's Francine Kiefer wrote:

The answer to why Congress has failed to pass a funding measure reveals the typical roadblocks – partisan differences over spending and policy specifics. The frustration is over the urgency. The problem is not your average one. [Anthony Fauci, an infectious diseases specialist,] calls the Zika virus a 'pandemic in progress.'

But without a public outcry with potential electoral consequences, those differences could not be bridged.

Even Floridians living near "ground zero" of the fight against a highly transmittable disease are not ready for a "radical approach" to combat it.

"Personally, I'm not afraid of Zika," Megan Hall, who lives on Sugarloaf Key, told NPR. "I know it's a huge problem in a lot of places, and I don't discount it. I know it's terrible what's going on in Brazil and all these places – Puerto Rico. But this is not an emergency."

Although Mr. Conlon insists the scientists at Oxitec are well-aware of all the risks cited by protesters and have taken steps against them, for many locals the threat of Zika remains too nebulous and faraway to overcome fears of playing "guinea pig" to "mutant bugs."

Raiding Opioid Abuse Funding To Fight Zika Highlights Government Dysfunction

By Michael McAuliff

Huffington Post, August 18, 2016

WASHINGTON — The threat of Zika — and Congress' inability to respond to it — is shining new light on how little official Washington really cares about the nation's opioid crisis.

Lawmakers went on vacation in July without passing even part of the $1.9 billion in emergency Zika funding that the White House sought in February. So the administration of President Barack Obama has had to make do on its own.

It started by shifting $589 million away from efforts to keep Ebola contained. And last week, the administration rifled the drawers of the Department of Health and Human Services, shifting another $81 million to keep money flowing to time-sensitive Zika vaccine development.

That's where the official response to the opioid epidemic comes in. Some of that cash, $4.1 million, comes from the Substance Abuse and Mental Health Services Administration, which is at the forefront of dealing with addiction.

That fact was not lost on Sen. Jeanne Shaheen (D-N.H.), whose state has been among the hardest hit by an addiction crisis that tallied up some 47,000 deaths nationally in 2014, including nearly 19,000 from prescription painkillers and more than 10,500 related to heroin.

"It's been 189 days since the administration has requested funding to respond to Zika, and now they are forced to resort to desperate measures which include taking funds from another underfunded health emergency, the opioid epidemic," said Shaheen in a statement. "Ignoring the immediate funding needs of these health emergencies is legislative negligence."

And it may actually be worse than that.

Just before Congress went on break, it did pass legislation to address the overdose crisis, in the form of a bill called the Comprehensive Addiction and Recovery Act. It was bipartisan and accompanied by a slew of press releases. The problem with CARA, according to people who support the legislation, is that it was not accompanied by funding.

"It's like someone giving you a Ferrari — with no gas," said Dr. R. Corey Waller, the senior medical director for education and policy at the Camden Coalition of Health Care Providers and the National Center for Complex Health and Social Needs. "It's just going to sit there. You look at it and you know that in theory if you just had gas you could drive 200 miles an hour, but we have no gas."

Now throw in the Zika crisis. In the grand scheme of things, taking $4.1 million from SAMHSA is tiny compared to the agency's $2.2 billion substance abuse treatment budget this year.

And a spokesman for the agency said in a statement it would cope, though he did not provide details of how, pointing only to the need of the Department of Health and Human Services to adjust to Zika.

"The funds will be used to protect pregnant women and developing fetuses from devastating birth defects caused by Zika," the statement said. "SAMHSA will continue to apply all available resources to its mission to reduce the impact of substance abuse and mental illness on America's communities."

Perhaps the agency will adjust, but its stance gives a very good idea of how much — or little — lawmakers and the administration actually value the addiction treatment efforts they've been touting, especially with passage of CARA. They are second-place to Zika.

"To take more money from addiction right after passing CARA is just so ridiculous," said Waller. "I mean, it's malpractice. If you look at it from a very standard way, in medicine we would call it malpractice."

Physicians would call it malpractice because the two dissimilar-appearing health threats of a virus and addiction actually have a lot in common in terms of potential impact, and should both be addressed with a response equal to the problem, Waller said, noting that the addiction epidemic is the top cause of injury-related death in the United States.

"We know that. It's been called a health care crisis, it's an epidemic. It meets all the criteria for that from the standpoint [of the Centers for Disease Control and Prevention]," Waller said. "Zika has an absolute potential to do that. So let's pay for that. I don't think the American people would care about paying for those things.

"Sometimes you have to pay a little money to actually fix something, and they are not going to agree to even pay a little bit," Waller said of lawmakers. "And they start throwing around this little bit of money [to bolster the Zika response], but where they pull it from is out of the one budget that needs more in order to be able to do even an adequate job."

Shaheen and other Democrats have proposed a way to show Congress does care about opioids and Zika: come back from the seven-week vacation Congress is on to pass the funding for Zika, at least.

"I strongly urge Leader McConnell and Speaker Ryan to call Congress back into session to finally provide an adequate response to both the Zika virus and the opioid epidemic," Shaheen said in a statement.

Both McConnell and Ryan have ignored such requests.

There are 33 cases of locally transmitted Zika infections in the United States, all in Florida, according to the latest tally from the state. There are about 2,000 travelled-related cases in the United States and 6,500 more in the territories, with some 1,000 pregnant women affect, all told, according to the CDC.

The Mystery Of Zika's Path To The Placenta

By Adrienne LaFrance

The Atlantic, August 18, 2016

Among the many mysteries that have vexed scientists about the ongoing Zika epidemic is the question of how, in pregnant women, the virus manages to cross the maternal-fetal barrier.

A woman's body is usually quite good at protecting her growing baby. There are biological blockades to prevent the transmission of viruses to a fetus through the bloodstream, by way of the placenta; the same path for the nutrients and oxygen that sustain a developing baby. The placental membrane is similarly adept at keeping harmful agents out.

Zika, however, is a strange and troubling exception.

Not only does the virus move through the placenta and infiltrate the amniotic sac; it works its way into the fetal brain and can cause irreparable, even fatal, damage.

Now, scientists are beginning to understand what happens, on a cellular level, once Zika crosses the placental barrier. A new study, published Thursday in the Journal of Clinical Investigation, identifies key cells that enable the virus to replicate by examining how Zika behaved in the tissue of placentas from three women not infected by the virus.

First, researchers found that Zika thrives in special placental cells known as Hofbauer cells—which is surprising, since the cells' typical role is to keep pathogens out.

"These Hofbauer cells usually take a viral antigen and create an immune response," says Michael Simoni, an obstetrician and one of the study's authors. Instead, with Zika, Hofbauer cells are "physically housing" the virus. (This reinforces a similar finding from May.)

Additionally, Hofbauer cells may actually help disseminate Zika to the fetal brain.

Second, the researchers found that Zika is also able to replicate in fibroblast cells, the building blocks that make up the very structure of the placenta. "The fibroblasts ended up being a little bit of a surprise," Simoni told me. "When we found out they were replicating [Zika] just as well if not better as the Hofbauer cells, that was definitely interesting." Related Stories

Another intriguing finding was that three separate strains of Zika—one from Africa, one from the Americas, and one from a past outbreak in Cambodia—didn't seem to differ from one another in how infectious they were. That's despite the fact that congenital Zika, which causes babies to be born with abnormally small heads and other health problems, seems to have emerged only with more recent strains of the virus as it has evolved in recent years.

The findings raise a host of questions, the biggest of which is: How is Zika infiltrating the womb in the first place? "Next, we really want to get at the mechanism of how the virus is getting across the fetal-maternal barrier," says Kellie Ann Jurado, a virologist and the lead author of the study.

Scientists have several hypotheses. It's possible, for instance, that Zika is piggybacking its way across the placenta via otherwise helpful antibodies—basically taking advantage of a pathway meant to help keep a fetus healthy. Or, it may be that the virus is so tiny it can push its way through a membrane that keeps most other viruses out. "This super-tight layer that usually nothing expect for oxygen and nutrients can cross," Simoni says. "But, potentially, if Zika is small enough, it can just squeeze in between the cells."

Other researchers are focusing on how Zika affects the health of the placenta itself. A recent essay in the New England Journal of Medicine describes severe placental degradation among mice infected with Zika in the first and second trimesters of pregnancy. In humans, scientists still don't fully understand how risky Zika is in different stages of pregnancy. A better understanding of what Zika does to the placenta could be crucial for figuring it out.

Complicating these areas of Zika research is how little is understood about the placenta more broadly. "Given its vital role, shockingly little is known about the placenta," Denise Grady wrote for The New York Times in 2014. "Only recently, for instance, did scientists start to suspect that the placenta may not be sterile, as once thought, but may have a microbiome of its own—a population of micro-organisms—that may help shape the immune system of the fetus and affect its health much later in life."

As a virologist, Jurado told me she's "not always thinking about the placenta," but that she was stunned when she began to review placenta-related medical literature for her research into Zika. "Seeing all the missing pieces, I was shocked," she said. "I didn't understand why there hasn't been more basic research. It's definitely needed, especially in cases like this where the outbreak seems to be infecting the placenta."

Part of the difficulty in learning more about the placenta is the ethical sensitivity of potential research subjects—understandably, expectant mothers aren't necessarily jumping at the chance to participate in experiments that could yield unexpected outcomes for their unborn babies. But there's still plenty that can be gleaned from working with the organ shortly after delivery, when a baby no longer needs it, as this recent Zika study illustrates. Research initiatives like the Human Placenta Project, a $42 million NIH undertaking, are increasingly doing just that.

"The placenta is the least understood human organ but arguably one of the most important," the project's website reads. "It influences not just the health of a woman and her fetus during pregnancy, but also the lifelong health of both."

Zika Virus: Local Transmission Taking Place In Miami Beach, Florida

Miami Herald, August 18, 2016

A new area of ongoing Zika transmission has been identified in Miami Beach, according to sources familiar with discussions that Florida health officials held with local public officials Thursday to alert them.

State officials are expected to identify a specific geographic area for ongoing Zika transmission within Miami Beach this afternoon, sources said. The Florida Department of Health did not immediately respond to request for comment.

South Florida's hospitality industry has dreaded the possibility of Zika spreading to Miami Beach because the region's economy relies heavily on its $24 billion-a-year tourism industry. More than half of the hotel rooms in Miami-Dade are located in Miami Beach.

Starting early Thursday morning, Miami Beach public works officials and code compliance officers were dispatched to neighborhoods to inspect for mosquito breeding sites.

City Manager Jimmy Morales said in a written statement that the city is in constant communication with the health department regarding the most effective approach to mosquito control.

"Our strategy has been and will continue to be focusing on the elimination of potential breeding sites and educating our residents and businesses on what they need to do," Morales said in the statement. "We are also working with the county and they are also inspecting and as needed mitigating through techniques like clean ups, larvicides and fogging."

The first area in the continental United States with ongoing Zika transmission was identified by Gov. Rick Scott on July 29, when he announced that the virus was being spread by local mosquitoes within a one-square-mile zone north of downtown Miami in the Wynwood neighborhood.

At least seven new local cases of Zika have cropped up outside of that zone in Wynwood since then, however, including one in Southwest Miami-Dade.

On Wednesday, the health department reported three new local Zika infections in Miami-Dade, including one inside the Wynwood zone and two others outside of it.

A total of 557 people in Florida have contracted Zika this year, including 63 pregnant women. Of those, 33 are locally acquired cases, with all but seven traced to the Wynwood zone.

Epidemiologists continue to interview residents and collect blood and urine samples inside the designated zone, but they also have launched investigations into six Zika infections that occurred outside of that area. One is in Palm Beach, and the other five are in Miami-Dade. Health officials have not said whether they suspect any of the local cases were sexually transmitted.

Florida health officials have said repeatedly that one case does not mean active transmission is occurring in an area. Instead, health officials investigate each case by interview, and taking blood and urine samples from close contacts and neighbors around each person infected.

The Zika response plan published by the federal Centers for Disease Control and Prevention in June notes that "a starting point" for defining an area of local transmission is two or more infections (not related to travel or sex) among people who do not share the same household and which occurred inside a one-mile diameter within one month.

New Cluster Of Zika Cases Is Reported In Miami Beach

By Pam Belluck And Lizette Alvarez

New York Times, August 18, 2016

A cluster of Zika cases most likely transmitted by local mosquitoes has been identified in Miami Beach, a health official said Thursday. Health authorities are trying to decide whether to designate a section of the bustling tourist city as a zone of active Zika transmission, and whether to advise pregnant women to avoid the area.

The health official said Thursday that there are "a handful of cases" of likely local transmission that involve people who were in "close proximity to each other." The official insisted on anonymity, saying that the cases and the location are not likely to be officially announced until late Thursday or early Friday.

Neither the Centers for Disease Control and Prevention nor the Florida Department of Health had released official information on the cases or the location in Miami Beach.

To date, only one neighborhood in Miami, a one-square mile section of Wynwood, has been declared an active Zika transmission zone in the United States, and the C.D.C. has advised pregnant women to stay out of the area. As of Wednesday, Florida authorities had tied 25 of the 35 locally-transmitted Zika cases to a single area in that Wynwood zone.

Zika Now Suspected From Mosquitoes In Miami Beach

By Brady Dennis

Washington Post, August 18, 2016

Health officials in Florida have identified a possible new area of Zika transmission involving several cases in Miami Beach, said an official familiar with the situation who declined to speak on the record because of the ongoing investigation.

The development, first reported by The Miami Herald, would mean that the local virus outbreak no longer is contained to the Wynwood neighborhood north of downtown Miami, where more than two dozen people have been infected by Zika in recent weeks.

Earlier this month, federal health authorities urged pregnant women not to visit Wynwood in light of the situation unfolding there – the first time officials had warned against travel to part of the continental United States because of the outbreak of an infectious disease. They made the decision after “aggressive” efforts to combat Zika’s mosquito-borne spread proved insufficient. Tom Frieden, director of the Centers for Disease Control and Prevention, called it “a truly scary situation.”

If confirmed in Miami Beach, CDC officials likely would issue an updated travel advisory that includes the newly affected area. It was unclear Thursday where the boundaries of such a warning might be.

In a statement, Gov. Rick Scott insisted the outbreak remained confined to Wynwood. “We still believe local transmissions are only occurring in an area that is less than one square mile,” he said.

“As we continue to aggressively assess and test people for Zika, we will make every resource available to fight this virus,” Scott said.

The Herald reported that early Thursday, Miami Beach public works officials and code compliance officers were dispatched to neighborhoods to inspect for mosquito breeding sites.

The Zika virus, which has now spread to 70 countries, has been linked to a rare and severe birth defect known as microcephaly, which is characterized by an abnormally small head and often underdeveloped brain, as well as an array of other fetal abnormalities.

In rare cases, the virus also has been linked in adults to Guillain-Barre syndrome, an autoimmune disorder that can cause paralysis and even death.

Should officials confirm local Zika transmissions in Miami Beach, it could deal another blow to Miami’s vibrant tourism industry.

Scott seemed keenly aware of that Thursday, saying he had directed state officials to work closely with hotels, attractions and restaurants to help them with Zika prevention and education efforts. He also said affected businesses in Miami-Dade County would be offered mosquito spraying at no cost.

“Tourism is a driving force of Florida’s economy and this industry has the full support of our state in the fight against the Zika virus,” Scott said in his statement. “Additionally, our Department of Economic Opportunity is working with businesses that may have been impacted to ensure they have everything they need to remain successful. We will continue to work closely with our businesses and the tourism community to ensure their needs are met.”

As of Wednesday, the Florida Department of Health reported 461 travel-related cases of Zika and 33 locally acquired cases. Sixty-three of the state’s Zika cases involve pregnant women.

Tropical Depression Karl Forecast To Strengthen In Atlantic

Associated Press, September 22, 2016

MIAMI — Tropical Depression Karl is forecast to strengthen in the Atlantic.

The U.S. National Hurricane Center says the depression's maximum sustained winds early Thursday are near 35 mph (56 kph) with some strengthening forecast during the next two days.

As of 5 a.m. EDT Thursday, Karl was centered about 625 miles (1,006 kilometers) south-southeast of Bermuda and moving northwest near 16 mph (26 kph).

Farther east, Tropical Storm Lisa is expected to weaken. The storm's maximum sustained winds are near 45 mph (72 kph).

Lisa was centered about 710 miles (1,143 kilometers) west-northwest of the Cabo Verde Islands and is moving northwest near 14 mph (22 kph).

At The Height Of Hurricane Season, The Tropical Atlantic Ocean Is Sleepy

By Brian McNoldy

Washington Post, September 21, 2016

The tropical Atlantic Ocean, usually buzzing with storms at this point in September, looks more like it should in June, when hurricane season is just starting.

Although there are two named storms active across the Atlantic, dry air and strong wind shear are dominating the basin in a pattern unfitting of the climatological peak of the season.

Reconnaissance aircraft have been flying into, over and around Karl to assess its intensity and structure, and they have found that is weakening. It was recently downgraded to a tropical depression, and it may even get downgraded again to an open wave later today given the trend. The circulation is centered about 900 miles south-southeast of Bermuda and tracking toward to the west at 14 mph.

Forecast models suggest that Karl will make a comeback by the end of the week. It is expected to turn toward Bermuda and intensify to a hurricane as it interacts with a mid-latitude trough and acquires characteristics of a non-tropical weather system. Bermuda can expect Karl's closest approach and worst weather on Saturday, though it may get spared hurricane conditions.

Bermuda averages one damaging hurricane encounter every six to seven years, but the tiny island has had some recent bad luck, with about six storms passing close enough to produce hurricane conditions in just the past decade. As of the latest forecast, there is still a slight chance that Bermuda could experience hurricane-force winds as Karl passes by this weekend (assuming it is able to regain some organization).

Tropical Storm Lisa is located about 1600 miles east of Karl and is faring slightly better while immersed in a hostile environment. Lisa began as Tropical Depression 13, which formed Monday afternoon, and is now approximately 600 miles west of the Cape Verde islands. It has strengthened recently, and sustained winds are up to 50 mph.

Models generally agree that Lisa will continue its track to the northwest and find itself in a very hostile environment this weekend, so it is forecast to weaken and dissipate in the central Atlantic.

The large-scale pattern across the Atlantic would suggest that a lull in tropical storm activity may last for a while.

The anomalous dry air and strong wind shear prevalent across the basin may well combine to either choke off development of storms that manage to form or to prohibit formation altogether.

The graphic below shows the extent of the anomalously dry air. While Karl and Lisa show up as moist pockets, the drier-than-normal mid-level air is lurking in the deep tropics and working its way into their circulations.

Another atmospheric featur,e known as the Madden-Julian Oscillation, or MJO, is in a phase that typically suppresses Atlantic tropical cyclone activity, and it may remain in that phase through early October.

While the number of named storms this hurricane season is impressively above average for this date, the Accumulated Cyclone Energy (ACE) stands at about 70 percent of average because the storms that have formed have generally been weak and/or short-lived. One storm, Hurricane Gaston, contributed half of the season's ACE, while the other half came from the other 11 storms.

Thursday's Forecast: Wet West, Upper Midwest

By Doyle Rice

USA Today, September 21, 2016

The national weather forecast for Thursday, September 22nd calls for thunderstorms across the West and in the Northern Plains. The Southeast Coast also gets hit with showers.

The first day of autumn will feature soggy weather for parts of the West, Midwest and Southeast while heat and humidity continues in the South and East.

West: Rain will soak portions of the Rockies and Southwest on Thursday. Some flooding is possible from Utah to Montana.

North-central U.S.: Showers and thunderstorms are likely Thursday from the upper Great Lakes to parts of the northern Plains. Some of the heaviest rain is forecast in portions of Iowa, Minnesota and Wisconsin.

Southeast: More cloudy, gloomy weather and below-normal temperatures are expected in coastal sections of the Carolinas and Virginia.

Weather history for Sept. 22: In 1913, Des Moines had its earliest freeze on record. In 1989, strong winds and driving rain from Hurricane Hugo continued to batter the Carolinas.

Photos: A Second Straight Stellar Sunset In DC Area

By Jason Samenow

Washington Post, September 21, 2016

Along the edge of a coastal storm is the place to be for spectacular sunsets.

In Tuesday's case, the D.C. area was on the fringe of the cloud deck from the remnants of one-time Tropical Storm Julia. Areas along and west of Interstate 95 were perfectly positioned to capture the beautiful scene as the sun sank and illuminated the layers of clouds to the east.

You may recall the region was treated to stunning sunsets when it was along the periphery of Tropical Storm Hermine as well.

Tuesday evening's magnificent sunset scene followed terrific views Monday evening when a front was pushing out of the region.

Below find some of the best submissions from Tuesday's sunset sent to us via social media …

5 West Virginia Counties Stay Under Flood State Of Emergency

Associated Press, September 21, 2016

CHARLESTON, W.Va. (AP) – Gov. Earl Ray Tomblin is extending a state of emergency for five West Virginia counties devastated by floods in June.

Tomblin announced the extension until Oct. 21 for Clay, Greenbrier, Kanawha, Nicholas and Webster counties to ensure that state resources are provided to rebuild homes, businesses and communities. That includes demolition and stream cleanup efforts.

The declaration was scheduled to expire Wednesday, three months after floods killed 23 people and destroyed homes, businesses and infrastructure.

An emergency declaration expired Wednesday evening for Fayette, Roane and Summers counties.

At one point, 44 of West Virginia's 55 counties were under a state of emergency.

Service Warns Of More Flooding In Northeast Iowa

Associated Press, September 21, 2016

LANSING, Iowa (AP) — Heavy rainfall has forced some streams out of their banks in northeast Iowa, and forecasters say there's more in store for the area.

Allamakee (al-uh-muh-KEE') County emergency services coordinator Corey Snitker said Wednesday that he's gotten reports of 3 and 4 inches of rain overnight. Snitker says the runoff accumulated in low-lying spots and ran over some streets in the northeast corner of the county, especially in Lansing.

The Lansing city clerk and the mayor didn't immediately return calls from The Associated Press.

Snitker says none of the major county roads is closed but also says more rain is expected.

The National Weather Service's flash flood watch says two-day totals of more than 7 inches could occur where new storms later Wednesday and overnight track the Tuesday-Wednesday storms.

Flooding Follows Heavy Rainfall In Northeast Iowa

Associated Press, September 22, 2016

DES MOINES, Iowa (AP) — Authorities say flash flooding is occurring across several counties in northeast Iowa, thanks to heavy rains.

The National Weather Service said Thursday that 1 to 2 inches an hour have fallen in spots, and more thunderstorms are expected to produce another 1 to 2 inches. The same storms also may also be capable of producing hail and strong winds.

The service says water is covering some streets in Hawkeye and says there's water over the pavement on U.S. Highway 18 west of Hawkeye.

The service also says at least three tornadoes were reported Wednesday evening in parts of southern Floyd County and northern Butler County. Two machine sheds were destroyed southeast of Marble Rock, and trees were knocked down in several areas.

It's unclear whether the storms caused any injuries.

State Returns Nearly $70K In Unclaimed Funds To Flood Victim

Associated Press, September 21, 2016

BATON ROUGE, La. (AP) — The Louisiana Department of the Treasury's Unclaimed Property program has returned nearly $70,000 to a resident affected by last month's flooding.

Treasurer John Kennedy, in a news release Wednesday, said a woman found $34,000 of her own money and another $35,000 in cash and stock from her late mother's estate.

In all, the department says it returned about $176,000 to Louisianians who stopped by Saturday's event at the Mall of Louisiana in Baton Rouge.

Unclaimed property includes old bank accounts, insurance proceeds, utility deposits and other lost money sources.

The program has returned more than $407 million to almost 630,000 residents since 1972.

Residents can search for missing money online at www.LATreasury.com or call the department's toll-free hotline at 1-888-925-4127 Monday through Friday from 8 a.m. to 4:30 p.m.

La. Guard To Open $13.5 Million Franklinton Readiness Center

Associated Press, September 21, 2016

FRANKLINTON, La. (AP) — The Louisiana National Guard is set to open its new $13.5 million Readiness Center in Franklinton.

A ribbon cutting ceremony will be held Thursday.

The National Guard said in a news release the Readiness Center will serve as headquarters for roughly 105 soldiers of the LANG's 843rd Horizontal Engineer Company, 205th Engineer Battalion. It is replacing the original center that was built in 1975 and sustained heavy damage from Hurricane Isaac in 2012.

The new state-of-the art center was completed July 15 and covers more than 30,000 square feet.

USDA: Ag Disaster In 24 Louisiana Parishes, 2 Texas Counties

Associated Press, September 21, 2016

BATON ROUGE, La. (AP) — The U.S. Department of Agriculture has named 24 Louisiana parishes and two Texas counties agricultural disaster areas because of last month's storms and flooding.

Eleven parishes are primary disaster areas, and the others are adjacent to them, the Louisiana Department of Agriculture and Forestry said in a news release Wednesday.

The primary disaster areas are Acadia, Ascension, Cameron, Evangeline, Iberia, Jefferson Davis, Lafayette, St. James, St. Landry, St. Martin and Vermilion parishes. Allen, Assumption, Avoyelles, Beauregard, Calcasieu, East Baton Rouge, Iberville, Lafourche, Livingston, Pointe Coupee, Rapides, St. John the Baptist and St. Mary parishes, and Jefferson and Orange counties in Texas are contiguous disaster areas.

Last week, the LSU AgCenter estimated that south Louisiana suffered $277 million in damage to crops, livestock, equipment and increased production costs. The worst damage was to soybean and rice crops, estimated at losses of $69 million each. Corn damage was pegged at $44 million, while cotton damage reached $26 million.

The Farm Service Agency has low-interest emergency loans for eligible farmers. Farmers have eight months to apply.

The agency considers the extent of losses, security available and repayment ability.

It also has other recovery programs.

Gov. Edwards Going Back To Washington Seeking Disaster Aid

Associated Press, September 21, 2016

BATON ROUGE, La. (AP) — Gov. John Bel Edwards is making his third trip to Washington in as many weeks, trying to build support for billions in federal disaster aid for Louisiana's flood recovery.

Edwards' office says the Democratic governor will travel to Washington on Wednesday and return home Friday. He'll be meeting again with members of Congress, making his pitch for a $2.8 billion recovery package.

The governor and Louisiana's congressional delegation are trying to get flood aid inserted into a spending bill that must pass to avoid a government shutdown next week. It's unclear if they will be successful or have to wait until after the November elections for another chance at the disaster relief.

The mid-August flooding killed 13 people and caused more than $8.7 billion in estimated damage.

Trump Weighs In On Internet Fight In Stopgap Spending Bill

By Andrew Taylor

Associated Press, September 21, 2016

WASHINGTON (AP) — Donald Trump's campaign has inserted itself into already tricky negotiations on a temporary spending bill needed to avert a government shutdown, siding with Texas Sen. Ted Cruz in trying to block the government from ceding its limited role in overseeing some aspects of the internet.

"Donald J. Trump is committed to preserving Internet freedom for the American people and citizens all over the world. The U.S. should not turn control of the Internet over to the United Nations and the international community," senior Trump adviser Stephen Miller said in a statement.

Democratic and Republican administrations have both supported a transition of the U.S. Commerce Department's role in governing the internet's domain name addressing systems, transferring responsibility to such stakeholders as technical experts, businesses and other governments.

The temporary spending bill is the top item on the congressional agenda before lawmakers leave Washington for the fall campaign. It also provides more than $1 billion in long-delayed funding to battle the Zika virus. Lawmakers hope negotiations on the measure will be wrapped up this week, though the pace of talks has been slow and Wednesday produced no visible breakthroughs.

Many experts say Cruz and his allies are greatly overstating the Commerce Department's potential influence over internet content and spinning exaggerations and conspiracy theories. But Senate Majority Leader Mitch McConnell, R-Ky., is pushing to use the stopgap spending bill to at least delay the transition. Democratic negotiators like Senate Minority Leader Harry Reid of Nevada are strongly opposed to that effort.

Meanwhile, House Speaker Paul Ryan, R-Wis., came out Wednesday in favor of adding money to the measure to address catastrophic flooding in Louisiana.

President Barack Obama has heeded calls by Louisiana's governor and congressional delegation and requested $2.6 billion to help Louisiana rebuild from last month's devastating floods. Ryan didn't volunteer how much money he supports. But the Republican speaker is opposed to a key demand of Democratic negotiators: money to help Flint, Michigan, repair its lead-tainted water system.

The flood aid question is one of a handful of unresolved issues involving the stopgap funding bill, which would prevent a shutdown next week and keep the government running through Dec. 9.

Meanwhile, the Senate rejected a resolution to block the Obama administration from selling more than $1 billion worth of American-made weapons to Saudi Arabia, a key U.S. ally in the Middle East. Lawmakers backing the measure, including Rand Paul, R-Ky., are critical of the kingdom's role in Yemen's civil war, but Majority Leader Mitch McConnell, R-Ky., opposed the resolution, which was killed by a 71-27 vote.

"I think it's important to the United States to maintain as good a relationship with Saudi Arabia as possible," McConnell said Tuesday.

The other big item on the Capitol Hill pre-election to-do list is an override vote on President Barack Obama's anticipated veto of legislation that would allow the families of 9/11 victims to sue the government of Saudi Arabia. Ryan predicted that "the votes are there for the override." The vote is expected next week.

The Zika-fighting portion of the pre-election spending bill is nearly complete. Republicans have dropped language to block affiliates of Planned Parenthood in Puerto Rico from receiving funding for prevention and treatment of Zika in the territory. Zika, which can cause grave birth defects, is often transmitted by sexual contact, and women are being advised to delay getting pregnant if they live in an area where Zika is widespread.

Negotiators on the measure hope a deal might be reached Wednesday, but negotiators have blown through several earlier deadlines.

Democrats See Stopgap Spending Bill As Best Chance To Get Funding For Flint Water Crisis

By Kelsey Snell

Washington Post, September 21, 2016

Democrats believe they have finally found the leverage they need to force Republicans to approve funding to address the water crisis in Flint, Mich.: historic flooding in Louisiana.

Democrats are pushing for a Senate-passed aid package for Flint to be linked to flood relief funds in a stop-gap spending bill that would prevent a government shutdown at the end of the month. Republicans say they want to give the House more time to consider passing funding for Flint, but Democrats have refused to sign off on the spending bill until the issue is resolved.

"We have been trying to fund Flint for I think it's eight months now," Senate Minority Leader Harry Reid (D-Nev.) told reporters Tuesday. "People in Flint are still drinking water out of bottles. They still have children who are sick with lead poisoning. And the Republicans have refused to do anything."

Flint aid has emerged as one of the final sticking points as negotiators continue to bicker over the remaining details of the stop-gap spending bill, which would keep the government funded through Dec. 9 and also provide more than $1 billion to combat the Zika virus. Party leaders also continue to clash over whether the United States should give up control of a non-profit that governs the internet domain system and make it easier for the Export-Import Bank to approve more deals. But the stand-off over aid for Flint is proving to be among the hardest issues to resolve.

There is broad bipartisan agreement that Congress needs to act quickly to approve federal disaster relief for the wide swath of Louisiana impacted by historic rainfall and flooding that killed 13 people in August. Louisiana Gov. John Bel Edwards (D) has requested $2.8 billion to help rebuild the area where flooding has typically been rare and few residents were protected by flood insurance.

But Democrats are insisting Republicans also agree to include money to help Flint deal with a water supply that has been poisoned by lead contamination.

"You can't put Louisiana in unless you put Flint in, they both should be together," Senate Democratic Policy Committee Chairman Sen. Charles E. Schumer (D-N.Y.) told reporters Thursday.

Democrats, led in the Senate by Gary Peters and Debbie Stabenow of Michigan, have been working for months to pass funding for Flint to repair damage to the city's water pipes that caused lead to leach into the drinking water. The crisis began in 2014 when a state-appointed emergency manager switched the source of the city's drinking water to the nearby Flint River in an effort to save money. The corrosive river water caused damaged pipes and rendered the water undrinkable and in some cases unsuitable for bathing.

"Louisiana needs the money now, Flint needed the money last January and before," Peters said. "It is a living nightmare for the people of the city of Flint and they can't wait any longer."

Last week the Senate voted 95 to 3 to approve $100 million in federal money for Flint as part of a broader water resources bill, pending the drafting of a comprehensive plan for how the money would be spent. It also authorized at least $700 million in loans from the Environmental Protection agency for communities looking to upgrade their existing water system and $50 million for programs to address the health impacts of lead exposure.

[Congress Senate clears Flint aid package, but House action still in doubt]

The bipartisan Senate package falls short of Democrats' original request for $600 million in relief for Flint.

Senate Republicans say they have already approved the money once and Democrats just need to wait for the water bill to be approved in the House.

"I don't understand their thinking, obviously [the water bill] has Flint in it," Sen. Bill Cassidy (R-La.) told reporters on Wednesday. "It's just a question of does it come 10 weeks from now."

House leaders have said they plan to take up the water bill sometime after the election in November but their legislation does not include any aid for Flint. Peters said House Energy and Commerce Committee Chairman Fred Upton (R-Mich.) has vowed to push for Flint to be addressed once the House and Senate meet to resolve differences in their two versions of the water bill. But Democrats don't want to wait to see if the funding survives those negotiations.

"Their bill may not have money for Flint in it," Schumer said.

House Republicans Slam New Obama Climate Review

By Devin Henry

The Hill, September 21, 2016

House Republicans on Wednesday hammered a new Obama administration request for federal agencies to consider climate change impacts in environmental reviews of proposed projects.

The guidance, finalized by the White House's Council on Environmental Quality (CEQ) in August, sets standards for how agencies can incorporate climate change into their permitting evaluations under the National Environmental Policy Act (NEPA).

Republicans oppose the change, saying the new guidance will slow down permitting for projects like oil and gas drilling and pipeline construction that already needs to go through NEPA reviews.

"For CEQ, it appears advancing a questionable agenda at all costs is more important than ensuring that the law and science and sound economic reasoning are going to be honored," House Natural Resources Committee Chairman Rob Bishop (R-Utah) said during a Wednesday hearing.

Bishop tied the guidance to climate-related executive actions pursued by the Obama administration.

"This administration's concept that the end justifies the means, not going through Congress and finding other ways of accomplishing its goals, stretches the limits of the Constitution," he said.

Democrats and CEQ Managing Director Christy Goldfuss defended the guidance, saying it will help address climate change, which Rep. Raul Grijalva (D-Ariz.) called the "mother of all environmental issues."

The guidance will help "merely understand the carbon impact of our federal decisions," said Grijalva, the committee's top Democrat.

"By counseling federal agencies on how to consider climate change in their NEPA reviews, our final guidance builds on the administration's efforts to address climate change and build a more resilient future," Goldfuss said.

Along with the CEQ's guidance, committee Republicans also took aim at climate science generally.

One member insisted there are more factors behind recent wildfire activity than higher temperatures. Another read a news article from the 1920s about warming seas to conclude, "global warming has been going on for a long time."

"As a holder of a degree in Agriculture, a Bachelor of Science, I'm glad to hear that we're concerned about the production of CO2. All the plants I've ever grown love CO2," Rep. Doug LaMalfa (R-Calif.) said.

He asked Goldfuss: "What percentage of climate change or CO2 is caused by man-made actions?"

"We're going to have a difference of opinion on this," Goldfuss said. "We know, and what I know, is what our scientists tell us, which is that climate change is happening now and that humans are contributing."

LaMalfa asked, "which group of scientists?"

"The vast majority," Goldfuss replied.

Social Entrepreneurs Predict Flooding Risk In Vulnerable Communities

By Anne Field

Forbes, September 21, 2016

As climate change causes more potentially catastrophic flooding across the globe, the need to predict what areas are the most vulnerable becomes more urgent.

That's the issue Cloud to Street is addressing, combining big data analysis, crowd sourced information from people on the ground and satellite imagery to create what co-founder Bessie Schwarz calls a "living vulnerability assessment."

The startup recently took part in a pitch event at SOCAP2016 in San Francisco.

Basically, the startup creates maps that determine and displays flood risks for anywhere in the world, with an analysis of which communities are most vulnerable because of their underlying social conditions. For example, in one area, it might turn out there's a connection between having a large older population and higher risk of extreme damage from flooding. According to Schwarz, although roughly 16% of New Orleans residents were over 60 when Hurricane Katrina hit, 75% of deaths were from people in this age bracket.

But it takes a lot of leg work. Part of the data comes from satellite imagery, much of which was originally generated by NASA. But another chunk is from people on the ground–the communities that have experienced flooding.

"We need to now whether those pixels are of your street and if so, did it really flood there and what happened," she says.

In fact, the social conditions connected to flooding are as important as the satellite data, because they provide the most insights into what causes a community both to experience greater losses and be less likely to recover.

For example, a flood map of New York State in 2014 showed that major characteristics of at-risk

places included a preponderance of female head of households/ lower median house value and poverty.

Also, the characteristics of social conditions are different from one region or country to another. "The conditions that make communities more at risk in Senegal are not necessarily the same ones you find in the ninth ward of New Orleans," says Schwarz.

Schwarz and co-founder Beth Tellman got started when they were graduate students at Yale's School of Forestry and Environmental Studies in 2013. There, they got involved with a project spurred on by Google Earth Outreach, which has a tool for processing satellite imagery. Tellman, a hydrologist who had previously worked on disaster relief in El Salvador, immediately remembered instances during which people didn't get the help they needed thanks to faulty maps. Schwarz had worked as a community organizer on climate change-related disaster relief in the U.S., and saw the need to gather input from those on the ground.

Then, according to Schwarz, they were approached by World Bank officials in 2014 trying to get a better understanding of what happened when disastrous flooding in the north Indian state of

Uttarakhand killed almost 6,000 people. But it wasn't until early 2015 that the founders decided, says Schwarz, "We need to make a company out of this."

Now, they're running pilots in Senegal and India, as well as part of the U.S. because, says Schwarz, "There's great data here." The target market is development banks that work with governments and NGOs.

Coastal Washington Tribe Wins Prize For Improving Health

Associated Press, September 21, 2016

TOKELAND, Wash. (AP) — A small tribe on the Washington coast has won a prestigious award for its efforts to improve community health.

The Shoalwater Bay Indian Tribe located near Tokeland in Pacific County received the Culture of Health award from the Robert Wood Johnson Foundation last week.

The foundation honored the tribe for its work in opening a Wellness Center to provide medical, dental and mental health services for tribal members and others. Previously, tribal members had to drive 70 miles to see a doctor.

The tribe was also recognize for its efforts in engaging youth to participate in tribal government and for working to move the reservation, which located in a floodplain and tsunami zone, out of harm's way.

Gov. Jay Inslee was scheduled to visit the tribal council and tour the new Wellness Center on Wednesday.

Gov. Scott Orders DEP Investigation Of St. Pete Sewer Crisis

Associated Press, September 21, 2016

ST. PETERSBURG, Fla. (AP) — Gov. Rick Scott has ordered the Florida Department of Environmental Protection to investigate a sewage spill in St. Petersburg.

Heavy rain during Hurricane Hermine overloaded the city's sewer systems, sending millions of gallons of sewage to flow into streets and waterways.

In a news release Wednesday, Scott's office said the City of St. Petersburg dumped about 150 million gallons of raw and partially-treated sewage and wastewater into Tampa Bay and Boca Ciega Bay.

Also on Wednesday, St. Petersburg Mayor Rick Kriseman announced he was replacing two top city wastewater officials.

And U.S. Rep. David Jolly's has called for a federal environmental probe.

Island County Settles Landslide Lawsuit For $1.5 Million

Associated Press, September 21, 2016

COUPEVILLE, Wash. (AP) — Island County commissioners have voted to settle two lawsuits connected to a massive 2013 landslide for $1.5 million.

The Daily Herald reports (http://bit.ly/2coHuAk) that more than 65 Central Whidbey homeowners affected by the slide will split the sum, which will be paid by the Washington Counties Risk Pool. Island County has also agreed to rebuild a portion of a road that was destroyed by the landslide.

As part of the settlement the county has admitted no liability or fault.

The Central Whidbey landslide on March 27, 2013 moved an estimated 5.3 million cubic feet of earth, a house and a small wooded area in a matter of moments. No one was injured in the slide but many properties were damaged.

2 More El Faro Families Settle With Sunken Ship's Owner

Associated Press, September 21, 2016

JACKSONVILLE, Fla. — Two more families of crew members who died on the freighter that sunk last year near the Bahamas during a hurricane have settled their wrongful-death lawsuits.

The families settled with Tote Services Inc. and Tote Maritime Puerto Rico, the owner and operator of El Faro, respectively, for $500,000 each plus an undisclosed sum for economic losses.

The 790-foot-long (240-meter-long) ship sank Oct. 1 after losing propulsion and getting caught in Hurricane Joaquin. All 33 aboard died, and all of their families filed claims. The number of settled cases now stands at 23.

The Florida Times-Union reports (http://bit.ly/2cDq1jU) the latest settlements are with the families of Theodore Quammie of Jacksonville and Steven Shultz of Roan Mountain, Tennessee.

Investigators are transcribing 26 hours of audio from the ship's bridge after crews recovered El Faro's data recorder.

Abandoned Katrina Hospital

Yahoo! News, September 21, 2016

Haunting pictures show what remains of a New Orleans hospital that was decimated by Hurricane Katrina and left to rot.

The eerie images show equipment and supplies that were left behind as people evacuated and fled in fear of the incoming hurricane in August 2005.

Other shots show the damage the hospital endured during the disaster and the subsequent flood, with paint left peeling from the walls.

American photographer Jeff Hagerman, from Atlanta, took the snaps at the Charity Hospital in New Orleans. (Caters News)

Wildfire Rehab In Idaho, Oregon Includes Fall Herbicide

By Keith Ridler

Associated Press, September 21, 2016

BOISE, Idaho (AP) — The federal government's 5-year, $67 million rehabilitation effort following a 2015 rangeland wildfire in southwest Idaho and southeast Oregon is entering its second year with another round of herbicide applications combined with plantings of native species.

The U.S. Bureau of Land Management has started applying the herbicide Imazapic on federal lands to knock out invasive weeds in Oregon and will begin in Idaho in October, officials said this week.

The rehabilitation is part of the federal government's plan to develop new strategies to combat increasingly destructive rangeland wildfires, mainly in Great Basin states that contain significant habitat for greater sage grouse, a bird found in 11 Western states. About 200,000 to 500,000 remain, down from a peak population of about 16 million.

About 100 square miles of aerial spraying is taking place in Idaho and Oregon and visitors are asked to stay away from posted areas.

Other areas previously treated with herbicide will be re-planted with bluebunch wheatgrass, squirrel tail and Sandberg's wheatgrass, to name a few, said Cindy Fritz, a natural resource specialist with the Boise District of the BLM. It is hoped the native plants will keep out invasive species, particularly fire-prone cheatgrass.

The 2015 wildfire scorched about 436 square miles of sagebrush steppe that supports cattle grazing and some 350 species of wildlife, including sage grouse.

Federal officials chose not to list the ground-dwelling bird as endangered last year but that decision will be reviewed in about four years, and what happens with the wildfire rehabilitation in Idaho and Oregon could play a role.

"The sage grouse wasn't listed but it will be reviewed for listing soon enough, and some kind of evidence that you can recover habitat for the bird is an important habitat question that they're trying to get right," said John Freemuth, a Boise State University professor and public lands expert.

Part of the new strategy on the rehabilitation is extending the effort to five years rather than the typical three, as well as applying what scientists call adaptive management that allows changing plans if something doesn't appear to be working.

Fritz said the adaptive management is currently being used with about 8 square miles treated with herbicide last year that failed to eliminate invasive species.

Previously, Fritz said, with the shorter three-year timeline, "we would have walked away. The fact that we get to do multiple treatments is something very new to us."

Much is riding on the rehabilitation effort that is expected to produce proven strategies to help restore future rangeland wildfire areas with the goal of making them more resistant to fire and resilient if a fire moves through.

Interior Secretary Sally Jewell toured the area in May to get an update on the work that's a result of her order last year calling for a "science-based" approach to safeguard greater sage grouse while contending with fires that have been especially destructive in the Great Basin.

Freemuth said adaptive management has been talked about for a long time but is rarely used due to staffing levels and lack of resources.

"I think they needed a signal, as Jewell gave, to monitor things long term and change things if something doesn't work out," he said.

The BLM has partnered with the U.S. Geological Survey to quantify results with some 2,000 sample monitoring plots being tracked.

Firefighter Dies, 1 Hurt As 1,000 Battle California Wildfire

By Christopher Weber

Associated Press, September 21, 2016

LOS ANGELES — A firefighter among those battling a central California wildfire died Wednesday and another was hurt when the water truck they were in overturned on a highway miles from the fire lines.

The accident happened as firefighting crews gained ground in their effort to contain the 19-square-mile fire on Vandenberg Air Force Base.

The truck crashed just before dawn at a roundabout on Highway 246 about two miles (3.2 kilometers) outside the city of Lompoc, Ventura County Fire Department spokesman Steve Swindle said.

Venture County firefighter Ryan Osler was killed, and Adam Price was injured. There were no other occupants in the truck.

Osler, 38, was a second-generation firefighter whose father worked for the same department. He was married with two children.

Gov. Jerry Brown said in a statement that Osler "dedicated his life to protecting his fellow Californians. This tragedy reminds us of the dangers firefighters face every day."

Osler's father-in-law, Leonard Yniguez, described him as "just the most perfect person. He was always there for everybody."

Osler married Yniguez's daughter, Jennifer, after they graduated from high school in Santa Clarita. He kept a memorial to his father at his home. It included his father's helmet, shoulder patches and a photo of him when he rescued a baby.

"It was in his hallway leading into this master bedroom," Yniguez told the Ventura County Star. "He would see it every night when he went to bed. Now, we have to do it for him."

The California Highway Patrol was investigating the cause of the crash.

Ventura County was among several departments that sent more than 1,000 firefighters to the fire, which was 45 percent contained.

Firefighters focused Wednesday on the blaze's southeast boundary. Voluntary evacuation orders were in place for about 400 residents of the San Miguelito Canyon area.

Officials said the fire did not pose an immediate threat to the base's launch complex that fires satellites into space. Its cause was under investigation.

Vandenberg encompasses nearly 100,000 acres along the Pacific Ocean. A wind-whipped fire in 1977 killed the base commander, the base fire chief, an assistant chief and a bulldozer operator.

Ventura County Firefighter Is Killed While Driving To Canyon Fire At Vandenberg Air Force Base

By Veronica Rocha

Los Angeles Times, September 21, 2016

A Ventura County firefighter was killed and another was injured early Wednesday in a rollover crash near Lompoc as the pair were hauling water to the Canyon fire at Vandenberg Air Force Base.

The firefighters were assigned to a water tender by the California Governor's Office of Emergency Services and headed to the 12,353-acre wildfire about 6:20 a.m., when the rollover crash occurred on the westbound California 246, said Capt. Mike Lindbery, spokesman for the Ventura County Fire Department.

The water tender struck a curb within a roundabout at Purisima Road, causing the truck to overturn, according to the California Highway Patrol. The firefighters were wearing seat belts.

When CHP officers arrived, they found the firefighter trapped in the passenger seat inside the water tender.

The Ventura County Fire Department identified him as fire engineer Ryan Osler.

The second firefighter, who has not been identified, was taken to an area hospital, Lindbery said. He suffered minor injuries, authorities said.

The firefighters were among more than 1,000 personnel assigned to the massive blaze.

On Tuesday, Air Force officials said fire crews were making progress on the wildfire, but officials are concerned that increased winds later this week could rekindle flames.

The blaze has remained active along the northern portion, but cooler temperatures allowed firefighters to build lines around the fire, Air Force officials said in a statement Wednesday. The fire is 50% contained.

Using infrared heat detection, an aircraft was expected to fly over the Canyon fire overnight to determine whether firefighters had made significant gains, Air Force officials said.

The wildfire, which started Saturday in a remote canyon, has knocked out power to several buildings and has halted railway service through the sprawling base. Four firefighters suffered minor injuries while battling the blaze: two on Sunday and two on Monday, officials said.

Northwest winds Wednesday are expected to push the fire toward already-scorched areas, allowing crews to amp their firefighting efforts.

"Fire crews will concentrate their efforts from the northwest portion of the fire area in order to stem the fire's spread in that direction, and to provide additional protection for the base's space launch complexes," the Air Force said in a statement.

But increased winds Thursday could kick up flames, so Air Force officials said fire crews will be monitoring any hot spots.

Vandenberg Fire Department Assistant Chief Wayne Seda on Tuesday said crews have been making plans to defend its "critical assets," including the Atlas V rocket, which was scheduled to take off Sunday and carry a commercial satellite to space.

He said the rocket was not in danger, although "it's a concern."

FEMA HOUSING

FEMA Homes Of Last Resort

By Lauren Langlois

Hammond (LA) Daily Star, September 22, 2016

A little more than 20 mobile homes being provided by the Federal Emergency Management Agency are getting set up for flooded residents at a trailer park off Airport Road outside Hammond city limits, according Tangipahoa Parish President Robby Miller.

The parish is expected to need about 100 FEMA mobile homes, he said, and more should be trickling in. Currently, only a few are set up on flood victims' private properties in Tangipahoa Parish as those residents work on repairing their homes, he said.

Permits for mobile homes to be set up at trailer parks are still required by parish government, though the permits are free of charge. He said many residents are still staying with friends and families while others are using other forms of temporary housing.

"We have a long way to recover," he said.

Miller said the parish reached out to owners of trailer parks so they could provide information on how much space they have for the emergency mobile homes. The parish then provided the information to FEMA.

The federal agency considered trailer parks that had empty spaces available in parishes hit by devastating floods in August as possible sites for mobile homes, said Steven Solomon, FEMA media relations specialist.

Solomon said the agency conducted physical inspections of the trailers parks that included determining the parks' debris status and confirming that utilities were working. Sites have to be outside a flood plain, and lot sizes have to accommodate the manufactured housing units that are different from the FEMA trailers provided during Hurricane Katrina's aftermath.

Solomon said 47 units were being occupied by flood victims in the affected parishes as of Tuesday. The mobile homes are considered a last resort by FEMA, he said.

Flooded victims could also apply for temporary housing aid from FEMA to stay in a house, apartment, hotel/motel, recreational vehicle or other readily available rental place. More than 60,000 residents are being provided some form of temporary housing aid throughout parishes impacted by the August floods, he said.

Political Activists Claim East Feliciana Officials Treated Them With Disrespect

By James Minton

Baton Rouge (LA) Advocate, September 21, 2016

CLINTON — Two black political activists involved in housing debates over the years with East Feliciana Parish police jurors claimed Tuesday that parish Homeland Security Department officials treated them with disrespect during a meeting to discuss possible trailer park sites for flood victims.

Lula London told the jury she was "despondent over the treatment" given her and her associate, George Turner, during a meeting with parish Homeland Security Director Joseph Moreau and his assistant, Jim Parker, both of whom are white.

"I have never witnessed any treatment like that since the 1970s, and I've been on the road a lot," London said.

"It seemed as if a demon came out of that man," Turner said of Moreau, who had been reading a letter from him requesting that three pieces of property, including one owned by London and the other owned by the School Board, be submitted to the Federal Emergency Management Agency for possible trailer park sites.

The other site is on Turner Road in Ethel, but Moreau said he was not clear if George Turner owned the property.

Moreau did not address the pair's allegations during the meeting, but said later "none of that happened in that manner."

The meeting, held in the parish 911 center, was videotaped and witnessed by Emergency Communications Commission members who were waiting to begin a formal meeting, Moreau said.

Moreau, who has been working with FEMA to find a suitable site, said he told London and Turner they have no authority to submit school property to FEMA; only the School Board has that authority.

In the absence of School Superintendent Carlos Sam and jury President Louis Kent, Moreau said he told London and Turner the meeting was terminated, at which time he said London accused of him of being a racist.

Parker said he told London and Turner to leave when London made the comment to Moreau.

During the discussion, juror Chris Hall said a piece of parish-owned property in Clinton has been submitted to FEMA and the U.S. Army Corps of Engineers for consideration, possibly avoiding disputes among landowners interested in getting a trailer park and neighboring residents opposed to them.

Moreau also said FEMA has not decided a need exists for a trailer park for flood victims.

One possible kink in getting aid to flood victims is that FEMA has determined that no one can show proof of ownership for 198 homes that were "devastated" by the flood, Moreau added.

By Sept. 6, FEMA had approved six families for temporary mobile homes but the units were to be placed on the victims' property.

Three of the jury's eight members present Tuesday — Jason McCray, Ed Brooks and Michael Cheatham — apologized to London and Turner, with McCray saying, "Don't go away with a bitter taste in your mouths."

News Roundup: Edwards, Landry To Meet Over Latest Budget Disagreement … FEMA Awards Mississippi Business Contract To Supply Manufactured Homes For Louisiana Flood Victims … Oil And Gas Inventories Decline Greater Than Expected

Baton Rouge (LA) Business Report, September 21, 2016

Talking it out:

Gov. John Bel Edwards will sit down with Attorney General Jeff Landry next week to try to hash out their latest budget dispute. The Associated Press reports that representatives of Edwards and Landry say a Sept. 30 meeting has been scheduled to discuss Landry's budget requests that the Edwards administration stalled. The attorney general sought to boost spending in his budget on Medicaid fraud investigations and to take money from the health department to defend Louisiana abortion laws. The Edwards administration disagreed with both requests and refused to advance them to the Legislature's joint budget committee for consideration. Landry sought intervention from lawmakers, who suggested they were tired of the bickering and told the officials to work it out themselves. Edwards and Landry have clashed repeatedly since taking office.

Temporary housing:

The Federal Emergency Management Agency has awarded a $6.76 million contract to a Mississippi business to supply temporary housing for Louisiana flood victims, The Associated Press reports. U.S. Sen. Thad Cochran says in a news release that Lexington Homes was awarded the fixed-price contract to construct and deliver 155 manufactured homes, which will be used to support flood disaster recovery efforts in Louisiana. Severe storms and flooding in August led to a federal emergency designation for 22 parishes. Lexington Homes is one of seven builders to compete successfully for this indefinite delivery/indefinite quantity contract, which includes four option years.

More than expected:

The nation's oil and gasoline stockpiles fell more than expected in the past week, bringing good news to the energy sector that the global glut of petroleum is continuing to shrink. FuelFix.com reports that commercial crude inventories fell by 6.2 million barrels for the third consecutive week. Gasoline stockpiles declined by 3.2 million barrels. Both, however, remain near historically high levels, according to the U.S. Department of Energy. The only sizable buildup came in distillate fuel oil—used for diesel and heating oils—which grew by 2.2 million barrels. Total petroleum stockpiles shrank by 6 million barrels when all products, including propane and other oils, were counted. The news quickly boosted U.S. oil prices up to about $45 a barrel, up nearly $1 for Wednesday morning. Read the full story

Town Of Livingston Relaxes Trailer Ordinance In Wake Of "Great Flood"

By Jamie Webb

Livingston Parish News (LA), September 21, 2016

Livingston — The Livingston Board of Aldermen decided to follow in Denham Springs' footsteps and relax its trailer ordinance in light of the Great Flood of 2016.

"We need to find a way to ease our trailer ordinance for those people who flooded who want to put a trailer on their property while they rebuild," Mayor Derral Jones said.

"I called other municipalities, and we think the best way is the way Denham Springs did it. Rather than try to rewrite an ordinance or amend an ordinance, they simply agreed that it would not be enforced for those people whose houses were flooded who want to put a trailer on their property while they rebuild," he said.

"That will be allowed for a six-month period. If they're not done in six months, they can come here and apply for an additional extension of time. They must be tied in to city sewer," Jones stipulated, adding that the town will require a permit and inspection for those who want trailers.

He felt relaxing the ordinance was an important step to take to ease the burden of local residents because rewriting or amending the ordinance would require a 30-day notice.

Jones said he already had a handful of requests to place trailers last week but it was strictly against the ordinance.

"We had about 30 homes and businesses that got water in them here in town, which represents 6-7 percent of all the buildings in Livingston," Jones said. "God blessed us, when you compare that to the 85 percent of homes in Denham Springs that got water."

"Our engineering firm got flooded out," he added, noting the absence of the town's engineer at the meeting Sept. 8.

He also said some of the town's employees got water, and the day of the monthly meeting was the first time they had a full staff at Town Hall since the flood.

Jessie Glascock, who qualified as a town alderman in July, mentioned the future widening of Interstate 12 through the town and wondered if there was anything the town could do now to prevent potential flooding.

"We see the problems that [barrier] wall caused in Walker," Glascock said, suggesting more spaces between the wall partitions to allow water to flow more efficiently.

"That wall caused Walker some nightmares. I saw it with my own eyes," he said. "I was in a boat on this side of the wall, and you could drive on the other side of the road."

Jones said after this flood, the Department of Transportation and Development (DOTD) will probably adjust their future construction plans accordingly.

In other news, Jones said he has received a few requests for town services since the flood.

"We've been requested by the Sheriff's Office to try to provide water and sewer for a tract of land south of the town for some trailers for his employees. He said he has 73 employees whose homes flooded, and of course he can't work 73 people short, so he needs them here. They plan to put some trailers or cottages there for them," Jones said.

"We also were asked to provide water and sewer to about 200 FEMA cottages in Satsuma," he said, adding that the project might require a lift station.

In other news, Jones mentioned a meeting local officials had with the Federal Emergency Management Agency (FEMA), who announced President Obama's decision to amend the Louisiana Flood Disaster Declaration to cover 90 percent of federal funding as opposed to 75 percent.

"That's a significant savings for us to only have to pay 10 percent rather than 25 percent," he said.

Jones expects the town will only have a small claim, falling under the threshold of $120,000 in damages.

Some of that included the town park and its concession stand, which had walk-in coolers and walk-in freezers that flooded. One of the baseball fields was damaged when the flood pushed all the dirt from the infield to the outfield.

Jones thanked the town's residents for helping travelers who were stranded on I-12 with food, medical care and more.

"I cannot begin to tell you how proud I am of our citizens of the Town of Livingston and how they stepped up to the plate to take care of their own and take care of others in need," Jones said.

"We at one time had hundreds of evacuees between Bethel Church's gym and the high school gymnasium – people who were stuck on I-12 when they shut I-12 down on the east side because the river overflowed," he said. "I don't know how many people told me, 'I've never been treated this way in my life. I don't want to go home – I want to stay here."

The mayor and aldermen also expressed their gratitude for the town's employees, law enforcement, fire department and volunteers who worked non-stop during and after the flood.

"They did a fantastic job and stepped up to the challenge," Alderman Joey Sibley said. "It was amazing to see the outreach."

"Most of the town employees and police officers do not get the credit for the job they do," Alderman David McCreary said.

In other business, Jones said he would look into getting a written right-of-way for the Red Oak Water Tower. The town has a verbal right-of-way for use of the paved road that leads to the tower, but Town Attorney Mike Lee said they need a written one.

When they met Aug. 11, the board handled water business and welcomed a visitor who had a water complaint.

Resident Ray Chidester said he owns a property on Montana Street that his sister's family lives in, but they had been experiencing more water than usual during regular (non-flood) rain events.

"Within the last couple of weeks, the property behind me on Tuscany was sold, and the new owner fenced it in and built up the land about 18 inches or two feet tall, and he hauled in yellow clay," Chidester said. "That water now drains onto my property, through my property, and because he built that land up, any water on Tuscany can't go by it, and it drains down the side of his property through my property."

Chidester said some of the water enters his carport and leaves a yellow slime over the ground that makes it slippery, and it must be hosed off daily.

Jones said he met with the neighbor and encouraged him to speak with the town's engineers about potential remedies to get the water directed to the ditches or sewers.

If he does not comply, Jones said Chidester could summon him to court to enforce the changes.

Jones said there are no permits required for a property owner to build up land for a pad, but "if you are flooding somebody, then we have a problem."

In other business, the board approved a contract extension with Waste Management as well as a final payment request to Phoenix Fabricators & Erectors, Inc. of $122,611.57 for the Red Oak Water Tower. This amount includes the retainage after receiving a clear lien certificate for the project.

Beyond this work, the mayor said the town is in desperate need of a new water well. Jones said in August he was looking into getting a $500,000 state grant to assist with building the well, but in September, after the Great Flood, he was all but certain the grant would not be available.

The town had already paid for engineering and sent out bids on the project, and they received a low bid of $760,000. Jones said he would look into other grants and funding for the well.

With less than a handful of meetings left before he retires as Mayor of the Town of Livingston, Jones reflected on some of the changes the town has faced over his long tenure as mayor. For example, when he first became mayor, the town was issuing about four building permits a year. One day this summer, the town issued eight in just one morning.

"We have several new businesses who are coming, including Shell with a new upscale service station and Burger King next door to Shell. Livingston is going to change, and it will be up to the next administration and the next Board of Aldermen to try to manage the growth so that we all still have a community that we love to live in. It's going to be a difficult chore to do that," Jones said.

In other business, the Council:

-Alderman David McCreary said for the month of July, the Fire Department handled 15 first aid calls, three motor vehicle accidents, one investigation, five fire alarms, one gas leak and two false/canceled alarms in town; 11 first aid, four motor vehicle accidents, two mutual aids and two grass/trash fires outside of town.

-For August, the Fire Department handled 25 first aid calls, one motor vehicle accident, one investigation, five fire alarms, one vehicle fire, one grass fire, one electrical line down, one false alarm call and one rescue from an elevator in town; and 16 first aid calls, four public assists, eight motor vehicle accidents, three mutual aids, two fire alarms and one electrical line down outside of town.

Residents Can File For Temporary Housing Aid Extension

By Kevin Dupuy

WBRZ-TV Baton Rouge (LA), September 21, 2016

BATON ROUGE – Residents who need extended temporary housing assistance from FEMA must provide proper documents to make the request.

According to FEMA, residents that are eligible for the extension can use the temporary housing assistance to pay for a place to live.

To receive the extension, residents must demonstrate that they have a disaster related financial need, and complete the following paperwork:

Temporary housing assistance form. (Contact FEMA if you haven't received a form)

A copy of your lease

Receipts showing proper use of federal disaster housing assistance

Current household income status

Any household financial obligations

If you have questions, contact the FEMA helpline at 800-6211-3362.

Many FEMA Trailers Sit Empty Despite Desperate Need For Housing

By Rob Masson

WVUE-TV New Orleans, September 21, 2016

TANGIPAHOA PARISH, LA (WVUE) –

FEMA trailers are now pouring into sections of the state by the hundreds, and though the need is great in Tangipahoa Parish, many sit empty as the kinks are being worked out.

Her walls are open, her house is in disarray and her son wishes Jackie Mosby was somewhere else.

“I think she needs a trailer, but that’s life,” said Justin Johnson.

The problem is, Jackie Mosbey rents her home to own it one day, and she hasn’t qualified for a trailer.

“I didn’t know how to go about it how to do it,” she said.

Eighteen trailers are now being installed about 10 miles away outside of Hammond in a park that held 160 trailers after Katrina.

“The contractor’s out now, no later than next week we can get these people in here,” Said Tangipahoa Parish Planning Director Alyson Lapuma.

Parish officials say finding occupants for the trailers is an ongoing challenge, and they’re meeting with FEMA on a daily basis.

“The electricity was turned on for these 18 [trailers]. They had some minor situations regarding quality control,” said Lapuma.

Though Mosbey has gotten $4,700 in FEMA help, she said her son has been her greatest asset.

“If it wasn’t for him I don’t know what we would do,” she said.

She said the FEMA money will help her buy sheetrock, but without her family she doesn’t know if she could rebuild.

Parish officials said most residents are like the Mosbeys and will persevere and rebuild.

If you’ve received flood damage, they ask that you give them a call at (985) 748-9602.

Mobile Homes Eligible For Shelter At Home Program

WWL-FM New Orleans, September 20, 2016

Homeowners who live in mobile homes are now eligible to apply for the Shelter At Home program. Deputy Chief of Staff for the Governor’s Office, Julie Baxter Payer says they wanted to get some clarification about who was eligible for the program.

“That was the reason for the request by letter last week to verify whether or not that was included because this is a FEMA funded program,” Payer said.

Payer says they have verified that manufactured and modular homes can be included in the program, whether or not they are on wheels or attached to the ground. She says, like with other homes in the program, inspections will be done on a case by case basis.

“They’re going to be measured by the same standard as every other house. In other words, if we spend $15,000 on this on this home, can we make a safe habitable space in the home,” Payer said.

Payer says they also got some clarification about what types of homes do not qualify for the program.

“An RV or a camper that’s more recreational in nature will not be eligible for Shelter At Home work,” Payer said.

NFIP AND FLOOD MAPS

Scituate Officials Outline Options For FEMA Flood Insurance Rate Maps

By Ruth Thompson

Scituate (MA) Mariner, September 21, 2016

The FEMA Flood Insurance Rate Maps are not going away, even if the town does not adopt them at the October special Town Meeting.

“They are in place whether the town adopts them or not,” said David Ball, a member of the Scituate Coastal Coalition.

The coalition and the Town of Scituate hosted a public meeting Tuesday, Sept. 20 to discuss the importance of adopting the maps, and what the consequences would be if they were not adopted. Close to 100 people filled the Scituate Beach Association Clubhouse.

“If the maps are not adopted there would be a laundry list of issues,” Ball said. “There is no benefit at all to not accepting the maps, except financial ruin.”

The Flood Insurance Rate Maps, or FIRMs, where issued by FEMA in 2013 to help the federal agency keep record of data that includes storm tides, river flow and rainfall, among other statistical factors that outline flood risks.

That same year Scituate, Marshfield and Duxbury filed a joint appeal through the Woods Hole Group Inc., to fight the maps, which the towns felt were incorrect.

While Scituate continues to work through the Woods Hole Group to achieve changes it believes are needed to make the maps accurate, the town has a deadline to adopt the maps. The federal agency issued its letter of final determination in May, which triggered a six-month window for voters to adopt the maps.

The community would be suspended from the National Flood Insurance Program, or NFIP, if the maps are not adopted at the Oct. 19 special Town Meeting, according to Scituate Coastal Resource Officer Nancy Durfee.

In this event, the following sanctions would apply:

Property owners would not be able to purchase NFIP flood insurance policies, and existing policies would not be renewed;

Federal grants or loans for development would not be available in identified flood hazard areas under programs administered by federal agencies;

Federal disaster assistance would not be provided to repair insurable buildings located in identifiable flood hazard areas for damage caused by a flood; federal mortgage insurance or loan guarantees would not be provided in identified flood hazard areas.

Additionally, while federally-insured or regulated lending institutions, such as banks and credit unions, are allowed to make conventional loans for insurable buildings in flood hazard areas of non-participating communities, the lender must notify the applicants that the property is in a flood hazard area and that the property is not eligible for federal disaster assistance. Some lenders may choose not to make these loans.

"It's critical that this happens," Ball said of adopting the maps.

During the public meeting, Leslie Fields, a coastal geologist and marine environmental analyst with the Woods Hole Group, Inc., reviewed the appeals process and gave a brief history of the FIRM updates.

Many of those attending had questions about their property or neighborhoods, which Durfee, Ball and Fields attempted to answer during and after the meeting.

"Each one of you is very unique and different," Durfee said. "You need to know what's right for your property."

Ball stressed homeowners should talk to their insurance agents about coverage and the requirements for their property.

"A property does not have to be near the ocean to be in the flood zone," he pointed out.

Ball and Durfee stressed the importance of attending special Town Meeting and voting to adopt the maps, with Ball explaining the process of Town Meeting.

"If the flood maps are not adopted, property values will go down in flood zones," he said.

"So if you want to protect your property, go to Town Meeting."

Special Town Meeting begins at 7 p.m. on Wednesday, Oct. 19 in the gymnasium at Scituate High School, 606 Chief Justice Cushing Highway (Route 3A).

Lessons Of '86: What Green Country Can Do To Prepare For Next Major Flood

By Travis Meyer

KOTV-TV Tulsa (OK), September 21, 2016

TULSA, Oklahoma –

One of the costliest floods in Tulsa history hit 30 years ago along the Arkansas River. Our community is still at risk, and the dangers to life and property are real.

The challenge is to be prepared for the next major flood by learning the lessons of '86.

In October, 1986, a devastating flood hit the Tulsa area when the Arkansas River raged out of its banks.

It was a true perfect storm: a stalled front combined with moisture from a hurricane dumped up to 20-plus inches of rain upstream into the Arkansas River basin. It forced record releases from the Keystone Dam.

From Sand Springs to Brookside to Jenks and Bixby, people evacuated. Water covered streets and flooded thousands of properties with more than $65 million in damage throughout Tulsa County.

Many areas now developed, like Katy Banning's new Bixby neighborhood, were under water in 1986. She had no idea her property was at risk

"We weren't told, but had we been told, we would have got a second opinion and checked with our insurance company to make sure it was safe and everything to move in," said Katy Banning.

INCOG – Tulsa County Floodplain Map

Now, when building in the Arkansas River floodplain, developers are only required to reveal if a property sits inside the 100-year floodplain which means there's a 1 percent yearly chance of flooding. The '86 flood is considered a once-in-200-year flood, and there is no disclosure requirement for that.

Gaylon Pinc is an expert on Arkansas River flood control and potential development.

"We learned a lot from that flood in that the 100-year protection in some areas may not be adequate," he said.

Since ‘86, levees built to handle a 100-year flood protect Tulsa, Sand Springs and Jenks, but bring their own problems.

“By building a levee in one area, you actually can exacerbate flooding downstream in another area,” Pinc said.

That leaves downstream communities more vulnerable.

Flying over Bixby, Jenks and Tulsa, you can see how much has been built in some areas that were once flooded. Many of these areas lie in the floodplain. Some of these places have taken extra steps though to protect for the next flood disaster like Margartitaville Resort and Hotel.

River Spirit Project Manager Randy Hull and his crew engineered a widened concrete drainage channel funneling storm runoff underneath the resort. The tributary into the river is built to handle more water than the ‘86 flood.

“All of our decisions were based on what happened in ‘86,” Hull said. “So, all of our decisions were based on ‘what are we going to do in the event of.’ or ‘how are we going to plan this building for what could happen.’”

The entire building was built to withstand a flood that would rise one foot *above* the ‘86 flood. Advances in technology give Hull less concern for a catastrophic event.

“I’m more confident than what happened in ‘86 because the information is a lot better, the monitoring is a lot better,” said River Spirit Project Manager Randy Hull.

“We have a lot more time to do something in the event of a major flood event, and our capacity is greater.”

But, not everyone is building above minimum standards.

An overview of what could be underwater if a 200- or even a 500-year river flood happened shows many new neighborhoods, businesses and planned developments flooded – hundreds of millions in damage.

“It’s going to be a man-made flood, if you will,” said flooding expert Gaylon Pinc. “It will be deliberate releases at these high flood levels, and we will have warning just like we did in ‘86 to get out of the way, which is the best solution.”

And knowing your risk is the first step to staying safe.

“Got to the FEMA website or go to your local floodplain manager. Ask to look at the maps to see what flood zone you are in,” Pinc said. “I wish more people did that. Everybody should do that whether you think you’re on high ground or not because there are certain localized floodplain issues you need to be aware of in certain watersheds.”

Experts say flood insurance is vital, even with the extra expense.

“We would look into it especially when the river gets high, but just by looking at it – the embankment looks pretty high,” said homeowner Katy Banning. “I don’t know how it would flood again, but I mean, if someone advised us to, we’d think about it.”

You have to know your history to best prepare for your future. Experts recommend building in flood-prone areas to the ‘86 flood level plus one foot.

“Nature can always outdo itself in doing harm to us that live in homes that are vulnerable,” Pinc said.

MITIGATION

After Delay, Ascension, FEMA Agree On Deal To Do Damage Assessments, Hire Inspectors

By David Mitchell

Baton Rouge (LA) Advocate, September 21, 2016

Within the next two weeks, FEMA will have 10 two-person teams of inspectors doing damage assessments of the 10,000 to 12,000 Ascension Parish homes and businesses inundated after last month’s historic flood, parish officials said Wednesday.

Parish government and Federal Emergency Management Agency officials reached an agreement on damage assessments this week after Parish Council members aired concerns late last week about the slow start to the process. The agreement calls for FEMA to pay for the contract inspectors but the inspectors will use a damage assessment method designed by the parish, not by FEMA’s. The assessment is expected to calculate damage on more favorable terms to parish residents.

Martin McConnell, spokesman for parish government, did not give an estimate on how long the assessments were expected to take, but the teams have been projected to assess 20 to 35 buildings per day. Based on that rate, the 10 teams could have the 10,000 to 12,000 buildings assessed in 29 to 60 days of work after they start.

Flooded homes or businesses in need of repairs that will cost more than 50 percent of their value, excluding land, will be deemed to have substantial damage. They will require elevation, removal or demolition, if that building is also within the 100-year floodplain and below FEMA's projected height requirement for a 100-year flood.

According to parish officials, 55 percent of East Ascension Parish, where the heaviest flooding occurred, is inside the 100-year floodplain, including swaths of St. Amant, Sorrento, Galvez and Prairieville.

Some council members, worried that residents were already well into renovation work more than a month since the floods occurred, suggested last week that the parish may even want to hire contractors to do the job.

But McConnell, the spokesman, said Wednesday FEMA contractors will be doing the work on the agency's dime.

Councilman Todd Lambert, whose barbell-shaped District 9 extends from the Gonzales area west of Airline Highway east to parts of hard-hit St. Amant, said Wednesday he would have liked to have seen the process start a little more quickly.

"People are ready to get back in their homes. They're all displaced," said Lambert, who has several family members who flooded.

FEMA contractors already started with damage assessment in some parishes, including the East Baton Rouge Parish, officials have said.

The parish administration's announcement Wednesday of the agreement it has with FEMA to hire the contract inspectors came one day after McConnell said the parish and the federal agency had agreed on using Ascension Parish's scoring method to calculate damage from flooding.

Jerome Fournier, parish planner, described for Parish Councilman Daniel "Doc" Satterlee last week the parish's efforts to negotiate with FEMA its damage assessment method.

He said the parish's method sets the cost to repair at $131 per square foot, but shifts some pre-set estimates of damage lower than what FEMA normally would, which could allow homeowners to avoid surpassing the 50 percent threshold of damage that would require elevation or demolition of the houses.

The parish's method, like FEMA's, assigns set percentages of damage to various parts of a building based on flood levels.

But, unlike FEMA's scoring method, Fournier said, foundation damage in many areas of the parish is likely to be close to zero because backwater flooding rose gradually. FEMA's standard, Fournier said, accounted for moving water along a river, which would cause foundation damage.

Without the foundation damage, many of those flooded homes aren't likely to cross the 50 percent threshold, Fournier said.

At the same time, some homes along the Amite River where the water was moving probably did have foundation damage and are likely to cross the 50 percent damage threshold.

"So we're dealing with two different scenarios and that's what we're trying to convince FEMA of right now," Fournier said of the negotiations. "We're dealing with different environments than what they've been dealing with in the past."

The parish apparently made its case because McConnell said Wednesday FEMA accepted the parish's assessment method.

McConnell did not say Wednesday how the parish would deal with assessments of homes where repair work has already started, though Fournier said last week inspectors would ask questions about flood heights and take other steps to make the assessments.

Repair Work Progressing On West Feliciana Roads, Bridges

Baton Rouge (LA) Advocate, September 21, 2016

ST. FRANCISVILLE — West Feliciana Public Works Director Jim Ferguson's list of projects needing attention is long, but progress has steadily been made since what he calls a "1,000-year storm" caused between $7 and $8 million in damage to the parish's infrastructure.

"This is the fifth emergency declaration I've been a part of, so I'm familiar with the process," said Ferguson, who in other jobs also dealt with hurricanes Katrina, Gustav and Ike and high water events along the Mississippi River and Red River.

Because of his experience, Ferguson said he knows the importance for a parish to get ahead of the paperwork required for a disaster to get the ball rolling for Requests for Public Assistance that are needed for reimbursement. He also has been meeting regularly with Federal Emergency Management Agency representatives. In a best-case scenario, West Feliciana can expect to recoup up to 90 percent of its costs from FEMA.

He said the storms that deluged South Louisiana with rain for three days in mid-August dropped between 22 and 24 inches on West Feliciana. He said most of the structures in the parish are built to withstand a 25-year event, not one of the magnitude of the August storms.

"We've never experienced rainfall like that, some of these structures weren't built to withstand that type of event," said Ferguson. "I'm surprised we didn't have more bridges blown out. We had culverts and roads under water. Relatively speaking, the infrastructure held up."

The two costliest projects are new bridges at Island Road over Williams Creek and the Polly Creek Bridge on Plettenberg Road, which is also known as the Cat Island Bridge. Ferguson said requests for quotations have been advertised for both projects. He said both could take up to 24 months to complete, with the Polly Creek Bridge costing $1.2 million and the new Island Road structure at $2 million.

The Burnett Road Bridge, a project being managed by St. Francisville, also requires complete replacement and will cost roughly $1 million.

Mayor Billy D'Aquilla recently met with Commissioner of Administration Jay Dardenne to get the project's capital outlay status moved from priority two to priority one in order to secure funding, and D'Aquilla said he's also working with FEMA. Because the damage is so extensive, the design work for the bridge will need to be revised somewhat, but D'Aquilla hopes work can begin soon and anticipates completion after the first of the year.

Work on Jacock Road bridge was completed shortly after the storm, at a cost of roughly $25,000. Repair work on Old Tunica Road, allowing for one lane, cost $45,000 and when other priority repairs are completed, a second lane will be added.

Debris at low-water bridges at Sligo Road and Solitude have been cleared and both bridges are open. The Scott Creek low-water bridge on Island Road is open and abutment repairs on Como Road have been completed.

As for La. 66, detours using Highland Road have caused substantial damage, and Ferguson said he understands the project should be completed by the end of October. He also said Mahoney and Mulberry roads require major repair work. Bains Road is being fortified where washouts occurred.

Ferguson said the parish has pretty much finished picking up debris, although he hasn't been able to put a cost on it yet. He said using parish workers is cheaper than contractors and will bring a higher percentage of FEMA reimbursement to the parish.

"We're starting to get back to repairing pot holes and cutting grass again," Ferguson said. He also cautions people not to remove cones or barricades because they're necessary for public safety.

During the Parish Council meeting Sept. 12, Parish President Kevin Couhig praised Ferguson and parish work crews saying they've saved the taxpayers hundreds of thousands of dollars.

Caldwell Water System Repairs Planned

By Tina Alvey

Beckley (WV) Register-Herald, September 21, 2016

LEWISBURG — Plans are on the drawing board to repair Caldwell's severely damaged water delivery system before winter.

This summer's flood caused hundreds of thousands of dollars in damage in the unincorporated community, which is served by Lewisburg's regional water plant. Among the damages were breaks in water lines at three crucial points — the U.S. 60 Caldwell bridge, the W.Va. 63 tunnel (commonly referred to as the Monroe Draft) and the 2-inch pipe leading to a single household on Joe Bennett Road.

Chapman Technical Group engineer Greg Belcher advised Lewisburg City Council Tuesday night that he couldn't guarantee the Federal Emergency Management Agency would fund the repairs, but suggested putting the two larger projects out to bid immediately in order to give FEMA figures to ponder.

Belcher recommended that the $40,000 repair on Joe Bennett Road be bid, but not presented to FEMA, due to the likelihood that the agency would not provide any funding for that small fix.

He estimated that the total tab for all three projects would come in at around $285,000, if FEMA selects the most expensive option to replace the tunnel line, which would involve a directional drilling underneath the 450-foot length of the tunnel. Council was not enthusiastic about that option, primarily because once the line is threaded under the tunnel, it cannot be repaired if future problems arise.

Removing the Joe Bennett Road repair from the equation, repairing the bridge line and simply restoring the portion of the tunnel line that connects to pipe that is attached to the inside of the tunnel reduces the total cost for FEMA's consideration to around $150,000, Belcher said.

Allowing contractors to bid on either option will give FEMA some comparisons to weigh, he noted, but warned city officials that the agency will not make promises of funding in advance. That leaves the decision on which option to pursue in the hands of council.

"It's ultimately going to come right back to us," Belcher said.

Complicating the tunnel project is the interest of CSX Railroad in the structure.

"The railroad is going to claim some control over what happens to the tunnel," Belcher predicted.

Urging council to move forward with the process, lest the water lines not be restored before winter, Mayor John Manchester said a combination of state and federal funds will mean that the two major repairs — the bridge and the tunnel — will involve no city funding.

But with or without that outside funding, there are 100 water customers on the other side of the tunnel now dealing with low water pressure due to the undersized line that had to be used in a temporary work-around that was quickly put in place following the flood who are depending on the city to make these permanent repairs, he said.

Belcher pointed out that at some point the city's long-awaited major water project, which will increase the water plant's capacity and efficiency, will be put back on the front burner. And when the bond is floated for that multi-million dollar project, the relatively small cost of these repairs can be recouped, if state and federal funds don't immediately materialize.

Council unanimously authorized the bidding process for the repairs to commence.

Sinkhole-ravaged Block In Harrisburg Could Be Demolished, Transformed Into Green Space Next Year

Harrisburg (PA) Patriot-News, September 21, 2016

HARRISBURG—Residents in the worst sinkhole-affected area of South 14th Street in Harrisburg will get fair market values for their home and relocation costs paid through a federal disaster grant, city officials announced Wednesday night.

The $1.65 million award from the Federal Emergency Management Agency will pair with a $1 million county mitigation grant, allowing the city to buy out 25 homes at the center of the block, where a giant sinkhole erupted in March 2014.

The relief can't come soon enough for residents in the 1400 block of South 14th who have endured fear and limbo for more than two years. Some residents have had to remain in homes they consider dangerous, on top of shifting ground. Other residents moved out, but have been paying rent and mortgage payments along with taxes and double insurance costs.

The residents gathered at a neighborhood church Wednesday night to hear details of the recently-awarded grant and what it means for their future.

Mayor Eric Papenfuse explained to the packed room at Mt. Olive Church at 1331 South 14th that the federal money awarded so far only covers the first phase of the city's plan for the block, which has been plagued with a series of sinkholes. Engineers also have predicted a high likelihood of more sinkholes to come.

Because of the geology and fault lines under the block, it doesn't make sense to simply carve out homes in the center of the block, Papenfuse said, so the city is also pursuing a grant through the Commonwealth that could deliver up to $8.5 million— enough for the city to buy all 53 homes on the block, relocate residents and prepare the land for open green space.

"We don't want to leave a permanent, blighted eyesore," he said. "We'd like to leave green space safe enough for kids to play. We'd like to leave something that would contribute to the community when we're done."

City officials said they should know in a few weeks whether they win the larger grant of federal mitigation grant money allocated to the Commonwealth.

If the city gets the nod for the Commonwealth grant, and gets it fairly quickly, then the whole project could be completed next year, Papenfuse said.

City officials have already arranged to have most of the homes at the center of the block appraised for their pre-disaster fair-market value. Next, city officials say they will seek to have all homes on the block appraised.

If all goes according to plan, all residents will move out before any demolition begins, the mayor said. Property owners who live on the block will be eligible for relocation expenses and so will renters if the larger grant pans out, city officials said.

The demolition will be conducted carefully with seismic monitors, Papenfuse said, to avoid creating vibrations that could harm nearby homes on 13th Street.

The city is also seeking a grant from Impact Harrisburg, a nonprofit created to help the city's financial recovery, that could help with engineering and design costs that aren't covered by the other grants, Papenfuse said.

The biggest sinkhole that erupted in 2014 opened directly in front of Sheena Mosley's home. She had to evacuate immediately and live in a hotel for 26 weeks with her four children.

Mosley later found a townhouse for her family with four children, where she has had to pay more than $1,100 a month in rent for more than 18 months. But the new neighborhood is treacherous for different reasons than the home on 14th, she said.

"It's where all the shootings have been happening," Mosley said. "Me and my kids have been in the crossfire three or four times."

Mosley is looking to relocate, again, to a safer area, but she doesn't have the disaster money in hand yet, and she's facing deep waiting lists at the city's various housing authority developments.

She's thankful city officials have locked down money to buy her old home, but she thinks city officials should help her and other displaced residents get priority placement at housing authority developments.

Becky Cook, meanwhile, said she was concerned because the abandoned home attached to hers with gaping holes in its roof is damaging her kitchen ceiling, requiring four repairs in recent years. She doesn't want to throw good money after bad if the home is eventually going to be demolished.

"I really can't wait to get out of there," she said. "But still, I'm sad to be leaving. I've lived there for 17 years."

Jocelyn Harper said her 83-year-old uncle has lived in his home on South 14th for 43 years. He's thankful for the sinkhole assistance, but fearful about having to relocate and start anew in another home—assuming he can find one.

"It's stressful for him," Harper said. "All the senior centers have two-year waiting lists."

Maria Vargas, who has been fighting for sinkhole relief with Mosley and others from the beginning, said she thinks residents are "halfway there."

"I've got faith the Commonwealth's going to come through," she said. "I think this is good news. It is positive."

FIRE GRANTS

Thorsby Fire Department Receives $149,000 Grant

By Steven Calhoun

Clanton (AL) Advertiser, September 21, 2016

The Thorsby Fire Department has been awarded a $149,600 grant from the Federal Emergency Management Agency to replace self-contained breathing apparatuses.

According to FEMA.org, the Assistance to Firefighters Grant is given by FEMA to "enhance the safety of the public and firefighters" by giving financial assistance "for critically needed resources to equip and train emergency personnel."

The TFD believed it was in need of a grant. It had been using the same masks for more than 13 years. According to TFD's fire chief, Lee Gunn, the masks only have a 15-year lifespan. The grant came just in time to save the city having to pay to replace all the masks, or SCBAs.

"This is the biggest grant we've ever received from FEMA for equipment," said Gunn. "There was a great team effort in preparing this grant."

The department only had to match 5 percent of the grant, a cost of $7,123.

Gunn stressed the importance of the soon-to-be-replaced masks and how much wear and tear they go through during training and emergency incidents. The department serviced them yearly, but still time took its toll on the old masks, he said.

Now, the department can begin the process of sending off bids and replacing the masks with new ones. The new masks will be up to the latest safety standards, unlike the old ones, which were grandfathered in under previous standards.

"This grant provides our members with the newest SCBA technology available to deliver superior service to our community," said Gunn. He estimated that the new masks would be purchased by the start of the new year, and hopes there is some money left over to buy additional equipment as well.

Fire Company Gets New Tanker Truck

By Justin Strawser

Sunbury (PA) Daily Item, September 21, 2016

SUNBURY – The new $300,000 Upper Augusta Township tanker truck is in service and ready to help the community.

Township Fire Chief Bill Brown said the 2016 Western Star is replacing the deteriorating 2,500-gallon 1988 Mac Tanker.

"It was on its last leg," Brown said. "The body was falling apart. We had significant issues with the unique transmission."

The new truck was paid for with a combination of a $236,000 federal Assistance to Firefighters Grants, $50,000 worth of township money and $14,000 worth of fire company money raised through multiple fundraisers.

"Without the grant, it would have been impossible," Brown said. "The township supervisors were also extremely helpful with the purchase. We couldn't have done it without them."

The new 31-foot-long truck was built by Midwest Fire Equipment & Repair Company out of Luverne, Mn.. It holds 3,000 gallons of water and can pump 1,000 gallons a minute. It also has a PTO pump on the truck instead of needing a portable pump, all the dump valves are electric operated from the cab and has a lot of compartment space.

"It's night and day," Brown said. "There's just no comparison to the old truck."

The tanker puts the township's fleet up to six vehicles, including an engine, a mini-pumper, a brush truck and two boats.

"We have a reliable apparatus that can function in multiple aspects," Brown said.

Township Board of Supervisors Vice Chairman Ed Markowski, who works as the township FEMA/PEMA coordinator and flood plan administrator, said he helped the fire company apply for the grant.

"It's important we have a fire company here in our township," he said. "We allow the fire company apparatus to go out to adjoining communities in times of need. We never turn down the fire company when they ask."

Markowski said $2,200 was also paid by the township to Sunbury Motors for equipment and an employee to drive the truck back to the township.

Upper Augusta has 30 active firefighters. The fire company is located at 2188 Mile Hill Road.

Broken Arrow To Hire 17 New Firefighters

KOTV-TV Tulsa (OK), September 21, 2016

TULSA, Oklahoma –

Broken Arrow is hiring more firefighters, thanks to a nearly one and a half million dollar grant from FEMA.

Broken Arrow has 156 firefighters now, with six open positions.

They want to hire a total of 17 new cadets and have them start next February.

Broken Arrow Fire Department Receives Grant To Hire 11 Firefighters

By Clayton Youngman

KTUL-TV Tulsa (OK), September 21, 2016

BROKEN ARROW, Okla. (KTUL) – The Broken Arrow Fire Department is getting closer to its goal of hiring 20 new firefighters.

The Federal Emergency Management Agency (FEMA) has awarded the fire department a $1.49 million grant to hire 11 new firefighters, according to a press release from the city. The money, called the Staffing for Adequate Fire and Emergency Response grant, will cover the salaries and benefits of the 11 entry-level firefighters for two years.

"The Broken Arrow Fire Department made a promise to citizens, that if they passed the Vision 2025 sales tax renewal, we would increase our staffing level by 20 firefighters," said Fire Chief Jeremy Moore in a press release. "Because of this SAFER grant and the one we received last year, we're able to deliver on that promise three years earlier than anticipated."

Following the renewal of the Vision 2025 sales tax, the city will have the funding to retain the 11 firefighters hired with the SAFER grant after their two years are up, according to the press release.

The fire department, which currently has 156 members on staff, will also look to fill six additional firefighter vacancies in addition to the 11 cadets covered under the SAFER grant. The hiring process is currently underway, and the 17 new firefighters would start on Feb. 1.

The Tulsa Fire Department also received a SAFER grant last month. That money allowed the department to move toward hiring 27 new firefighters.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Andrew Gillum Responds To Rick Scott's Criticism About Hurricane Recovery

WTXL-TV Tallahassee (FL), September 21, 2016

TALLAHASSEE, FL (WTXL) – Mayor Andrew Gillum has responded to criticism about how Hurricane Hermine was handled by the City of Tallahassee.

Power outages in the city have led to open complaints from Governor Rick Scott about the speed of repairs and restoration following the storm.

Wednesday, Mayor Gillum spoke up about what happened after the storm, reflecting on what he thinks the city could have done differently.

"I do think that we probably would have communicated more consistently and more clearly to our customers, to the citizens here about what was the staging of the repair process. When you've got over 80 percent of your system impacted, what do you repair first, what should the customers and expect to see," said Mayor Gillum.

Gillum said that the city's response outpaced the response to Hurricane Sandy and the last three major storms that have hit the United States.

Despite that, however, he said that the disconnect between Governor Rick Scott and the city has not helped the recovery process.

"So, I now know that it is not just our example here in Tallahassee, there seems to be a pattern of behavior that instead of going to resolution and solution in these matters, there seems to be a kind of unhealthy I think blame game, which again at the end of the day does not help a single citizen," said Mayor Gillum.

He said governments on a local, state, and federal levels needed to evaluate who has what resources and the best ways those resources can be used to provide help when needed.

FLOODS

FEMA Help Comes In Many Languages

By Laura Gary

The Daily Iberian (LA), September 22, 2016

FEMA means help in any language, even unheard ones.

The Disaster Recovery Center (DRC) on Darnall Road is equipped to meet the communication needs of anyone who walks in. From handouts printed in multiple languages, to information in Braille, to American Sign Language interpreters, the center has people covered.

"Our role here is to provide support to different components of FEMA, to ensure access to people with disabilities" said Lisa Bothwell, FEMA Disability Integration Branch III Lead. "I think a lot of this job is problem-solving."

Bothwell said that assistive listening devices are available for the hearing impaired, in addition to the interpreters. The center also uses TTY communications and video interpretation services.

"It's always something different," Bothwell said.

The visually impaired have access to large print, magnifiers and material printed in Braille.

"We try to work hand-in-hand with them," said Peter Sessum, FEMA Media Relations.

In addition to having American Sign Language interpreters on hand, FEMA also has access to interpreters of various spoken languages.

DRC manager Angela Demerath said that most of the people she has encountered in Iberia Parish speak English, but she has dealt with a few who speak Spanish.

"We have products, benefits, and assistance available to everyone," Sessum said.

"I enjoy meeting all of the people from the state of Louisiana and being able to help them," Bothwell said.

28,000 Acadiana Households Registered With FEMA

By Claire Taylor

Lafayette (LA) Daily Advertiser, September 21, 2016

More than 28,000 Acadiana households that suffered flood losses in August flood have registered with the Federal Emergency Management Agency.

As of close of business Monday, 28,494 households in eight Acadiana parishes had registered with FEMA, according to Sharon Karr, FEMA media relations specialist.

Household registrations by parish include:

Statewide, flood victims have been approved for more than $655 million through FEMA's Individual and Household Program. That includes $538 million for housing assistance and $117 million for other needs assistance.

Oct. 13 is the deadline for August flood victims to register for FEMA disaster assistance and for a Small Business Administration loan, Karr said.

Flood victims can visit the Disaster Recovery Center at 301 W. University Ave. to register for FEMA aid or an SBA loan.

They can register with FEMA online at https://www.disasterassistance.gov/ or by calling 1-800-621-3362.

95 Property Owners Appealing Reassessments

By Claire Taylor

Lafayette (LA) Daily Advertiser, September 21, 2016

A whopping 95 people are scheduled to appeal their property reassessments before the Lafayette City-Parish Council next week.

"First time ever," Lafayette Parish Assessor Conrad Comeaux said of the largest number of appeals he's seen in 16 years as assessor.

Council Clerk Veronica Williams said 95 people are on the Sept. 27 council agenda to address the council as part of the assessment appeals process. Usually, only one or two property owners appeal their assessments, she said.

Some of the 95 may withdraw their appeals before Tuesday, Comeaux said, as his office works through the list, reviewing each for errors and explaining to property owners why the reassessment is correct.

More than 700 people called and 1,100 visited the assessor's office in recent weeks asking why their property values increased so much since the last reassessment four years ago, he said.

Property owners complained about extreme increases in property values, some as much as 100 to 300 percent.

Comeaux said most of the large increases are because land was undervalued for many years.

“We did an extensive study on land values and land sales,” he said. “We had a few glitches but, for the most part our values were solid.”

With more than 110,000 accounts, Comeaux said a few errors can be expected. Some corrections have been made but for the most part, the reassessments are correct.

Property owner Jack Venable told the council Tuesday he waited for hours in line at the assessor’s office to inquire about having his property taxes decreased “because my house is basically worthless.”

Venable said he’s a disabled veteran who relies on rental income but that income is gone since his properties flooded in mid-August.

“I’m only asking to pay taxes on what the property’s worth,” he said.

Property owners can still call or visit the assessor’s office to inquire about their reassessments, although Comeaux asked them to wait until after the Sept. 27 council meeting. It’s too late to appeal the assessment to the council, but appeals can be made to the state tax commission, he said.

Homeowners whose properties were flooded also can still report their loss to the assessor’s office to have their assessed value and taxes reduced this year. Email proof of flooding, such as documents from FEMA or your flood insurance provider, to flood@lafayetteassessor.com.

Need To Restore Flood-damaged Items? Smithsonian Experts To Offer Help

Lafayette (LA) Daily Advertiser, September 21, 2016

Experts from the Smithsonian Institute will be in Lafayette Friday to demonstrate how to salvage valued possessions that got wet in flooding last month.

The experts will be available at the Federal Emergency Management Agency Disaster Recovery Center, located at 301 W. University Ave., from 10 a.m. to 5 p.m. Friday.

There, visitors will learn how to care for water-damaged photographs, quilts and other personal treasures, according to a press release from Kurt Pickering, public information officer for FEMA.

For more information, email the Heritage Emergency National Task Force at hentf@si.edu.

More Than Just The Haul: How Flood Debris Removal Can Amount To Millions Paid

By Maya Lau

Baton Rouge (LA) Advocate, September 21, 2016

Days into its operation, the temporary site for flood-related debris in south Baton Rouge looked nearly like a fully-fledged landfill this week, with remnants of people’s households already piled stories high as dump trucks rumbled into the expansive site.

The debris at the site, tucked away on a small street at 15400 Old Perkins Road West, will be compacted and eventually moved a second time to its final spot at Ronaldson Field, each chunk of it adding to the cost the city-parish is paying for its removal.

Though taxpayers won’t be footing most of the bill — 90 percent of the amount is set to be reimbursed by the Federal Emergency Management Agency — the city-parish will still pay millions out of its rainy-day fund.

On Wednesday, the Metro Council will consider appropriating some $47 million for flood relief, most of which is expected to be reimbursed, but that’s only a preliminary estimate of the total needed because debris collection is still ongoing.

The various layers of contractors needed to do the work are part of why the amount is so high.

Debris contractor DRC Emergency Services, the company hired by the city-parish, is making about $14 million on the project so far, based on an estimate by Mark LeBlanc, assistant public works director for capital improvements in the city-parish. For every cubic yard hauled, DRC makes $13.98, plus $3.10 a cubic yard for processing at a temporary staging site, according to its contract.

DRC, in turn, has hired roughly 50 subcontractors to help with the operation, but paying those firms shouldn’t add to the bill to the city-parish, said DRC vice president Mark Stafford. For debris housed at a staging site, the company doesn’t make additional money for the second haul, to the landfill.

The firm hired to check on how DRC is hauling the debris — and making sure the process meets FEMA standards — will earn roughly 20 percent of what DRC charges, said Linda Hunt of the city-parish finance office. That means the monitoring company, Thompson Consulting Services, could get paid about $2.8 million just on the debris that’s been hauled so far.

A separate outfit, CSRS Inc., is to be paid $900,000 to handle the paperwork and accounting required so the city-parish can be reimbursed by FEMA, based on the proposal before the Metro Council.

About 1 million cubic yards of debris have been collected in Baton Rouge and unincorporated parts of the parish, putting this summer's flood somewhere between the level of a Category 1 and Category 2 hurricane in terms of damage generated, based on a U.S. Army Corps of Engineers model cited in DRC's contract. Hurricane Katrina was a Category 3 hurricane. One house's debris might total about 50 cubic yards, just on the first round.

In the small cities within East Baton Rouge Parish, debris collection is in various stages of completion, with Zachary nearing its finish. On Monday, that city, where some 450 homes were flooded, will begin its fourth and final pass of debris pickup using the contractor Ceres, said Chris Calbert, Zachary's chief administrative officer. He couldn't provide an estimate of how much money the city has spent on flood relief as of Tuesday.

In Baker, which dropped its initial contractor, Neighborhood Restoration of Baton Rouge LLC, after the first few days of pickup and hired DRC instead, has spent about $375,000 in debris cleanup so far, that city's administrative officer Julie McCulloch said. About 930 homes were affected, with about 14,000 cubic yards of debris picked up, said Herman Dungan IV, the operations manager for Debris Tech, the city's monitoring firm.

Over in Central, where possibly 80 to 90 percent of the city's 11,174 structures were affected in the floods, debris clearing has cost $2.5 million thus far, said Mayor Jr. Shelton. About 172,000 cubic yards have been picked up on the first pass, he said, which is about 10 days away from being completed. After that, clearing crews will work on their second and third rounds of hauling away the detritus, Shelton said.

Range, I-12 Area Businesses Still In Flux

By Tommy Comeaux

Livingston Parish News (LA), September 21, 2016

DENHAM SPRINGS — A drive down Range Avenue in Denham Springs would normally provide consumers with access to stores and shops offering almost any product or service they could want or need.

But that was before the Great Flood of 2016. Now, the vast majority of the businesses are shuttered, closed since mid-August when their buildings flooded.

Probably as many as 80 percent of the business establishments on Range Avenue remain closed, but some business owners – some lucky, some industrious – have reopened and are serving customers.

The southern portion of Range Avenue near its intersection with Interstate 12 took on the highest levels of flood waters and almost all of the businesses in that area remain closed – the McDonald's, the Burger King, two of the convenience stores and all of the shopping center at Range where it intersects Rushing Road are closed.

Only the pharmacy at Rite Aid is open, although there are signs of some businesses working to reopen. Representatives of the chain stores all along Range Avenue did not return phone calls made to their offices late last week.

The Super Stop convenience store was an exception to the rule in the area, as was the Waffle House restaurant. There was no one at the restaurant authorized to speak to the media but the son of the owner of the convenience store explained what they had to do to get open again.

"We put at least three weeks of hard work into it," said Sam Alkilini Jr. Flood water in the store was several feet deep and it was three days after the flood began Aug. 12 before Alkilini, his father and employees could reach the store.

The store reopened almost three weeks ago and is open from 6 a.m. to midnight, now that the curfew has been lifted. The store's Chevron gas pumps, though, remain inoperative, Alkilini said, while his father waits for a determination on whether they were infiltrated by flood water.

Not far from the store is Performance Tires, which was reopened just eight days after the flooding began.

"We took on four and a half to five feet of water in some places," said owner and CEO Tim Whittingston. "The whole flood was definitely a tragedy, that's for sure."

"We gutted the place as soon as we were allowed to come back in, pressure washed and cleaned it," he said, with the help of a crew of dedicated employees. "It was inspiring."

Whittington said they were grilling and serving free hamburgers for the first few days after the shop reopened and were repairing tires that had picked up nails from the debris for at least a week after.

Businesses on the north end of Range, beginning at Florida Avenue, were less likely to have been affected by the flood. Some did not take on any water at all while others worked hard and quickly to recover from the damage done by the flood.

The Shoe Department, for example, was only closed while the water was up, said a member of management who asked to remain anonymous.

"We closed because none of our employees could get to the store, either because of the high water or because they were dealing with flooding at their own homes," she said, adding the store was fortunate in regard to the Great Flood.

"We did not get any water in the store from the flood at all," she said. "We opened back up on the 17th and we've been rolling since then."

Bedding Plus, across the street from the shoe store and on the same higher elevation than the southern end of Range Avenue, also did not flood, said manager Louis Chevolleau.

"All of the businesses at this intersection (near Range and Florida) got no water because of how high this area is," he said. "We got absolutely no water."

There was water on the parking lot of the mattress store, Chevolleau said, enough for rescuers in boats to use it as a launch site. When he returned to check on the business when the water receded, he said there were three boats still sitting in his parking lot.

With so many people losing so much to floodwater, Bedding Plus has seen a surge in business, Chevelleau said.

"People are starting to get their money from FEMA and their insurance so business is picking up because of that," he said. Chevelleau added that at the rate sales have been going so far this month, September's sales will likely be four times higher than an average month.

Manager Chris Ferdinand at the AT&T Store said the business was flooded with about three feet of water in mid-August, but the company wasted no time getting the store cleaned and repaired and reopened Sept. 12, a month after the Great Flood demolished the city's business district.

Discount Muffler owner Brian Walls, one of the industrious business owners along Range Avenue, said his business was flooded to just over four feet, "right at 50 inches," he said, pointing at a water line at the back of the shop.

"We didn't do so well," Walls said, adding his sales room was hit hard and so was the shop, the floodwater destroying all of his inventory.

He said the flood left him with little alternative but to "buy new equipment and inventory then remodel and fix the shop" with the help of his crew.

"Business has been okay since we opened back up," Walls said. "I didn't think we would have as much business as we have but it's been much better than I expected."

Faces Of FEMA: Making Sure Representatives Are Legitimate

By Emily Giangreco

KLFY-TV Lafayette (LA), September 21, 2016

LAFAYETTE, La. (KLFY) – Knocking on doors, entering homes and comforting flood victims is one of the many job requirements for FEMA representatives.

To ensure residents safety they want to make sure that you know the faces of FEMA.""

Many are pretending to be FEMA representatives and taking advantage of flood victims.

FEMA Disaster Assistant Specialist, Glenn St. Pierre said there are ways to make sure the person knocking on your door is legitimate.

"The first thing we do is just introduce ourselves, show them our credentials to make sure that they actually know that we're with FEMA," said Pierre, "One of the main things is our badges, our credentials and our uniforms from FEMA."

Pierre served in the Coast Guard for 30 years, where he was first introduced to FEMA back in 2005.

"My first introduction to FEMA was when I was here wearing a Coast Guard uniform at Katrina, and really got to meet the people in Louisiana," said Pierre, "That's one reason why I still do this after I've retired from the Coast Guard is to get out to meet people and to try and help."

Ty Cobb was out of town when the flood waters entered his home.

His wife had to be rescued and they are currently living in a motor home until their home is livable again.

He said representatives like Pierre have made that process a lot easier on him and his family.

"The guy was extremely friendly, extremely helpful, extremely thorough," said Cobb, "He walked through, took measurements, took pictures, wrote up his report. And two days later FEMA had direct deposited money into my checking account. We were able to get started almost immediately."

According to FEMA representatives, they have met face to face with over 34,500 flood victims.

Tomblin Signs Flood Relief Bill

Fayette (WV) Tribune, September 22, 2016

CHARLESTON — Gov. Earl Ray Tomblin Tuesday signed legislation, House Bill 201, that he presented to the Legislature earlier this week in a special session to appropriate funds to cover West Virginia's share of costs associated with the June flooding. Gov. Tomblin signed the bill during a ceremony at Elkview Middle School, where students from Herbert Hoover High School are temporarily taking classes.

"Nearly three months ago, our state was hit by historic and destructive flooding. Twenty-three people lost their lives. Homes, businesses and communities were devastated. Schools were destroyed. But today, we celebrate new hope for a brighter future," Gov. Tomblin said. "This legislation, which I presented just days ago, represents continued progress — and I am grateful for the Legislature's quick approval. Recovering from this tragedy will take all of us coming together. But as we are seeing again today, that's what we do best in West Virginia."

Through Gov. Tomblin's bill, $85 million — $55 million of which comes from the Rainy Day Fund — is now available to cover the state's share of costs for individual and public damages, as well as long-term recovery efforts. This includes the state's estimated match of $130 million to rebuild five schools — Herbert Hoover High School, Clendenin Elementary School, Richwood High School, Richwood Middle School and Summersville Middle School.

The funding approved this week represents West Virginia's 25 percent share of flood-related costs. The Federal Emergency Management Agency (FEMA) is currently covering 75 percent of total costs. Should the state meet FEMA's designated threshold of $253 million in total expenses, the federal government could cover 90 percent, leaving the state responsible for 10 percent. If Gov. Tomblin's request to the White House for this higher level of cost-sharing is approved, it would kick in once funds are obligated, including funds for school construction.

Flood Damage Estimates For Coonskin Vary Widely

By Laura Haight

Charleston (WV) Gazette-Mail, September 21, 2016

The cost of damages to Coonskin Park from the June 23 floods is still in question.

The Federal Emergency Management Agency estimated the cost at about $500,000, Kanawha Parks and Recreation Executive Director Jeff Hutchison told the Parks and Recreation Commission board Wednesday

However, an independent contracting company assessed just the damaged portion of the Elk River Trail Road, and gave the commission a quote of $2 million, four times the amount FEMA estimated in damages for the entire park.

"There's still some question about what the cost of that is," Hutchison said.

He said he was working to get the names of more contractors to see if the commission could get a lower quote.

Coonskin Park also saw damage to a parking lot, shelter area and to a water pump.

Elk River Trail Road won't be repaired until at least April, when the asphalt plants reopen.

Hutchison said he would like to secure a contractor by late winter or early spring. He said most contractors are currently focusing on main roads in Greenbrier County that were damaged.

The board also voted to renew its lease with Lake Erie Golf Co. for the next five years for new golf carts.

The park will receive new golf carts for the same price the park is currently paying. As long as the golf carts are under lease and warranty, the park doesn't have to pay anything if the carts need maintenance.

The company sends a mechanic out so the park doesn't have to hire one, which saves the commission around $40,000 annually, the board learned.

The golf carts will be updated from 2010 golf carts to 2017 golf carts with bag covers and other amenities.

Wilkinson Co. Flood Recovery Continues

Jackson (MS) Clarion Ledger, September 21, 2016

After historic rainfall and subsequent flooding in August, recovery efforts continue in Wilkinson County.

Neighboring counties are assisting with debris removal, the Mississippi Emergency Management Agency said Wednesday. They are as follows:

•Harrison County: Public Works Department is assisting in the county and the town of Crosby, removing debris from the mucked out homes and the roadways.

Sent debris removal equipment and personnel for four days to collect and remove debris, and transported that debris to a waste facility.

•Adams County: Public Works Department sent five large debris removal vehicles, along with personnel to operate the equipment.

•Franklin County: Public Works Department sent two large debris removal vehicles, along with personnel to operate the equipment.

"Every county in this state has needed assistance from another at one point, so it's our duty to be there for one another, especially when other assistance may not be available," said Harrison County Emergency Management Agency Director Rupert Lacy. "The old Civil Defense principals have carried over and we are all happy to help out through the State Mutual Aid Compact".

This week, the first $50,000 of a $250,000 grant from MEMA went to Wilkinson County to buy materials and supplies to repair flood-damaged homes. The work will be done by volunteer groups coordinated through the county's newly formed non-profit Community Based Recovery Committee (CBRC).

MEMA requested Joint Damage Assessments from FEMA to see if any southwest Mississippi counties could be eligible to receive public assistance grants to repair infrastructure. Mississippi's threshold for a public assistance declaration is $4.2 million in damage. The MEMA-FEMA assessments revealed $1.38 million dollars in damage, making the state ineligible for assistance.

Governor To Tour Flood-damaged Areas On Maui

KGMB-TV Honolulu, September 21, 2016

LAHAINA, MAUI (HawaiiNewsNow) –

The governor on Thursday will fly over and visit storm-damaged areas on Maui.

Gov. David Ige plans to take a two-hour aerial tour of flood-damaged areas, before visiting a storm-damaged community.

The tour follows initial damage assessments conducted by the Hawaii National Guard and FEMA over the weekend.

Iao Valley saw major damage from flooding last week, and Maui Mayor Alan Arakawa has issued an emergency proclamation to speed up clean-up efforts.

Neighboring Counties Help Wilkinson County Residents With Debris Removal After Flooding

By Donesha Aldridge

WJTV-TV Jackson (MS), September 21, 2016

Recovery efforts are still underway in parts of Mississippi that were affected by historic rainfall and flooding last month.

According to the Mississippi Emergency Management Agency, neighboring counties are helping out Wilkinson County residents with debris removal through mutual aid.

"Every county in this state has needed assistance from another at one point, so it's our duty to be there for one another, especially when other assistance may not be available," said Harrison County Emergency Management Agency Director Rupert Lacy. "The old Civil Defense principals have carried over, and we are all happy to help out through the State Mutual Aid Compact".

MEMA said the first $50,000 of a $250,000 grant from MEMA went to Wilkinson County to buy materials and supplies to repair flood-damaged homes this week. The work will be done by volunteer groups coordinated through the county's newly formed non-profit Community Based Recovery Committee.

Mississippi wasn't able to receive federal funds from FEMA after flooding because there was not enough damage to meet the federal standards to request a Presidential Declaration for Crosby. A Presidential Declaration allows federal funds to be made available to those affected by disasters.

Mississippi's threshold for a Public Assistance declaration is $4.2 million in damage. The results of the joint MEMA-FEMA assessments revealed $1.38 million dollars in damage, making the state ineligible for assistance.

Below is a list of counties helping Wilkinson County residents:

Harrison County:

Public Works Department is assisting in the county and the town of Crosby, removing debris from the mucked out homes and the roadways.

Sent debris removal equipment and personnel for four days to collect and remove debris, and transported that debris to a waste facility.

Adams County:

Public Works Department sent five large debris removal vehicles, along with personnel to operate the equipment.

Franklin County:

Public Works Department sent two large debris removal vehicles, along with personnel to operate the equipment.

Chatham Commission To Consider Termination Of Agreement On Live Oak Library System

By Kelly Quimby

Savannah (GA) Morning News, September 21, 2016

One of the biggest financial backers of the Live Oak Public Libraries is set to vote this week to end the agreement that outlines its support for the regional library system.

The Chatham County Commission on Friday will consider directing County Manager Lee Smith to send the library system a six-month notice of the board's intent to terminate its long-standing memorandum of understanding over the Live Oak Public Libraries and negotiate a new, more comprehensive agreement.

The county manager said Wednesday he is recommending the termination. The commission is the owner of the system's Chatham County library buildings, he said, and it pays nearly $7.4 million each year to assist in the library system's operations.

"The old contract, or MOU, is in my opinion pretty weak as far as financial transparency and accountability," Smith said. "Until recently, we've not received financial reports from the library in years. ... My commissioners appoint the majority of that (library) board, and I think — I know — we should be more privy to actions taken by that board and how it impacts the citizens and clients of the library."

The existing agreement with the library system has been in place since March 2004. It establishes a "fiduciary duty" on the part of the regional and Chatham County library boards "to provide top quality library services," to "operate in an efficient and effective manner and to be held responsible and accountable for the performance of the Regional Board and Chatham Board of the library system."

But the county alleges that many provisions of the agreement are outdated and have not been complied with. Smith said a new agreement could better ensure compliance and prevent some of the issues that have marred the library system in recent months.

Recent investigations of the library system's finances and human resources department have resulted in accusations of mismanagement, harassment and poor accounting practices.

A number of firings and resignations have followed suit, including the resignation Tuesday of Chatham-Savannah Public Schools Superintendent Thomas Lockamy, who was only recently appointed to the library board by the Chatham County Commission. Lockamy's appointment to the library board was seen as a conflict by some, because his cousin, Jim Stroud, had served as human resources director for the library system until he was fired earlier this month at the recommendation of independent investigators.

The county manager said his board will be filling the vacant board post — a task that is becoming increasingly difficult the more the controversy around the library system grows. He said the county will likely advertise the position among the county's business community. An ideal member has a financial background, he said, with an understanding of the library system. Once appointed, Smith added, new members should undergo some kind of orientation to make their role on the board clear.

Meanwhile, Smith said, he'll be working with his counterparts in Effingham and Liberty counties to devise a new contract with the library system.

"It's an outside agency ... and I think we need to place upon the library board the same requirements of any other outside agency — performance outcomes," Smith said. "If (the library board does) not meet the requirements, then funding will be held back until such time as those requirements are met. I think that is fair to taxpayers and citizens. That's transparency, accountability at its best."

Hermine debris update

In addition, Smith said the county will be bringing on contractors this week to assist with the clean up of debris from Tropical Storm Hermine. He said cleanup is now more than halfway complete, and urged residents in the unincorporated county to be patient while the work continues. The storm did not do enough damage to merit funding from the Federal Emergency Management Agency, Smith said, and therefore it is up to the county to fund the cleanup itself.

"We're moving as fast as we can move, but we've only got so many crews," Smith said.

IF YOU GO

What: Chatham County Commission meeting

When: 9:30 a.m. Friday

EMERGENCY PREPAREDNESS

ReadyErie App Designed For Preparedness

By Lucy Lopez

West Seneca (NY) Bee, September 22, 2016

The Erie County Local Emergency Planning Committee hosted its annual public information forum to discuss emergency preparedness and response in the county.

Tracy Fricano-Calmers of the Erie County Department of Health Emergency Preparedness gave a presentation on the new ReadyErie smartphone application.

"It is a collaborative effort with both the Health Department and Emergency Services," Fricano-Calmers said.

The goal of the app is to encourage members of the community to have a plan in place in case of emergency.

With the app, people will be able to share their status with selected contacts if they are in danger, get emergency alert notifications, locate Erie County emergency shelters and emergency services, get the latest county weather and news updates, and create a personal preparedness plan.

When creating the plan, users can enter how many people are in their household, if they have pets and who they want to notify. The app also gives a rundown of an emergency supply shopping list.

Once the plan is built, users can share it with other app users in their family to make sure that everyone is on the same page.

Another feature in Ready- Erie is the Need to Know section where there are guides verified by federal sources such as the Federal Emergency Management Agency and the Centers for Disease Control on a variety of topics. Currently the app has information on things such as an active shooter response plan, floods and emerging infections like the Zika virus.

Surrounding counties also have apps, and eventually, the hope is that ReadyErie will be able to give users county to county updates by using the location service feature on smartphones.

Fricano-Calmers mentioned that this feature would be ideal for those who commute between counties.

“This app really fills the gap with community preparedness by making it accessible to phones. People take their phones everywhere,” she said.

Working with the mapping feature in the app, Fricano-Calmers said this is one of the functions that makes it good for immediate response.

If there was a fire or spill, administrators of the application would be able to go in and geofence an area by drawing a circle on the map of the areas that are being affected. Anyone in that area would be notified about the event, which would be handy if there were to be any evacuation protocols in place.

The app is free to users and available in both the Google Play store for Android and Apple iPhone app store.

FEMA CORPS

Americorps Visits Baton Rouge For Flood Recovery Efforts On National Day Of Service

Baton Rouge (LA) Advocate, September 21, 2016

AmeriCorps National Civilian Community Corps members honored the Sept. 11 National Day of Service and Remembrance by participating in service projects around East Baton Rouge Parish on Sept. 10-12.

In collaboration with the AmeriCorps Disaster Response Team and Voluntary Organizations Active in Disaster, AmeriCorps NCCC members assisted in the mucking and gutting of 23 homes that were devastated by the Louisiana floods, a news release said. These homes belonged to social workers, teachers, military veterans and neighbors of first responders. A total of 375 AmeriCorps members participated in the national day of service to improve the community and pay tribute through service, the release said.

Twenty-five AmeriCorps NCCC Southern Region Traditional and FEMA Corps Teams, consisting of eight to 12 members on each team, were part of the total number of AmeriCorps participants. During the day of service, AmeriCorps members were visited by state Sen. Regina Barrow, state Rep. Edmond Jordan, Congressman Garret Graves, Lt. Gov. Billy Nungesser and AmeriCorps Director Bill Basl.

The National Day of Service and Remembrance for Sept. 11 was designated by Congress in 2009.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Daily Mail Editorial: Legislators Work Well Together In Crisis Mode

Charleston (WV) Gazette-Mail, September 21, 2016

Legislation to provide $85 million for West Virginia’s share of $339 million in recovery costs from the June floods was signed by Gov. Earl Ray Tomblin Monday after the Senate approved the bill 32-0. The House of Delegates passed the measure Sunday 92-1.

The supplemental appropriation, House Bill 201, includes $55 million from the state’s Rainy Day emergency reserve funds, $21 million in unappropriated state Lottery funds and $9 million that was not spent in the recently ended 2015-16 state budget year, the Gazette-Mail’s Phil Kabler reported.

That money will go into the Civil Contingency Fund, allowing Tomblin to pay the state’s match for Federal Emergency Management Agency disaster recovery funding.

Afterward, Tomblin thanked the Legislature for its prompt action, Kabler reported.

“The damages of this flooding were far-reaching, and the recovery process will take years,” Tomblin said in a statement. “By maximizing federal support and continuing to do our share, we can make that process much smoother for impacted communities, businesses and families.”

Prior to the vote Monday, senators from hard-hit counties spoke of the need for flood recovery funds.

"I can tell you this is a real challenge and a change for our area," said Sen. Ron Miller, D- Greenbrier, who said the region's key industry of tourism is down nearly 50 percent since the floods, later adding, "We still have people living in tents. We have people living in campers."

"This piece of legislation will allow us to rebuild and capture FEMA dollars that will allow us a brighter day," said Sen. Greg Boso, R-Nicholas, who said the hard-hit town of Richwood is "essentially a ghost town."

Lawmakers' quick work during this special session, and many other special sessions over the years when responding to a crisis, is commendable. It was helped with leadership from the governor, who, unlike the previous special session on the 2016-2017 budget, provided a clear and concise proposal for a solution.

Yet the fast and efficient work makes state residents wonder: if the executive and legislators can act so responsibly this time, why not regularly?

In fact, even absent the June 23 floods, the state has been facing a series of crises. Drug addiction is rampant, revenues and the economy are down, the jobless rate is high and too few able-bodied adults are in the workforce.

Surely, these problems can be fixed with clear solutions from executive and legislative leadership.

State residents now know what legislators can do in a crisis. It's incumbent upon legislators and the next governor to continue with this sense of urgency to lead the state out of its multiple crises.

McHugh David: "Shelter At Home" – Great Idea, Bad Execution

Livingston Parish News (LA), September 21, 2016

The 'Shelter At Home' program is a great idea for those who did not have the means to disassemble their homes and treat for mold following the 'Great Flood of 2016.'

However, that is where the scope of work should have stopped, and the program should have come into the spotlight much, much earlier than it did.

For reference, the 'Shelter at Home' program offers up to $15,000 to have your home gutted, treated for mold, and then re-built to a 'livable' standard. The reason for the re-construction process is to try and get residents back into their homes as temporary housing options in the Baton Rouge area disappeared very quickly.

The re-building portion either should not have been offered, or the payout should have been increased.

Rewind to the days, even the first few weeks following the flood. The main topic of discussion? No, it wasn't FEMA just yet – people wanted to know how to properly clean out their houses.

Frequently asked questions by residents included how much sheetrock should I cut out? What about the insulation? Do I need to remove my cabinets? How dry do my studs need to be? How do I treat for mold?

Many of those questions were answered by media outlets, friends, contractors (some good, some bad), religious groups... anyone who was out-and-about helping, or pretending to help. Armed with that information, many individuals were able to gut their homes many weeks ago.

Now, five weeks after the catastrophe, the fine print in the 'Shelter At Home' program still hasn't been ironed out – due in large part to questions about mobile homes.

Too little, too late for a lot of people considering many of the homes that were never gutted are now overtaken by mold and damage from post-flood issues.

Many don't need the first part of the service because, as mentioned, they already used the available information to clean their house.

Perhaps many people still need help gutting their home, and while the damage may be severe at this point, $15,000 is still a good payout for cleanup and mold remediation.

However, when getting into sheetrock work to make the home livable? That's another situation entirely.

Currently, FEMA is using $80 per square foot to determine the damage amount on homes. That figure includes things like flooring, cabinetry, and walls. Take a quarter of that, $20 per square foot, for wall-work.

$15,000, at $20 per square foot for wall work, comes out to 750 square feet – less than half the size of many homes in Livingston Parish which flooded and were not substantially damaged (over 18 inches, 50% or more damage to the value of the home).

Should it come at any surprise that pictures and videos of the 'Shelter at Home' finished product, complete with shoddy work, lack of caring on the 'state approved contractor,' and some passionate words from residents?

Note that the $15,000 estimate provided would be for a home that was already gutted and cleaned, showing only the cost of putting up new walls. The figure did not include any homes which also needed to be cleaned first. Keep in mind, as well, that a clean home isn't necessarily a 'dry' home – wood studs have to be dried first, before sheetrock can be floated.

The $15,000 figure was probably the low bidder, as is customary with any governmental bid situation these days. One wonders, however, if anyone involved in the process took a look at the $15,000 figure and said to themselves, 'That doesn't look right.'

Why is this a problem? Shouldn't people be happy that the government is at least willing to spend a few dollars to try and get their house put back together?

If the work was 'just good enough,' maybe that line of reasoning will work, however – if the reconstruction efforts have to be torn down and re-done since the work was so bad, why are they done at all?

The fact that some people may have been excluded from the program could be a blessing in disguise.

It will be some time before the final figures are tallied to see if the program was successful in its goal, or not, but this disaster was not Katrina – the water did not keep people out for long, and those folks got their homes clean as soon as possible.

What most citizens who were affected needed was proper work done on their home, at an appropriate price and skill, so that they could live at home. Some are able to move back in, but in most cases its due to the sweat from their own brow.

Don't take the money, either, if its offered but you don't plan to use it toward the program. The big thing governmental entities learned from Katrina? They audit, and then they come get their money back.

OUR VIEWPOINT: Insured Shouldn't Suffer Because Of It

The Brazosport (TX) Facts, September 22, 2016

Lake Jackson resident Bruce Howe has every right to be unhappy that he, his wife and 8-year-old daughter continue to live in a camper three months after being forced from their home by the Brazos River flood. He did all the right things as a homeowner and seems to have been penalized for it.

His situation demonstrates how backward things can be when the federal government is involved, and the unfairness of the help it provides in times of trouble.

Howe's situation is not unique, by any stretch. Thousands of people were affected by the historic flood and hundreds of homes suffered some type of damage, from minor to having to completely gut the structure. In his case, the home was damaged enough that it is uninhabitable.

The family did what it is supposed to do long before the floodwaters came and purchased flood insurance. Based on statistics provided by the Federal Emergency Management Agency, they were in the minority of affected Brazoria county property owners.

Since June 1, according to a report from FEMA, just 29 claims have been made by county residents under their National Flood Insurance Program policies. Of those, 16 claims have been paid or closed without payment and 13 cases remain open.

On the flip side, many homeowners who did not fork over the hundreds of dollars for a flood policy have the repairs to their homes well under way. They are beneficiaries of payouts from FEMA or loans through the Small Business Administration.

"I know people who were flooded and didn't have insurance who have moved back into their homes," Howe said. "Here I am still living in my camper with my wife and 8-year-old daughter because we don't have funds to get the house fixed."

Because the Howes and others had flood insurance, however, they are not eligible for that immediate relief. Whether they receive aid from those sources and how much is determined only after their insurance claim is settled.

That seems to us to be a very serious flaw in the system. At minimum, those with insurance should be able to receive aid immediately, then settle whatever financial differences might exist when the insurance check arrives.

It is almost certain there will be a difference, because the main benefit of the insurance will be the amount of money a policyholder receives versus someone who gets only FEMA disaster aid.

"Of the roughly 5,600 Texas households that FEMA approved for disaster assistance for the May-June floods, the average grant was about $6,800," FEMA spokesman David Mace said. "By comparison, Texans with flood insurance who filed claims in the last two years received an average settlement of about $57,000."

That light in the tunnel only goes so far in relieving the frustration of policyholders who still are waiting for their claim to be settled. Their gravy train should have come at the same time it did for everyone else, and the government needs to tweak its program so those who paid into the system aren't at a disadvantage.

Updated Flood Insurance Needed For

Ohio, Nation: Collin O'Mara And Sara Calo (Opinion)

By Collin O'Mara And Sar Calo

Cleveland Plain Dealer, September 21, 2016

A surge of destructive flooding has made the need for flood insurance in Ohio greater than it has ever been. With each passing year, flooding takes its toll on local communities, destroying homes and wildlife habitats throughout the state. Amazingly, Ohio residents essentially have only one option for getting flood insurance coverage.

Throughout the state, a majority of home and business owners have been forced to rely on the National Flood Insurance Program (NFIP) for their flood coverage because it has been the only option to meet mandatory purchase requirements.

In some states, however, private insurers are offering better coverage at lower rates than the NFIP because of statewide regulations to loosen restrictions on the marketplace. Since Ohio has not made such changes, private coverage can be purchased from out-of-state providers, but it is often not accepted by financial institutions issuing mortgages because it is not federally backed.

This system is long overdue for an update, so Congress must act to level the playing field and address outdated and arcane regulations so that people across the state and country can have equal access private coverage if they choose. The status quo is unsustainable. Since premiums remain heavily subsidized and haven't kept up with the risk of inflation, the NFIP's overall debt has reached approximately $23 billion.

The Flood Insurance Market Parity and Modernization Act (HR 2901), which unanimously passed the U.S. House of Representatives in April, would level the playing field for private insurers to enter the marketplace by clarifying that private policies can be used to meet the federal mandatory purchase requirements.

Now it is the U.S. Senate's turn to act on the House legislation.

View Cuyahoga County flood maps as updated in 2011

Competition is a vital part of any industry, and flood insurance is no exception. The presence of private insurers in the flood insurance marketplace will lead to more options, better prices and greater efficiencies for hundreds if not thousands of communities across the country. Ohio residents would finally be able to choose the flood coverage that works best for them instead of being restricted to the one-size-fits-all policies of the NFIP.

Private insurers would also have more flexibility than a government-run program to provide additional coverages and price policies more accurately based on a property's exposure to flooding. This would lead to lower rates for many policyholders as well as discourage risky development in regions that experience frequent floods. In fact, current insurers writing private flood coverage are already targeting high-risk zones to offer better coverage at a lower rate.

Just as importantly, HR 2901 would bring some desperately needed relief to the NFIP, which has struggled to remain solvent after major payouts from Hurricanes Katrina and Sandy. A 2015 GAO report found that at its current pace, the federal flood-insurance program, which is managed by the Federal Emergency Management Agency, would be unable to repay its debt within a reasonable time frame, if ever.

To avoid additional expensive taxpayer bailouts, it is necessary for the NFIP to reduce its exposure to risk by sharing some of the burden with other insurers. Reducing its risk would enable the NFIP to better serve policyholders and ensure that the program will still be around for future generations.

Ohio's leaders have recognized the state's susceptibility to flooding: Eighty-six of the state's 88 counties voluntarily participate in the NFIP to manage their floodplains.

According to FEMA, from October 2014 to September 2015, the NFIP paid out more than $7 million in claims to Ohio policyholders. Though that number is significant, states such as Florida, Texas and Alabama raked in $50 million to $115 million each.

The threat from floods will only get worse in the coming years, making it imperative to give Ohio consumers access to flood insurance – whether it's from the NFIP or the private market – so they can bounce back quickly in the wake of a storm.

The development of a private flood insurance marketplace is one of several reforms that would strengthen the NFIP and ensure its viability. In 2017, the program needs to be reauthorized and reformed, so Congress must act to avoid another series of short-term extensions and shutdowns that will only create uncertainty in real estate and related markets.

The federal government also needs to make resiliency and mitigation efforts a greater priority, both within and outside of the NFIP. Strengthening infrastructure and helping homeowners take preventative measures will minimize the damage when storms hit and reduce the costs of post-disaster recovery.

Communities can also invest in natural systems that restore the local ecology and help reduce flooding risks long-term. By restoring natural watersheds and other wildlife habitats that act as natural flood barriers, communities will have more of a buffer for future flooding and increased wildlife habitats nearby during the times of year when floods don't threaten Ohioans.

2012: Cleveland-area watershed restoration projects get $1.7 million in federal funding

Another mitigation measure that would give consumers a clear picture of their vulnerability to flooding is updating flood maps using modern technology. Accurate maps would also ensure that flood insurance rates reflect the true risk that a property faces and require fewer homeowners to file expensive appeals.

As the country braces for the rest of this year's hurricane season, the U.S. Senate needs to pass this common-sense and much-needed legislation to bring better flood coverage to Ohio residents and protect taxpayers from taking on the NFIP's crushing debt.

A Building Moratorium Brings Unnecessary Clouds [Commentary]

Baltimore Sun, September 21, 2016

In the wake of the summer's Ellicott City flood, calling for a nine-month freeze on development in the area is a reflexive move that will do little to provide answers about the adequacy of Howard County's stormwater management policies and practices.

The idea of a moratorium in under consideration by the County Council. Proposed by Councilman Jon Weinstein, a cheerleader for rebuilding Ellicott City's Main Street, a halt to building could be ordered as soon as December for land that drains into the Tiber and Hudson streams and eventually into the Patapsco River.

At a hearing on the proposal this week, the public comments were boilerplate: Slow-growth advocates urged a more expansive review, beyond the Tiber-Hudson watershed, and supported a pause in building. Business advocates said a moratorium would be misguided.

Well before the July 30 flood, government-appointed groups were already examining how businesses manage stormwater and what can be done to minimize flood damages in the historic portions of Ellicott City, where a flour mill depended on water power.

Stopping development will not help or harm a review of whether a patchwork of regulations conflict with best practices to manage runoff.

One engineer who spoke at this week's hearing correctly observed that older Ellicott City developments didn't have sophisticated stormwater management protocols. Over time, advances in technology and engineering have brought systems such as retention ponds that allow rainwater to be more slowly released after a major storm and the use of paving materials that allow more water to seep into the earth rather than be swiftly swept into gutters, culverts and sewers.

Building almost anything in Howard County has never been a cake walk – there are layers of reviews, approvals and permits. To slap a moratorium in place could burnish an anti-development image that the county's doesn't need. Responsible efforts to study flooding issues are already underway. A halt to development, even in a limited area around Ellicott City for almost a year, would be an unnecessary overreach.

National Hurricane Center: Newton Is Now A Hurricane

Associated Press, September 5, 2016

MIAMI — The National Hurricane Center says Tropical Storm Newton has strengthened into a hurricane.

Newton formed off Mexico's Pacific coast and is headed toward Baja California.

Newton was located about 215 miles (350 km) southeast of Cabo San Lucas Monday evening. The storm was moving northwest at 16 mph (26 kph) with maximum sustained winds of 75 mph (120 kph).

Forecasters expect Newton to continue moving in the same general direction with an increase in forward speed into Tuesday. The center of Newton is expected to be near or over the southern tip of the Baja California peninsula Tuesday morning, by which time it could be near hurricane intensity.

The government of Mexico has issued a Hurricane Warning for the west coast of the Baja California Sur from north of Puerto Cortes to Cabo San Lazaro.

Coastal portions of five Mexican states could see 5 to 10 inches of rain, with isolated maximums of 15 inches.

Hurricane Newton Hits Mexico With Threat Of Flash Floods

By Kelly Gilblom

Bloomberg News, September 6, 2016

Hurricane Newton made landfall Tuesday morning in northwest Mexico and will probably cause damage from heavy rain.

Cabo San Lucas, a popular tourist destination, will be hit by winds moving as fast as 90 miles (144 kilometers) an hour, according to the latest advisory note by the U.S. National Hurricane Center. Newton is expected to reach the mainland as a hurricane early Wednesday morning as it gradually weakens.

Associated rainfall of as much as 18 inches, could cause life-threatening flash floods and mud slides, especially in the areas of mountainous terrain. An advisory from the Mexican national weather service said the storm could be accompanied by hail, dust tornadoes and eddies, and warned against the risk of electric shock.

"A dangerous storm surge is expected to produce significant coastal flooding near and to the east of where the center makes landfall on both the southern Baja California peninsula and mainland Mexico," according to the update. "Near the coast, the surge will be accompanied by large and destructive waves."

Preparations to protect life and property should have been completed by now, NHC said. Baja California has seven ports, according to information compiled by Bloomberg. There's also an operational liquefied natural gas terminal that's outside the range of the hurricane's trajectory.

Countries including the U.K. and Canada warned against travel to Mexico amid dangerous weather. At least 38 people died in mudslides and floods caused by Tropical Storm Earl last month, the U.K. warning said.

Newton is the second hurricane within a week. Hermine became the first hurricane to strike Florida since 2005 on Friday. It damaged crops and property before weakening and moving up the U.S. East Coast.

Hurricane Newton Soaks Mexican Coast, Aims For Los Cabos

Associated Press, September 5, 2016

MEXICO CITY — Tropical Storm Newton strengthened into a hurricane Monday as it drenched parts of western Mexico, causing floods and landslides as it headed toward landfall near the Los Cabos resorts.

Forecasters said it was expected to come ashore Tuesday morning at or near the resort towns on the southern tip of the Baja California peninsula.

Rains associated with Newton prompted about 100 people to evacuate their homes and damaged residences in Uruapan in the Pacific coast state of Michoacan, the city government said. Some roads were blocked by flooding and mudslides in the neighboring state of Guerrero, where some people were evacuated by helicopter. No deaths were reported in either state.

Newton's maximum sustained winds increased to 75 mph (120 kph) by midafternoon Monday, the U.S. National Hurricane Center reported. The storm was centered about 215 miles (350 kilometers) southeast of Cabo San Lucas and was moving northwest at 16 mph (26 kph).

Forecasters said it was on a projected path to the southern tip of Baja, where the twin resorts of Cabo San Lucas and San Jose del Cabo are located. A hurricane warning was in effect for Cabo San Lucas and the nearby coastline.

Newton was expected to cross over the peninsula and enter the Gulf of California, also known as the Sea of Cortez, on Wednesday.

The hurricane center said the storm was likely to continue north into Arizona as a tropical depression later in the week.

Record-tying Magnitude 5.6 Quake In Oklahoma Oil Country Rattles Midwest

By Molly Hennessy-Fiske

Los Angeles Times, September 3, 2016

Oklahoma regulators ordered more than three dozen oil and gas wastewater disposal wells to shut down after a magnitude 5.6 earthquake — matching the strongest ever to hit Oklahoma — struck Saturday morning and reverberated across the Great Plains, rattling even far-off Iowa.

People took to social media to report feeling the quake not just in Iowa but Missouri, Kansas, Texas, Arkansas and Nebraska. Oklahoma Gov. Mary Fallin declared a state of emergency in Pawnee County, epicenter of the quake.

Oklahomans have grown accustomed to quakes in recent years thanks to a flurry of seismic activity linked to underground disposal of wastewater from oil and natural gas production. But people quickly noticed this was no ordinary quake for the Sooner State.

Sarah Carpenter had just awoken and was sitting on the edge of her bed when the quake hit at 7:02 a.m., its epicenter not far from her home in the town of Pawnee.

"I heard the big boom and there were like two or three after that and I thought, 'This is not like any one we've ever had,' " said Carpenter, 64. "My house went back and forth and back and forth. I didn't think it would ever stop. I thought, 'I'm on a boat in an ocean.' I could hear stuff falling in my house.… I've been in a skyscraper in California when they had it and that's what it felt like. It was just rocking back and forth."

The last magnitude 5.6 quake to hit Oklahoma struck about 70 miles south in the town of Prague in November 2011, according to the U.S. Geological Survey.

"This is the biggest one I've ever been around," said Pawnee County Sheriff Mike Waters. "It was felt all around us."

The epicenter of Saturday's quake was about nine miles northwest of the county seat, a town of about 2,000 in north-central Oklahoma where more than a dozen older limestone-and-brick buildings were damaged and one father had to get stitches after his mantelpiece toppled on his head as he shielded his son, Waters said.

About six buildings owned by the local Pawnee tribal authority also were damaged, as were more than a dozen houses in the rural county of 16,000, Waters said.

He said the quake seemed to last more than 30 seconds, longer than recent temblors, and "that's why we got so much more damage." The area was shaken by a 3.2 quake earlier in the week.

"Everybody's getting a little more used to them — but not to this magnitude," Waters said.

Waters was at home south of Pawnee when the ground starting moving. The shaking "knocked pictures off the wall, clocks off the wall, some fans off shelves — it was pretty bad. I haven't even got to go through my residence to see if I have any structural damage," he said.

Carpenter inspected her home and didn't see any damage, but worried about her pipes. When she went downtown to the antique store where she volunteers, see saw several older buildings cordoned off, their walls cracked and crumbling. The grocery store was closed. "All their food's on the floor," she said.

The antique store, Cornerpost, did not have any major damage, she said. Customers appeared Saturday and echoed Carpenter's memory of the quake: "They didn't think it was ever going to quit."

Fallin tweeted that state crews checking potential bridge and highway damage from the quake "found very minor issues."

"The city of Pawnee is working with insurance companies to inspect the buildings before reoccupying," she tweeted.

Fallin also announced that the state energy regulator, the Oklahoma Corporation Commission, contacted operators of 37 disposal wells in a 725-

square-mile area near the epicenter "telling them to shut down" and that the order was "based on emergency authority — this is a mandatory directive."

"Everything within 5 miles of a 10-mile section of the fault in question is to shut down within 7 days. Everything else is to shut down within 10 days," she tweeted.

Matt Skinner, a spokesman for the commission, said it was an "indefinite shutdown."

"All the reductions we have done to date have been predicated on the research showing a link between Arbuckle wastewater disposal and earthquakes," Skinner said.

The formation has long been a favored spot for wastewater disposal because of its depth and ability to soak up water. It sits just above the basement rock where most active faults lie, and where researchers have warned injecting wastewater could cause earthquakes.

The commission released a statement saying the area of concern includes 211 square miles in Osage County outside its jurisdiction. The agency has contacted federal regulators at the Environmental Protection Agency, who will "determine what action to take in that area."

Parts of Oklahoma have become as earthquake-prone as California, experts said. Although the increase in earthquakes of magnitude 3 or greater in the state in recent years has been linked to the energy industry's wastewater disposal, experts cautioned that it was too early to say what caused Saturday's quake.

"For this particular one, we can't say until we study it more," said Jefferson Chang, interim state seismologist. "Oklahoma has had large earthquakes even before industry started up here.… It could be tectonic, it could be industry. You need more research to tell. It's a very hot topic."

Last year, the state-run Oklahoma Geological Survey said that it "considers it very likely" that oil and gas wastewater wells were causing the majority of the state's earthquakes.

"If it is industry, it's mainly wastewater disposal," Chang said, not the drilling itself or hydraulic fracturing, known as "fracking."

State regulators have asked Oklahoma producers to reduce wastewater disposal volumes in earthquake-prone regions of the state.

The area where the quake was centered is at the edge of a region covered by the Corporation Commission's spring "regional earthquake response plan," designed to reduce the number of earthquakes by decreasing wastewater injection volume by 40% compared with 2014.

Both Oklahoma and Kansas have imposed such volume limits after quakes increased in recent years, but Kansas officials acted more quickly and have seen a decrease in quakes of 2.7 or more — a 60% drop from 2014 to 2015. In Oklahoma, the frequency of quakes has continued to increase.

Carpenter was skeptical about connecting the quakes to drilling.

"I don't think they've been drilling round here lately, so I have a hard time believing it's related," she said, blaming natural forces. "We're on a fault line."

Waters said he'd like to see more research into possible connections between quakes and drilling, which fuels the local economy.

"We've had a lot of drilling around here but the past several months it's slowed down. As the drilling has slowed, the quakes have slowed," he said. "Our counties rely on that, our schools, our law enforcement. But if it's jeopardizing our citizens, we need to do something about it."

This article was updated to report that Gov. Mary Fallin declared a state of emergency in Pawnee County.

Earthquake Ties Record For Strongest In Oklahoma History

By Niraj Chokshi And Henry Fountain

New York Times, September 3, 2016

A 5.6-magnitude earthquake centered near the city of Pawnee rattled the state just after 8 a.m. Saturday, tying a record set in 2011 for the strongest such tremor in Oklahoma history, according to the National Weather Service.

Local officials reported moderate to severe damage and at least one nonlife-threatening injury.

"We are finding a lot of rural houses north, northwest of Pawnee that are seeing extensive damage," said Sheriff Mike Waters of Pawnee County.

Pawnee County Emergency Management posted photos on Facebook just before noon on Saturday of a pile of rubble, noting that three buildings sustained moderate damage, while several others had minor damage.

Rocks and bricks fell from some businesses in town, and items fell off grocery store shelves, Mr. Waters added.

Gov. Mary Fallin said on Twitter that she had dispatched state transportation crews to inspect area bridges for damage.

The United States Geological Survey recorded subsequent earthquakes of magnitudes 3.6, 3.4 and 2.9. The morning earthquake was felt as far away as Chicago and Austin, Tex.

Oklahoma has been hit in recent years by thousands of earthquakes. Most have been imperceptible, but the number that can be felt — generally of magnitude 3.0 and higher — has risen significantly. Only three earthquakes of that size or stronger were recorded in 2009. There were 109 in 2013 and 585 in 2014. Last year, the state had 907 such quakes. So far this year, there have been more than 400.

Seismologists say the quakes are caused by high-pressure injection of wastewater from oil and gas wells, both conventional ones and those that are hydraulically fractured, or fracked. As wastewater under pressure migrates into rock formations below ground, it alters stresses along old faults, allowing them to slip.

The United States Geological Survey acknowledged in a statement that oil and gas activity has set off many earthquakes in the states, but said it could not yet say the practice caused Saturday's quake.

"Without studying the specifics of the wastewater injection and oil and gas production in this area, the U.S.G.S. cannot currently conclude whether or not this particular earthquake was caused by industrial-related, human activities," it said.

Oklahoma has thousands of wastewater disposal wells across the state. Since mid-2015, the state has ordered operators of some disposal wells to reduce the volume of wastewater injected, in the hope of reducing the number of earthquakes.

The earthquake on Saturday is the largest in the state since a 5.6-magnitude quake struck near Prague, about 60 miles south of Pawnee, in November 2011. That quake injured two people and damaged more than a dozen homes, as well as a building at a local college.

Record-tying Oklahoma Earthquake Felt As Far Away As Arizona

By Ken Miller

Associated Press, September 3, 2016

OKLAHOMA CITY — A record-tying earthquake in the edge of Oklahoma's key energy-producing areas rattled the Midwest from Illinois to the southwest part of Texas on Saturday, and likely will bring fresh attention to the practice of disposing oil and gas field wastewater deep underground.

The United States Geological Survey said a 5.6 magnitude earthquake happened at 7:02 a.m. Saturday in north-central Oklahoma, on the fringe of an area where regulators had stepped in to limit wastewater disposal. That temblor matches a November 2011 quake in the same region.

An increase in magnitude 3.0 or greater earthquakes in Oklahoma has been linked to underground disposal of wastewater from oil and natural gas production.

The Oklahoma Corporation Commission, which since 2013 has asked wastewater-well owners to reduce disposal volumes in parts of the state, is requiring 37 wells in a 514 square mile area around the epicenter of the earthquake to shut down within seven to 10 days because of previous connections between the injection of wastewater and earthquakes.

"All of our actions have been based on the link that researchers have drawn between the Arbuckle disposal well operations and earthquakes in Oklahoma," spokesman Matt Skinner said Saturday. "We're trying to do this as quickly as possible, but we have to follow the recommendations of the seismologists, who tell us everything going off at once can cause an (earthquake)."

Skinner said the commission's "area of interest" includes another 211 square miles in Osage County, but doesn't know how many wells may be involved because the area is under the jurisdiction of the Environmental Protection Agency, and that the commission is working with that agency.

"EPA decides on the wells in Osage County. We don't know anything about Osage County, legally we're not even allowed to ask," Skinner said.

People in Kansas City and St. Louis, Missouri; Chicago; Gilbert, Arizona; Fayetteville and Little Rock, Arkansas; Des Moines, Iowa; Memphis, Tennessee; and Big Lake in southwest Texas, all reported feeling the earthquake. Dallas TV station WFAA tweeted that the quake shook their studios, too.

Pawnee County Emergency Management Director Mark Randell said no buildings collapsed in the town of 2,200 about nine miles southeast of the epicenter. "We've got buildings cracked," Randell said. "Most of it's brick and mortar, old buildings from the early 1900s."

Randell also said a man suffered a minor head injury when part of a fireplace fell on him as he protected a child. The man was treated and released.

Oklahoma Gov. Mary Fallin has declared a state of emergency for the county, allowing state agencies to make emergency purchases related to disaster relief and preparedness. The declaration is also the first step toward seeking federal aid should it be necessary

The damage is not as severe as the 2011 quake near Prague, Oklahoma, about 60 miles south of Pawnee, despite being the same magnitude and approximately the same depth. Saturday's was 3.7 miles deep, compared to 3.1 miles in 2011. Both are shallow quakes, during which shaking is more intense, like setting off "a bomb directly under a city," USGS seismologist Susan Hough has said.

However, hard bedrock beneath the surface in north-central Oklahoma is likely the reason for less damage, Oklahoma Geological Survey geophysicist Jefferson Chang said, adding that the subsurface around Prague is softer.

"It's pretty much comparable to the Prague event," Chang said. "But in harder rock, it won't shake as much."

Pawnee furniture store owner Lee Wills told The Associated Press that he first thought it was a thunderstorm.

"Then it just ... Everything went crazy after that. It just started shaking," said Wills, who lives about 2½ miles outside of town. "It rocked my house like a rubber band. Threw stuff off cabinets and out of cabinets, broke glasses."

Midwest Earthquake Felt From Missouri To North Texas

By Elliot Smilowitz

The Hill, September 3, 2016

An earthquake shook the Midwest early Saturday morning, rattling Americans just waking up in Missouri, Arkansas, Texas and Oklahoma.

The earthquake's magnitude was 5.6, according to the United States Geological Survey (USGS). It hit just after 7 a.m. Eastern.

It was felt in Kansas City, Mo.; Fayetteville, Ark.; Norman, Okla.; and Dallas, Texas, according to the Associated Press.

It's not yet clear whether the earthquake caused any injuries or damage.

Earthquakes hit Oklahoma frequently, but they are typically below 4.0 magnitude and rarely are felt in the northeast part of the state, according to Tulsa World.

Earthquake Rattles Oklahoma; One Of Strongest Recorded In State

NPR, September 3, 2016

An earthquake struck northern Oklahoma early Saturday morning, rattling houses and waking residents in the region around Pawnee, about 74 miles north of Oklahoma City. Preliminary measurements show the quake had a magnitude of 5.6 — believed to be one of the strongest in state history.

The quake was felt in five states, according to the U.S. Geological Survey: Oklahoma, Kansas, Missouri, Arkansas and Texas. It struck just after 7 a.m. local time, at a depth of 6 kilometers (3.7 miles).

The epicenter was around 8 miles northwest of Pawnee, a town of less than 3,000 people. Shortly after the large quake hit, at least four additional temblors struck the same area, with the strongest having a magnitude of 3.6; all of them were shallower than the first quake.

According to the National Weather Service's Tulsa office, the earthquake ties the strongest quake in Oklahoma history at 5.6 magnitude. The previous record breaker hit on Nov. 5, 2011, the agency says.

Public Radio Tulsa — where the quake was strongly felt — describes the scene:

"Police in Pawnee report some windows were broken and homes sustained damage to the the outside facade. There have been no reports of injuries.

"The quake struck just after 7 a.m on Saturday morning. It was nearly four miles deep.

"Social media was alive with people feeling the quake from Dallas to Springfield, Missouri. The quake was so strong in Joplin, people there were worried it was the New Madrid Fault in far eastern Missouri, the site of the United State's strongest earthquake ever in 1812."

A number of smaller earthquakes have hit northern Oklahoma in the past week — including one that struck the same area as today's quake on Thursday, with a 3.2 magnitude. Since last Saturday, a string of similar quakes have hit an area west of Pawnee, including at least eight with a magnitude of 3 or higher.

In Oklahoma and other regions that are experiencing a spike in earthquakes, a consensus has emerged that they're linked to the underground injection of wastewater that's generated from fracking in oil and gas production, as Public Radio Tulsa recently reported.

The station says the Oklahoma Geological Survey is now working on a six-month study of injection wells to get a grip on how to cut the chances that operations "inadvertently induce a seismic event," as an oil industry representative said last month.

The U.S. Geological Survey says that Saturday's strong quake "occurred as the result of shallow strike-slip faulting."

More from the USGS:

"Locations across the central and eastern United States (CEUS) have been experiencing a rapid increase in the number of induced earthquakes over the past 7 years. Since 2009 rates in some areas, such as Oklahoma, have increased by more than an order of magnitude. Scientific studies have linked the majority of this increased activity to wastewater injection in deep disposal wells in several locations. However, other mechanisms such as fluid withdrawal, enhanced oil recovery, or hydraulic fracturing processes can also result in induced earthquakes."

State Of Emergency Declared In Oklahoma After Record Earthquake

By Michael Regan

PBS NewsHour, September 4, 2016

Oklahoma's governor on Saturday declared a state of emergency for Pawnee County located near the epicenter of one of the strongest earthquakes ever recorded in the state.

The 5.6-magnitude earthquake struck Saturday morning about 8 miles northwest of Pawnee City, damaging buildings, shaking food from shelves in local supermarkets and sending shock waves through several Midwestern states.

Gov. Mary Fallin said in a statement that no injuries were reported and damage was limited, though the state of emergency designation for Pawnee County would open up funding for disaster relief and emergency preparedness and could bring in federal aid.

Saturday's earthquake equaled another 5.6 earthquake recorded in 2011 in Oklahoma's Lincoln County, the largest ever documented in the state.

Oklahoma has seen a rapid rise in the number of earthquakes over the last six years, which scientists link to the use of wastewater by the oil and gas industry.

While the process of hydraulic fracturing, or fracking, is often associated with the uptick in Oklahoma earthquakes, some studies show earthquakes may instead be caused by companies pulling gas and oil from water found underground, then back into the earth through disposal wells.

Historically, the state saw just two magnitude 3 earthquakes or higher per year prior to 2009, though that number surged to more than 900 in 2015 after domestic production of oil and gas increased along with the amount of wastewater.

Earlier this year, state regulators curbed the amount of wastewater that the oil and gas industry can inject thousands of feet into the Arbuckle formation, a sedimentary rock layer found under Oklahoma that rests above fault lines.

On Saturday, the Oklahoma Corporation Commission, which is in charge of regulating the state's oil and gas industry, began halting the use of 37 additional disposal wells across 725-square miles in the area surrounding the earthquake's epicenter.

Fallin said the state also will work with the U.S. Environmental Protection Agency, which has "sole jurisdiction" over disposal wells in another nearby county.

"Information on the earthquake is still being collected, and will be reviewed by my coordinating council on seismic activity," Fallin said

State Of Emergency In Oklahoma City Following Earthquake

By Jessie Hellmann

The Hill, September 4, 2016

Pawnee, Okla., is under a state of emergency after an earthquake hit the county Saturday morning, according to The Associated Press.

"The earthquake was felt in multiple states and was the strongest the state has experienced since November 2011 when a magnitude 5.6 earthquake occurred in Lincoln County," Gov. Mary Fallin said on Saturday night.

"This emergency declaration will start the process to help individuals, families and businesses impacted by the earthquakes and serves as a precursor to requesting any necessary assistance."

State regulators have also ordered oil and gas companies shut down 37 wastewater disposal wells in the area.

The earthquake has been linked to injection wells that oil and gas companies use as part of fracking.

Disposal Wells' Link To Oklahoma Earthquake Scrutinized

Shutdown Of Wastewater Wells Near Earthquake Epicenter Is Ordered: Oklahoma Officials

Associated Press, September 3, 2016

PAWNEE, Okla. (AP) — The Oklahoma Corporation Commission has directed dozens of wastewater disposal wells within an approximate 500-square-mile radius of the epicenter the Oklahoma earthquake to shut down.

The commission says about 35 wells are included in the directive, which was issued following the 5.6 magnitude earthquake that struck Saturday morning about nine miles northwest of Pawnee in north-central Oklahoma.

The number of magnitude 3.0 or greater earthquakes has skyrocketed in Oklahoma, from a few dozen in 2012 to more than 900 last year.

Commission spokesman Matt Skinner says the wells were directed to shut down due to scientific links that the increase to the underground disposal of wastewater from oil and gas production induces earthquakes. The commission has previously asked producers to reduce wastewater disposal volumes.

The earthquake ties the record for the strongest earthquake in recorded Oklahoma history. No major damage was reported, and there was one minor injury.

Wells Closing After Oklahoma Quake Fraction Of State's Total

Associated Press, September 4, 2016

OKLAHOMA CITY (AP) – The 37 wastewater disposal wells to be shut down in north-central Oklahoma, where a 5.6 magnitude earthquake struck this weekend, are just a fraction of the state's total number.

There are about 4,200 total wells across the state and about 700 in a 15,000-square-mile "Area of Interest" created by the commission to address earthquakes in the area that includes the epicenter of Saturday's temblor near Pawnee.

The earthquake tied a November 2011 quake as the strongest in recorded state history and was felt as far away as Nebraska, but no major damage was reported.

Not all of the state's wells operate simultaneously, Oklahoma Corporation Commission spokesman Matt Skinner said.

"We estimate that at any one time, there are about 3,200 active disposal wells," Skinner said.

An increase in magnitude 3.0 or greater earthquakes in Oklahoma has been linked to underground disposal of wastewater from oil and natural gas production, and since 2013, the commission has asked wastewater-well owners to reduce disposal volumes in parts of the state where the temblors have been most frequent.

The "area of interest" includes another 211 adjacent square miles that's under the jurisdiction of the Environmental Protection Agency, and Skinner said the commission doesn't know how many wells may be involved there.

Gov. Mary Fallin declared a state of emergency in Pawnee County because of the earthquake. State and local emergency management officials and officials from the U.S. Geological Survey assessed damage Sunday, according to Pawnee County Emergency Management Director Mark Randell.

"We're just trying to determine just how widespread" the damage is, Randell said. He described it as minor to moderate, with some collapsed chimneys and fallen sandstone facing off buildings; no buildings collapsed.

None of the utilities, pipelines or fuel infrastructure in the area had major damage, either, the commission said. The Oklahoma Department of Transportation inspected 180 state bridges within a 30-mile radius of the epicenter and reported minor cosmetic damage to two structures, but all are open and safe for travel.

ODOT said the inspections across six counties took about six hours to complete.

"We are pleased with the speed and efficiency of our crews in their response to this event and dedication to ensuring public safety," ODOT executive director Mike Patterson said.

The U.S. Army Corps of Engineers is inspecting all dams within a 50-mile radius of the epicenter, including the Birch, Cleveland Levee, Heyburn, Kaw, Keystone, and Skiatook dams.

Key energy-producing areas in both Oklahoma and Kansas saw an uptick in quakes in the first half of this decade, but took different approaches. Kansas moved quickly to limit volume in wastewater disposal wells, while Oklahoma concentrated on the depth of the disposal. Kansas saw a 60 percent drop while the frequency of quakes in Oklahoma continued to climb.

Food Assistance Continues; Experts Discuss "Exodus"

Associated Press, September 5, 2016

BATON ROUGE, La. (AP) — Experts studying demographics and data following south Louisiana's great flood of 2016 tell a newspaper they don't expect a mass exodus of people from the area, such as the one that followed Hurricane Katrina in 2005.

Allison Plyer, executive director of The Data Center in New Orleans, told The Advocate (http://bit.ly/2bSIwTj) that the flooding was patchy enough that it enabled victims to stay with unaffected neighbors nearby while they worked on homes.

Experts said the restoration of electricity and school reopenings were other factors that could prevent a mass exodus.

Tulane University geographer Richard Campanella told the newspaper that many residents in the flood footprint are homeowners. He said property ownership would make them less likely to leave than renters.

Renters are one group that is more likely to leave.

That was the case for Caroline and Kevin Farris, who were renting a home in Denham Springs with their 3-year-old daughter Isabella.

They were in North Carolina when the flood hit, visiting Caroline's family.

They returned to find that the house had flooded with 39 inches of water.

Kevin Farris' family in Watson also flooded, so the couple decided to head back to North Carolina and stay with Caroline Farris' family.

"We didn't have a choice," Caroline Farris said. "My husband called his job and said, 'Look, I'm really sorry, but we can't stay here,' and then I had to do the same."

Caroline Farris already has gotten a new job in her hometown, and the couple expects to move into their new rental next week.

Elliott Stonecipher, a north Louisiana demographics expert, told The Associated Press on Monday that another group to keep an eye on will be retiring baby boomers – people with discretionary income who might find the floods to be the last straw as they cope with other south Louisiana problems, including traffic congestion and crime in Baton Rouge.

Many in that group, especially with government aid for their flood losses, might flee to Florida or Texas, states without a personal income tax. Or, if they want to stay in state, they might head for central or north Louisiana spots where real estate costs are low.

The August floods damaged more than 150,000 homes and displaced thousands.

A state office said Monday that more than 109,000 people have received nearly $44 million worth of food benefits in the first two weeks of a nutritional assistance program helping south Louisiana flood victims.

It's called the Disaster Supplemental Nutrition Assistance Progam. The state Department of Children and Family Services says in a news release that Saturday marked the completion of two weeks of D-SNAP operations in Acadia, Ascension, East Baton Rouge and Lafayette parishes.

The department opens its third week of operations Tuesday, through Saturday in parts of Evangeline, Iberville, Jefferson Davis, St. James, St. Martin, Washington, West Baton Rouge, West Feliciana and St. Tammany parishes.

Residents are encouraged to preregister for DSNAP online at www.dcfs.la.gov/preregister or by phone at 1-888-LAHELP-U (1-888-524-3578) before visiting a DSNAP location.

Tens Of Thousands Of Vehicles Were Destroyed In Recent La. Floods

By Jesse Hardman

NPR, September 6, 2016

Most of the roads in South Louisiana are now open. Towing companies are going gangbusters because neighborhoods flooded by the recent rain storms are littered with damaged cars and trucks.

Flooded Cars Mean Longer OMV Hours

Associated Press, September 5, 2016

BATON ROUGE, La. (AP) — State police say there's an overwhelming demand for Office of Motor

Vehicle services following disastrous flooding in August.

In a news release, state police say office hours at the OMV Field Office on Independence Boulevard in Baton Rouge is extending office hours through next week.

Through Friday, the office hours will be 8 a.m. to 6:30 p.m. The office will be open from 8 a.m. to 4:30 p.m. on Saturday.

The office is processing up to 600 cancelled plates a day from flooded vehicles as well as duplicate drivers licenses and IDs.

How Growth-Focused Politics Helped Build Vulnerability In Louisiana's Flood Zones

By Andrew Revkin

New York Times, September 2, 2016

Updated | As coastal communities from the Carolinas through New England track Tropical Storm Hermine, which struck Florida yesterday as that state's first hurricane since 2005 before weakening, it's worth looking back at the disastrous deluge in Louisiana for wider lessons. A good starting point is two photographs.

What's wrong with these pictures?

When the elegant plantation home was built in Baton Rouge, La., some two centuries ago, it was elevated a few feet aboveground — providing greatly boosted odds of limited damage in one of the Mississippi delta's frequent big floods (not to mention protection from termites and the like).

When the contemporary ranch was built in a development in Ascension Parish nearby, it was set on a concrete slab — deeply vulnerable to floodwaters like those that came in the state's astounding mega-rainfall in mid August. The photos were taken by Craig E. Colten, the Carl O. Sauer Professor of Geography at Louisiana State University and a longtime student of why communities expand in harm's way.

He wrote a compelling piece for The Conversation digging in on the growth-oriented policies and perverse incentives that added greatly to the losses in Louisiana's great flood of 2016.

You can read an excerpt below.

But I also recommend you read a deep dive into factors behind the scope of losses in the August flood, by Edward P. Richards, who directs the program in law, science and public health at Louisiana State's law school. That piece includes some helpful math and flood history explaining why "one in a thousand year" storm labels or the like can greatly overstate the rarity of extreme events.

Here's his prime point in a section under the heading "Who's to blame?":

From a land use perspective, the primary problem was that local planning and zoning commissions have known that the areas are prone to severe flooding for at least the 30-plus years since the 1983 flood. Homeowners and small businesses were not warned about the risk and were not advised to buy flood insurance if they were outside the FEMA 100-year flood zone. They relied on planning and zoning commissions to determine if developers were building in safe locations.

After surveying the situation in Louisiana's flood zone, Richards offers an all-too-familiar warning to growth-oriented municipalities in flood zones around the country:

This is a problem for every community in the United States that is subject to periodic flooding. There are many communities with millions of homes that have built themselves beyond the drainage capacity of their watersheds and face the same difficult choices about development and relocation as does the area currently flooded in Louisiana.

[Read John Schwartz's new exploration of tropical storms in a warming climate. And for a discussion of factors that fueled the massive rains in Louisiana, including the role of greenhouse-driven climate change, click back here and listen to the related Warm Regards podcast.*]

Read further on, if you dare, and you'll find a hair-raising nugget from Katherine Bagley's piece for Yale Environment 360 on a new study of "severe repetitive loss properties," rebuilt over and over and over and over again (actually many more times than that for some) thanks to subsidized federal flood insurance:

In Colten's piece, "Suburban sprawl and poor preparation worsened flood damage in Louisiana," the geographer describes some parallels with the devastation wrought by Hurricane Katrina:

In both cases, human decisions magnified the consequences of extreme natural events. Planning and permitting enabled development in areas that had experienced repeat floods, and agencies had failed to complete projects designed to mitigate flood damage before the storms hit.

This part of Louisiana, which is known as the Florida Parishes because it once was part of the

Spanish territory of Florida, is a natural laboratory for flood studies. A benchmark flood in 1983 caused some $344 million in damages. Additional dramatic floods occurred in 1990 and 1993. In 2001 Tropical Storm Allison dumped 19 inches of rain on Baton Rouge over the course of two days and unleashed extensive inundations. And just last March, 9 to 15 inches of rain inundated much of the same area.

In 1985 Rod Emmer, the long-time director of the Louisiana floodplain managers' association, gave a stunningly prescient presentation to a national gathering of floodplain managers in New Orleans. Emmer observed that the devastating 1983 flood along the Amite River was the fourth in an 11-year span, and that losses could have been reduced with sensible flood-reduction projects. He also pointed out that planners had repeatedly called for such action, and concluded that the problem was not a failure to plan, but a failure to follow through and complete projects.

After the 1983 flood, local officials began taking steps to improve flood protection systems and reduce risk. They included raising and modifying highway bridges that impeded the flow of river water, and upgrading levees and pumps to manage excess backwater flooding in the lower reaches of the river basins.

Baton Rouge, the state capital and largest city in the region, and Denham Springs modified their floodplain building standards to reduce risk. And public officials secured authorization in 1986 for the Corps of Engineers to build a diversion canal to redirect excess water from the upper Comite River basin to the Mississippi. Local voters even approved a tax to fund a portion of the project in 2000. By all appearances, it seemed that communities were responding to Emmer's appeal.

However, these efforts have not been sustained. Suburban sprawl has spilled onto floodplains and placed residents at risk. For example, the relatively new incorporated community of Central in East Baton Rouge Parish reports that 75 percent of its territory is in the 100-year floodplain. According to initial news reports, up to 90 percent of the town's houses sustained damage in this month's floods. Between 2000 and 2010, the population of Ascension Parish grew from 76,617 to 107,215, and Livingston Parish's population increased from 91,814 to 128,026. Developers have intensively built up areas along the Comite and Amite rivers and in the territory where the two rivers converge and back up into Bayou Manchac during floods….

There has been no effort to deflect development or require safe construction practices within the 500-year floodplain, even though the region's flood history suggests that broader flood mitigation efforts would be prudent.

Since Congress passed the Disaster Relief Act of 1950, the federal government has provided relief and recovery funds after large-scale floods and other disasters. These payments, along with federally funded levees and other flood control structures, have created a false sense of security in the face of risk.

As promised, if you have the strength, here's the main finding from the Natural Resources Defense Council report on repetitive flood losses — and bailouts — at the heart of Bagley's story (italics added by me):

2,100 properties across the U.S. enrolled in the National Flood Insurance Program have flooded and been rebuilt more than 10 times since 1978, according to a new analysis of insurance data by the Natural Resources Defense Council (NRDC). One home in Batchelor, Louisiana has flooded 40 times over the past four decades, receiving $428,379 in insurance payments. More than 30,000 properties in the program, run by the Federal Emergency Management Agency, have flooded multiple times over the years. Those homes, known as "severe repetitive loss properties," make up just 0.6 percent of federal flood insurance policies. But they account for 10.6 percent of the program's claims — totaling $5.5 billion in payments….

According to FEMA records, Louisiana homeowners with flood insurance have poor track records when it comes to preparing for the next storm. The state leads the nation in severe repetitive loss properties, with more than 7,200 of the NFIP's 30,000 multi-flood homes. Since 1978, these Louisiana houses have received $1.22 billion in flood insurance payments — 22 percent of all repetitive loss claims, according the NRDC.

"We need to change the emphasis of the NFIP from a rebuilding program to a risk mitigation program," said Moore. "It currently addresses people's short-term need to get their life back in order, not the long-term risk."

I can't end without noting how much Moore's plea echoes those I've been hearing from officials, economists and scientists in the West's crowding wildfire zones, where ballooning federal budgets for fighting fires are draining money from programs that could help communities build safer and get comfortable "living with wildfire."

Further reading | For a sobering reminder of just how normal massive flooding is along the Mississippi and its delta, explore the studies linked in another post by Richards at the L.S.U. law school:

"Mississippi River Flood History"

The record of Mississippi River floods goes back to the earliest explorers: High Flows and Flood History on the Lower Mississippi River Below Red River Landing, LA (1543- – Present) and the paleoclimate records show megafloods greatly exceeding even the 1927 flood: Brown, P., J. P. Kennett, and B. L. Ingram (1999), Marine evidence for episodic Holocene megafloods in North America and the northern Gulf of Mexico, Paleoceanography, 14(4), 498–510, doi:10.1029/1999PA900017; and Tripsanas, E.K. et al., 2013. Wildfire Prompts Evacuation Preparations In Wenatchee

Associated Press, September 4, 2016

WENATCHEE, Wash. (AP) — Officials are telling residents in Wenatchee neighborhoods to prepare to evacuate in case a wildfire comes closer.

Chelan County Emergency Management tells KIRO station that the fire was burning at about 10 acres near Horse Lake Road on Sunday.

Authorities say residents nearby should be ready to leave at a moment's notice.

Firefighters are battling winds of about 7 mph. Additional crews are being called in.

Blaze Near Last Month's Huge California Wildfire Contained

Associated Press, September 4, 2016

DEVORE, California (AP) — A slow-moving wildfire burning in the San Bernardino National Forest near the site of a major wildfire last month has been contained.

The U.S. Forest Service says the 20-acre fire broke out Saturday night near Interstate 15 in Devore.

The fire led officials to close the interstate for a short time before reopening most lanes. The interstate is a major route for travelers and truckers between Southern California and Las Vegas.

In mid-August, a wildfire in the area burned with a ferocity never seen before by veteran California firefighters.

The blaze raced up and down canyons, instantly engulfing homes and forcing thousands to flee. It was contained at 57 square miles after seven days. Five years of drought have turned the state's wildlands into a tinder box.

Idaho Wildfire Slowed By Cold Front, Rain

Associated Press, September 5, 2016

LOWMAN, Idaho (AP) – A fire burning in the rugged wilderness between Idaho City and Lowman since July 18 has been slowed by rain.

KIVI-TV reports (http://bit.ly/2c7FETd) that the so-called Pioneer Fire has burned about 283 square miles and was 55 percent contained by Monday.

Forest officials say an overnight cold front lowered temperatures into the 30s and 40s in the area on Monday.

Intermittent rainfall occurred Sunday night and early Monday morning, primarily south of highway 17.

Officials said firefighters are taking advantage of the cooler temperatures and higher humidity to engage the fire directly where it is safe to do so before warmer and drier conditions return later in the week.

Areas within the fire perimeter continue to burn, sending smoke to Garden Valley, Lowman, Stanley and surrounding areas.

California Wildfires Put Vegas Under Air Quality Warning

Associated Press, September 5, 2016

LAS VEGAS (AP) — Southern Nevada is spending Labor Day weekend under an air quality advisory thanks to wildfire smoke from California.

The Clark County Department of Air Quality on Sunday issued the warning for potentially elevated levels of ozone and smoke through Monday.

Several wildfires burning in central and southern California triggered the advisory, although officials said unhealthy levels of pollution aren't currently occurring in the Las Vegas area.

Young children, the elderly and those with respiratory problems or cardiac disease may become sensitive to any rising ozone or smoke levels.

More Campgrounds And Hiking Trails Closed As Big Sur Fire Continues To Burn

By Harriet Ryan

Los Angeles Times, September 3, 2016

Popular campgrounds and hiking trails near Big Sur remained off-limits for the holiday weekend as fire crews continued their six-week battle against a blaze burning in the Los Padres National Forest.

Federal officials said Saturday morning that with the Soberanes fire only about 60% contained, they were expanding a closure order to cover a swath of the national forest in Monterey County from north of Big Sur to the San Luis Obispo County line.

The areas closed to the public includes the forest's Monterey Ranger District, a region known for scenic wilderness with coastal redwood groves, steep canyons and dramatic peaks.

The closures are designed to prevent injuries and reduce the potential for another accidental wildfire, officials said.

The Soberanes fire started July 22 with an illegal campfire in Garrapata State Park. The fire has consumed nearly 96,000 acres and 57 homes. A 35-year-old bulldozer operator working with Cal Fire died in a rollover accident while working to extinguish the fire in July.

Thirteen crews totaling more than a thousand people are using helicopters and controlled burns this weekend in an effort to get control of the blaze.

Despite the forest closures, many attractions in the coastal region are open. Businesses along Highway 1 are generally open as is Hearst Castle, Big Sur Lodge, Point Sur Light Station and portions of Julia Pfieffer Burns State Park.

Hurricane Season Is Heating Up. So Is The Planet. Coincidence?

By John Schwartz

New York Times, September 2, 2016

The 2016 hurricane season just shifted from sleepy to fierce.

Tropical Storm Hermine strengthened into a hurricane on Thursday, just in time to strike the coast of Florida — the first hurricane to hit that state in nearly 11 years.

As that storm moves up the Atlantic coast, two other storms had been threatening Hawaii, a state that rarely receives such visitors. And there are probably more to come before the season concludes at the end of November.

This is, in other words, the height of the season, that time of year when conditions are the most favorable for making cyclones — and for making coastal residents nervous. It is also the moment that puts on display much of what we know, and still do not know, about hurricanes, and what to expect as climate change progresses.

Much of this, so far, is normal. This season is shaping up within the forecasts from the National Oceanic and Atmospheric Administration, which predicted in May that, in the Atlantic, there was a 70 percent likelihood of as many as 16 named storms.

As many as eight of them, the agency said, could become hurricanes (that is to say, with winds of 74 miles per hour) and as many as four could be major hurricanes with winds of 111 miles per hour or higher.

So things are on track in the Atlantic. In the Pacific, however, there have been some unusually strong storms and busy seasons in recent years.

All of this activity comes after what some meteorologists and news reports have called a long hurricane drought, citing a nearly 10-year run without major hurricanes making landfall in the continental United States. While that is literally true by the definitions used by climate scientists, any discussion of a hurricane drought can seem insulting to people in the Northeast and along the Texas Gulf Coast, where the so-called Superstorm Sandy and Hurricane Ike caused billions of dollars of damage.

The efforts to detect a lull involve arbitrary line-drawing exercises, Robert E. Hart of Florida State University wrote in a recent paper with Daniel R. Chavas of Princeton and Mark P. Guishard of the Bermuda Institute of Ocean Sciences. A Category 3 hurricane at landfall is considered a major storm; Hurricane Ike, for all its destructiveness, missed that mark, and Sandy was not considered a hurricane by the time it struck but instead an extratropical storm.

Whether or not the definitions of hurricane drought should be changed, Dr. Hart said in an exchange of emails as he prepared for Hurricane Hermine to hit his home in Tallahassee, long periods without storms can foster dangerous complacency. "Memory fades about the prior events, and more people have never experienced one than before," he said. (His home came through the storm without damage.)

When it comes to hurricanes and climate change, scientists are still trying to figure out what warming is doing now and will do later. "It's a really tough problem," said Gabriel A. Vecchi, a climate researcher at NOAA's geophysical fluid dynamics laboratory in Princeton.

The issue might appear to be simple: Warmer oceans provide more energy for storms, so storms should get more numerous and mighty. But other factors have complicated the picture, he said, including atmospheric changes that can affect wind shear, a factor that keeps cyclones from forming.

Kerry A. Emanuel, a climate scientist at the Massachusetts Institute of Technology, said the evidence suggested climate change would cause the strongest storms to grow even stronger, and to be more frequent. Unresolved questions surround the effect of warming on the weaker storms, but even those will dump more rain, leading over time to increased damage from flooding.

In the Pacific, and especially near Hawaii, there is some evidence that the tendency toward more storms and stronger storms is underway, Dr. Vecchi said.

Hiroyuki Murakami, an associate research scholar at the Princeton laboratory, said that the unusually active hurricane seasons for Hawaii were being caused mostly by subtropical warming that is part of the ocean's natural variability, but that human-caused climate change was also having an effect. His recent research, he said, suggests that active hurricane seasons in the Pacific will grow more frequent under the influence of warming, though natural variability will still play a role in the record for any individual year.

Finding the strong telltale "signal" of climate change in events is challenging, Dr. Emanuel said, because there are relatively few storms to draw data from. "If we have our numbers right," he said, "it will be very difficult to see a signal in the actual data for a long time."

Still, he said, prudent risk assessment calls for expecting these theories to be proved right over time, and to prepare.

The fuzziness about whether hurricane patterns are changing does not undercut the overwhelming scientific consensus about climate change in general, Dr. Vecchi said. "There is no conflict between uncertainty about what global warming is going to do to hurricanes, and the reality of global warming and human activity being one of the drivers of global warming," he said.

"Just because I don't know what you had for lunch," he added, "doesn't mean you don't eat."

Any storm can do tremendous damage where it hits, depending on the strength of its surge and winds and flooding. And overdevelopment along the nation's coastlines means that the cost of damage is bound to escalate.

A big part of preparing, Dr. Emanuel said, is overhauling the nation's flood insurance system, which currently does little to dissuade people from living in hazardous areas.

A recent report from the Natural Resources Defense Council showed that many homes are rebuilt over and over after storms with money from the National Flood Insurance Program.

The owners of one Louisiana home that has flooded 40 times have received $428,379 from the program over time. More than 2,100 homes flooded more than 10 times and received payments from the program. The 30,000 most-flooded homes make up less than 1 percent of the five million homes in the program, but have received more than 10 percent of the claims paid since 1978.

"Climate change just makes it worse," Dr. Emanuel said, and he predicted far greater property damage and rebuilding costs in years to come. The insurance problem, he said, "sets up for a string of Katrinas and Sandys as far as the eye can see."

Oysters Are Nearly Extinct In New York Waters. This Team Is Trying To Coax Them Back.

By Samantha Schmidt

New York Times, September 4, 2016

Torrential rain poured down on the team of scientists and conservationists on Jamaica Bay as their small boat slowly towed about 85 cages packed with 36,000 oysters, a species that once blanketed New York Harbor but is now nearly extinct there.

"We are quite the sight," Casey Stokes, an environmental scientist with HDR, an engineering firm, said on Thursday as he steered the boat to a spot off Kennedy International Airport, where they would leave the oysters to grow, and hopefully, to reproduce.

With the placement of an additional 12,000 oysters in the coming weeks, the team will have added nearly 50,000 adult oysters to the bay, making it the largest single installation of breeding oysters in New York City, according to the Environmental Protection Department.

The project, led by the department, is the city's latest and largest attempt to restore a self-sustaining oyster population in Jamaica Bay in the hope of improving water quality, protecting the shoreline from erosion and reviving habitats for fish and wildlife.

The project is funded by a $1 million grant from the United States Interior Department's Hurricane Sandy Coastal Resiliency Competitive Grant Program. The Environmental Protection Department, which is contributing $375,000, is working with the Billion Oyster Project, an ecosystem restoration and education project that is trying to restore one billion oysters to New York Harbor.

Since 2010, the department has conducted two smaller oyster restoration projects, in Dubos Point Wildlife Sanctuary in Queens, and in Gerritsen Creek in Brooklyn. Those projects succeeded in getting oysters to grow in the harbor and release eggs, but scientists have not been able to get them to reproduce and sustain new generations, said John McLaughlin, the director of the department's Office of Ecological Services.

"It's a needle in a haystack," Mr. McLaughlin said. "The odds are just tremendous."

In the 1800s, New York Harbor was covered in oysters, Mr. McLaughlin said, but because of overharvesting, dredging and pollution, they became functionally extinct there.

"It used to be known for its oysters," Pete Malinowski, a founder and the director of the Billion Oyster Project, said. "At one time, half of the world's oysters were harvested in the New York Harbor."

Without oysters, New York Harbor's ecosystem lacks a crucial element. Each adult oyster can filter dozens of gallons of water each day, and an oyster bed can reduce the force of waves on wetlands, protecting the coast from erosion. An oyster bed is also an important habitat for species of fish that live in the small spaces between the oysters, Mr. McLaughlin said. "Think of them as a condominium."

Previous attempts to restore the population have been too small, Mr. McLaughlin said. With thousands more oysters in this installation project, there is a higher likelihood that oyster larvae will latch on to shells and grow into adults.

The team's strategy for reintroducing oysters consists of many moving parts. Mr. McLaughlin said he anticipated that during spawning season next summer, the oysters in the cages would begin to reproduce and that the resulting fertilized eggs would float in the water for two to three weeks.

"Then it's a one-way trip down," Mr. McLaughlin said. With the changing tides, the oysters likely will float through the bay and attach themselves to parent oysters or to shells in one of four beds on the sea floor, where they will be able to grow.

This is where the project takes an unexpected twist: The four shell beds are made not only of clam and oyster shells but also of tiny pieces of porcelain that have been recycled from nearly 5,000 toilets from New York City's public schools.

Since 2013, the department has been installing environmentally efficient toilets in schools as part of a citywide effort to conserve water. Before this oyster restoration project, the department was simply disposing of the old toilets, said Ben Huff, the water demand management program manager for the department. Mr. McLaughlin suggested that the city use the leftover porcelain for the oyster beds because porcelain has been shown to be just as effective as shells for oyster growth.

On Thursday morning, staff members from the department and the Billion Oyster Project unloaded hundreds of bags of oysters from a truck onto the beach at Bayswater Point State Park in Queens. The bivalves, which were of the Island Creek variety of the eastern oyster species, had been shipped from Duxbury, Mass., the day before.

One by one, the oysters were moved to black plastic baskets, which each held five gallons of oysters and were stored underwater in floating metal cages.

Once all 85 cages were loaded and tied to one another along a 500-foot rope, the team pulled them to the site near the airport.

With the foggy Manhattan skyline in the distance and planes flying overhead, the scientists worked with team members on a larger vessel to attach the cages to four 400-pound anchors. On the small boat, Mr. Malinowski and three scientists pulled at the rope, attaching it to the final anchor.

"Nice work," said Mr. Malinowski, 33, his hands beginning to bleed slightly. "That's it. Piece of cake, right?"

For two years, the department will assess the water quality in the area and monitor the oyster beds for traces of spat — oyster larvae that have attached to a shell and hardened.

"And that's a home run," Mr. McLaughlin said.

The team also hopes to gather information for future oyster restoration, Mr. Malinowski said.

"We have a long way to go," he said. "This is just scratching the surface."

FEMA Is Hiring Temporary Workers For Flood Recovery

By Richard Sharkey

Alexandria (LA) Town Talk, September 5, 2016

The Federal Emergency Management Agency is hiring Louisiana residents for temporary work to help with the flood recovery process.

FEMA is advertising through the Louisiana Workforce Commission to fill open positions at its disaster recovery offices in Louisiana.

"These are full-time jobs, but of temporary duration, with benefits including health insurance, sick leave and holiday pay. Job duration varies, but some may last as long as FEMA is locally involved in the recovery. Benefits end when the job ends," a news release said.

To apply, visit www.laworks.net, the website for "Louisiana Workforce Commission — Helping Individuals Reach Employment."

Click in the "DISASTER RELIEF WORK" box at the top of the screen, and then click on a job description to open detailed requirements and a link to apply.

Once hired, applicants will receive appropriate on-the-job training.

Candidates must be U.S. citizens, 18 years or older and have a valid government identification card such as driver's license or military ID. Candidates will be subject to a complete background investigation.

Displaced Baton Rouge Teachers Return To Work As They Try To Rebuild Their Homes

Baton Rouge (LA) Advocate, September 5, 2016

As schools in the Baton Rouge area struggle to return to normal in the wake of historic flooding, some of the educators who run them are facing their own challenges.

Bruno Paquot returned to work Thursday. He'd been gone three weeks but it might as well have been a lifetime ago.

The native of Belgium had his life turned upside down when his two family cars and house flooded, forcing his family to live elsewhere. Twelve of his coworkers at the school where he teaches, Baton Rouge Foreign Language Academic Immersion Magnet, also known as BR FLAIM, have similar stories. That's nearly a third of the staff at this public foreign language immersion school located near downtown Baton Rouge.

Teachers throughout the Capital region are suffering.

The East Baton Rouge Parish school system reports that 817 teachers have been displaced by flooding — about 27 percent of its teaching staff — which is the second largest district in the state.

As he prepared for school to reopen Tuesday, Paquot was conflicted.

"I wish I was at the house detailing, getting the walls ready to be re-Sheetrocked," he said.

But he was also glad to be back at the school he's worked at for seven years and where he serves as a fifth-grade French language immersion teacher.

"It feels normal to be here," he said, "but in the back of my mind I keep that running checklist of everything that still has to be done."

April Fisher, a school counselor at BR FLAIM, is often mentally in two places at once these days. The house she was renting on Flannery Road was flooded, destroying most of her possessions, though she managed to save her car. She evacuated with her boyfriend and five-year-old daughter to her mom's Prairieville house, which escaped the flooding.

The stress and confusion was especially bad during the two days, Aug. 22 and 23, she returned to work when the East Baton Rouge Parish school system planned to reopen Aug. 24. At the last minute, though, officials postponed the restart of school 13 more days.

"I was here in body, but I wasn't here," Fisher said of those two days in August. "I was still on the phone trying to get things done, thinking what do I need to do, when can I get to the house, when is the process going to get started? OK, you need to apply for FEMA. What else do I need to do?"

Paquot took off work those two days; however, the school system has since said employees who took those days off do not to have to count them as vacation days.

Paquot said his daughter did get back to school that week, so he understands as a parent the value of school as a source of stability. But as a homeowner, he still had too much going on.

"I was washing the walls, washing the doors, washing the floors, getting everything prepped for my wife's boss to come and spray the disinfectant and mold killer," he said. "I could not have come (back to work). If I wanted to save my house, there was still work to be done."

Principal Cheryl Miller is the longtime principal of BR FLAIM. She said she has other staff members who have been through a lot but not all are ready to talk about it.

One of her fifth grade teachers was evacuated with her family from their flooded home and was devastated when she had to leave behind her three beloved dogs. A few days later the dogs were happily discovered alive and still at the flooded house. One of Miller's paraprofessionals was flooded and is sleeping on an air mattress on her mother's floor.

Miller said the stress is visible on their faces.

"You see this weight, this pressure that's sitting on their shoulders," she said.

One big stress reliever has been the support from BR FLAIM's parents, led by its parent-teacher organization. The PTO organized help for several teachers like Paquot as well as another 10 BR FLAIM families who suffered flooding. The parents spent two weeks gutting houses and plan to return when it's time to rebuild.

Paquot said the BR FLAIM members were at his house Aug. 16, the first day he was able to get back home. The PTO members and a range of other volunteers showed up that day and two days later, they had gutted the whole house.

"They were awesome," Paquot said. "I have been teaching 20 years and I've never been in a school where the PTO was this active."

Claire Pittman, PTO president, said she's not handy, but has a background in communications. She ended up helping to keep people informed about who needed what and directed traffic. Volunteers were working at two or three houses a day for two weeks, but parents also supplied meals and provided a wide range of help, she said.

"The response was very quick and it was very surprising," Pittman said. "I can't tell you how many times I cried because of people's selflessness."

BR FLAIM, which earned an A from the state, has a small but avid following in Baton Rouge. Schools that will allow children to become bilingual in Spanish, French or Mandarin Chinese are rare.

Pittman said the awareness of the value of what they have drove some of the school's quick response.

"We felt that it was a critical need to help people because most of our teachers are not from here so they don't have family here," Pittman said. "And we don't have many choices if they can't come back."

The Paquots are still trying to decide what they are going to do with their flooded house.

"We didn't have flood insurance," he said. "There are a few options ranking from terrible to not-so-bad."

The family has received some money already from FEMA as well as a range of other unsolicited help. A friend started a GoFundMe page for the Paquots that has raised nearly $18,000 so far. Another friend provided them with a house to stay in until they get back on their feet. A coworker loaned him a car she wasn't using.

"We've been lucky," he said. "The support of the community has just been fantastic."

Life, however, is still far from normal.

As a counselor, Fisher is trying to prepare herself for the trauma she will see in the children who show up Tuesday. She recalled being a mental health counselor in Baton Rouge after Hurricane Katrina in 2005 and treating displaced children who had experienced the storm.

"Til this day they are afraid when it rains, when it's lightning, when a heavy wind comes," Fisher said.

Paquot can relate: "A few days ago it rained and the sound of the rain is making my stomach turn."

FEMA Teams Seek To Register Remaining Tangipahoa Flood Victims

By Heath Allen

WDSU-TV New Orleans, September 3, 2016

HAMMOND, La. – Federal Emergency Management Agency disaster survivor assistance teams were back on the ground in Tangipahoa Parish making sure every family affected by the recent flooding has the opportunity to register for assistance.

Updated technology has made the effort much more efficient than in recent years. Armed with laptop computers, the teams can follow the progress of residents who have already registered, and sign up those have not yet registered.

A disaster survivor assistance team returned Friday to check on Hammond flood victim Charles Stewart, for whom the memories of the flood are still vivid.

"(The floodwater) came from the river this way so fast, you could actually see it crawl up your leg. That's how fast it come in," Stewart said.

Water 2-feet-deep filled Stewart's home. He walked with FEMA representatives among the bare studs and floors in his Hammond home. After the flood, he almost left for good.

"Two days after it happened, I just wanted to leave. I just wanted to get that new camper and just hit the road and get out of here. It was so horrible," Stewart said.

Stewart's home was one of many visited by disaster survivor assistance teams. Crews carrying laptops knocked on doors, looking for anyone who may have been missed in earlier visits.

"They are so busy with the losses and the damage that sometimes they don't even think of FEMA." said team member Luis Delgado. "We encourage them to go through us because we may be able to help them, not only with our programs, but also with referrals."

Delgado urges all residents who may have been affected to register for assistance.

"Don't count yourself out. Register with FEMA and we'll take it from there," Delgado said.

While technology makes the FEMA effort more efficient, Delgado believes the one-on-one contact makes the difference.

"We understand that under their circumstances, they need all the help they can get, so we have to be clear about the message and the mission that we have out here," Delgado said.

For Charles Stewart, the visit from the disaster survivor assistance team made all of the difference.

"It was a sad situation three or four days ago. It was bad. It's better now," Stewart said.

FEMA urges everyone affected by the August flood to go online and register at www.DisasterAssistance.gov.

ZIKA VIRUS

Hurricane-damaged Wolfe's Pond Berm To Be Repaired

By Rachel Shapiro

Staten Island (NY) Live, September 5, 2016

STATEN ISLAND, N.Y. – Four years after Hurricane Sandy hit Staten Island and after hundreds of thousands of dollars in federal funds were promised for repairs to the berm at Wolfe's Pond, the project is scheduled to begin.

Wolfe's Pond in the similarly-named park in Prince's Bay, is separated from Raritan Bay, which leads to the ocean, by a narrow beach and a berm.

The berm, a raised bank of soil and plantings, was breached both in Hurricane Irene in 2011 and Hurricane Sandy the following year.

Sand from the beach was deposited into the pond, decreasing the depth. Salt water mixed with the fresh-water pond, creating brackish water.

In summer 2012, Sen. Charles Schumer urged FEMA to speed up its funding process for the pond's repairs. With the funding secured, the ball was rolling on plans to repair the berm's damage from Irene.

But that fall, Hurricane Sandy hit, further damaging the berm and the pond itself.

While the project was fully funded for the Irene repairs, damage from Sandy had to be assessed and a plan put in place to repair it.

Asked why it has taken so long for the repairs to take place, the Parks Department said the new design had to be put out to bid that combined the expanded scope of work.

Working with FEMA to agree on the repairs extended the process, and extensive review and comment were required before the city was able to obtain work permits from the state Department of Environmental Conservation and U.S. Army Corps of Engineers.

Mayoral funding and additional FEMA funding were combined with the original funding to plan for the repairs.

The Parks Department plans to dredge the southern portion of the pond where the depth was decreased from the sand.

With all approvals in place, the Parks Department anticipates construction to begin in late 2016/early 2017.

The project was put out to bid in late spring and final bid review is underway.

By restoring the berm, the Parks Department anticipates, fresh water will fill in the pond again, returning it to its pre-Irene condition.

People who used to fish there may appreciate the pond's return to a manageable depth and most would like to see the pond return to its pre-storms status.

NO DIRECT CONNECTION WITH MOSQUITOES

Environmentalist Seth Wollney, a doctoral biology student at the College of Staten Island who also teaches, is heading a study of seven freshwater ponds, including Wolfe's Pond, and notes that pond is not really different from other ponds on Staten Island.

The depth is more shallow than it typically is, like at other ponds, so there's less water movement, which makes it more stagnant.

Mosquitoes are attracted to stagnant water, and while the Health Department and Wollney see no evidence of there being more mosquitoes there this season than in previous years, neighbors have complained about the pests, as fears of spreading West Nile virus and Zika virus continue.

While the depth of the pond has changed, Wollney doesn't want to see it dredged — removing sediment from the pond floor to add depth — because doing so would disturb the things living there and possibly create an opportunity for invasive species to take root.

Larvicide has been applied at the pond, and the Health Department says mosquito breeding in the lake is well under control.

"The city regularly treats marshes and other non-residential areas with larvicide as part of its aggressive mosquito control program," a Health Department spokesman said. "We will continue to treat Wolfe's Pond Park throughout the mosquito season," including one treatment that took place Aug. 29.

Wollney and the Health Department noted there is plenty of fish in the pond, which feed on mosquito larvae, helping control the population.

Seth's father, Clay Wollney, is a science teacher at Staten Island Academy and a local naturalist who writes environmental columns for the Advance.

He noted that the algae on the pond is an indication that the pond isn't moving, and with stagnant water often comes breeding mosquitoes.

But given the fish population, they're keeping the pests at bay.

He said it's fairly typical of most ponds on the Island to have algae now — in the spring when there's rain, there's more water flowing and it's less stagnant.

"It's not really unusual, it's just just been a dry year so we have a lot of sitting water," he said.

But while the algae indicates stagnant water, Seth Wollney noted there's no proven connection between mosquitoes and algae.

Plus, there was algae there before the breach.

So does the berm breach have a direct correlation to mosquitoes breeding there?

"I think the breach has very little to do with the mosquitoes or anything," Seth Wollney said.

Regarding algae, the Parks Department will test the water there.

Like Clay Wollney, that department too noted that several lakes in the city experience algae blooms because of several factors, like warm weather, sunlight, stagnant or slow moving water, and excess nutrients.

The test will determine whether it's a harmful algal bloom and what caused it.

NATIONAL PREPAREDNESS MONTH

"Don't Wait. Communicate" Is Message Of National Emergency Preparedness Month

By J. H. Osborne

Kingsport (TN) Times-News, September 4, 2016

KINGSPORT — "Don't Wait. Communicate."

If you have a cell phone, you likely received an alert on Thursday from the U.S. Department of Homeland Security. In crowded public areas, it was noticeable that what seemed to be a majority of people were searching for their phones, which seemed to be emitting an unusual siren-ish "ring."

That was an example of the type of warning that will be issued in the case of an actual emergency. This notification, however, announced that September is National Emergency Preparedness Month.

The theme is, "Don't Wait. Communicate. Make your Emergency Plan Today." This year's events focus on youth, older adults, and those who are challenged with access and functional needs, according to a press release issued by the Kingsport Fire Department to promote the month-long public awareness campaign.

Glenda Bobalik, executive director of the American Red Cross of Northeast Tennesssee, said preparedness is something the agency tries to keep in the public eye year-round, but this joint, national effort aims to get people, basically, to do three things.

"First, to get informed about what the emergency or disasters are that can happen in your neighborhood and your community," Bobalik said Friday afternoon. "And second, then to make a plan so that when something happens ... plan how your family is going to get back together. Make a plan on what you are going to do. The third thing is to build a preparedness kit with the items you really need. We all need food and water. A lot of us are on prescription medications, and we need to make sure we have enough of that for three days. Just the steps we need to take and things we need to have so that we can make it through that emergency because the emergency responders cannot get to us all at exactly the same time."

It's a matter of just being aware of what can happen, Bobalik said.

"And this year, one part we're really wanting to focus on is having that plan of how they are going to get out of their house if it is on fire," Bobalik said. "Have a meeting spot outside so everyone will know if everyone had made it out. Try to figure two ways out of every room."

For larger community disasters, it is suggested that your family have a designated contact out of the immediate area who can coordinate messages in case you can't communicate directly with each other — and pick a place where your family will meet if you can't meet at home.

Being prepared doesn't help only when disaster strikes; it can also ease your recovery afterward, Bobalik said.

"We have found, along with all of our partners, that the people that have taken steps to be prepared ahead of time are the ones who recover more quickly," Bobalik said. "They're the ones who quickly get back to work, back to school. They just come through the whole process more easily. So we would just like everyone in our community to take some time, take some preparedness steps and be ready. Make sure you have a flashlight, a battery-operated radio, and the items you would need to be safe for a few days. It makes a tremendous difference in how fast we can recover. It just takes us all sitting down and thinking about it."

The KFD's release included the following tips:

- Follow the National Fire Protection Assocation, FEMA, NOAA, the American Red Cross and other national partners each week to learn more about what to do. Every week focuses on a different activity to help you prepare. Start by checking out www.ready.gov/september for resources to share and get the word out about National Preparedness Month. Follow the NFPA's Fire Break and Safety Source blogs this month for all the latest and greatest ideas for emergency preparedness.
- From September 4-10, the theme is "Preparing Family and Friends." You can create a family emergency communication plan, learn more about financial preparedness, and use NFPA's Get Ready Kit.
- Honor the memory of 9/11 during the next week by getting involved in your community and planning with neighbors. The NFPA's Firewise program and wildfire preparedness web pages can help you find great community-level activities.
- Individual preparedness is where it all begins.
- During the week of September 18-24, look for some great new tips and tools for youth, and make sure you are personally prepared. You can use FEMA's mobile app to get alerts, tips and more.
- The final week of September leads to America's PrepareAthon on September 30. It's a call to action at the end of the month, the goal of which is to leave members of the public more ready to face whatever lies ahead.

Louisiana Gov. Requests $2 Billion In Federal Funding For Flood Recovery

By Gretel Kauffman

Christian Science Monitor, September 12, 2016

Louisiana Gov. John Bel Edwards appealed to Congress on Friday to approve $2 billion in federal funding for flood recovery efforts, telling lawmakers that the state “cannot recover without it.”

Speaking at a House subcommittee hearing on the federal response to the August flooding that displaced thousands and caused $8.7 billion in damage, Governor Edwards said the money was needed for housing, economic development, and public works. He also urged the Federal Emergency Management Agency (FEMA) to speed up the delivery of manufactured housing units, part of efforts to shelter people who were living in the more than 55,000 homes now destroyed.

“While the response with manufactured housing units has been quicker than any other Louisiana disaster, it has not been fast enough for the families in Louisiana who have lost their homes and have no place to go,” Edwards said.

But while the governor praised the federal response to the flooding thus far, a number of local mayors who spoke said that it was not enough, and lamented a lack of communication between local and federal officials.

One mayor, Jr. Shelton of Central, La., said that he did not directly speak with FEMA for three weeks after the flooding.

“That debris that’s out there? That’s not debris, it’s people’s lives,” Mr. Shelton said. “We have suicides, we have mental breakdowns, we have families being torn apart.”

Some have argued that the slow federal response could be due, in part, to a lack of national media coverage of the disaster.

“It’s not just water that’s rising,” Mike Scott, of the New Orleans Times-Picayune, wrote on August 16. “So is the frustration level of many observers who can’t help but notice a key absence amid the tragedy: the national media.” And such complaints “aren’t trivial,” he said.

“As Louisiana well knows, the loosening of the recovery purse strings is directly commensurate to the number of people who are made aware of the scope of the devastation,” Mr. Scott wrote. “In this case, where national news coverage has been scarce, locals have every reason to worry that recovery funds will be just as scarce.”

While displaced residents wait for FEMA housing units to arrive, a number of local Airbnb hosts have offered to let flood victims stay in their homes for free, as Winston Ross reported for The Christian Science Monitor last month.

“The generosity, compassion and caring, to take from their own income and welcome strangers into their property. There are just no words for that,” Kim Stewart, a Baton Rouge resident staying in an Airbnb property while her home is repaired, told the Monitor. “There are no words. I truly believe it’s a Southern thing.”

This report contains material from the Associated Press.

WH Challenges Republicans On Aid For Louisiana, Flint

By Devin Henry

The Hill, September 12, 2016

The White House on Monday challenged congressional Republicans to provide new funding for the Flint, Mich., water crisis, as well as recovery efforts following severe flooding in Louisiana.

White House press secretary Josh Earnest defended the Obama administration’s response to Flint and Louisiana when asked whether funding for the crises will come up during budget meetings with Republicans.

He noted, for example, that 63,000 Louisiana families have received federal assistance and that there’s been $260 million in insurance payments there since last month’s flooding in and around Baton Rouge.

Gov. John Bel Edwards (D) last week asked federal officials for more than $2 billion to help further recovery efforts. Earnest said Congress would have to address that request.

“Theres a lot of moralizing about how the president should do his job,” he said during a press briefing Monday.

"Well he's done it. The question now is, are Republicans in Congress going to do their job? ... Are they going to do their job for the people of Louisiana? I think we're going to find out."

Earnest said the White House "would support congressional action to offer additional assistance" to Flint, which is suffering from elevated levels of lead in its drinking water.

Lawmakers have long tried to cut a deal on aid for Flint. Senators agreed over the summer to include $220 million in funding for Flint and cities with other drinking water problems in a water infrastructure bill, legislation that is set to receive a vote this week.

"It's clear that the problems in Flint are deeply entrenched and the administration would certainly be supportive of an effort in Congress to offer additional assistance," he said. "We'll just add it to the long list of things that Republicans in congress have failed to make progress in."

President Obama and congressional leaders will meet on Monday afternoon to discuss funding the government after the fiscal year ends on Sept 30.

Overnight Energy: Senate Advances Water Bill With Flint Aid

By Timothy Cama And Devin Henry

The Hill, September 12, 2016

WATER BILL, FLINT AID MOVE FORWARD: The Senate inched closer on Monday to wrapping up work on $9.4 billion waterways bill that that provides emergency funding for lead-contaminated communities like Flint, Mich.

The Senate voted 90-1 to end debate on a substitute amendment to the Water Resources Development Act (WRDA), which authorizes dozens of waterways projects around the country.

Bill sponsors are putting together a package of bipartisan amendments for the bill, but they're likely to steer clear of any controversial provisions in an effort to swiftly advance the legislation this week.

Sen. Jim Inhofe (R-Okla.), chairman of the Environment and Public Works Committee, said they considered around 35 provisions for the package and "hope to get consensus to adopt [the package] shortly after the cloture vote tonight."

The measure provides $220 million in emergency assistance to address drinking water crises in communities such as Flint, where water from the Flint River corroded the city's pipes, contaminating the water supply with lead.

"We are pleased that after months of working with Republicans and Democrats, our bipartisan agreement to help Flint and other communities is now before the Senate as part of the Water Resources Development Act," Sens. Debbie Stabenow (D-Mich.) and Gary Peters (D-Mich.) said in a statement.

"In the coming days, we will continue our effort in the Senate to finally pass this urgently-needed help for Flint families."

Read more here.

WHITE HOUSE PRESSURES CONGRESS ON AID: Hours before the Senate's waterways vote, the White House challenged congressional Republicans to do more for Flint and victims of last month's flooding in Louisiana.

White House press secretary Josh Earnest defended the Obama administration's response to Flint and Louisiana when asked whether funding for the crises will come up during budget meetings with Republicans.

In fact, he said, it was time for Republicans to do something the victims – whether it's the WRDA aid package for Flint or the $2 billion Louisiana Gov. John Bel Edwards (D) wants to help recover from the flooding near Baton Rouge.

"There's a lot of moralizing about how the president should do his job," he said during a press briefing Monday.

"Well he's done it. The question now is, are Republicans in Congress going to do their job? ... Are they going to do their job for the people of Louisiana? I think we're going to find out."

He also knocked Congress for moving slowly on Flint.

"We'll just add it to the long list of things that Republicans in Congress have failed to make progress in," Earnest said.

Read more here.

WH: PIPELINE DECISION CAME FROM OTHERS: The White House on Monday downplayed its influence on an administration decision Friday to block construction on a pipeline project in North Dakota.

The Department of Interior and the Army Corps of Engineers decided Friday to halt construction on a crucial stretch of the Dakota Access Pipeline while it decides whether the project needs a new, tougher environmental review. The decision came moments after a federal court ruled Army Corps officials conducted a proper assessment of the pipeline project's impact on Native American cultural lands in North Dakota.

"I think they're trying to do the right thing here in terms of making sure that everybody's interests are

taken into consideration," Earnest said at his briefing. But he declined to say what role, if any, President Obama had on the decision from Interior and the Army Corps.

"This was a decision that they made." Earnest said.

"I can't speak to the discussions they may have had with the White House. This was ultimately their decision, and they made this decision to ensure that the interests and concerns of everybody who is affected by the construction of this project were properly taken into account."

FIGUERES DROPS OUT OF UN RACE: Christiana Figueres, who led the United Nations' efforts toward last year's Paris climate agreement, is ending her campaign to lead the UN.

Figueres sent a letter Monday to the UN's general assembly and Security Council notifying them, and tweeted it out.

"Out of loyalty to the United Nations and in order to facilitate the advance [sic] of the selection process I hereby inform you that today I withdraw my candidacy to the position of secretary-general," the Costa Rican diplomat wrote.

A poll of UN diplomats last week had Figueres in ninth place out of 10 candidates, according to the Associated Press.

Join The Hill on Wednesday, September 14 for "Preparing for the Next Disaster: A Policy Discussion on Community Resilience," featuring Sen. Joe Manchin (D-W.Va.), Rep. Blaine Luetkemeyer (R-Mo.), and Timothy W. Manning, Deputy Administrator for Protection and National Preparedness at FEMA. Topics of discussion include preparedness efforts to increase community resilience and the role of federal, state & local government in pre-disaster mitigation. RSVP here.

ON TAP TUESDAY I: Sen. Bernie Sanders and others hold a rally outside the White House, protesting the Dakota Access Pipeline. Sanders had asked the Obama administration to block the pipeline, and introduced an amendment in the Senate last week to slow down its construction. The protest is one of dozens around the country.

ON TAP TUESDAY II: A House Oversight Committee panel will host a hearing on conservation efforts.

Rest of Tuesday's agenda ...

The Senate Agriculture Committee will meet to discuss a forestry bill.

AROUND THE WEB:

A mining firm is suing the federal government over its decision to review its lease renewal request for precious metal mining in Minnesota, the Duluth News Tribune reports.

The Alaska Railroad will soon become the first railroad in North America to haul liquefied natural gas, the Alaska Dispatch News reports.

Enbridge, which last week delayed its planned Sandpiper pipeline, is still moving forward with a replacement for it's 1,097-mile Line 3 pipeline running from Alberta to Wisconsin, Forum News Service reports.

BONUS AROUND THE WEB: Web comic XKCD looks at historic deviations in Earth's temperature from the 20th century average. It's fun, until the end.

Overnight Finance: Obama, Leaders Huddle On Budget | McConnell Tees Up Short-term Spending Bill | Trump Says Yellen Trying To Help Obama

By Sylvan Lane

The Hill, September 12, 2016

Budget powwow at the White House: President Obama on Monday urged congressional leaders to avert a government shutdown ahead of the Oct. 1 deadline, with election politics looming large over the discussion.

Obama encouraged leaders to move forward on an emerging compromise to keep the government open through mid-December and provide more money to fight the Zika virus.

Senate Majority Leader Mitch McConnell (R-Ky.), Senate Minority Leader Harry Reid (D-Nev.), Speaker Paul Ryan (R-Wis.) and House Minority Leader Nancy Pelosi (D-Calif.) attended the White House meeting in what has become a familiar ritual before a funding deadline.

But the dynamic of the meeting was different than in the past, when leaders often engaged in combative negotiations. The Hill's Jordan Fabian has the details: http://bit.ly/2cjOz19

McConnell tees up short-term spending bill: Senate Majority Leader Mitch McConnell (R-Ky.) is turning the Senate toward a short-term spending bill as lawmakers face an Oct. 1 deadline to avoid a government shutdown.

"I expect to move forward this week on a continuing resolution through Dec. 9 ... that includes funds for Zika control and for our veterans," the Senate Republican leader announced Monday on the Senate floor.

McConnell filed cloture on proceeding to a House legislative appropriations bill, which is expected to be the vehicle for the short-term continuing resolution (CR). The move sets up the Senate to take an initial procedural vote this week, once it wraps up work on a water infrastructure bill.

Wrapping up the CR ahead of the Oct. 1 deadline could allow McConnell to get his conference out of Washington and back on the campaign trail. The Hill's Jordain Carney has the latest: http://bit.ly/2cm7j1j.

Cruz throws cyber curveball: Sen. Ted Cruz (R-Texas) is meeting with conservative lawmakers in both chambers to build support for a showdown with the White House over funding the government and power over the internet.

Cruz wants a stopgap measure to fund the government to include a rider that would block the administration from relinquishing the special oversight role the United States has had over the internet since its inception.

The prospect of Cruz leading rank-and-file House Republicans – including members of the House Freedom Caucus – into a last-minute fight with President Obama over a government funding resolution would be a rerun for the Texas senator, who was blamed by his colleagues for causing a 2013 government shutdown over an ObamaCare fight.

It's also a headache for Speaker Paul Ryan (R-Wis.) and Senate Majority Leader Mitch McConnell (R-Ky.), who both want to avoid even the slightest chance of another government shutdown. The Hill's Alex Bolton tells us more: http://bit.ly/2cSjDGi.

Bill would extend foreign investor visa program: Sen. John Cornyn (R-Texas) said Monday that a short-term spending bill will include an extension of a visa program set to expire at the end of the month, even as negotiations remain deadlocked.

Asked if the EB-5 investor visa program would be a part of the government funding bill, the Senate's No. 2 Republican told reporters "I think that will be part of the [continuing resolution], yeah."

Cornyn's comments come as talks about how to reauthorize the program have stalled in Congress, with senators split on how to determine where money under the program is sent. Jordain Carney surveys the battlefield: http://bit.ly/2cEjXsQ.

Trump: Yellen's doing Obama's bidding: Donald Trump accused Federal Reserve Chairwoman Janet Yellen on Monday of doing President Obama's bidding by keeping interest rates low.

In an interview with CNBC, the Republican presidential nominee charged that the Fed was no longer politically independent and instead was pursuing policies to boost Obama in his final months in office.

"She's obviously political, and she's doing what Obama wants her to do," he said in a phone interview. "As soon as [rates] go up, your stock market is going to go way down, most likely. Or possibly."

While Yellen was Obama's pick to lead the Fed, the central bank prizes itself as a politically independent institution and strongly rebuts any claims that outside politicians weigh on its efforts to steer the U.S. economy. Here's more on the madness from The Hill's Peter Schroeder: http://bit.ly/2czbmJP.

Fed official urges caution in raising rates: Lael Brainard, a member of the Federal Reserve Board of Governors, made the case Monday for the Fed holding off on rate increases, arguing that inflation remains lower than normal and there remain economic risks looming abroad. That combination of factors "counsels prudence in the removal of policy accommodation," she said.

Brainard's speech had been closely monitored by financial markets for any indications that the central bank could be preparing to raise interest rates again at its September meeting. The Fed has only raised rates once since the financial crisis, back in December, but Fed watchers are expecting another hike could be coming soon.

But Brainard's speech appeared to suggest such a hike could still be a ways off, as she contended that there was still more the Fed could do to boost the labor market while keeping rates low to protect the U.S.

economy from potential disruptions from foreign economies: http://bit.ly/2cqzQRx.

Happy Monday and welcome to Overnight Finance, where we're also feeling a bit better after this weekend, thank you for asking. I'm Sylvan Lane, and here's your nightly guide to everything affecting your bills, bank account and bottom line.

Tonight's highlights include more anger over the Iran settlement, congressional heat on Wells Fargo, more Fed rate hike delays and a vision for a new financial regulatory system.

See something I missed? Let me know at slane@thehill.com or tweet me @SylvanLane. And if you like your newsletter, you can subscribe to it here: http://bit.ly/1NxxW2N.

House Judiciary Committee: Hearing on Oversight of the Patent and Trademark Office, 1 p.m. http://bit.ly/2czNymh.

Amplifying U.S.-Africa Trade, Investment, and Economic Relations: From Obama to the Next Administration, 2 p.m. http://bit.ly/2cSpvzs.

Chamber calls for overhaul of financial regulatory system: While Congress mulls how to replace Dodd-Frank financial regulation, the United States' largest business advocate is looking to reshape the system around it.

The U.S. Chamber of Commerce on Monday called for a complete reboot of how the United States regulates financial institutions and banks, insisting that the current framework is outdated and cumbersome for businesses of all sizes.

Top Chamber officials panned the country's "1930s regulatory system," arguing it stifles economic growth and capital access with redundant, overbearing regulations.

The Chamber's Center for Capital Markets Competitiveness (CCMC) outlined potential fixes in a report released Monday that it said was meant to start an "honest debate" about the country's regulatory future.

The release comes a day before the House Financial Services Committee marks up the panel's sweeping overhaul of Dodd-Frank. I'll take you inside the Chamber's proposal here: http://bit.ly/2cHWw0v.

Senate Dems call for investigation into Wells Fargo's fake accounts: Five Senate Democrats are calling for hearings to investigate the actions of Wells Fargo employees who created millions of fake bank and credit card accounts to boost their sales.

Led by Sen. Robert Menendez (N.J.), the Democrats sent a letter on Monday to Senate Banking Committee Chairman Richard Shelby (R-Ala.) urging him to hold immediate hearings to delve into what happened at one of the nation's largest banks and to determine whether more consumer protections are needed.

"The magnitude of this situation warrants thorough and comprehensive review," the senators wrote in the letter. The Hill's Vicki Needham explains: http://bit.ly/2cRJS3F.

Coalition urges SEC to require disclosure of more tax info: The Securities and Exchange Commission (SEC) should update its rules to require U.S. multinational corporations to disclose more tax information, a financial-transparency coalition argued in a report released Monday.

"As multinational corporations have increasingly relied upon complex, international tax strategies to affect their bottom lines, the SEC's disclosure framework has not kept pace," the Financial Accountability & Corporate Transparency Coalition wrote in the report. "It's time for the SEC's disclosure rules to catch up."

The report was issued shortly after the European Commission ruled last month that Apple owes Ireland $14.5 billion in back taxes because Irish authorities gave the company an unfair advantage over other businesses. The Hill's Naomi Jagoda breaks it down: http://bit.ly/2c6mL44.

Top Dem urges Labor Dept. to investigate Chipotle for wage theft: Rep. Rosa DeLauro (D-Conn.) is calling on the Labor Department to investigate allegations that Chipotle Mexican Grill is failing to pay employees overtime.

According to media reports, nearly 10,000 workers from the fast casual Mexican restaurant chain have joined a class action lawsuit against the company for allegedly forcing employees to work "off the clock" hours without compensation.

The workers claim in the suit that Chipotle uses timekeeping technology that automatically punches workers off the clock, even if they are required to continue to work

In a letter Monday to the David Weil, the director of the Labor Department's Wage and Hour Division, DeLauro demanded an investigation into the corporation's labor practices and policies. The Hill's Lydia Wheeler has it all here: http://bit.ly/2cmb7Q5.

GOP lawmaker wants answers on Iran payment: A Republican congressman is asking the Treasury Department whether a recent cash payment to Iran could be used to fund terrorism, and how the department plans to keep that from happening.

Rep. Joe Wilson (R-S.C.) said he's "gravely concerned with the nefarious possibilities" of what Iran could do with $1.7 billion in cash from the United States. He sent a letter sent Tuesday to the Treasury under secretary for terrorism and financial intelligence, outlining his fears.

At issue is a payment made to Iran by the U.S. earlier this year to settle part of a 1970s lawsuit between the countries. The payment, converted into European cash and airlifted to Iran, preceded a prisoner swap between Iran and the United States.

Republicans have since accused the Obama administration of paying ransom for American prisoners and funding Iran's terror sponsorship with untraceable money.

"By providing this regime with billions [sic] of dollars in untraceable foreign currency, the Administration is aiding the regime and criminals across the world in their perpetuation of financial crimes," wrote Wilson: http://bit.ly/2cjFsxn.

India challenges US renewable energy programs at WTO: India has filed a new dispute against the United States at the World Trade Organization (WTO) challenging domestic content requirements and subsidies in renewable energy programs across eight states.

The complaint, highlighted by the WTO on Monday, argues that renewable energy programs in Washington, California, Montana, Massachusetts, Connecticut, Michigan, Delaware and Minnesota are getting favorable treatment compared with imported products to the United States.

India's case charges that the energy program measures are inconsistent with WTO's rules "because they provide less favorable treatment to imported products than to like domestic products, and because the subsidies are contingent on the use of domestic over imported goods," the trade group said.

The new case comes a few days ahead of an expected WTO Appellate Body decision on a U.S. challenge to India's domestic content requirements for solar cells and solar modules under the Jawaharlal Nehru National Solar Mission. Here's more from Vicki Needham: http://bit.ly/2cqBqDf.

Flood risk: SmarterSafer, A coalition of dozens of environmental, business and fiscal groups are urging Congress to act on flood insurance. The Hill has an exclusive excerpt of a letter to be sent to lawmakers tomorrow:

"Congress should invest in proven mitigation strategies--both at a community and property level--for those areas most at risk to future disasters. Mitigation should include multiple options including strengthening natural features that help buffer storms, buyouts and preservation of green space, and elevation and other property-level interventions. In addition to shifting to additional pre-disaster spending, Congress should make changes to disaster assistance including strengthening requirements for communities and states--those states and communities that plan for and mitigate risks would be 'rewarded' with the full share of federal disaster assistance, while those that do not plan for known risks, would get less in federal assistance. In addition, federal disaster assistance funds should only be spent on resilient projects--on building smarter and safer-- and not spent on construction that is not resilient and not safe. This will protect people, communities, and scarce federal resources.

Congress must also strengthen the National Flood Insurance Program (NFIP) and reduce regulatory burdens to private sector competition. Too few people purchase flood insurance, even those at risk. While there are numerous reasons for this, many people do not trust NFIP, and many people mistakenly believe the federal government will step in and disaster assistance will make them whole. Given the average award of disaster assistance ($8,016 for Superstorm Sandy), without flood insurance, many families are unable to rebuild."

Join The Hill on Wednesday, September 14 for "Preparing for the Next Disaster: A Policy Discussion on Community Resilience," featuring Sen. Joe Manchin (D-W.Va.), Rep. Blaine Luetkemeyer (R-Mo.), and Timothy W. Manning, Deputy Administrator for Protection and National Preparedness at FEMA. Topics of discussion include preparedness efforts to increase community resilience and the role of federal, state & local government in pre-disaster mitigation. RSVP here.

Weathering The Storm

By Scott Burns

U.S. News & World Report, September 12, 2016

Anna Johnson didn't have to go to church on Sunday, Aug. 14 to hear prophetic stories about the dead being raised from their graves. That morning, the Denham Springs, Louisiana native awoke to an eerie sight: a procession of coffins uprooted from a nearby cemetery by the rushing floodwaters steadily floating down her street. Her community was buried beneath six feet of floodwater. "We've never seen anything like it," she said.

What's most extraordinary about this story isn't the haunting imagery of the floating dead casually drifting through the streets or the enormous magnitude of the damage that resulted from what the Red Cross called "the worst natural disaster since Hurricane Sandy." It's what people like Johnson and her husband did next. Undeterred by the floating coffins and raging current, Johnson's husband immediately set out on his boat to help the local sheriff's department rescue those in jeopardy.

He was just one of thousands of Good Samaritans who risked their lives to save their neighbors. Louisianans affectionately refer to this armada of hunters, fisherman and ordinary citizens from all across the south who deployed their own motorized boats to rescue thousands of people and pets stranded by the flood as the "Cajun Navy."

Not everyone has been so supportive. Some state senators have tried to propose legislation that would require members of the Cajun Navy to receive formal training and certification from the government.

This precautionary impulse is not uncommon. Even in dire circumstances, many lawmakers are very hesitant to cede any authority over to private citizens. Their first instinct is to rely on the top-down efforts of formal authorities.

This proposal was immediately met a flood of backlash from members of the Cajun Navy. As Dustin Clouatre, a Cajun Navy member from St. Amant, Louisiana, said: "How can you regulate helping people?"

The heroic actions of these community members doesn't just capture the spirit and tenacity of the people of Louisiana, it also provides a vivid illustration of how the bottom-up efforts are at the heart of a community's revival after a disaster. The ordinary men and women who formed the Cajun Navy didn't wait for the National Guard or ask for permission from any top-down authority. Instead, they took the response into their own hands. Clouatre said it best: "These people are not going to wait for assistance. They're doers."

Many Louisianans learned this lesson the hard way over a decade ago during Hurricane Katrina when authorities tried to prevent private citizens from conducting rescue missions for safety reasons. More than 1,800 people lost their lives.

The death toll could've been much higher had it not been for the thousands of original Cajun Navy members who defied government edicts and launched their boats to rescue neighbors. Their courage provided a stark example of the how the power of civil society shined through despite rampant government failures.

As Mercatus Center scholars documented in their book "Community Revival in the Wake of Disaster," in many cases it was these private citizens and businesses that helped spur the post-Katrina recovery. Many local entrepreneurs, charitable and religious organizations also banded together to donate goods and keep their doors open through the recovery. Even large corporations like Wal-Mart and UPS were among the first on the scene delivering much-needed supplies.

Louisianans didn't wait for the government's permission this time around either. They jumped into action. As one member told ABC News, "We are a people that stick together. [We] take care of our own." As a result, thousands of lives were saved, and an entire community was able to unite around their courage and resilience.

This inspiring story provides an important lesson for policymakers. The first responsibility of federal and state authorities after a disaster should be to "do no harm" – removing barriers to recovery and allowing for, and even encouraging, private relief efforts in response to disaster. These bottom-up relief efforts are superior precisely because they empower local citizens to use their intimate knowledge of their area and its unique needs rather than top-down authorities whose actions are all-too-often bogged down by politics and red tape.

Some lawmakers might not fully appreciate the efforts of the thousands of volunteers who risked their lives to rescue their neighbors. But the people of Louisiana most certainly do. These local efforts, not the

action of governmental authorities, provide the bedrock of society that make communities like Louisiana so resilient in the wake of disaster.

Scott Burns is a Mercatus Center PhD fellow in economics at George Mason University, a graduate of the E.J. Ourso College of Business at LSU and a Baton Rouge native.

Woman In Viral Flood Rescue Video Meets Her Rescuer

By Michael Kunzelman

Associated Press, September 13, 2016

(DENHAM SPRINGS, La.) — Millions of people have seen and shared the video of a good Samaritan jumping off a boat to rescue Hailey Brouillette and her dog from a car sinking into south Louisiana floodwaters

last month. Brouillette isn't one of them, but she finally got to meet the man who saved her life.

Although she heard David Phung's voice during the rescue, Brouillette never saw her rescuer's face before their reunion Monday at a Denham Springs home where she is temporarily staying.

"I know I don't know you, but I love you," Brouillette, 53, said as she hugged and thanked the man she called her "angel" and "savior."

"It was nothing," Phung, 27, replied before Brouillete introduced him to Sassy, the poodle mix he also saved.

A Red Cross volunteer who befriended Brouillette at a shelter arranged Monday's meeting. Brouillette lost her trailer home and all of her belongings in the flooding

. Phung brought her a load of supplies, including dog food.

"It's just who we are in Louisiana. We help people in times of need," he said. "I was put in that place to help her out."

The Aug. 13 rescue video shot by WAFB-TV has millions of YouTube views. It shows floodwaters

swallowing Brouillette's red convertible as David Phung and two of his relatives arrive in a boat and urge her to get out of the car.

"I'm trying! I can't!" she replied. "Oh my God! I'm drowning!"

Phung tried to smash a car window from the boat, then jumped into the water and used his hands to rip open a hole on the top of the car. Phung grabbed Brouillette by her arms as the car disappeared in the murky waters. She remained submerged for several seconds before Phung finally pulled her out of the water.

"Get my dog!" she immediately shouted.

The poodle appeared to be underwater for at least 20 seconds before Phung took a deep breath, dipped below the surface and emerged with the dog cradled in his arms.

"I got your dog!" he yelled. "Swim to the boat."

Phung said he lost count of how many people that he helped save from the floodwaters, but none was more dramatic than Brouillette's.

"I didn't actually see the tape until two days later because I was working from sun up late into the night, just helping people," he said. "I was actually amazed at how calm and collected I was. I guess it was just the adrenaline took over."

Before getting caught in the floodwaters, Brouillette said she had been released from a hospital that morning after being treated for a kidney ailment. She was on her way to a pharmacy to get prescriptions filled when the car she borrowed from a friend was overcome by the water.

"It still seems like a dream," she said.

She believes "divine intervention" also played a part in her survival.

"He saved my life," she said. "I don't even know if I'm worth saving. I guess God said, 'Yeah.'"

Carolyn Perry, a Red Cross volunteer, said she watched the rescue video several times from her home in Kern County, California, before she was deployed to Louisiana.

"I was drawn to it," she said. "I just had this strange feeling I'm going to meet this woman."

Within three days of seeing the video, Perry recognized Brouillette at a Baton Rouge shelter that provided refuge to hundreds of flood victims. Perry said she hugged Brouillette and explained how the rescue had struck a chord with her.

"She was very, very humble, and we just struck up a friendship," Perry said. "For the next three days, we had a lot of heart-to-heart talks about life."

Before Perry returned home to California, Brouillette asked her new friend for help in connecting with the man who had saved her. Perry contacted an Associated Press reporter, who provided her with a telephone number for Phung. Perry called Phung and arranged for him to meet Brouilette and her dog.

At the end of their meeting, Brouillette gave Phung her phone number and embraced him one more time.

"And if I can ever do anything for you, let me know," she said.

Senate Boosts Bill For Water Projects, $220M For Flint

By Matthew Daly

Associated Press, September 12, 2016

WASHINGTON — The Senate voted to move forward Monday on a $10 billion water projects bill that includes $220 million in emergency funding for Flint, Michigan, and other communities beset by lead-contaminated water.

Senators advanced the bill 90-1 on a procedural vote, with approval expected later this week.

The bipartisan measure would authorize 29 projects in 18 states for dredging, flood control and other projects overseen by the U.S. Army Corps of Engineers.

The measure includes $100 million in grants and loans to replace lead-contaminated pipes in Flint and other cities with lead emergencies, as well as $70 million toward loans to improve water infrastructure across the country. It also includes $50 million to bolster lead-prevention programs and test water for lead in schools.

Sen. Gary Peters, D-Mich., said lawmakers finally "have a pathway to success" on Flint after months of effort. Senators have twice reached a bipartisan deal to help Flint but were blocked after Republican Sen. Mike Lee of Utah objected.

Flint's drinking water became tainted when the city switched from the Detroit water system and began drawing from the Flint River in April 2014 to save money. The impoverished city was under state control at the time.

Regulators failed to ensure the water was treated properly and lead from aging pipes leached into the water supply. Elevated lead levels have been found in at least 325 people, including 221 children. Lead contamination has been linked to learning disabilities and other problems.

Peters urged his colleagues to support the bill "to show the American people that we can continue to work together to address urgent needs across the country" and "deliver much-needed support to Flint families."

A spokesman said Lee remains opposed to the bill, which he said increases spending without offsetting budget cuts.

Several proposed amendments to the bill are still being negotiated, including one to resolve a dispute over dredging in Long Island Sound that pits Democrats in Connecticut and Rhode Island against Sen. Kirsten Gillibrand, D-N.Y.

The issue involves dredging near a submarine base outside New London, Connecticut, to make room for the U.S. Navy's newest Virginia-class submarines. Gillibrand and other New York officials fear the project could violate the state's stringent water quality standards.

Gillibrand secured language in the water-projects bill aimed at blocking any disposal that violates water quality standards. Sen. Richard Blumenthal, D-Conn., and other lawmakers are trying to block the provision or amend it to apply only to standards in the state where the disposal occurs.

Sen. Debbie Stabenow, D-Mich., welcomed the Flint measure, but said it comes months too late.

"For the people of Flint, this has taken way too long," Stabenow said in an interview. City residents are still using bottled water nearly a year after officials declared a public health emergency.

Sen. James Inhofe, R-Okla., chairman of the Senate Environment and Public Works Committee, called the water-projects bill crucial, not just for Flint but for the rest of the nation.

The bill includes about $1.9 billion for projects to restore Florida's Everglades and combat algae blooms that have fouled the state's beaches and rivers. Inhofe said in a newspaper column last week that fellow Republican Sen. Marco Rubio of Florida had convinced him to back the project after years of opposition.

Rubio's Democratic opponent, Rep. Patrick Murphy, has accused Rubio and Republican Gov. Rick Scott of not doing enough to find a long-term solution for algae blooms caused by polluted water flowing from Lake Okeechobee.

If approved by the Senate, the bill would go to the House.

WVU Alumnus Challenge Hits $1M In Flood Relief Donations

Associated Press, September 12, 2016

MORGANTOWN, W.Va. (AP) — West Virginia University says more than $1 million in donations will help West Virginia flood victims through a challenge

match from Arizona Diamondbacks owner Ken Kendrick.

Kendrick is a WVU alumnus. He had said after devastating floods in late June that he would match contributions to the WVU Foundation dollar-for-dollar up to $500,000.

The university says in a news release that more than 1,600 donors have given more than $502,000.

The floods killed 23 people in the state.

Gulfport, USO To Help Those Affected By La. Flooding

Associated Press, September 13, 2016

GULFPORT, Miss. (AP) — The city of Gulfport is partnering with the United Services Organization, Gulfport businesses, military and the fire department to send donations to the areas of Louisiana affected worst by flooding.

The Sun Herald reports (http://bit.ly/2c7GQY5) it's the second trip for the city in less than a month.

On Aug. 17, the city sent two truckloads of supplies immediately after the flood waters started to recede.

Gulfport Chief Administrative Officer John Kelly said Monday the National Guard Armory in Hammond, Louisiana, set up a store specifically for military families.

The USO is a nonprofit that operates two locations in Gulfport and annually provides programs and services to more than 60,000 service members and their families in Mississippi, Alabama and Louisiana.

$250K Grant To Help With Wilkinson County Flood Recovery

Associated Press, September 12, 2016

JACKSON, Miss. (AP) – State and federal officials say a $250,000 grant will help people in southwestern Mississippi repair homes damaged by flooding in mid-August.

Three homes were destroyed, 23 had major damage and 58 others had minor damage in Wilkinson County. Most were in the town of Crosby.

The damage fell short of the threshold for disaster assistance from the Federal Emergency Management Agency.

U.S. Rep. Gregg Harper says in a news release Monday that the Mississippi Emergency Management Agency is providing the grant to the new nonprofit Community Based Recovery Committee in Wilkinson County with money remaining from the Alternative Housing Pilot Program that FEMA awarded to Mississippi after Hurricane Katrina.

Wilkinson County borders Louisiana, and its floods were caused by the same storm system that deluged parts of that state.

Cayce Officials To Rebuild Flood-damaged Landing

Associated Press, September 12, 2016

CAYCE, S.C. (AP) – Officials in Lexington County are preparing to rebuild a boat landing on the Congaree River that was destroyed in the flooding rains last October.

Officials in Cayce think it will cost about $180,000 to repair the landing, with most of the cost paid by the federal government, The State newspaper (http://bit.ly/2cR0R69) reported.

The 23-year-old landing was closed after its dock was damaged in floods that followed record rain last fall. It's unclear how long the project will take.

Fishing and floating trip guides are happy about the decision.

"It's way overdue," said Kevin Geddings, owner of Adventure Carolina in Cayce.

The most recent renovations to the landing were in 1993 by state natural resources officials to encourage outdoor recreation in the Midlands. It's the only landing on the riverfront in the city of nearly 13,000 residents.

One guide, Jason Bennett of Irmo, says the loss of the dock created congestion on the Richland County side of the river.

"That makes things a little more inconvenient," Bennett said.

The closing shortened float trips by nearly a mile and required longer treks to return boats and equipment to his shop, Geddings said.

"Not having it has been huge for us," he said.

The landing also benefits recreation on land, officials say. The parking lot is a gathering spot for bicyclists and hikers headed for nearby trails.

Small Earthquake Widely Felt Across San Francisco Bay Area

Associated Press, September 13, 2016

OAKLAND, Calif. (AP) — A small earthquake rumbled beneath the San Francisco Bay area early Tuesday and was widely felt across the region.

The U.S. Geological Survey says the magnitude 3.5 temblor struck at 12:40 a.m. PDT and was centered just to the east of central Oakland.

Oakland police said they had no reports of problems associated with the quake, which was fairly shallow at around three miles in depth.

The USGS website recorded responses from people reporting they felt it in many Bay Area cities, including San Francisco, Oakland, and Berkeley.

Little Change In Strength For Tropical Storm Ian

Associated Press, September 12, 2016

MIAMI (AP) — Tropical Storm Ian has seen little change in strength as it moves over the central Atlantic.

The storm's maximum sustained winds early Tuesday are near 45 mph (75 kph) with slight strengthening forecast over the next two days. Ian is centered about 980 miles (1,580 kilometers) east-southeast of Bermuda and is moving north-northwest near 9 mph (15 kph).

Meanwhile far out over the Pacific, Hurricane Orlene is expected to slow down. The Category 2 storm's maximum sustained winds are near 105 mph (165 kph). The U.S. National Hurricane Center says gradual weakening is expected during the next few days.

Orlene is centered about 635 miles (1,020 kilometers) west-southwest of the southern tip of Mexico's Baja California peninsula and is moving north near 5 mph (7 kph).

Neither storm currently poses a threat to land.

Tuesday's Forecast: Rainy Southeast, Plains

By Doyle Rice

USA Today, September 12, 2016

The national weather forecast for Tuesday, September 13th calls for showers to hit from Chicago to Oklahoma City, along the Southeast and Gulf Coast and in the Rockies.

Showers and thunderstorms will make for a soggy day as a front stalls in the Plains while a tropical wave soaks Florida and the Southeast.

Central U.S.: Showers and thundershowers will drench the southern and central Plains as a front stalls across the region, contributing to the potential for heavy rainfall all the way from Texas to the Great Lakes.

Florida, Southeast: A tropical wave will cross Florida Tuesday, enhancing the chances of possibly heavy showers and thunderstorms.

West: The West Coast will be clear and dry. Rain and a few snow showers are possible in the Rockies.

Weather history for Sept. 13: In 2008, Hurricane Ike hit the Texas coast with 110 mph winds.

How To Prepare Your Home Before The Next Big Storm Hits

By Tom Hurd

Washington Post, September 12, 2016

We are just about at the halfway point of the hurricane season, which most forecasters have projected to be above average in intensity.

But aside from official start and end dates for a particular type of natural disaster, extreme weather is the new reality — and in all parts of the country, not just coastal regions. Now consider this frightening thought: It wasn't a "named" hurricane or tropical storm that resulted in an estimated 150,000 damaged properties in the Baton Rouge area and flooded nearly one-third of the state of Louisiana.

Prolonged rainfall was the culprit, and that ended up being the worst disaster in the United States since the devastation caused by Superstorm Sandy. The torrential downfall that very recently washed out a sizable portion of historic Ellicott City, Md., is another example of the uncompromising damage that storms not classified as hurricanes can do to communities.

Essentially, what used to be considered "100-year storms" are now happening approximately every five years. Another eye-opener is that only 65 percent of the U.S. population is covered by model building codes. And when disaster does strike, often times in the rush to rebuild, homes and buildings are not completed up to

local minimum building codes, and that in and of itself is a recipe for disaster.

The good news is that in recent years the design and construction industry has recognized that responding to these sets of natural challenges is a national imperative. In addition to advocating for effective land-use policies, modern building-code adoption and smarter infrastructure investment, we research materials and design techniques and construction procedures to make homes and buildings more resilient to these threats.

But what can you do as you consider the possibility of encountering a dangerous storm or disaster? Here are some tips to help prepare your home for the next one:

Document your home before disaster strikes: Take photos of the inside and outside of your property and share them with your insurance company to have in its files; list rare and special items separately. Put extremely valuable items in a fireproof and waterproof safe or box.

Familiarize yourself with your home's construction: Know the age of your home and what kind of framing it has. Know how recently the roof has been repaired or replaced. All this will help guide you on what design changes or updates should be made to reinforce your home.

Prioritize repair projects: Make easy and inexpensive fixes, and phase repairs, maintenance and retrofits so they are manageable. Use wind-resistant nailing patterns to secure roof sheathing. Consider what flying debris and storm water might do before reworking areas to minimize damage.

Communicate your building performance goals: Make your desire for storm-resistant and resilient design elements known to your architect or contractor from the outset of a project, and include site selection, program and building life cycle in your conversations. Make sure that you are comfortable with their expertise in this area before proceeding with work.

Designate a safe room in your home: This space can be used for certain hazards, including hurricanes, tornadoes and strong storms. Spaces that can be used for this purpose include a mud room, laundry room or even a powder room, and each can be strengthened. If you have a shelter in a low area, make sure you can get out in case of flooding. Consider multi-hazard possibilities, and ask your architect what you'd need to do to reinforce those spaces.

Upgrade your safety standards in your renovation plans: Building codes are a life safety standard that afford only the bare minimum for the protection of property. Hazardous conditions may not be up to date in local maps and regulations to reflect current realities and risk. Any reworked areas or additions can be built to higher-strength standards — often for just a little more money than your planned budget, giving you a better alternative in a storm.

If you are making any big-picture construction or renovation plans, the best advice I can offer is to work only with a licensed architect, engineer or contractor. These professionals should be well-versed in the best practices to prevent destruction with cost-effective mitigation features and advanced planning.

Hurricane Katrina winds caused $8 billion in damage, and stronger building codes would have reduced this by 80 percent. The expression that an ounce of preparation is worth a pound of cure is especially true when it comes to natural disasters. According to the Federal Emergency Management Agency, every dollar spent on disaster mitigation saves $4 in rebuilding costs.

Design and building material fortifications are your best line of defense to protect your home, but you would also be well served to have a conversation with your insurance carrier — particularly if you can participate in the National Flood Insurance Program. So far this year, thunderstorms and hailstorms have caused the greatest insured property losses — up to $7 billion in damages.

Finally, proper preparation may help change a disaster into just a short-term uncomfortable event. Now is a great time to see where your homeowner's insurance policy stands and to have your home evaluated with an overall risk assessment that an architect can provide, before the next time Mother Nature's unpredictable fury strikes.

Tom Hurd is the chair of the American Institute of Architects Disaster Assistance Committee.

PM Update: Beautiful This Evening, And Warming Up A Little Tuesday

By Ian Livingston

Washington Post, September 12, 2016

Today was classic September. The bluest skies, and low humidity, mixed with warm sunshine. I could go for this kind of weather every day. This bout is relatively short-lived as temperatures are on the way up tomorrow. Heat and humidity continue to build into Wednesday, but thankfully it won't last long. The remnants of summer are certainly on borrowed time.

Through Tonight: We should see a fairly quick fall in temperatures this evening, especially outside the city, thanks to low humidity. Through the night, dew

points rise toward and past 60, which means humidity becomes more noticeable and it helps slow those temperature falls later at night. Lows are mainly in a 60-68 degree range, coolest suburbs to downtown.

View the current weather conditions at The Washington Post.

Tomorrow (Tuesday): It's another day of abundant sunshine. Warmer than Monday, but not hot like last week. We'll save that for Wednesday. Highs are mostly in the mid-80s. It's still relatively comfortable, but warmer than it should be, and humidity is increasingly apparent. Winds are from the south around 5 to 10 mph.

See Jason Samenow's forecast through the weekend. And if you haven't already, join us on Facebook and follow us on Twitter and Instagram. For related traffic news, check out Dr. Gridlock.

Pollen update: Mold spores, weed and grass pollens are MODERATE/HIGH. Tree pollen is LOW/MODERATE.

Want our 5 a.m. forecast delivered to your email in-box? Subscribe here.

Ian: For some of us (maybe only me), this has been a day we've been waiting on for years (literally, years). Tropical Storm Ian was named this morning. It's seemingly going to pose no real threat to anyone other than fish, and perhaps an errant ship. In fact, this might be about all you hear of Ian given it's not even currently anticipated to become a hurricane as it spins across the Atlantic. I'd be remiss not to at least mention it once here, though! Certainly no Meranti, which became a Category 5 in the Western Pacific today.

Until 2022 (when the name will be reused) …

August Was The Hottest Month Ever Recorded. Again.

By Dominique Mosbergen

Huffington Post, September 13, 2016

Surprise, surprise: Last month was the hottest August ever recorded, marking the 11th straight month that global heat records have been shattered, according to NASA data.

The agency broke the bad, though perhaps not entirely unexpected, news on Monday. August had a global average surface temperature of about 1.76 degrees Fahrenheit above average, NASA said. It also tied with July as the warmest month ever recorded since record-keeping began in 1880.

"We are well on our way to the warmest year recorded," the Union of Concerned Scientists wrote in an email to The Huffington Post this week.

If deemed the hottest year ever, 2016 will be the third year in a row to boast this unfortunate title.

But though every month — and each year — appears to bring the same news about "hottest" this and that, experts are warning against apathy and fatigue regarding record-breaking temperatures.

"While there may be a tendency to be complacent about the recurring record temperatures, with each month come more climate-related consequences that cannot be ignored," wrote UCS climate scientist Astrid Caldas in a blog post.

Climate change is not a future problem, but rather one that we are actively dealing with.

"We are feeling climate change impacts right here, right now," Caldas continued. "From wildfires and droughts to devastating floods, climate change fingerprint is all around us and does play a role in making events more extreme. An example are this summer's floods in Louisiana, caused by intense rains which were "at least 40 percent more likely to happen because of climate change," according to research.

Gavin Schmidt, director of NASA's Goddard Institute for Space Studies, stressed this week that it's long-term trends, rather than monthly readings, that "are the most important for understanding the ongoing changes that are affecting our planet."

NASA data shows a clear upward trend in global temperatures since 1880. The average global temperature has risen about 1.4 degrees F since then.

NFIP AND FLOOD MAPS

FEMA Remapping May Lead To Insurance Hikes

By Jake Abbott

Marysville (CA) Appeal-Democrat, September 12, 2016

Flood insurance is going to increase — probably by quite a bit for some, warn experts who are trying to do something about it.

With federal remapping of floodplains in the works for some counties, professionals working in the field met in Sacramento last week to discuss its effects on insurance rates and the agricultural industry.

Mike Inamine, executive director of the Sutter Butte Flood Control Agency, moderated a panel discussion at the Floodplain Management Association 2016 Conference. The discussion was revolved around the impact of FEMA's remapping — Flood Insurance Rate Maps (FIRMs) — for areas of high-flood risk on insurance rates for structures and businesses operating in floodplains in the Central Valley.

FIRMs are used to administer the National Flood Insurance Program throughout counties.

"The NFIP will result in flood insurance rates going up dramatically, it's quite an increase in flood insurance premiums," Inamine said.

FEMA originally mapped all counties throughout the U.S. in the 1970s and 1980s. In 2001, the agency began to update FIRMs to show if a region's levees met requirements for 100-year certification criteria. If an area cannot be certified, it is classified as a special flood hazard area and subject to development regulations.

Denise Carter, a Colusa County supervisor, was a panelist in the discussion. She said people with federally-backed mortgages living or operating in deep floodplains will be hit the hardest by the hike in insurance rates if an area is designated as high-risk. "As a task force, we worked on the possibility of having private insurance come in to have more affordable insurance options," Carter said.

She said while some residents living in Sutter County have already felt the effects of remapping, FEMA is going through the process in Colusa County.

The panel also discussed FEMA's building regulations for rural areas in a deep floodplain.

Inamine said some of the current regulations have an adverse impact on farmers and the agricultural industry.

"If you are in a floodplain, you are required to floodproof structures so water can pass through it," Inamine said. "There are many examples where a building has to have holes in it. That's fine except that some of those buildings hold food and crops."

In terms of floodplain management, farming is regarded as a wise use of a flood zone because it prevents hazardous development — housing or urban development — from occurring in deep floodplains behind levees.

Carter said panelists discussed the possibility of amending certain requirements for floodproofing that accommodate structures that support an agriculture industry.

Inamine said FEMA has shown interest in supporting rural area economies and that it wants to work with farmers on specific methods of improving regulations on agriculture structures while also mitigating costs.

Carter said the discussion was an opportunity for the task force to hear different perspectives on ways to address the issue.

"It provided the possibility to maybe tweak some things with FEMA's regulations," Carter said. "They have all these technical bulletins, which provide guidance on what you can do, and there is a definition of agriculture structures. The discussion was whether or not we should change that definition of what an agriculture structure is."

Inamine said the five panelists provided different perspectives on the complex issue. The other panelists were Gregor Blackburn, Ceil Strauss, Maria Lorenzo-Lee and James Gallagher.

"It highlighted the issue of how important this is moving forward in the Sacramento Valley," Inamine said. "It was essentially how do we do the right thing in a floodplain, in terms of insurance, and still keep it affordable."

Carter said a task force she works on is taking some of the topics discussed at the panel and writing up a report that will be sent to FEMA with recommendations on how to accommodate agriculture businesses looking to develop or build in deep floodplains.

"It's not going to be easy, but we are trying to find some little things we can do that will have a big impact on being able to continue farming in floodplains," Carter said.

FEMA Town Hall In Youngsville Set For Sept. 14

KATC-TV Lafayette (LA), September 12, 2016

The City of Youngsville will host a town hall/informational meeting on FEMA individual assistance Wednesday, Sept. 14, 2016, at 6 p.m. at Ernest Gallet Elementary School, 2901 E. Milton Ave.

The purpose of the meeting is to provide the needed assistance to residents and businesses that were affected by the August flood event. At this meeting there will be representatives from: FEMA Disaster Survivor Assistance (DSA), National Flood Insurance Program (NFIP), Small Business Administration (SBA), Governor's Office of Homeland Security (GOHSEP) and FEMA Mitigation.

At this meeting, residents will be able to get help with the following:

Sign up for FEMA assistance
Check on your FEMA claim
If denied, get assistance to find out why
Meet with the National Flood Insurance Program
Meet with the Small Business Administration and fill out application
Get information on how to mitigate future damage

Youngsville To Hold Town Hall Meeting, Providing Info On FEMA Assistance.

KLFY-TV Lafayette (LA), September 12, 2016

YOUNGSVILLE, La. (KLFY)— The City of Youngsville to hold town hall meeting to provide information on individual FEMA assistance.

According to a news release, the meeting will take place September 14 at 6 p.m. at the Ernest Gallet Elementary School cafeteria. The school is located at 2901 E. Milton Avenue, Youngsville.

Mayor Ken Ritter said the purpose of the meeting is to provide the needed assistance to residents and businesses that were affected by the flood event of August 12.

At the meeting there will be representatives from the FEMA Disaster Survivor Assistance, the National Flood Insurance Program, Small Business Administration, the Governor's Office of Homeland Security and FEMA Mitigation, according to officials.

The news release also stated that at the meeting, residents will be able to get help with the following:

Sign up for FEMA assistance

Check on your FEMA claim

If denied, get assistance to find out why

Meet with the National Flood Insurance Program

Meet with the Small Business Administration and fill out application

Get information on how to mitigate future damage

The Mayor said he requested this meeting to help residents to get the information they need to continue with their recovery. Everyone that had damage due to the flooding is encouraged to attend.

Duxbury: FEMA Floodplain Map Update

By David Skill

WATD-FM Marshfield (MA), September 12, 2016

Duxbury Town Manager Rene Read says Town Meeting is just a week away, and an article on the warrant about those FEMA floodplain maps needs to pass by a two-thirds majority.

"We've been working very diligently with our consultant, the Woods Hole Group. Leslie Fields will be attending our meeting a week from tonight, and she'll be providing a wealth of information to the voters so they can have a better understanding of what we need to do and why we need to do it," said Read.

But what if it is shot down by voters?

"Without the properly approved flood insurance maps, people will be in a serious financial predicament by not being able to get their mortgages secured," said Read.

We asked Read if the floodplain maps that were recently updated by FEMA are completely accurate, and if he thinks the warrant article will pass at Town Meeting.

"We had some dispute, not acrimonious, but we did have some dispute and we've questioned that with FEMA and we're working to figure out a method for making the correction, but what we'll be doing the following day is filing something called a letter of map amendment, which will allow us amend the map as adopted. So we have to have the maps in place knowing full well that they're not perfect, but knowing also that we're going to achieve perfection somewhere down the road," said Read.

Duxbury selectmen will also get a "litigation tracker" update from the law firm Anderson and Krieger at tonight's meeting.

MITIGATION

FEMA Helps Brandon, Ripton Pay For Irene Damage

Addison County (VT) Independent, September 12, 2016

BRANDON/RIPTON — The Federal Emergency Management Agency in August awarded the state of Vermont's Division of Emergency Management & Homeland Security more than half a million dollars to pay the federal share for projects tied to Tropical Storm Irene, which hit Vermont five years ago.

Among the six towns that won awards through the Hazard Mitigation Grant Program were Brandon and Ripton.

Brandon received $123,750 to supplement $1,196,533 awarded in July for Phase II of a downtown overflow relief culvert project.

Ripton received $14,848 for an emergency generator at their community shelter.

Other awards were:

$329,923 to Charleston for culvert and ditching improvements along Hudson Road; $79,460 to Richmond for a structural elevation; $11,668 to Marshfield for an emergency generator; and $96,750 to Enosburg for a culvert upgrade on the Tyler Branch.

"This was the latest, but will not be the last project to benefit from federal assistance tied to Tropical Storm Irene," a press release announcing the money said.

The federal Hazard Mitigation Grant Program, or HMGP, provides assistance to communities to fix areas of repetitive damage and make trouble spots safer. Making those areas more flood resistant through elevation of a building or road, larger culverts, or stronger riverbanks also helps save towns, the state, and

the federal government money in repair costs over the long run.

Of the $34.5 million available for HMGP after Irene, approximately $20 million was allocated for acquisitions — buy-outs of homes and businesses damaged by Irene that were built in floodplains and vulnerable to flooding again. Of 194 HMGP applications submitted to FEMA, 141 were for buy-outs. To date, 133 of them have been approved by FEMA, and more than 100 are completely "closed-out." In Northfield, for example, a neighborhood of homes that had been flooded and were vulnerable to future flooding have been removed, and the land is now a beautiful town park along Water Street.

Vermont's Congressional delegation was essential in advocating for the State with FEMA. The State successfully negotiated with FEMA for extra time, beyond the usual one-year window for submitting HMGP grants and the "routine" 12-month-extension, for a third year, allowing for applications to be submitted right up until the third anniversary of Irene in 2014.

There is still more than $8-million of HMGP funding from Irene available, and more than $8-million in applications pending, many of them still under environmental and historic preservation review. Applications still pending with FEMA include 7 buy-outs (2 in Ludlow and 5 in Chelsea), and 20 infrastructure projects. Permalink

Calallen ISD Hosts New Dome Grand Opening

By Beatriz Alvarado

Corpus Christi (TX) Caller-Times, September 12, 2016

Calallen ISD officials opened the district's estimated $4.8 million gymnasium and Federal Emergency Management Agency safety shelter Monday.

The 20,289-square-foot dome took about a year to complete and was built on a 56-acre lot along Wildcat Drive.

"Thanks to the vision of past and present school leaders, school board trustees and a dedicated Northwest community, Calallen ISD has expanded its facilities to embrace the ever-evolving rich history of the Calallen Wildcats," said Calallen ISD's Superintendent Artie Almendarez. "The official opening of this FEMA dome and the multi-purpose covered practice facility are first class venues that visibly display a long standing tradition of Wildcat pride."

Calallen and Tuloso-Midway independent school districts, along with Del Mar College and the Corpus Christi International Airport, teamed with city officials in 2012 to seek federal grant funds through the Texas Safe Shelter Initiative for the construction of disaster shelters.

The facilities will be used by first responders for emergency operations during a natural disaster, such as a hurricane.

For daily operations, the school's dome can be used as a gymnasium, auditorium, training facility or instructional space.

Clendenin Library Future, Bridge Repair Timeline Uncertain

By Ryan Quinn

Charleston (WV) Gazette-Mail, September 12, 2016

The Kanawha County Public Library system's director said Monday he's expecting a report this week on the level of flood damage to the Clendenin branch, and he still doesn't know when the bridge to Crossings Mall — where the nearby Elk Valley branch is located — will be repaired.

Alan Engelbert said the system received in the last few days $120,000 of a possible $600,000 in flood insurance coverage money for the contents and building of the Clendenin branch, which got 9 feet of water in the late June flooding. The floods spared the Elk Valley branch but swept away the culvert bridge leading into the shopping center where it and several businesses are located.

On July 26, the library reopened a space it used to occupy at 3636 Pennsylvania Ave., in Big Chimney, to serve both the Clendenin and Elkview areas until the bridge is replaced. The Mobile Library, the 33-foot-long "bookmobile bus" where patrons can check out items, also is stopping in Clendenin.

Kanawha County Deputy Planning Director James Young previously told the Gazette-Mail that the bridge was expected to be constructed off site, starting in early- to mid-August and continuing for six to eight weeks.

Engelbert said a contractor and the insurance company are continuing to assess damage to the Clendenin building and its contents to determine how much flood insurance money the system is owed. The Federal Emergency Management Agency may pitch in funds for whatever the future of the Clendenin branch is, though Engelbert said he is first awaiting the report on how the branch's damages compare to its appraised value.

Such reports have been done on flooded Kanawha schools — one showed the damages to Clendenin Elementary, for instance, equaled about 97 percent of the circa-1930 school's $3.7 million appraised value.

Any time a building is more than 50 percent damaged in such a situation, it has to be brought into compliance with national flood insurance policy, meaning there could be requirements to elevate the flooded structure above the floodplain or other measures.

Under its Public Assistance Program, FEMA can fund 75 percent, and perhaps more, of the cost to fix damage to public facilities, including the cost to build new facilities and establish temporary facilities. Engelbert said the system already expects about $18,000 in reimbursement for the costs to both set up and vacate the temporary branch serving Clendenin and Elkview.

Also at Monday's library system board meeting, Engelbert said the system will add Hoopla to its digital offerings starting Oct. 10. He said patrons will be able to go online and, using their library card information, access up to 10 "units" — such as songs and entire albums, movies and episodes of TV series — per month.

He said patrons will only be able to use such units for a limited amount of time. He said the library system has put $25,000 toward paying the fees Hoopla charges for each unit checked out.

The board also deferred action on a policy change that Engelbert said would pay part-time workers seven and a half hours worth of pay for the four and a half hours worth of work they do on Sundays only in the main Charleston branch of the system.

Engelbert said the change would cost about $5,600 annually in extra pay and benefits for the, on average, six workers who work each Sunday. He said full-time workers have received the benefit of being paid for extra hours each Sunday they work since 1974.

But, after some board members Monday questioned why the system would take the step and a reporter noted the item listed on the meeting agenda to legally allow the board to take the action Monday vaguely only said "Policy #104 Hours of Work," the board deferred action in a voice vote. The only nay heard was from Cheryl Crigger Morgan, the board's former president.

Corps Defends Valley Park Levee Height, Says It's Not Overbuilt

By Bryce Gray

St. Louis Post-Dispatch, September 13, 2016

The U.S. Army Corps of Engineers is defending its construction of the Valley Park levee system, disputing a recent report suggesting that parts of the system exceed height limits by as much as 8 feet.

Critics say an improperly high levee system would have worsened recent flooding in neighboring communities along the Meramec River, such as Eureka, Fenton and Arnold.

But the corps says the system's construction was based on sound analysis.

"It's our belief that we do not have a levee that was built beyond the authorized level," said John Boeckmann, a hydraulic engineer with the corps' St. Louis District.

Gauging the proper height of the levee comes down to defining the elevation of the 100-year flood level for the Meramec. Generally speaking, levees can be 3 feet higher than the 100-year flood stage for a given location.

But the corps and the levee system's critics disagree over which flood-level estimate is relevant in the dispute.

Corps representatives said the agency has congressional approval to rely on internal data, rather than Federal Emergency Management Agency data to determine flood levels. FEMA flood-level data would have called for the levee to reach a maximum elevation of 435 feet above sea level, based on the 100-year flood level.

A number of experts were under the impression that the 435-foot maximum applied to the levee. Some suspected the structure exceeded that level when it was not topped by catastrophic flooding of the Meramec in late December 2015.

"They appear to use the FEMA data, in which case it's improperly high," said David Stokes, the executive director of Great Rivers Habitat Alliance, an organization focused on river management issues. "If they didn't, they need to explain."

Questions about the levee's height ultimately led Great Rivers Habitat Alliance to commission an investigation by an outside group. The resulting report from St. Peters-based engineering firm Pickett, Ray & Silver Inc. was released in August and identified points of the levee reaching as high as 443 feet above sea level.

Though he could not confirm their accuracy, Boeckmann said many of the levee elevations listed in the report are "in the range of what's expected to be out there," based on the corps' design specifications.Differing estimates

The Valley Park levee system was authorized in 1982 and completed in 2005. Engineers for the corps said that the agency's design process used newer, better data than that provided by FEMA, which releases updated flood level data about once a decade.

"There's nothing in our regulations that requires us to take existing FEMA profiles and use them," said Don Duncan, another corps hydraulic engineer. "In this case, we knew there were floods and other events that happened since those profiles were developed."

The corps indicated by email that "this design procedure was not unique to the Valley Park project," stating that the agency always reserves the right to use flood data at its discretion unless specifically told otherwise.

Besides the use of different flood level data, Boeckmann offered a couple additional reasons the levee is higher than many expected.

Boeckmann said the levee was built slightly higher than authorized to account for anticipated settling as gravity takes its toll. Settling can typically alter levee height by 1 to 3 feet, he said.

Boeckmann also said some of the levee heights cited in the recent investigation may have been distorted by unrelated construction projects. For instance, he said that after the levee was completed, a utility crossing was installed at the spot measuring 443 feet in elevation, creating "an isolated high point."

Despite the counterargument, not everyone is convinced that the corps had reason to deviate from using FEMA flood level data. Critics say that the corps has been inconsistent over time, using FEMA data in various reports and now indicating that separate, internal data guided the levee's design.

"They make up some other number on the basis of their own arguments when it's convenient — they've not been consistent," said Bob Criss, a professor in the Department of Earth and Planetary Sciences at Washington University, and one of the first to call the levee's height into question following the recent record-level flooding of the Meramec.Seeking clarity

The levee's design drawings have not been fully disclosed, as Freedom of Information requests filed by those concerned with its height have been denied for national security reasons. Although the drawings were withheld, Boeckmann said the flood data itself went through a public review process in the 1990s and that the levee project was approved by FEMA, St. Louis County, and several cities along the Meramec River.

The corps has offered to meet with a number of interested parties later this week to clarify the design process.

"The gist of (the meeting) is that the Army corps wants to explain whatever process it used in determining the appropriate height of the levee," said Bruce Morrison, general counsel for the Great Rivers Environmental Law Center, one of the organizations that has sought information on the levee.

But critics feel that a different set of flood level data may not fully explain the 8-foot height disparity in the levee's design — a dramatic difference they argue could be hard to justify.

"That number has not changed significantly," said Criss, referring to the 100-year flood level the levee is intended to guard against.

Those pressing the corps for details want to hear an explanation of why FEMA's definition of a 100-year flood was tossed aside.

"If the Army corps deviates, is its modeling defensible? Is it rational?" asks Morrison. "There's a lot of stuff out there to try to lasso."

He says it's entirely possible that the corps felt more conservative flood precautions were necessary. But transparency and consistency, he said, are vital.

"It presents a misleading picture to the public if the Army corps switches to a different standard time and again," said Morrison.

Or, he said, if the corps doesn't have confidence in existing flood data, it may be time for flood maps to be redrawn entirely.

Corps representatives declined to speculate on the extent to which the levee may have influenced nearby flooding in late 2015 and early 2016, saying that "pointing the finger to one cause" would require performing a detailed hydraulic study.

"We can't comment or speculate on specific effects of the levee on neighboring communities," said Boeckmann. "It was really just a historic flood event that reached levels that had not been recorded at Valley Park, for instance."

Combined 'demo & Rebuild' Will Be Mitigation Option In Flood Communities

By Shauna Johnson

West Virginia MetroNews, September 12, 2016

CHARLESTON, W.Va. — For the first time, a combination of both structure demolition and rebuilding will be an option for West Virginia residents washed out of their homes and businesses in the June 23 flood and seeking assistance from the Hazard Mitigation Grant Program to prevent future flooding through reconstruction steps.

What's called "demo and rebuild," in the view of Al Lisko, director of mitigation/recovery for the state

Division of Homeland Security and Emergency Services, is a way to keep flooded communities intact — a concern that's been raised many times in the months since the flood.

With the number of destroyed structures in the Flood Zone, the idea behind "demo and rebuild" is for the Federal Emergency Management Agency to fund demolition of a building.

The Hazard Mitigation Grant Program would then step in with grant funding to build a new foundation and help place a modular home on that foundation in accordance with a community's floodplain ordinance,' according to Lisko.

"What it does is it puts the person into a safer situation, but it does not take it (the property) off the tax rolls. They would still live in the same area. They would still have community taxes and the community does not, in a sense, deteriorate its tax base," Lisko said.

It's only one option, he noted, "One of the things we don't know are how the people are going to feel about their options."

A series of public meetings on all the options, which also include stand-alone elevation of structures, relocation of structures to outside floodplains and full acquisition and demolition of properties, begins Tuesday night.

The first meeting is scheduled for Tuesday night, Sept. 13 at 7 p.m. at Clendenin City Hall in Kanawha County. The public meetings continue Wednesday, Sept. 14 at 6 p.m. at Elkview Middle School in Elkview and Thursday, Sept. 15 at 6 p.m. at Alderson City Hall.

Additional meeting times and locations are as follows:

Sept. 19
Roane County
Geary Elementary-Middle School, 9538 Clay Rd., Left Hand
6 p.m.
Sept. 27
Pocahontas County
Marlinton Town Hall, 709 2nd Ave
6 p.m.
Sept. 28
Richwood and Nicholas County
Alumni Hall, 103 East Main St., Richwood
6 p.m.
Oct. 3
Greenbrier County
Caldwell, White Sulphur Springs, Ronceverte
Location, Time TBD
Oct. 4
Greenbrier County
Charmco, Rupert, Rainelle
Location, Time TBD

Decisions on mitigation methods will be made at the local levels, with applications coming from incorporated areas or county levels for those in unincorporated locations using input from residents.

"The idea is that this is a program where each community has the opportunity to look at their options, to decide what they feel is best and to apply for the funding and then, hopefully, we'll have enough funding to cover everyone's desires and wishes," Lisko said.

"If not, then we have to do a prioritization process here at the state before submitting them to FEMA for final approval."

Lisko could only estimate the potential funding available through the Hazard Mitigation Grant Program, which is aimed at reducing future flooding, would amount to "several millions of dollars." The amount will be a percentage of total federal grants awarded for the June flood, and that number has not been finalized.

"They're going to have to look at their situation," Lisko said of the questions residents trying to rebuild will have to answer.

"For example, if you're a family and you were flooded and you're very frightened to live where you lived, would you accept a demolition and rebuild at the same location? Or would you simply say, 'No, I don't want to live there anymore?'"

FEMA Offers New Flood Relief Opportunities

WSAZ-TV Huntington (WV), September 13, 2016

KANAWHA COUNTY, W.Va. (WSAZ) – Homeowners who are rebuilding following the June flooding can meet with West Virginia and FEMA Hazard Mitigation Grant Program advisers on Tuesday and Wednesday.

The meetings will focus on the HMGP process and the rebuilding efforts as well discussion of elevation and mitigation reconstruction.

Tips and information will be provided to help homeowners prevent future damage and disaster in the event of a flood.

On Tuesday, flood-affected homeowners in Clendenin can meet advisers at the Clendenin City Hall at 7:00 p.m.

Other flood victims in Kanawha County can meet Wednesday at 6:00 p.m. at Elkview Middle School.

NEWS AROUND THE COUNTRY

FLOODS

Gulfport, USO Team Up To Help Louisiana Flooding Victims

By Justin Vicory

Biloxi (MS) Sun Herald, September 12, 2016

If there's still a need, keep giving. That's the view of the city and the United Services Organization.

Monday, the city partnered with the USO, Gulfport businesses, military and the fire department to send donations to the areas of Louisiana affected worst by flooding.

"I found out there was still a need, and helping military families is what we're all about, so I contacted our national office and they approved us to do this," USO Director Felice Gillum said.

It's the second trip for the city in less than a month.

On Aug. 17, the city sent two truckloads of supplies immediately after the flood waters started to recede.

"We got a lot of help after Katrina," Gulfport Chief Administrative Officer John Kelly said. "And this is a military community. So, we all work together when we can."

Kelly said the National Guard Armory in Hammond set up a store specifically for military families. The supplies will be dropped off there. Military personnel and families from the surrounding area can come to shop.

Mississippi Power, Island View Casino, the National Guard, Keesler Air Force Base, Seabee Base in Gulfport, Gulfport-Biloxi International Airport donated Lowes, Home Depot and Wal-Mart gift cards, cleaning supplies, bedding and comforters, blankets and sheets, food, baby supplies, toiletries and bottled water.

Donations were taken to all five Gulfport fire stations and brought to the Central Station in downtown Gulfport for distribution.

John Fayard of John Fayard Moving donated his truck and an employee to help with the haul.

The USO is a nonprofit that operates two locations in Gulfport and annually provides programs and services to more than 60,000 service members and their families in Mississippi, Alabama and Louisiana.

FEMA To Start Contacting Applicants By Text

WBRZ-TV Baton Rouge (LA), September 12, 2016

BATON ROUGE – FEMA announces that flood victims who applied for federal help may soon get a text from officials to let them know of their application status.

FEMA says it is using texts to connect with applicants in an effort to enhance communications as it allows to communicate quickly and easily with applicants.

The agency says that applicants may still be contacted through email or phone if they chose one of those as a preferred communication method when they first applied.

Applicants may then check their application's status by going online to disasterassistance.gov or downloading and using the FEMA app and then logging into their account. They may also call the FEMA helpline at 800-621-3362.

With the change, FEMA reminds applicants to never provide personal information such as Social Security or bank accounts numbers to anyone. FEMA only requests this information when applicants first apply for federal disaster assistance. FEMA inspectors only require verification or identity.

FEMA Reminds Residents To Check With Officials Before Rebuilding

WBRZ-TV Baton Rouge (LA), September 12, 2016

BATON ROUGE – The Governor's Office of Homeland Security and Emergency Preparedness and FEMA are encouraging residents to check with local officials before starting to rebuild following last month's flood.

As more financial assistance reaches flood victims, more people are beginning to repair the damages they sustained to their homes and businesses.

Officials want to remind residents of the following:

Work that may require permits often includes plumbing, electrical system, foundation and structural repairs.

Local officials may have building code requirements on how and where flood victims can renovate or rebuild. Officials ask flood victims to find out how repairs or reconstruction can meet current standards and compliance.

Flood victims can contact their parish emergency management office to learn more about elevation and

other ways to make their homes or businesses safer and stronger.

For contact information, visit www.gohsep.la.gov/ABOUT/PARISHPA

As Flood Victims Struggle With Emotional Toll, Doctors Say Help

By Sabrina Wilson

WVUE-TV New Orleans, September 12, 2016

NEW ORLEANS, LA (WVUE) –

In Tangipahoa Parish, there is rebuilding from the recent flooding underway. But amid the painstaking recovery, for many flood victims there are inner feelings to be dealt with.

"I have a lot of faith in God but even with my faith there's moments when it gets overwhelming you wonder how long is this going to take?" said flood victim Sonia Landry who moved to Robert after a catastrophic storm 11 years ago. "This is the second time it's happened for me because I was in St. Bernard Parish for Hurricane Katrina."

Arshile Glaze's trailer barely escaped the spring flooding, but his good fortune ran out in August.

"I know my wife gets depressed about it and upset about it," said Glaze, whose home is uninhabitable right now. "[We're] living with my stepdaughter in Covington. There's no way we can live in here."

Glaze tries to keep his wife's spirits from sinking too low.

"We find different things in the trailer that we had forgot we had and it makes her smile," he said.

On Capitol Hill, some local leaders from flood-stricken areas told members of Congress about the emotional toll resulting from the flood.

"We have suicides, we have mental breakdowns, we have families being torn apart because honestly they don't know how they're going to get back on their feet," said Mayor Jr. Shelton, of Central, Louisiana.

"The most common symptoms are depression, also anxiety and post-traumatic stress," said Dr. Howard Osofsky, chairman of the Department of Psychiatry at LSU Health New Orleans.

Mental health professionals from LSU Health New Orleans are involved in the effort to help flood victims, as well as state workers, cope with the aftermath of the flooding.

"We have worked with all of the partnering agencies and groups responding to the flooding disaster to develop the screening both for adults and for children to try and help identify and respond to people having the greatest need at this time," Osofsky said.

A home can provide a sense of security and familiarity that people rely on.

"There are many people who are suffering a great deal. They've lost their homes, they're rebuilding," Osofsky said.

Often, there are telltale signs of being overwhelmed.

"If people are having a more difficult time getting going in the morning, if they're not sleeping well, if they're drinking more, if they're more irritable, If one can see that they are exhibiting signs that they are stressed out, it's important to not only reach out to them and be supportive but to let them know that help is available," Osofsky said.

He said it's important to return to some semblance of normalcy as soon as possible, and he suggested that parents should speak to their children about the flooding.

"As much as possible, normalize what you're doing, the same type of routine. Parents have to be aware that their children need to be able to talk about it, and to know that this is a very unlikely event and that parents are keeping them secure and the community is keeping them secure," Osofsky said.

State leaders have said the majority of the flood victims did not have flood insurance. A lot of people said adding to their stress is the suspense of how much assistance they will qualify for under FEMA.

"It breaks your heart, makes you wonder what's going on, because when Katrina came, everybody was there, you know, jump in, give you a hand. This time it's like you're out here by yourself," Glaze said.

Assessment Of Flood-ravaged Library Branch Continues In Clendenin

WSAZ-TV Huntington (WV), September 12, 2016

KANAWHA COUNTY, W.Va. (WSAZ) – Kanawha County Public Library leaders say 35 to 40 people per day are using the mobile library set-up in Clendenin, following the June 23 flooding.

That location, along with the Elkview location in the Elkview Crossings Plaza, are both still closed because of flood damage.

The Clendenin location has been cleaned out after its contents were destroyed.

They are currently assessing the condition of the branch location to determine whether or not it will reopen.

The Elkview location did not sustain damage. However, it is not accessible because the bridge that

leads to the Elkview Crossings plaza has not yet been rebuilt. Leaders say they've not received an update on the status of the bridge repair.

To date the Kanawha County Public Library has received $120,000 in flood insurance to cover lost content.

Leaders say they will continue to work with FEMA to try and get more money to cover losses and the cost of temporary library locations in Elkview and Clendenin.

Monday night, the members of the library board voted to spend a nearly $11,000 grant from the West Virginia Library Commission to pay for costs of the Elk Valley Express Library Branch.

In other Kanawha County Library news, staff members have conducted an active shooter training at all of its facilities.

There will be a fire drill on Tuesday.

There was also discussion about updating the lighting at the branch location in Dunbar. In addition, board members heard about the possibility of doing a solar energy project at the St. Albans location.

ZIKA VIRUS

Obama Meets With Congressional Leaders To Hash Out Fall Agenda

By Gregory Korte And Erin Kelly

USA Today, September 12, 2016

WASHINGTON — President Obama will huddle with congressional leaders from both parties at the White House Monday in an effort to sketch out a bipartisan agenda for what remains of the election-year session.

On Obama's agenda: A spending bill to avoid a government shutdown in three weeks, more funding to combat the outbreak of the Zika virus, a Pacific trade deal, criminal justice reform and the confirmation of Merrick Garland to serve on the Supreme Court.

"It's hard to rank them in priority order, because so many of them are important. And the failure of Congress to act on some of these priorities would have significant negative consequences for the American people," said White House Press Secretary Josh Earnest. "These are priorities, each of them, where Congress has not fulfilled their responsibility to the American people."

It's the first opportunity the president has had to meet with congressional leaders since they returned from their summer recess last week. Obama returned from a nine-day Asia trip last Friday.

Congress must act soon to pass a stopgap spending bill, called a continuing resolution, funding the government until an annual appropriations bill can be passed later this year. Congressional leaders are anxious to reach a deal to prevent a government shutdown just weeks before the Nov. 8 election.

Senate Majority Leader Mitch McConnell said Monday that he hoped that funding for Zika and the Department of Veterans Affairs could be rolled into that short-term package. "Members on both sides have been working on an agreement to responsibly fund the government. We've made a lot of progress," he said.

But for that to happen, Senate Minority Leader Harry Reid said, "Republicans need to get away from their vendetta on Planned Parenthood."

The nonprofit family planning and abortion provider have been a lightning rod in the Zika debate. The House-passed Zika bill provides funding to state and local health agencies, but omits any funding of Planned Parenthood. Democrats say the agency is a major provider of health services and should get a share of the $1.1 billion in proposed Zika funding.

"They need it more than ever more with this scourge that is sweeping our country — Zika," said Reid, a Nevada Democrat.

Obama has been calling on Congress since February to approve $1.9 billion to help eradicate the mosquitoes that spread the virus and to develop a vaccine, but the House and Senate have not been able to agree on a bill because of a threatened Democratic filibuster in the Senate over Planned Parenthood and other issues.

Also scheduled to attend the meeting in the Oval Office Monday are House Speaker Paul Ryan, R-Wis., and Minority Leader Nancy Pelosi, D-Calif.

Obama is expected to talk to reporters after the meeting.

Obama Meets With Congressional Leaders Ahead Of Federal Funding Deadline

By Adam Edelman

New York Daily News, September 12, 2016

President Obama sat down Monday with congressional leaders to begin talks on a short-term spending bill that would avert a government shutdown on Oct. 1.

Lawmakers have returned to Washington for an abbreviated session in which they must pass a measure to keep the government funded.

More daunting, however, is the fate of a bill that

would provide money for the fight against the Zika virus.

And as recently as Monday afternoon, the talks seemed destined to go poorly.

Ahead of the closed-door meeting, the White House had choice words for Republican lawmakers.

"Unfortunately, they're stuck with Mitch McConnell and Paul Ryan," White House Press Secretary Josh Earnest said during his daily briefing, in a jab at Republican leadership

The talks comes as government scientists have stepped up their warnings about the spread of the Zika virus, which can cause devastating birth defects.

More than 670 pregnant women in the states and Washington, D.C., have the virus, leading to the birth of at least 17 babies with microcephaly so far.

Lawmakers left Washington seven weeks ago without resolving a dispute over money for Zika.

Obama asked Congress in February for $1.9 billion in emergency money, but legislation to partially pay for his proposal collapsed in July amid various fights, including over a Republican provision to deny money to Puerto Rican affiliates of Planned Parenthood.

Funding Planned Parenthood, Or Not, May Be Key To Keeping The Government Open

By Emmarie Huetteman

New York Times, September 12, 2016

WASHINGTON — Republican leaders looking to avoid a government shutdown one month before Election Day will have to jump a familiar hurdle: demands from some of their members to cut off funding for Planned Parenthood.

When Democrats balked once more last week at approving legislation to combat the Zika virus because the measure included limits on Planned Parenthood, some Republicans indicated a willingness to re-evaluate their position.

But the pressing question for Republicans who want to pass a stopgap spending bill to keep the government running after Sept. 30 is whether enough of their ranks are willing to leave Planned Parenthood out of the legislation.

After a meeting on Monday with congressional leaders at the White House, President Obama said he was hopeful of reaching a deal with Republicans to fund the government until after Election Day.

"Even though I know that we're in the midst of a political season and everybody is thinking about elections, there's still business to be done," Mr. Obama said.

Earlier, Senator Mitch McConnell, Republican of Kentucky and the majority leader, began procedural moves to pass a bill that would fund the government through Dec. 9 and include funds for Zika control and veterans programs.

Democrats have accused Republicans of inserting language targeting Planned Parenthood into the Zika funding legislation to bait them into blocking it. The measure would primarily withhold funding from two Planned Parenthood clinics in Puerto Rico that do not offer screening for the virus, but to Democrats, any limitation on Planned Parenthood sets a dangerous precedent that Republicans could exploit.

The measure is so vague that after multiple votes on the legislation, few from either party seem to clearly understand what the provision — which does not mention Planned Parenthood by name but places limitations almost exclusively on those two clinics — would do. Yet, in a demonstration of just how politicized Planned Parenthood has become, both sides have shown they are willing to wage war over it.

Efforts to defund Planned Parenthood, which performs abortions in addition to providing education, contraception and other forms of reproductive health care, have become such a contentious matter that there have been nine votes to cut off funding to the organization in the past two years alone, said Erica Sackin, a spokeswoman for the group.

After videos surfaced last year that critics said proved some Planned Parenthood clinics had been selling fetal tissue for a profit, a charge the organization denied, some outraged Republicans demanded the inclusion of a measure defunding it in last fall's stopgap spending measure. But Republican leaders redirected those calls into a separate measure, ultimately moving forward on the temporary spending bill.

This has been happening for years, said Senator Patty Murray, Democrat of Washington. She recounted receiving a call in 2010 from Senator Harry Reid of Nevada, the Democratic leader, shortly after congressional leaders had come to a consensus on a deal, she said. A group of House Republicans wanted to include restrictions on Planned Parenthood. "Not on my watch," Ms. Murray recalled saying.

"That was my first realization that they were willing to use the funding of Planned Parenthood as a hostage in just about anything," she said.

In the Zika fight, limitations on Planned Parenthood offered Speaker Paul D. Ryan of Wisconsin

what he needed: a way to pass the House version of the bill without Democrats. The bill passed during the late-night session gaveled in as Democrats staged their sit-in for gun restrictions in June, with the votes of some conservatives who are typically averse to increased spending.

In Florida, the only place so far in the continental United States where the disease is circulating, Zika has crept into its Senate race — which could help determine whether Republicans hold onto their majority — as Senator Marco Rubio is fending off attack ads over the proposed restrictions on Planned Parenthood.

Buried in the debate over the intersection between the Zika virus and Planned Parenthood is the murky reality of what the failed Zika bill, which could provide a framework for a temporary spending bill, would have done to the women's health organization.

The bill largely focused on funding for Profamilias, Planned Parenthood's partner in cash-strapped Puerto Rico. Because Puerto Rico has been the hardest hit by the virus, it would receive most of the money and thus be the most affected by the bill's restrictions.

Profamilias provides medical services almost entirely out of its two clinics in San Juan. They do not offer Zika testing, which tends to be done by more specialized facilities, said Marjorie Vázquez, a program director at Profamilias in San Juan, so much of their involvement in combating Zika centers on contraception distribution. Profamilias served about 7,000 patients in 2015, she said — not a particularly large number, given that about 390,000 people live in San Juan.

But because the vast majority of the clinic's clientele is poor and young, rerouting funding away from the group could have an outsize effect, some experts said.

Some House Republicans, particularly those from Florida, have at least hinted that they would be open to taking Planned Parenthood out of the ongoing Zika fight.

And Senator John Cornyn of Texas, the No. 2 Republican, said on Thursday that he was optimistic they could move forward to pass Zika funding.

"We're just going to have to work out our differences on that," he told Morning Consult.

Florence County Hosting CERT Basic Training Course

Florence (SC) Morning News, September 12, 2016

FLORENCE, S.C. – Florence County Emergency Management will host its second Community Emergency Response Team (CERT) basic training course, starting Oct. 21.

The course is open to anyone older than 18 who wants to educate themselves about safety and protection during a man-made or natural disaster. The course is free to anyone interested, and no prior training is required before taking the course.

The course teaches Florence residents about disaster preparedness, search and rescue, medical response, utility controls and fire safety among others. The course will be instructed by members of Florence County Emergency Management, Florence County EMS, and the Howe Springs Fire Department.

According to Andrew Golden of Florence County Emergency Management, the course is a key component for those wishing to become an official CERT member in Florence County.

A CERT is a group of trained volunteers who come together during a disaster or crisis. The volunteers, according to Golden, will take care of their families and themselves while also helping neighbors, suppressing small fires, providing medical aid and conducting small search and rescue operations.

Florence County Emergency Management adopted the National CERT Program after recognizing a need for the Florence community to be better prepared in case of a disaster. The National CERT Program is provided by the Federal Emergency Management Agency (FEMA) through the Department of Homeland Security.

Those interested in attending the CERT basic training course can register at fcemd.org. Space for the class is limited.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Citizens As Rescuers In Building Collapses

By Eric Holdeman

Emergency Management Magazine, September 12, 2016

The Federal Emergency Management Agency has established, in cooperation with local jurisdictions, Urban Search and Rescue Teams

These teams are scattered around the United States as shown in the link above. These are the teams that can help in building collapse situations like the Oklahoma City bombing. They are highly trained with specialized equipment and teams to deal with searching for, finding and attempting the rescue of people trapped in the rubble of a building.

Last week, at an after action review meeting from the June 2016 Cascadia Rising Earthquake Exercise, these figures were shared. I think they come from the Los Angeles Fire Department. It shows what percentages of people trapped and rescued are done at which level:

Search and Rescue

5% entombed, heavy rescue capability

15% void space non-structural, medium rescue capability

30% non-structural entrapment, light rescue capability

50% injured but not trapped, spontaneous program

The above points to the fact that the clear majority of people being rescued are not the results of urban search and rescue teams. The people performing rescues are co-workers; neighbors; passers-by on the street. ... Few if any have any training at all or likely no equipment other than those tools immediately at hand.

Here in the Puget Sound region I recall that light urban search and rescue trainings were offered to companies so that their internal staff would have the ability to extricate people who were trapped within a building. Some buildings have equipped floors with some specialized equipment, like crowbars, hydraulic jacks, blocking material, gloves, etc.

A little bit of forethought could be invaluable in having the tools necessary to provide meaningful help. A few hours of training could be all the difference in keeping people safe and giving them the basic instruction needed to make them much more effective.

Our Views: Big First Step In Federal Aid

Baton Rouge (LA) Advocate, September 12, 2016

While he's not physically bringing a check back home, Gov. John Bel Edwards and the state's delegation in Congress have achieved a significantly higher level of federal support to cover the costs of flood damages to public roads and buildings.

In a letter to Edwards, who was in Washington for two days for meetings on Capitol Hill, President Barack Obama agreed to increase the federal government's share of the costs for "public assistance" projects from 75 percent to 90 percent. State and local government agencies cover the balance for these projects, which includes debris removal and emergency response expenses.

The balance is going to be substantial, but the increase in the percentage that the U.S. government will cover makes a big difference to the state and to local governments — parishes, cities, school boards.

The dimensions of the August flooding made it likely all along that the 90 percent threshold would be reached, but until authorized by the president it was nevertheless at the top of Edwards' wish-list. Costs for mobilizing the National Guard and other responses to flooding would be covered by the higher match, as those bills come in.

The U.S. government has responded to Louisiana's plight: Obama's letter noted that the administration already has spent more than $660 million to help the state respond to the floods, including $200 million in direct assistance to flood victims.

Still, the costs to state government — already strapped because of a financial hangover left over by former Gov. Bobby Jindal's administration — makes a higher federal match rate important to the governor, as well as local leaders who face their own financial challenges. Debris removal alone is a huge task.

The governor and a bipartisan group of state leaders were in Washington to lobby for aid beyond the match rate. That decision was like getting to first base in terms of dealing with the impact of the floods, but with the governor we feel more is needed: Edwards told the president earlier that the state's infrastructure and families had sustained more than $8.7 billion in flood damage.

The governor is pitching a $2 billion package of aid that would be beyond that provided to families and agencies by the Federal Emergency Management Agency and other federal sources.

The legislative calendar in an election year is difficult but we applaud efforts by the state's leaders to unite on behalf of more assistance to the struggling communities hit by this major national disaster.

NATIONAL NEWS

California Blaze Burns Aggressively Across Steep Terrain

By Noah Berger And Kristin Bender

Associated Press, September 28, 2016

MORGAN HILL, Calif. — A blaze in a rugged area south of San Jose threatened hundreds of structures and destroyed at least one home as it burned aggressively, after charring more than 3 square miles of dry brush and timber.

A heat wave in parts of drought-stricken California worsened the wildfire that began Monday and forced hundreds of people from their homes in remote communities along the Santa Cruz Mountains.

It was 10 percent contained Tuesday night, the California Department of Forestry and Fire Protection.

One remote area where the fire burned is 30 minutes up a winding dirt road. Another is dotted with large-scale marijuana growing operations. A main route along the ridgetop is not accessible, even to firefighters, because of downed utility lines.

Flames lit up the mountainside above a roller coaster at Santa Cruz Beach Boardwalk, and a residence was reduced to rubble, though its hot tub still stood. The fire consumed a large home sitting on a hilltop plot and poured out thick, black smoke, while another house sat unscathed below.

The blaze broke out Monday during a statewide heat wave that brought witheringly low humidity and temperatures in the upper 90s.

The heat baked even coastal cities that normally benefit from the Pacific Ocean's cooling effect. But the high temperatures were expected to start easing late Tuesday.

"This fire is a good reminder that even though we are approaching October, this time of year is historically when we experience the largest and most damaging wildfires," Cal Fire spokesman Daniel Berlant said.

It threatened 300 buildings, though it's not clear if they were homes or smaller structures. The fire, which was partially under control, also burned close to television and radio towers. No injuries were reported.

Anthony Lopez returned to his home, which is still under evacuation orders, Tuesday. He was overjoyed to find his dozens of marijuana plants standing and his 1972 Buick Skylark uncharred.

Doreenann Bellamy packed her dog, photo albums and firearms into her pickup truck as she and her husband left their home.

"Everyone on the mountain has guns, and you've got to grab your guns first," she told The Mercury News in San Jose (http://bayareane.ws/2cH4hpE).

Danielle Mays anxiously waited for a neighbor to bring her Boston terrier, Layla, and her cat, Callie.

"That's it; that's what matters," Mays told the newspaper Monday. "I have fire insurance for the rest."

To the north, embers from eucalyptus trees engulfed in flames spread to 13 homes, destroying four houses in a Petaluma, California neighborhood of modest homes bordered by a major highway, authorities said.

Petaluma fire Battalion Chief Jeff Holden said damage in the other homes ranged from a scorched fence to burned backyard decks, sheds and windows.

One woman was injured and received burn blisters on the bottom of one foot.

The fire started in grass near an off ramp of Highway 101 and was blown by the wind into parched eucalyptus trees, Holden told the Press Democrat.

Authorities evacuated about 20 homes and shut down most of the freeway's northbound lanes for nearly two hours.

Dozens of firefighters from nearby cities joined Petaluma fire crews to fight the blazes. The last crew clearing the scene five hours after the fires started, Holden said.

The Latest: Barriers Protect Cedar Rapids As River Crests

Associated Press, September 27, 2016

CEDAR RAPIDS, Iowa — The Latest on flooding in Cedar Rapids, Iowa, where the Cedar River is cresting Tuesday (all times local):

11:45 a.m.

Officials in Cedar Rapids say an elaborate system of temporary floodwalls is successfully protecting thousands of homes and businesses from floodwaters.

Iowa's second-largest city said its hastily-erected 9.8-mile system of Hesco barriers and earthen berms was largely holding back the Cedar River, which was cresting Tuesday at its second-highest level in history.

As of Tuesday morning, city officials said the barriers had prevented most damage but that some buildings and homes near the river will likely have water in their basements.

City workers and contractors worked through the night to pump out water that seeped through the barriers and that came up through the sewer system.

Firefighters and police also rescued a woman who was swept away Monday afternoon by the river.

___

9:10 a.m.

The National Weather Service has lowered its forecast for the Cedar River's crest in Cedar Rapids.

The river is now expected to crest in Iowa's second-largest city at just over 22 feet, rather than 23 feet.

That's 10 feet above flood stage and considered major flooding, but it's still 9 feet below the record crest in 2008 that caused devastating flooding in the city.

Forecasters said Tuesday morning that they expect the river to crest in the next few hours.

City spokeswoman Sara Baughman (BAHF--muhn) says officials are happy to see the new figure. She says the river is expected to stay at that crest for several hours.

She says city officials are "cautiously optimistic" the city's defenses will hold as the river begins to drop.

The weather service expects the river will be back below flood stage sometime Monday.

___

6:30 a.m.

A city spokeswoman says Cedar Rapids' temporary flood protection system is holding as the Cedar River rises toward its expected crest of 23 feet — 11 feet above flood stage.

At 6 a.m. Tuesday, the water was less than 15 inches from its projected peak, which would be more than 8 feet below the 2008 record that led to devastating flooding.

Spokeswoman Sara Baughman (BAHF'-muhn) says there is some minor roadway flooding early Tuesday from storm sewer backup just west of the river downtown, but that the water is being pumped back into the river. Baughman also says water has risen onto Riverfront Park on the south end of Mays Island, but that it didn't appear to have reached the Linn County Courthouse.

She says there have been no reports of looting inside the evacuation zone.

___

12:10 a.m.

Residents of Cedar Rapids, Iowa's second-largest city, hope a temporary floodwall that is protecting thousands of homes and downtown buildings from the rain-swollen Cedar River will hold as the rain-swollen Cedar River crests.

The river is expected to reach its peak Tuesday morning at 23 feet before slowly falling through the week. Residents fear a devastating flood like the one that hit the eastern Iowa city of 130,000 in 2008.

City crews and residents have been stacking sandbags and building larger barriers for days in anticipation of the high water, which followed days of heavy rain in northern Iowa.

Schools have been cancelled through Thursday and the city's downtown and some neighborhoods are like ghost towns as resident abide by a request to evacuate.

Cedar Rapids Is Happy With Its Flood Barriers As Cedar River Crests

Associated Press, September 27, 2016

CEDAR RAPIDS, Iowa (AP) — An elaborate system of temporary flood walls largely protected Cedar Rapids homes and businesses on Tuesday as the river that runs through the city reached its second-highest peak ever.

City officials said the 9.8-mile system of Hesco barriers and earthen berms that contractors erected over the weekend was successfully holding back the rain-swollen Cedar River.

The city, Iowa's second largest, received good news as the river crested Tuesday morning at 22.1 feet, lower than predicted. That was 9 feet below the 2008 flood that destroyed thousands of homes and businesses in the worst natural disaster in Iowa history.

The barriers used to hold back the floodwaters consist of steel mesh panels, lined with a thick polypropylene material that can be quickly filled with sand or dirt, usually using a front-loader. They have also have been used extensively by the military.

City crews had worked through the night to patch any weaknesses in the protection system and pump out water that seeped through the barriers or came up through the saturated ground.

"City employees and contractors worked in really heroic ways to make sure the temporary system we put in place was fully functional," said city manager Jeff Pomeranz.

Their work continued Tuesday as the city turned its focus underground to its pressure-packed sewer system, which officials worried could send water shooting onto streets and create dangerous conditions for any bystanders.

"The enemy now is what we don't see," Pomeranz said.

Crews pumped water back into the river Tuesday in downtown and surrounding neighborhoods, which were largely abandoned as residents heeded the city's call to evacuate.

Nick Jelinek, 37, said the flood protection was working "great" as he pumped water out of the basement of a business building he owns in the usually bustling New Bo district. "This is as good as it could go," he said.

While the protection system was largely working, city officials said that many homes and businesses near the river will likely have water in their basements. They warned about the prospect of residential sewer backups and structural damage.

It will be a few more days before residents are allowed to return to their homes and businesses and key roads reopen. Public schools will remain closed today.

Firefighters rescued a woman Monday who had been swept away by the river north of downtown. She was able to cling to a tree until rescuers reached her.

Barriers Used To Protect Soldiers Now Stopping Floodwaters

By Ryan Foley And Scott McFetridge

Associated Press, September 27, 2016

CEDAR RAPIDS, Iowa — Iowa's second-largest city has managed to keep flooding at bay largely because of barriers that were widely used to protect soldiers in Bosnia, Iraq and Afghanistan.

Crews in Cedar Rapids hastily erected Hesco barriers along nearly 10 miles of the Cedar River through neighborhoods and downtown. As of Tuesday morning, the sand-filled containers had protected thousands of properties, some up to 4 feet beneath the surging waterway.

The barriers are a key reason Cedar Rapids officials are hopeful they can largely avoid flooding, unlike in 2008 when higher river levels inundated 10 square miles of the city, causing billions of dollars in damage.

"In 2008, we felt defenseless," Mayor Ron Corbett said. "In 2016, we took action and mobilized."

The barriers were invented by British entrepreneur James Heselden, a former coal miner who used them to stop erosion on his property. After his invention received media attention, the United Kingdom's military realized the barriers could be used to replace sandbags that protected soldiers from blasts in Bosnia, said Aaron Ackley, Hesco's director of emergency response.

The U.S. military came to the same conclusion and began using the barriers extensively in Iraq and Afghanistan, eventually totaling more than 30,000 miles of the containers, said Ackley, who first saw the barriers when he served with the U.S. Army in Bosnia.

"There's an unbelievable amount deployed for military use," Ackley said. "Every air base, every forward-operating base, every fire base is surrounded by Hesco."

As they were used more extensively by the military, emergency planners around the U.S. and the Army Corps of Engineers realized their ability to quickly protect against flooding and they have grown in popularity.

New York City has installed a network of what it calls "geotextile" bags along Rockaway Beach, weighing a total of 50 million pounds, to help protect the shoreline after Hurricane Sandy, said Meghan Lalor, a spokeswoman for the city's parks department. Containers also have been used to prevent flooding recently in Monroe, Louisiana, along the Los Angeles River in Los Angeles and spots in New Mexico where wildfires destroyed plants and led to increased flooding risks.

The barriers are comprised of steel mesh panels, lined with a thick polypropylene material that can be quickly filled with sand or dirt, usually using a front-loader. The barriers keep water from seeping through to the other side, but allow moisture to drain out the bottom.

Cedar Rapids Assistant City Manager Sandi Fowler said the city bought 1½ miles of Hesco barriers in 2010 as part of its flood protection plan, but this marks the first time they have been deployed. Through Hesco, the city acquired the rest of its 9.8 miles from the University of Iowa, which had them in storage. The new Hescos cost $1.4 million, but with labor costs added, the entire temporary flood system totaled about $5 million.

Such selling and sharing of the barriers is common as new disasters arise. Fowler said the city has given its Hesco barriers to other communities facing flooding twice since 2010, and they have then been replenished by the company. They have been stored in different municipal buildings around the city.

"Ours haven't been sitting on the shelf for six years," Fowler said.

Fowler said the city hired contractors to install the barriers, which are then wrapped in plastic to repel water. Sandbags are used to hold the plastic onto the barriers.

During floods elsewhere, the city learned that Hesco barriers would tip over because the river undermines the ground beneath them, so Cedar Rapids placed them on concrete city streets and trails.

"We're feeling very good, very, very confident, that this temporary system that we built in less than two days will protect our city," City Manager Jeff Pomeranz said.

Iowa Flood Is A Flop, And Thank God For That

USA Today, September 28, 2016

CEDAR RAPIDS, Iowa — As with most sequels, #Flood2016 as seen from Iowa's second-largest city lacked the drama of the original blockbuster.

But we're in the Heartland, not Hollywood. So that's very good news.

When a natural disaster underperforms, that means lives are saved and more homes stay safe.

Also like a typical sequel, the plot of this flood has been more ponderous and procedural. And everybody saw it coming, with about five days to heave sandbags and brace for impact.

Tuesday was peak day, when the Cedar River here crested just below 22 feet — a foot lower than the most recent estimate, and at least a few feet below what had been feared last week when rains hit. And, of course, it was far less water than the record 31-foot crest eight years ago that swamped 10 square miles of the city.

"The other 3 feet would've made a huge difference around here," said Carol Ekstrand, standing just west of the river with friend Scott Pinter in front of his dry Cedar River Landing bar. "It bought a lot of people their homes and businesses."

Down the street, plant manager Rick Schmerbach oversaw the effort to pump about 6 inches of water from the basement of Johnson Gas Appliance. This flood turned out to be more a story of the unseen enemy of seepage into basements, with pressure from the swollen river forcing water to gurgle up from below.

As many neighborhoods emptied of some 10,000 voluntary evacuees, an eerie silence descended on parts of the city.

“My wife says it feels like an episode of The Walking Dead down here,” said Dylan Smith, walking his blue heeler-pit bull mix, Nahla, Tuesday morning in the trendy NewBo business district along the northeast riverbank near downtown. What the area lacked in bloodthirsty zombies it more than made up for in stoic sandbags and the drone of water pumps.

About 10 miles of temporary flood barriers — HESCO-brand sand-filled cubes of wire frame and fabric — were assembled along the river for $5 million to $6 million within a few days, as if some giant Lego project. The city also deployed 250,000 sandbags, many of which remained dry and can be recycled.

The drama had ebbed enough at Tuesday morning’s press conference that Mayor Ron Corbett took time to get philosophical about comparisons between the wait-and-see nervous tension of a flood crest day and Election Day. And the local Red Cross spokesman read from his journal to help encourage residents to write about their feelings on the flood.

The obvious horrible tragedy Tuesday had nothing to do with the flood, except perhaps a tangential connection that school had been canceled for the week: A 13-year-old girl was shot and killed on the southeast side of the city, a murder that had squad cars abandoning their flood patrols to swarm to the scene and swiftly arrest three young suspects.

Even in the last massive flood nobody died as a result of the disaster itself.

“It’s not time yet to go back to life as usual,” City Manager Jeff Pomeranz said Tuesday, “but we’re getting close.”

On the sand-swept vacant streets of the core downtown business district it was easy to spot metallic birds that have proliferated in the last eight years: drone cameras launched to survey the watery landscape by air.

We should remember that these are the early days of #Flood2016. The water isn’t expected to drop below major flood stage until the weekend. In the early days of any disaster, summaries and statistics can fluctuate as frequently and wildly as the forecast. The broader themes and lessons learned from this flood haven’t had time to jell.

But this much seems clear, or at least it’s a local consensus based on nearly everybody I talked to: Cedar Rapids deserves high marks for its preparedness and response. As a journalist I would add that the daily public city council meetings and press conferences, complete with a Facebook Live feed and a sign language interpreter for the hearing impaired, provided a model of open government in the face of disaster. Any reporter or citizen could walk into the Ice Arena, sit down, and listen in as the council received updates from local chiefs and department heads.

As part of the morning ritual, city officials tended to hammer on the abiding need for permanent flood protection that could cost 100 times as much as the HESCO barriers, about half-a-billion dollars.

As early as Sunday, Corbett touched on the city’s classic east-west divide: The rebuilt downtown business district on the east and the residential neighborhoods such as Time Check to the west that have been decimated by flood buyouts. He said the city couldn’t accept a solution that protects only the richer eastern side.

“We wanted to protect both sides of the river,” he said. “We didn’t turn to some bureaucratic formula to make that decision. … The downtown wasn’t more important than Time Check.”

City Councilwoman Ann Poe later made a case for her city: “We process the grain that comes from all over the state,” she said. “So protecting this city is economically the right thing to do for this state.”

By Tuesday, a resident stood up and asked the city manager, “Why can’t we just build (permanent flood protection) ourselves and quit this monkeying around?”

Pomeranz reiterated that it’s “great being on the list” for federal flood relief passed through Congress and signed by the president, he said, “(but) we need the dollars, and that comes through appropriation.”

State Sen. Rob Hogg of Cedar Rapids, who shouldered his share of sandbagging in recent days and also vacated his law office, remains upset that permanent flood protection hasn’t been built to “provide certainty and security.”

“The politically responsible people have ceded their authority to unelected bureaucrats,” he said.

Self-described “ecological restorationist” Rich Patterson of Cedar Rapids has a question for his neighbors: “How many floods is it going to take before it sinks in?”

Patterson is an aquatic biologist originally from New Jersey who retired a few years ago as the longtime executive director of the Indian Creek Nature Center. He has written decades of pro-environmental opinion pieces to implore his fellow Iowans to act, long feeling like a lonely voice in the wilderness, and not because he plants his yards in native prairie.

"I'm really kind of tired of the heroic stuff," he said of the way the city tends to focus on the human drama of floods. And he doesn't think any permanent levee can be built high enough if officials don't also take other measures.

"Why don't we just do the dull and boring stuff?" he asked.

Wednesday's Forecast: Rainy Great Lakes, Mid-Atlantic

By Doyle Rice

USA Today, September 28, 2016

A wet Wednesday is forecast for the Great Lakes and Ohio Valley. By the evening and into Thursday, drenching rain could lead to flooding in the Mid-Atlantic and Central Appalachians.

Midwest, East: A soggy day is on tap for the Great Lakes and Ohio Valley. By the evening and into Thursday, heavy rain will pelt the Mid-Atlantic and central Appalachians, where flooding is a concern.

West: The northern Rockies will be warm and dry Wednesday while temperatures stay cool over the Pacific Northwest. A few afternoon showers and thunderstorms are possible over portions of the Southwest and southern Rockies.

Weather history for Sept. 28: In 1917, a hurricane hit Pensacola, Fla., dropping the city's barometric pressure to an all-time low of 28.51 inches. In 1984, Washington, D.C., had its coolest September day on record, with a high of only 52 degrees.

P.M. Update: An Enticing Evening Gives Way To Growing Rain Chances Wednesday; Flash Flood Watch

By Ian Livingston

Washington Post, September 27, 2016

* Flash flood watch late Wednesday to Friday morning for 3 to 5 inches of rain and locally higher amounts *

Morning clouds gave way to brilliant sunshine this afternoon. It ended up quite nice overall as temperatures reached into the mid-70s in most spots. Conditions remain pleasant into and through the evening. Enjoy it while you can, because prolonged storminess is inbound.

Through tonight: We should stay rather clear through the evening and into the early overnight, with the exception of areas well south and east where it's a bit cloudier already. Clouds will be streaming back into the whole area late. It'll end up cloudy after midnight, and some patchy fog is possible as well. A few showers are possible as we get toward morning. It shouldn't be too widespread or heavy, though. Lows range from the mid-50s to the low-and-mid 60s.

Tomorrow (Wednesday): Showers are possible in the morning, and that risk continues off and on through the day. I don't think we'll see a lot of widespread heavy stuff just yet, but it's likely coming. But any showers that move through could be briefly moderate to heavy. Otherwise, skies are cloudy with winds out of the northeast around 10 mph. Highs should crack 70, but mid-70s might be pushing it if clouds are thick enough.

See Matt Rogers's forecast through the weekend. And if you haven't already, join us on Facebook and follow us on Twitter and Instagram. For related traffic news, check out Dr. Gridlock.

Pollen update: Mold spores are MODERATE/HIGH. Weed and tree pollen is LOW/MODERATE. Grass pollen is LOW.

Want our 5 a.m. forecast delivered to your email in-box? Subscribe here.

Rain: It's coming. There's not much change from earlier. There's not much else going on out there to talk about today, either. So here's an updated rainfall forecast from the Weather Prediction Center.

D.C.-area Forecast: Heavy Rain Threat Today Into Friday; Some Potential For Flooding

By Dan Stillman

Washington Post, September 28, 2016

* Flash flood watch late Wednesday into Friday morning *

TODAY'S DAILY DIGIT

A somewhat subjective rating of the day's weather, on a scale of 0 to 10.

6/10: Can't downgrade clouds and potential showers too much, as we really need some rain.

EXPRESS FORECAST

Today: Mostly cloudy, occasional showers & storms. Highs: Low-to-mid 70s.

Tonight: Rain becoming likely. Lows: Mid-60s.

Tomorrow: Rain likely, heavy at times. Highs: Upper 60s to low 70s.

View the current weather conditions at The Washington Post headquarters.

FORECAST IN DETAIL

We need some rain, and it looks like we'll get a good dose of it over the next few days, with even some potential for localized flooding. As usual, it's not certain where the heaviest rains will set up, but the entire metro area is at risk for at least 1-3″ of rain, and totals upward of 4-5″ aren't out of the question. We'll trend nicer and brighter this weekend.

Today (Wednesday): Might see some patchy morning fog or mist, with occasional showers and storms through the course of the day. Highs should reach the low-to-mid 70s under mostly cloudy skies, with light winds from the east-southeast around 5-10 mph. Confidence: Medium-High

Tonight: A steadier rain is likely to develop during the evening or overnight, and should be heavy at times. A bit of lightning and thunder is possible as well. Winds increase from the east, to around 10-15 mph, as lows dip to the mid-60s. Confidence: Medium

Follow us on Facebook, Twitter, and Instagram for the latest updates. For related traffic news, check out Dr. Gridlock. Keep reading for the forecast through the weekend…

Tomorrow (Thursday): Rain is likely during the much of the day. And again it should be heavy at times, with a bit of thunder still possible. The rain, overcast skies and a cool breeze from the east (around 10-15 mph) help hold highs to the upper 60s to low 70s. Flooding could become a concern as the day goes on and into the night. Confidence: Medium

Tomorrow night: Rain remains likely with localized flooding possible. Overcast skies continue to go nowhere fast as lows settle in the 60s. Confidence: Medium

A LOOK AHEAD

With the upper-level area of low pressure still spinning to our west, we hold on to the chance of occasional lighter showers Friday into Friday night. Mostly cloudy skies persist Friday as well, with highs in the upper 60s to mid-70s. Confidence: Low-Medium

The weekend features improving weather. Clouds and a shower chance may linger early Saturday, but skies should eventually turn partly sunny, with afternoon highs reaching the 70s. The upper-level low then finally lifts away to our north, leaving us a partly sunny Sunday, with highs still in the 70s and only a slight chance of a shower. Confidence: Medium

Potential For Heavy Rain In DC Region Wednesday To Friday, Flash Flood Watch Issued

By Jason Samenow

Washington Post, September 27, 2016

* Flash flood watch late Wednesday to Friday morning for 3 to 5 inches of rain and locally higher amounts *

Starting Wednesday, a long duration, heavy rain event is likely in the D.C. area and much of the Mid-Atlantic.

Several inches of rain and areas of flooding are possible in the hardest-hit areas, although amounts are likely to vary widely throughout the region.

The period of steadiest and heaviest rain is expected between Wednesday night and Thursday night. Intermittent and more widely scattered showers may start as early as Wednesday morning and linger into the weekend.

Several ingredients are in place for a significant event, but specific amounts will depend on exactly where the heaviest rain bands set up. Model forecasts range from one to eight inches of rain between Wednesday and Friday, but most concentrate around three inches.

As the D.C. region has been abnormally dry since August, a three-inch soaking over 24 to 48 hours would be beneficial. It would mostly erase the rainfall deficit that has built up.

However, if the heaviest model simulations are correct, and more than four inches of rain fall, then flooding would become a concern.

Some areas could get hit repeatedly by waves of torrential rainfall and embedded thunderstorms, in a process known as "training." This would cause streams to rise and overflow their banks, and poor drainage areas to be overcome. Remember to never attempt to drive through flooded roads.

The National Weather Service indicates there is a slight risk of "excessive rainfall" Wednesday night and a slight to moderate risk of excessive rainfall Thursday. Excessive rainfall is defined as the quantity of water that would trigger flash flooding.

The setup for this event shares the characteristics of those that have produced the most extreme rainfall at this time of year in historical records.

A strong area of low pressure at high altitudes is forecast to dive south from the Great Lakes on Wednesday into the Tennessee Valley by Thursday.

This area of low pressure will be cut off from atmospheric steering currents, meaning it will sit and spin for up to several days. The low pressure area's counterclockwise circulation will continuously draw very moist air from the Atlantic Ocean into the Mid-Atlantic.

"The set-up for this event basically is consistent with that of an East Coast atmospheric river given the long-fetch Atlantic trajectory that will be in place," writes the National Weather Service. "Atmospheric rivers," common along the West Coast, act like fire hoses, channeling streams of moisture in narrow swaths and then unloading a deluge.

Capital Weather Gang's Wes Junker, who has specialized knowledge of Mid-Atlantic flash flooding, thinks areas of flooding will be difficult to avoid somewhere between central Virginia and southern Pennsylvania.

"Upper-level low [pressure areas] west of the mountains that stall providing a prolonged period of low-level easterly flow tend to be big rainmakers, especially along the east slopes of the mountains," Junker said. "Usually the heaviest rainfall occurs west of the city, although it's hard to say exactly where the bulls-eye will set up."

Over the next day, determining how much rain falls, and where, emerges as the biggest forecast challenge. Some areas may receive only moderate amounts of rain, while record-challenging amounts could occur in others, which would lead to flooding.

We should have a better idea of how much rain will fall and where on Wednesday, although — even then — upper-level low-pressure systems and the distribution of rainfall they generate are notoriously difficult to forecast.

Stay tuned to our posts for the latest, and find rainfall simulations from several models below:

European model: 2.5-7 inches

GFS model: 2-6 inches

NAM model: 1-4 inches

Wes Junker, Ian Livingston and Jeff Halverson contributed to this post. This post, originally posted early Tuesday afternoon, was updated Tuesday evening.

Flood Damage Estimates Rise In Waseca

Associated Press, September 27, 2016

WASECA, Minn. (AP) – Estimates of flood damage are rising in Waseca.

Waseca County's emergency management director, Nancy Lageson, tells The Free Press of Mankato (http://bit.ly/2dzidUv) that the county's assessment has doubled since last week's heavy rain, with at least 75 percent of the homes in the area damaged by flooding.

A line nearly 200 yards long of trucks and cars filled with wet carpets, furniture and waterlogged TVs and appliances was lined up Monday at the city's debris dump site.

John McGuire was hauling a trailer with carpet and furniture and was making his fifth trip to the dump, with more to come. He said his family had 10 inches of water in their basement.

Heavy Rains Leave Saturated Soil Across Wisconsin

Associated Press, September 27, 2016

MADISON, Wis. (AP) — The heavy rains that have caused flooding and landslides in parts of Wisconsin have also saturated the soil at record levels around the state.

The Wisconsin State Journal reports (http://bit.ly/2d6AwgV) that surplus moisture was found in 40 percent of the state's topsoil last week and 35 percent of its subsoil. Those are the highest levels for September and could raise the risk of future flooding.

That's according to the National Agricultural Statistics Service.

Two people died in Wisconsin and a train derailed last week after torrential rain in western and central counties. Flood warnings continue in Crawford, Grant, Juneau, La Crosse, Sauk and Vernon counties.

Despite the wet weather, the state's crops are OK with 87 percent of corn and 84 percent of soybeans rating good or excellent.

Several Utah Residents Still Can't Return Home After Tornado

Associated Press, September 27, 2016

WASHINGTON TERRACE, Utah (AP) – More than two dozen people in northern Utah are unable to return to their homes several days after a tornado tore through their neighborhood.

KUTV reports (http://bit.ly/2dds0x5) that a tornado ravaged the Washington Terrace community on Sept. 22, temporarily displacing several people and damaging one home beyond repair.

Gaelynn Sewell and her husband say the tornado ripped off half of their roof, meaning they will only be able to return to their house if it's rebuilt. She says they are waiting for information from insurance adjusters, who have to call experts to assess the damage because tornados rarely hit Utah.

City Manager Tom Hanson says the city has streamlined the building permit process and waived fees so families can return home as soon as possible.

School's New Antenna Pings Weather Satellites For Public Use

Associated Press, September 28, 2016

HAMPTON, Va. — Virginia's Hampton Roads region now has one of the most advanced weather monitoring systems in the country.

Hampton University says it has installed a "direct broadcast antenna" that connects with weather satellites owned by NASA and the National Oceanic and Atmospheric Administration.

The school says the antenna will rival most weather channels and meteorologists. The information it collects will be publicly available.

That means residents can get real-time data on the area's hurricanes, tornadoes and other severe weather before or at the same time as many forecasters.

NASA helped fund the $5 million device, which was manufactured by Orbital Systems. The school says it's one of just 10 such antennas in the country.

More Mitigation Meetings On Tap In West Virginia Flood Areas

Associated Press, September 28, 2016

CHARLESTON, W.Va. (AP) – Several more meetings are coming up to help homeowners get grants to reduce risks during future disasters in flood-ravaged areas.

The Division of Homeland Security and Emergency Management says a meeting about the federal Hazard Mitigation Grant Program will take place Wednesday evening at Alumni Hall in Richwood.

Two more evening meetings will follow – one on Oct. 3 at Workers United Local 863 in White Sulphur Springs, and a second on Oct. 4 at Rainelle Elementary.

The June 23 floods killed 23 and destroyed homes, businesses and infrastructure.

How Big Is Louisiana's Deficit? Figure Expected Next Month

By Melinda Deslatte

Associated Press, September 27, 2016

BATON ROUGE, La. (AP) — A dollar figure for Louisiana's budget deficit will be released next month, after the state's financial analysts finish reconciling the accounting books.

Louisiana leaders expect the state spent more than it brought into the treasury in the budget year that ended June 30. Gov. John Bel Edwards' administration says the gap could range from $200 million up to $300 million.

But the closing of the books on a state government budget year, with billions in income and spending, is complex.

The Revenue Estimating Conference — the state's income forecasting panel — was told Tuesday the accounting work is still underway. A price tag for the deficit is expected to come at the Oct. 28 meeting of the joint House and Senate budget committee.

WHY THE DEFICIT?

Business tax collections are driving the deficit prediction, bringing in less than expected in the state's official forecast.

Louisiana has struggled through repeated budget shortfalls in the last nine years amid the national recession, the oil price slump and the continued use by former Gov. Bobby Jindal and lawmakers of short-term fixes to close holes. Lawmakers, at Edwards' urging, recently raised an estimated $1.5 billion in taxes to shrink cuts in this year's spending plan.

LSU economist Jim Richardson, who sits on the four-member Revenue Estimating Conference, warned of the expected deficit when lawmakers were meeting in a legislative session on taxes. But the House balked at further tax hikes to fill a gap that wasn't yet certain.

HOW CAN THE DEFICIT BE CLOSED?

Whatever gap exists has to be closed in the current 2016-17 budget year. Deficits can be closed with either new money or cuts.

Republican leaders in the House are hoping the tax hikes they recently passed will bring in more money than expected and could help offset last year's deficit. But Louisiana's share of response and recovery costs to the catastrophic mid-August flooding could heap new shortfalls on the state and erase gains that might show up in tax collections.

The Edwards administration asked agencies at the start of the current budget year on July 1 to lessen spending as a safeguard against likely cuts.

It also has renegotiated Jindal-era deals that privatized the services provided by the LSU charity hospitals and has identified a way to draw down more federal financing for the deals, which could help cut the state's costs and shrink the budget gap.

CAN THE RAINY DAY FUND BE USED?

Senate President John Alario, R-Westwego, said he's looking at whether Louisiana can tap into its "rainy day" fund, which contains $359 million. But he's not certain that the state will meet the constitutional triggers needed to be able to use up to $120 million of the fund.

"We're looking at everything, if it's constitutionally available to us," Alario said Tuesday. But he added: "I'm not anticipating that we will be able to get to it."

GOP: Edwards Shouldn't Have Been Fundraising In Washington

Associated Press, September 27, 2016

BATON ROUGE, La. (AP) — The Republican Party is criticizing Democratic Gov. John Bel Edwards for attending a fundraiser for his re-election campaign while on a Washington trip lobbying Congress for flood aid.

The fundraiser was held at a lobbying firm office, hosted by Democratic former U.S. Sens. John Breaux, J. Bennett Johnston and Mary Landrieu.

Jason Doré, state GOP executive director, said Tuesday the fundraiser "took precious time" away from a trip aimed at building support for disaster relief.

Edwards spokesman Richard Carbo said the Thursday evening fundraiser didn't disrupt any of the governor's meetings. The trip was originally planned for Edwards to speak at an education event, and the congressional talks were added after the flood.

Carbo says the Edwards campaign, not the state, paid for hotel rooms the night of the fundraiser.

Elizabeth Warren Is "Past Sick And Tired" Of Republicans Who Only Help Their Own

Huffington Post, September 27, 2016

WASHINGTON — If Republicans don't want to help the constituents of Democratic lawmakers when they face catastrophe, why should Democrats rush to the aid of voters in GOP districts in their times of trouble?

Sen. Elizabeth Warren (D-Mass.) had a simple answer to that Tuesday. Because it's the right thing to do, she said in a blistering floor speech that hammered Republicans for taking exactly the opposite approach.

"I am past sick and tired of Republican senators who come here to demand federal funding when their communities are hit by a crisis but who block help when other states need it," Warren said, referring specifically to the GOP's failure to act on the lead-pipe crisis in Flint, Michigan.

"Their philosophy screams, 'I want mine, but the rest of you are on your own,'" Warren said. "It's ugly, it's un-American and it's just plain wrong."

The Massachusetts senator named no names, but Senate Minority Leader Harry Reid (D-Nev.) had singled out Sen. Bill Cassidy (R-La.) earlier in the day for telling NPR that aid for his flood-ravaged state should not be held "hostage because of other people's grief."

Cassidy complained that quick relief for Louisiana should not be held up by Democrats who have been trying for a year to get aid to some 100,000 residents of Flint, about half of whom are African-American.

Over the course of that year, Republicans have argued repeatedly that the Flint problem is a state issue and that any federal aid should be offset by cuts elsewhere. The $220 million Flint bill, which is now stalled in Congress, would be paid for by cutting a $250 million tax subsidy that helps the auto industry.

By contrast, Republicans have added some $500 million to a stopgap government funding bill in order to help flood victims in Louisiana and other Southern states. That provision has no offset and would add to the nation's debt.

"Like Flint, Louisiana received a federal disaster declaration to make the thousands of people who've lost their homes eligible for our help," Warren said. "Congressional Republicans, urged on by the two Republican senators from Louisiana, have decided to give Louisiana the support that it needs to recover from this disaster as part of the government funding bill."

Warren said it was "great" that Louisiana would get that help, but slammed the GOP for hypocrisy.

"The Republicans who control Congress say there will be nothing for Flint. This is raw politics," she said. "Two Republicans represent Louisiana and two Democrats represent Michigan. Congress is controlled by Republicans, so Louisiana gets immediate help, but after a year of waiting, Michigan gets told to pound sand. Is this what we've come to?"

Democrats may yet obtain aid for Flint by refusing to vote for the overall spending bill, which would fund the government into December, until the cash for the Michigan city is guaranteed, too. One way that may happen is if Senate Majority Leader Mitch McConnell (R-Ky.) pulls the Louisiana funding from the spending bill and links it to the Flint aid. He said Tuesday that he was considering such a step.

House Republicans To Allow Flint Vote

By Lindsey McPherson

Roll Call, September 28, 2016

House Republicans late Tuesday acquiesced to Democrats' demands to address the Flint, Michigan, water contamination crisis, when the Rules Committee voted to allow an amendment to a water resources measure that would authorize $170 million in assistance.

The move comes just one day after the Rules panel blocked a similar attempt to get a vote on Flint aid as the chamber took up the Water Resources Development Act. The change of heart signals interest in resolving a stalemate over Flint that has held up a must-pass stopgap spending bill to keep government agencies running into December.

An aide to House Minority Leader Nancy Pelosi told Roll Call that the amendment the Rules Committee made in order by voice vote represents a bipartisan agreement between the minority leader and Speaker Paul D. Ryan "to allow germane authorization language to be added to WRDA as an amendment that will, at the end of the day, provide the necessary funding Flint needs in the final WRDA conference report."

The amendment authorizes the federal government to provide $170 million to communities like Flint. The actual inclusion of the money is expected to come later as part of a House and Senate conference committee on the WRDA bill.

Earlier Tuesday, a procedural vote in the Senate on a continuing resolution failed to attract the 60 votes needed to advance the package, in part because Democrats objected to the way the GOP included aid for states affected by floods but didn't for Flint, which has been dealing with contaminated water for more than year.

The Senate had already authorized $220 million in similar aid, with an equal amount of offsets, as part of its version of the WRDA. However, Democrats have been pushing to attach the Flint package to the CR since it's a must-pass bill and there was no guarantee House Republicans would agree to take up the issue as part of the WRDA.

Ryan and House GOP leaders have said they see the WRDA as the proper place to debate Flint funding, not the CR. But until the Rules Committee decision Tuesday night, there was no plan to attach Flint aid to the WRDA on the House bill.

Democrats had been skeptical of GOP leaders' assurances that Flint aid would be addressed in a conference committee.

"There's no way I can imagine us leaving town and then taking sort of a promise that we will get to you later," Rep. Dan Kildee, a Michigan Democrat who represents Flint, told reporters Tuesday. "And I'll tell you why. Later is worse for Flint. … Time works against the city."

While the Rules Committee decision does not provide any guarantees that Flint aid will get to President Barack Obama's desk as part of the WRDA — the House still has to adopt the authorizing amendment and the conference committee will have to provide money for Flint aid in the final measure — it greatly increases the likelihood. Kildee has said he believes there are plenty of House Republicans who would join Democrats in supporting aid for Flint.

The mere scheduling of a House vote on Flint may be enough to get Senate Democrats to stop blocking the CR, since inclusion of money for the city was their main objection. But since the amendment does not provide any actual money, it's unclear whether it will be far enough. Since the deal has Pelosi's backing, if the Flint authorizing amendment is adopted as part of the WRDA, she will likely be able to convince House Democrats to pass the CR without Flint.

Democrats still object to some aspects of the Senate GOP's continuing resolution, including a provision to block the Securities and Exchange Commission from adopting a rule requiring corporations to disclose political donations. But with government funding set to expire after Sept. 30, those objections are unlikely to hold up the CR from moving forward.

Many House Republicans, including Ryan, have voiced concerns about providing funding to help Flint recover from its water crisis because they see it as a local government issue and worry that it sets a precedent for other local governments to seek help from the federal government for local issues. A vote on the authorizing language should test exactly how much opposition exists because of that concern.

House Paves The Way For Flint Aid In Water Bill

By Melanie Zanona

The Hill, September 27, 2016

House leaders have reached a deal to potentially include emergency funding for lead-contaminated communities like Flint, Mich., in a waterways bill in a move that is designed to stave off an election-year government shutdown later this week.

The agreement comes after Senate Democrats and a handful of Republicans blocked a stop-gap spending bill to fund the government past Sept. 30. Democrats opposed the legislation because it lacked Flint aid but included help for Louisiana flood victims.

The House Rules Committee agreed late Tuesday night to allow a floor vote on a bipartisan amendment from Reps. Dan Kildee (D-Mich.) and John Moolenar (R-Mich.) that would authorize up to $170 million for communities around the country that are facing a drinking water crisis.

The panel reversed course from a meeting on Monday, when committee lawmakers said they could not waive a budgetary point of order for a $220 million Flint amendment offered by Kildee to the water infrastructure bill.

Chairman Pete Sessions (R-Texas) praised lawmakers from both sides of the aisle on Tuesday for their “hard work over the past couple of hours” on the deal.

A Senate-passed version of the waterways bill included a $220 million Flint aid package, but the House version lacked the same drinking water provisions due to committee jurisdictional differences.

GOP leadership had assured lawmakers that the Flint issue could be dealt with in conference committee negotiations on the water bill, but Democrats wanted a stronger show of good faith from House Republicans.

The full House will now vote on the Flint amendment Wednesday, although it’s unclear just how much support it will garner. The upper and lower chambers also would still need to reconcile their two bills.

But the breakthrough could remove Democratic opposition to a continuing resolution that lacks Flint aid.

Rep. Jared Polis (D-Colo.) said he looks forward to reading through the language and hopes that the compromise lives up to its promise of helping the children and residents of Flint.

Funding Bill Rejected As Shutdown Nears

By Jordain Carney

The Hill, September 27, 2016

Senate Democrats on Tuesday blocked a short-term funding bill for the government over the water crisis in Flint, Mich., moving Congress one step closer to a shutdown in the midst of a presidential election.

Senators voted 45-55 on a GOP resolution that would fund the government through Dec. 9, but not provide financial aid for Flint. Sixty votes were needed to move forward with the bill.

Sens. Joe Donnelly (Ind.), Joe Manchin (W.Va.), Bill Nelson (Fla.) and Jon Tester (Mont.) were the only Democrats to support the continuing resolution (CR). Thirteen Republicans voted against the leadership-backed proposal.

Democrats are digging in on their demand that funding for Flint be included in the spending bill, which already includes emergency help for flood victims in Louisiana, Maryland and West Virginia.

Democrats, while stressing they don’t oppose the flood aid, argue any short-term funding bill shouldn’t include the flood money unless it also helps Flint.

Senate Majority Leader Mitch McConnell (R-Ky.) didn’t shut the door to dropping the flood money from the stopgap bill, saying, “that’s certainly an option.”

The government will shut down on Oct. 1 unless a funding measure is passed.

Sen. Dick Durbin (D-Ill.) shot down a question about whether Democrats would be satisfied with a promise from McConnell (R-Ky.) and Speaker Paul Ryan (R-Wis.) to pass the Flint aid in a lame-duck session after the election.

“No, if he wants to make that promise to Flint make him make the same promise to Louisiana,” Durbin said.

Sen. Debbie Stabenow (D-Mich.) added in a separate press conference that, “if the rational is that a water issue in Flint should be in [Water Resources Development Act], then a water issue in Louisiana should be in WRDA as well.”

Sen. John Cornyn (R-Texas) didn’t close the door to the Louisiana aid being moved to the water bill.

“It’s important to a number of states, including my state,” the Texas Republican said. “That’s what the bill has in it now, and we’ll see how the Democrats vote.”

Sen. Bill Cassidy (R-La.), noting he was opposed to removing the flood money, said he was aware of the Democratic objections.

“Why do you feel you have to punish people in Louisiana ... for Flint when there’s a pathway forward on Flint through the WRDA bill?” he said.

The stalemate over Flint comes after the Senate version of WRDA passed earlier this month included $220 million to address water infrastructure improvements in Flint.

But the House measure does not have Flint aid provisions, meaning the two chambers would have to resolve the issue in conference committee negotiations after the election.

Sen. Barbara Boxer (D-Calif.) hinted that Democrats could accept a written agreement on Flint aid from Republican leadership.

"We need more than just vague promises," Boxer told reporters. "They can commit to us in writing that they can absolutely agree to our provisions. We don't have any of that."

But Democrats appeared split on what would need to be in such a deal.

Sen. Gary Peters (D-Mich.), while noting the CR isn't the only vehicle for the Flint aid, also set a high bar for an agreement: the president's signature.

"The writing would be the president signing the bill," he told reporters.

The White House on Tuesday backed up Democratic demands for the Flint funding to be added to the bill.

"The president has made clear for moths that Congress needs to act to provide resources to the community of Flint," White House press secretary Josh Earnest said.

Earnest noted the emergency funding in the Senate CR for Louisiana, Maryland and other states recovering from flooding.

"The president believes Congress should do the same thing for Flint and other communities dealing with those challenges."

GOP Sens. Ted Cruz (Texas), Steve Daines (Mont.), Lindsey Graham (S.C.), Dean Heller (Nev.), James Inhofe (Okla.), James Lankford (Okla.), Mike Lee (Utah), Mitch McConnell (Ky.), Rand Paul (Ky.), David Perdue (Ga.), Ben Sasse (Neb.), Tim Scott (S.C.) and Jeff Sessions (Ala.) voted against the bill.

McConnell's "no" vote allows him to bring it back up for another vote.

McConnell: Senate Could Drop Flood Money From Spending Bill

By Jordain Carney And Sarah Ferris

The Hill, September 27, 2016

Senate Majority Leader Mitch McConnell (R-Ky.) signaled Tuesday that GOP leadership could drop emergency flood aid from a short-term spending bill as lawmakers look for a way forward on the stopgap measure.

"We keep hearing their position is 'no Flint, no floods.' Well, that's certainly an option worth discussing," he told reporters.

McConnell stressed that he was not considering adding aid for the lead-contamination crisis in Flint, Mich., to the continuing resolution (CR), which would fund the government through Dec. 9.

"We addressed the Flint issue in the [Water Resources Development Act] bill. It's paid for," the Senate Republican leader said. "We've done Flint in the Senate already, and the House is going to act on their version of WRDA today or tomorrow."

McConnell's remarks came shortly before a procedural vote on the spending bill fell short of the 60 votes needed to move forward.

Senate Majority Whip John Cornyn (R-Texas) said he would support the spending bill even if it's stripped of flooding aid – some of which would go to his home state – because it could be addressed later in the year.

"We need to get the government funded," Cornyn told reporters minutes before the failed vote. "My hope is that the flood funds would come in the longer-term spending bill, and I believe that would happen, so I'd be willing to support that, even without that in there."

He accused Democrats of "killing" the flood relief funding "to get something they've basically already won," arguing that the House and Senate would likely agree to a water resources bill later this year that includes Flint money.

Democrats, who say they don't trust that the House will agree to fund Flint, say the GOP needs to include funding for both in the stopgap government spending bill.

Senate Democratic leaders said after the failed vote on Tuesday that they plan to keep pressing Republicans on Flint as they reopened talks ahead of Friday's deadline.

Sen. Dick Durbin (D-Ill.) suggested that the Democrats would have the upper hand, adding that McConnell got "pasted" in the vote with 13 members of his own party rejecting the bill.

"[McConnell] needs Democrats to pass this thing, so we need to talk to him about getting a few things done. I certainly think Flint is included, but including Louisiana makes it a must," Durbin said.

When asked if he could support a bill that includes neither Flint or flooding aid, Durbin declined to say, replying: "I'm going to defer to my senators from Michigan."

Democrats, while arguing they support flood money, say if it is going to be included in the CR, so should Flint aid.

Eight Democrats, led by Minority Leader Harry Reid (D-Nev.), sent a letter to GOP leadership on Tuesday asking them to reopen negotiations.

Reid declined to say if dropping the flood money would be enough to win over Democrats, saying they would wait to see what McConnell offers.

Sen. Gary Peters (D-Mich.), who represents Flint, said Tuesday he wouldn't vote a spending bill that doesn't include Flint, even if it also excludes flooding relief.

"I have said, and I think all of my colleagues have said very clearly, we're in favor of helping the people of Louisiana as well as Flint," Peters told reporters. "We've always been about Louisiana and Flint. It's always been about both."

Dems Demand Flint Funding Promise "In Writing" From GOP

By Sarah Ferris

The Hill, September 27, 2016

Senate Democrats say they plan to block a governing spending bill Tuesday because they don't trust Republicans to keep their promise to separately approve funding for the Flint, Mich., drinking water crisis.

Sen. Barbara Boxer (D-Calif.), who is on the Environment and Public Works Committee, said at a press conference about two hours before the vote that Democrats are demanding a commitment to Flint aid in writing.

"We need more than just vague promises," Boxer told reporters. "They can commit to us in writing that they can absolutely agree to our provisions. We don't have any of that."

Democrats have opposed the GOP's bill to keep the government open through Dec. 9 because it ignores the lead-contaminated water system in Flint but includes $500 million to help relief efforts in Louisiana after this summer's floods.

GOP leaders in both chambers have said Flint funding should be part of a separate bill called the Water Resources Development Act (WRDA), which is going through the House this week.

While the Senate's version of that bill includes money for Flint, the House's version does not, and any agreement merging the two would likely come after the November elections.

Sen. Debbie Stabenow (D-Mich.) left open the possibility that Democrats could support a funding bill, or continuing resolution, that doesn't include Flint aid as long as they have assurances that money would come eventually.

When asked whether there are solutions other than putting it in the government spending bill, Stabenow said: "Yes, but I'm not going to negotiate that in public."

House Democrats who joined the press conference took a harder line on the Flint funding, threatening to shut down the government and blame the GOP over the issue.

"If the money is not provided before we leave this week, we're not leaving," said Rep. Sandy Levin (Mich.), the top Democrat on the House Ways and Means Committee.

Rep. Dan Kildee (D-Mich.), whose Flint amendment to the House's water bill was shut down Monday, said that commitment "needs to come in the form of a bill on the president's desk."

"The only thing we can trust is a commitment to put this language in the continuing resolution and get this to the president's desk," Kildee said.

"How can we trust the Republicans when they say they'll care of Flint in the WRDA bill?"

Dems Gain Upper Hand On Budget

By Jordain Carney And Sarah Ferris

The Hill, September 27, 2016

Congressional leaders are scrambling to avoid an election-year government shutdown after a funding bill went down to defeat in the Senate on Tuesday, leaving no clear path forward.

Senate Democrats believe they have seized the upper hand with less than 72 hours left to get a funding bill to President Obama's desk.

They feel emboldened because Republicans failed to secure a simple majority for Tuesday's proposal to fund the government; roughly a dozen Republicans voted against it, leaving Senate Majority Leader Mitch McConnell (R-Ky.) well short of the 60 votes needed to move forward.

Sen. Dick Durbin (D-Ill.) suggested Democrats were entering the final days of negotiations with an advantage because McConnell got "pasted" during Tuesday's procedural vote.

McConnell "needs Democrats to pass this thing, so we need to talk to him about getting a few things done," the Senate's No. 2 Democrat said.

Democrats are demanding that the continuing resolution (CR) to fund the government include emergency funding to help Flint, Mich., clean up its contaminated water supply.

Any spending bill will need Democratic votes to clear the upper chamber, giving the party leverage as lawmakers inch closer to a shutdown that had once seemed improbable.

"We don't need Republicans to again threaten a shutdown, and they've done it twice," Minority Leader Harry Reid (D-Nev.) told reporters. "We should be able to find a path forward to fund the government and help the people of Flint."

Lawmakers must pass a funding measure by Saturday to prevent the federal government from shutting down.

The fight is playing out against the backdrop of a heated election campaign. McConnell had hoped for a quick, drama-free September session to get his members back to the campaign trail.

McConnell opened the door Tuesday to dropping emergency aid for Louisiana, Maryland and West Virginia to address Democratic criticism that the spending proposal includes help for flood victims but not for Flint. He could bring the CR up again for a vote as soon as Wednesday.

"We keep hearing their position is 'no Flint, no floods.' Well, that's certainly an option worth discussing," McConnell told reporters.

But the Kentucky Republican stressed he was not considering putting the Flint money into the CR.

Dropping the flood money, which was added after weeks of negotiations, from the bill would likely cost McConnell additional GOP support.

Louisiana Sen. Bill Cassidy, who voted in favor of advancing the CR Tuesday, said that he was aware of the Democratic objections but warned against removing the flood funds.

"Why do you feel you have to punish people in Louisiana ... for Flint when there's a pathway forward on Flint?" the GOP senator asked.

Democrats, eager to not give ground, gave no indication they would advance the bill if the flood money were dropped.

"Let's see him do it. We'll discuss it when that happens," Reid said. "McConnell's gotten himself into this mess and he can do whatever he does and we will take a look at it."

In addition to the flood money, which Democrats say they support, Reid pointed to a fight over the Securities and Exchange Commission (SEC) as another sticking point.

Democrats have expressed frustration that the bill wouldn't reverse a policy rider included in last year's omnibus appropriations package that blocks the SEC from requiring corporations to disclose political spending.

Republicans are quick to note that because the SEC language is current law, they would have to attach a rider to this year's otherwise "clean" funding measure to unwind it.

The fight over Flint aid has dragged on for months, and lawmakers are running out of time to get the funding passed this year. After next week, the House and Senate won't be in session again until mid--November.

The Senate passed a water infrastructure bill, the Water Resources Development Act, earlier this month that included $220 million to address improvements in Flint and other communities with water problems.

But a House measure does not have Flint aid provisions, meaning the two chambers would have to resolve differences in a conference committee after the elections.

Sen. John Cornyn (R-Texas), the majority whip, said Tuesday that the Flint money "can be and probably will be resolved" in that committee, but it would take more time.

"We just don't have enough time to do that between now and Friday," Cornyn said, arguing that any changes to the House's water bill "may jeopardize their ability to pass it there."

Democrats appeared skeptical Tuesday of commitments from GOP leadership to include the aid in a conference report.

"If Mr. [Pete] Sessions [R-Texas] thinks it's an earmark now he'll think it's an earmark when we fight to go to conference, and he'll fight to keep it out of the WRDA bill," Sen. Barbara Boxer (D-Calif.) told reporters.

Sessions shot down an attempt to add Flint funding to the House WRDA on Monday night, but said he expects it to be included in the conference report over the objections of the bill's lead sponsor, Rep. Bill Shuster (R-Pa.).

Rep. Fred Upton (R-Mich.), chairman of the House Energy and Commerce Committee, told reporters Tuesday that he is confident Flint funding will pass before the end of the year.

"I'm convinced it's going to happen and I will be part of the effort to get that done," Upton said, adding that it will come either in the short-term or long-term government spending bill or the water resources bill.

Durbin, however, said Democrats wouldn't settle for a verbal promise, adding if Republicans want "to make that promise to Flint ... [they can] make the same promise to Louisiana."

A government shutdown would carry political risk for both sides, and particularly for incumbents in tough reelection races.

Sen. Kelly Ayotte (R-N.H.), one of a handful of GOP senators running for reelection in a purple state, said Tuesday that her colleagues should pass a CR instead of "dragging us to the brink of a government shutdown to score political points during an election year."

Liz Johnson, a spokeswoman for Ayotte's campaign, also sent a note to reporters Tuesday questioning whether Gov. Maggie Hassan, her Democratic opponent, will "support a government shutdown."

Overnight Energy: Judges Scrutinize Obama Climate Rule

By Timothy Cama And Devin Henry

The Hill, September 27, 2016

CLIMATE RULE GOES TO COURT: Ten federal judges spent all day Tuesday scrutinizing numerous legal and constitutional aspects of President Obama's Clean Power Plan.

The judges of the Court of Appeals for the District of Columbia Circuit seemed to split largely along party lines in the questions that they asked of the 16 lawyers supporting and opposing the rule.

And while the oral arguments in Washington didn't reveal much in the way of a consensus among the judges, it showed what main legal issues they're focusing on as they decide whether to uphold the main pillar of Obama's climate agenda.

The judges focused their questions largely on how the regulation fits under the Clean Air Act, whether the rule is too "transformative" to stand, whether Congress needs to have given the EPA a "clear statement" for it to enforce its rule, and how the court should apply differing legislative amendments that the House and Senate passed in 1990.

While a majority of the judges who engaged with the lawyers seemed at least somewhat supportive of the EPA's position, they nonetheless asked tough questions of all sides represented.

Judges like David Tatel, appointed by President Bill Clinton, repeatedly questioned the rule's challengers, led by West Virginia, and pushed back against their arguments.

Responding to West Virginia Solicitor General Elbert Lin's contention that the EPA is trying to implement "a new energy economy," leaving the energy landscape unrecognizable, Tatel disagreed.

"Explain to me why it's unrecognizable," Tatel said. "These new standards apply to sources that have been regulated for decades," he said, adding that the only "transformative" change is that the EPA is now regulating carbon dioxide, as the Supreme Court ruled in 2007 that it could do.

Judge Thomas Griffith, appointed by President George W. Bush, agreed.

"How is it transformative?" Griffith asked. He said coal's use would only be marginally different, and "that doesn't seem to me to be transformative."

TRUMP'S CLIMATE VIEWS TAKE CENTER STAGE: Donald Trump's rejection of the science behind climate change – and his one-time view that it may be a Chinese hoax – has emerged as one of the major stories from Monday night's presidential debate.

Hillary Clinton riled Trump during the debate, saying, "Donald Trump thinks that climate change is a hoax perpetrated by the Chinese," and pointing to a tweet he sent in 2012. The tweet went on to become the most retweeted of Monday's event.

Trump, falsely, replied to Clinton, saying, "I did not. I do not say that." And on Tuesday, his campaign looked to clarify his position.

Kellyanne Conway, his campaign manager, told CNN Trump doesn't think climate change is a hoax, only that he doesn't believe the broad scientific consensus that it's caused by human activity.

"He believes that global warming in naturally occurring," she said.

Running mate Mike Pence took it one step further, saying the tweet was "flippant and joking" on the Today Show.

"Donald Trump's position is the hoax is some bureaucrats in Washington, D.C., can change the climate of the Earth," Pence said.

Clinton believes in man-made climate change and has said the United States should invest in clean energy like solar power in the future. Trump disputes that view, saying clean energy investments aren't prudent and that he would help the fossil fuel industry as president.

Regardless of whether Trump believes climate change is a hoax or a naturally-occurring event, the practical implications are clear: he does not believe human activity is behind global warming and doesn't intend to address it if he's elected president in November.

Read more about the debate exchange here, and the Trump campaign's reaction to it here.

FLINT: Senators on Tuesday blocked a short-term funding bill for the government over the water crisis in Flint, Mich., moving Congress one step closer to a shutdown in the midst of a presidential election.

Senators voted 45-55 on a GOP resolution that would fund the government through Dec. 9, but not provide financial aid for Flint. Sixty votes were needed to move forward with the bill.

Sens. Joe Donnelly (Ind.), Joe Manchin (W.Va.), Bill Nelson (Fla.) and Jon Tester (Mont.) were the only Democrats to support the continuing resolution (CR). Thirteen Republicans voted against the leadership-backed proposal.

Democrats are digging in on their demand that funding for Flint be included in the spending bill, which already includes emergency help for flood victims in Louisiana, Maryland and West Virginia.

Democrats, while stressing they don't oppose the flood aid, argue any short-term funding bill shouldn't include the flood money unless it also helps Flint.

That raised the possibility that Republicans could pull the flood aid from the bill.

"We keep hearing their position is 'no Flint, no floods.' Well, that's certainly an option worth discussing," Senate Majority Leader Mitch McConnell (R-Ky.) told reporters, saying he is not considering adding Flint to the bill because the Senate already approved aid for the city in a water infrastructure bill last week.

But some Democrats rejected that approach on Tuesday, with Rep. Dan Kildee (D-Mich.), who represents Flint, calling it a "threat."

Sen. Gary Peters (D-Mich.), who also represents Flint, said Tuesday he wouldn't vote for a spending bill that doesn't include Flint, even if it also excludes flooding relief.

"I have said, and I think all of my colleagues have said very clearly, we're in favor of helping the people of Louisiana as well as Flint," Peters told reporters. "We've always been about Louisiana and Flint. It's always been about both."

Government funding expires on Friday. Both sides hope to avoid a messy government shutdown a little more than one month before the face voters in November.

Read more about the Senate vote here, and the rising specter of removing flooding aid here.

TOMORROW IN THE HILL: Tribes and their allies have cheered the Obama administration's approach to tribal issues.

But President Obama has one more key test on that front before he leaves office: the Dakota Access Pipeline.

Tribes are pushing Obama to reject the project, which has become a flashpoint for indigenous rights groups, not to mention anti-fossil fuel activists. And while he gets high marks on everything from Indian healthcare to tribal consultation, tribes say a strong decision against Dakota Access will cement his legacy on Native American affairs.

Read more, tomorrow in The Hill.

ON TAP WEDNESDAY: The Georgetown University Law School's climate center will host lawyers representing different sides in the Clean Power Plan case to discuss Tuesday's oral arguments.

AROUND THE WEB: Implementing the Paris climate deal will cost some Asian countries up to $300 billion a year, a new report concludes – but the economic return on decarbonizing their economy will bring in new cost savings, CNBC reports.

The World Health Organization says 92 percent of humans live in areas with unacceptably high air pollution levels, BBC News reports.

Stop us if you've heard this one: OPEC members have, once again, failed to set a limit on oil production, Reuters reports.

IN CASE YOU MISSED IT:

We Just Might Have A Real Climate Debate In This Election. That's Bad News For Trump

By Chris Mooney

Washington Post, September 27, 2016

Those who closely follow the problem of climate change are used to being disappointed by U.S. political campaigns and elections. After all, here is this massive global problem that, it seems, continually fails to gain major traction. Much of the country still denies it, non-science journalists seem afraid of it, and candidates have often not wanted to touch it. It notoriously did not come up in any of the 2012 presidential debates.

Something seems to have happened with the Monday's 2016 presidential debate, however, that just might ignite the subject. And moreover, it could do so in a way that is potentially bad news for Donald Trump, whose habit is not only to deny the science of climate change, but to do so in a dismissive way that plays into the hands of a quite knowledgeable Hillary Clinton, and begs easy scrutiny from fact checkers.

Let's run back over what happened to trigger all of this. It starts with this infamous Trump tweet:

The concept of global warming was created by and for the Chinese in order to make U.S. manufacturing non-competitive.

— Donald J. Trump (@realDonaldTrump) November 6, 2012

Clinton dinged Trump on this quite early in the debate, leading him to bizarrely deny it. Here's the exchange:

CLINTON: Take clean energy. Some country is going to be the clean- energy superpower of the 21st century. Donald thinks that climate change is a hoax perpetrated by the Chinese. I think it's real.

TRUMP: I did not. I did not. I do not say that.

CLINTON: I think science is real.

TRUMP: I do not say that.

But the tweet is right there. Its own language implies a hoax, and in other cases, "hoax" is the actual word Trump used.

It was the contradicting of his own tweet that really dug Trump into a hole, because this meant that the political press, often hesitant to dig into this science-infused issue, could simply point out the blatant contradiction in a binary fact-check manner.

Accordingly, Trump's campaign manager Kellyanne Conway had to defend him on climate issues Tuesday morning on CNN, where she basically said that he denies widely accepted science. More specifically, Conway stated "he believes that global warming is naturally occurring," and when CNN's Alisyn Camerota clarified whether that meant it isn't caused by humans, she stated: "Correct."

There is an overwhelming scientific consensus that climate change is mainly caused by humans – or as the U.N.'s Intergovernmental Panel on Climate Change put it in 2013: "It is extremely likely that human influence has been the dominant cause of the observed warming since the mid-20th century."

There is also growing fear about just how fast change could come – a place where uncertainty still persists — and how bad it will be.

Trump's vice presidential pick, Mike Pence, was also entrained. Later on CNN, he appeared to diverge somewhat from Conway, arguing that "there's no question that the activities that take place in this country and in countries around the world have some impact on the environment and some impact on climate." "Some impact" isn't accurate either — as you can see above, human activities are the driving force — but Pence is here retreating to the more easily defended stance of a more practiced, but still skeptical, politician.

The point is that all this puts the issue on the radar, and it could potentially be bad news for Trump, especially if in a future debate they really get into the subject — where Clinton can be expected to show a policy mastery and where Trump seems to strangely link the issue to nuclear weapons (something he did later in the debate, and has done before).

"Ironically, Trump's absurd climate science denial has raised the issue's political profile, drawing attention also to repeated attempts by Republicans in Congress to undermine the climate protections Obama is pursuing and Clinton will continue," said Paul Bledsoe, who worked on the climate issue for Bill Clinton's White House. "And as climate impacts, like the Louisiana floods, keep getting worse, there's a sense that enough is enough — that the political kid gloves are finally off when it comes to climate change."

There is also reason to think that Clinton may have strategically brought the subject up last night because she and her advisers think it helps her politically — specifically, with the millennial voters that she needs to sway away from third party candidates in this election.

Billionaire Tom Steyer's NextGen Climate campaign, for instance, has been literally waiting for a debate moment like this because it believes that once millennials perceive the true difference between Clinton and Trump on this issue, they'll know how they want to vote.

"Hillary Clinton twice brought up climate change and clean energy in the early minutes of last night's debate, showing she knows it's a winning issue for her, particularly among millennials," said Jamison Foser, a senior adviser at NextGen Climate. "Donald Trump falsely denied his previous false claims that climate change is a hoax, showing he even understands that voters are looking for candidates with solutions–not someone who buries his head in the sand."

As I have written before, some polling evidence also suggests ways that the issue could favor Clinton over Trump — for instance, there are now quite high levels of public acceptance of climate change amid record high global temperatures. Moreover, there is reason to think it helps her reach those who worry most about the issue, whether millennials or Bernie Sanders supporters now flirting with voting for Green Party nominee Jill Stein.

But even more than that, the climate issue now seems to be feeding into something else: The sense that Trump just can't speak with factual accuracy. It's one thing for him to run away from what he actually tweeted. But it could be even more remarkable if he has to debate Clinton on the actual science and try to defend denying a powerful global scientific consensus, or abandoning a global agreement backed by the entire world, the Paris climate accord. Monday's debate seemed to prime that confrontation.

Granted, even though the issue has now been injected into prime time, it could easily fade again. It's still nowhere near a top concern of voters, compared with terrorism or the economy, and it's also a very tough subject to get the political press to care about. It's hard to fit into a horse race narrative and it rarely rises to the top of the agenda. It merely abides, continues, worsens, and threatens people who are young more than people who are old — Clinton's voters if she is to win.

Implement The Clean Power Plan

By Sen. Edward J. Markey (d-Mass.) And Rep. Jared Huffman (d-Calif.)

The Hill, September 27, 2016

Sometimes big problems require big solutions. One of the biggest problems this country has long faced is air pollution, which has had a devastating effect on the health of people and our planet. More than 45 years ago, recognizing the seriousness of the threat, Congress enacted a big solution: the Clean Air Act. It is one of our nation's most successful laws, helping to cut air pollution of all types even as the U.S. economy has grown.

Now the administration's effort to use the Clean Air Act to reduce a dangerous air pollutant is under attack in the courts. A legal challenge to the proposed Clean Power Plan (CPP) is counterproductive and counter to the clear authority of the law. The Clean Power Plan implementation is critical to protecting public health and welfare.

The Clean Air Act was designed to address air pollutants, and has been so successful, in part, because it gave the Environmental Protection Agency (EPA) the tools necessary to help achieve Congress' objectives. The EPA then used that authority to create the Clean Power Plan, which sets the first ever limits on power plant carbon pollution. This is a big deal. Power plants produce nearly half of U.S. carbon pollution, representing the single largest domestic source. Clean energy is the key to combatting climate change.

Carbon pollution not only degrades air quality, it damages the health of the American public, leads to coastal erosion that threatens entire communities, acidifies the ocean, and increases the risk of deadly weather such as the drought, flooding and violent storms.

If implemented, the Clean Power Plan will help ease those effects. Indeed, the plan is estimated to prevent 3,600 premature deaths, 90,000, asthma attacks in children and 300,000 missed work and school days by 2030. From both a public health and a climate protection standpoint, the estimated benefit of the Clean Power Plan is valued at $54 billion per year.

The coal industry and some Republican politicians sued the EPA in the U.S. Court of Appeals for the D.C. Circuit. Arguments are set to be heard on Sept. 27. As the court will see, the Clean Power Plan stands on a strong legal foundation. As members of Congress, we know lasting legislation often sets out broad goals, provides guidance on how to achieve them and then lets expert agencies fill in the details. That's exactly how Congress drafted the Clean Air Act. And that's why the King Coal and their allies are wrong when they claim the Clean Power Plan is executive overreach or that EPA acted only because Congress hasn't passed climate legislation.

Just because Congressional Republicans have successfully blocked a broader legislative response to the grave threat of climate change doesn't remove the authority that Congress already gave the EPA to place limits on carbon pollution. Taking away the EPA's authority to address carbon pollution wouldn't advance the intent of Congress, it would thwart it.

The Clean Power Plan builds on existing market trends and strategies that states and companies are already using to reduce their carbon pollution. That's why a number of energy companies filed an Amicus brief supporting the EPA, as did a broad coalition of legal experts, environmental groups, states and cities and more than 200 current and former members of Congress, whom we were honored to join.

The reason the Clean Power Plan enjoys such broad support is simple: It's legitimate, it's achievable and will help protect the health of our planet and its people.

The views expressed by authors are their own and not the views of The Hill.

FEMA HOUSING

Tents, Travel Trailers And A Tale Of Uneven Flood Recovery

New Orleans Times-Picayune, September 28, 2016

DENHAM SPRINGS – As the water crept into his backyard, Ferdie Genre, 62, settled into his favorite chair on the back porch and tried to stay calm. He snapped a quick picture and tapped a text message to his contractor friend, Darryl Jarreau.

"Hope it stops raining soon," he said. "Me, too" was the reply.

"If we get water, can we be first on your list to repair?"

"Yes."

"Thanks. It's getting too close for comfort."

Genre didn't like to raise undue fear, so he reassured his wife, Pat, 60, that all was fine. He knew that the Greystone Golf and Country Club community had never flooded. Besides that, when he had hired Jarreau 11 months earlier to build their dream home, a four-bedroom, three-bath house south of Denham Springs, he insisted on an extra foot of foundation for added peace of mind.

Now as the water surrounded their garden's sugar kettle, peace of mind was a fleeting memory.

Four miles to the north, Krysta Oliszewski, 41, and her son Conner, 20, watched the water rising around their timeworn, three-bedroom mobile home. She had often seen the streets flood in Magnolia Estates, a subdivision where a single mom can find cheap rent and security, provided the doors stay locked.

But flooding had never reached this high, or this quickly. When it washed over the mobile home's deck, she realized they were in trouble. When it seeped up through the floor, she realized they were going under. And she realized she had no plan. "I didn't know what to do," she said. "I was in a sheer panic."

She called her mother, who asked, "Can you get out?" Oliszewski wasn't sure.

"I gathered what I could," she said. "I wrapped my laptop in three layers of garbage bags and grabbed documents," and stepped into the cold, muddy water. She and her son slogged through ankle-, waist- and then chest-deep water for more than a mile before they found land. "When the water got to ankle-deep" again, she said, "I just dropped to my knees and started bawling. It was surreal."

. . . .

The Louisiana Flood of 2016 killed 13 people, displaced tens of thousands of others, caused an estimated $8.7 billion in damage and destroyed some 60,000 houses. But across the 22 parishes that were declared disaster areas, the damage and recovery have been far from uniform. For many, the difference came down to elevation, planning and resources.

With two feet of water in their house, Ferdie Genre, a retired accountant, and his wife were the last to be rescued from Greystone on Aug. 13. "Two good Cajuns from Morgan City took us out of here at 9:30 at night" in a boat, said Pat Genre, a retired social worker.

At midnight, they were mustered into a Walmart parking lot where they waited with a crowd of neighbors and strangers for 17 "miserable" hours. Some men grew impatient and sought to throw a brick through the window. Others stood up and talked them down.

Soon they were in a Humvee headed to a FEMA shelter in Sorrento, where they spent four days before being recognized by their son's girlfriend, who took them into her home.

Four days after they evacuated, their house had drained. By the next weekend they had met with their contractor, mucked the house with 17 of Ferdie's former coworkers and moved into a donated 40-foot travel trailer parked in their driveway. Friends, family, forethought and their means put them on the fast track toward recovery.

In Magnolia Estates, Oliszewski, who makes a living painting houses and doing odd jobs, made do at her mother's home in Baton Rouge for six weeks. Then she ran out of patience. "I love my mom," she said, "but I need my space." When a group of "church ladies" offered a tent, she headed back to her own trailer lot. "At least I have privacy," she said.

Setting up the tent was easy, and neighbor two doors down offered a working shower. A small air conditioner, a mattress and a few table lamps made it downright homey.

Not everyone in Magnolia Estates was as comfortable. On Oliszewski's block alone, 18 flooded mobile homes were supplanted by four small campers and 10 tents.

During a visit Sept. 21, more than five weeks after the flood, Raymond Merrow's front yard looked like a squatter's camp. After his own mobile home flooded, he offered his land to a mishmash of nomads with nowhere else to settle. Three tents and a dry-rotted camper were crammed together there. Debris littered the trampled mud. Seven steps over plywood and carpet remnants led to a garden-hose shower and open latrine, shielded by a green tarpaulin. Flies swarmed incessantly.

To the left, Alicia Chiasson, 30, coughed and hacked as she crawled from her 5-by-8-foot, four-person tent. She and her fiancé, Corey Dabadie, 25, were living in it with a ragged pile of clothes, a small air mattress and a corner filled with junk food. “That’s our dresser, our bedroom and our kitchen,” she said. “I just want to take a hot shower. I’ve had the same clothes on for five days.”

Crystal Rabalais, 34, felt traumatized sitting outside her tent, on what used to be her trailer’s front porch. She said she, her husband and their 7-year-old daughter survived a harrowing rescue through floodwater that was over their heads. “About 7 feet deep, like somebody stuck a plug in a bathtub,” she said. “I’ll have to take my little girl to counseling after what she went through.”

Oliszewski grew more frustrated as she tried to network through the FEMA help line. She finally lost her composure with a representative who told her that someone else, a stay-over friend, had claimed her renter’s assistance.

“Well, he has no proof that he was the primary,” she said, slamming her open palm onto the back of her old truck. “He doesn’t even get friggin’ mail here,” she pleaded. After an endless back and forth, she hung up.

“They’re telling me they still don’t have the documents in my file. That’s the problem. That’s what makes me mad. He has no proof, and they just hand him $2,000. That’s my rent, for my kids. He knew what he was doing all along,” she said.

. . . .

At Greystone, Pat Genre lifted a heavy suitcase from beside her bed in the travel trailer, which was comfortable although snug for the retired couple after four weeks of condensed living. She ran the zipper around the case and flipped open the cover. Atop their evacuation clothes and envelopes of financial records was a small plastic storage container. “This is what I saved,” she said as she lifted the top.

One by one, she laid out her small collection of treasured photographs. “Here’s my dad and my aunt. Here’s my grandmother,” she said. “And here’s one from our wedding I was able to save.” She fought back tears as she repacked her container.

Her big wedding album was trashed. “It was all brown. I just threw it away.”

There are so many things that money can’t replace, like her grandmother’s blanket chest filled with photos and home movies of family long gone. “Once you live a few years on this planet, you make those connections to those people ... .” She paused, took a deep breath as a tear swelled in her eye. But with stoic, Southern grace, she quickly wiped it away. “It’s not just pictures,” she said. “It’s your memories.”

The Genres know they have financial resources, friends, family and foresight. They hope to have their house back together by Christmas and get back to their retirement. Pat hopes to refashion her grandmother’s ruined blanket chest into something new, with an added story. “It’s going have warped sides, but that’s our brown badge of courage,” she said. “That’s experience.”

In Magnolia Estates, Oliszewski balanced on a sewer pipe and carefully crossed a bog to the back of her trashed trailer. There among the debris, she found her son’s cherished steel footlocker, fabricated by her brother years before.

She lifted the heavy lid and unpacked the few treasures remaining of her life. “It’s my high school memorabilia ... prom pictures and my yearbook.” She pointed to glamour shot of a young woman holding a baby. “That’s me and my oldest son, Conner. It was waterproofed,” she said. “I was so worried about it.”

After all her loss from the storm, Oliszewski also is saying farewell to Conner, who is moving to Missouri looking for opportunity. As he turned to leave, he bear-hugged her with such enthusiasm that he lifted her off the ground.

He drove away, leaving her with her thoughts. On her bed, she wrapped herself in one of her last remaining family heirlooms, a quilt made special for her by her grandmother. “I’m so glad this survived,” she said.

She’s looking forward to getting her FEMA renter’s assistance. And for now, at least, the tent’s not so bad. “It’s big enough for me,” she said, “and it’s temporary.”

“You make do,” she said. “I’m a survivor. I have no choice.”

Red Cross Shelter In Baker To Close By Friday

By Emily Beck Cogburn

Baton Rouge (LA) Advocate, September 27, 2016

BAKER — The Red Cross-run shelter in the Baker Municipal Building on Groom Road will be closing at noon on Friday, Mayor Darnelle Waites announced at Tuesday's City Council meeting.

About 30 people are living in the shelter, down from 200 a few weeks ago.

"What we are getting now are some people from Baton Rouge as the shelters close down there," he said.

City officials are working with the Red Cross and the Federal Emergency Management Agency to find housing for those still in the shelter.

The council also unanimously approved an ordinance to allow manufactured homes within city limits for up to 18 months to house those displaced by the flood.

The city has further requested 150 FEMA modular homes to be placed in the vacant Renaissance Village lot off Groom Road near La. 964, the same location FEMA trailers were placed after Hurricane Katrina. More homes may be added in the future, depending on need.

Some other FEMA homes might be placed in lots outside the city limits, though locations are not yet determined, he said.

"We wanted to make sure that people who live in Baker will come to (the Renaissance Village) location. We don't want to try to take care of others' problems. We have to provide fire, police, and social services to the site. It's a huge undertaking," Waites said.

He couldn't immediately provide a timeline when the FEMA homes would become available, remarking that the federal agency moves slowly.

Most people in need of homes located at the Renaissance Village site would probably be renters who lost their houses or apartments.

"Most homeowners are trying to get back into their homes," he said.

FEMA will also provide the modular homes to homeowners to place on their properties provided that the homeowners have large enough lots, he said.

Debris pickup is also moving forward in the city, Waites told the council.

Within a few days of signing a debris removal contract with Neighborhood Restoration, it became clear the firm could not handle the amount of debris in Baker and the city contracted with DRC Emergency Services instead, he said.

Some streets in Baker, such as Groom Road and McHugh Road, are owned by East Baton Rouge Parish, and the parish is responsible for debris removal in those areas. Lavey Lane in Baker is owned by the state Department of Transportation and Development, which also takes it out of the city's responsibility.

Waites encouraged residents to call the city if they have debris on their property, rather than curbside, that needs to be removed.

"You have to come in and sign a ROE (Right of Entry) form or we can't go on your property," he said.

The Baker Fire Station on Groom Road, which flooded, has been gutted and is ready to be rebuilt. The city will begin accepting bids next week to renovate the building, which cost $4 million when it was built less than 20 years ago, Waites said.

The city did have flood insurance on the fire station and rebuilding costs should be covered.

Waites invited residents seeking more information to attend an open meeting concerning disaster relief scheduled 6 p.m. Oct. 4 at Redemptorist Life Church, 2400 Debra Drive.

NFIP AND FLOOD MAPS

The Future Of Flooding

By Stephanie Alderton

Brush (CO) News-Tribune, September 27, 2016

Flood waters cover the entrance and roadway on Sept. 15, 2013, at the south end of Muir Springs recreation area northwest of Log Lane Village along Highway 144. This picture was taken during the latest major flood caused by overflowing rivers in Morgan County. (Jane Larsen / Courtesy Photo)

If the Federal Emergency Management Agency's latest floodplain maps go into effect in 2017, Morgan County's flood risks will look a little different.

As a part of the National Flood Insurance Program, Morgan County's highest flood risk areas are shown on maps created by FEMA, which help determine property values and insurance rates. For the first time in about 35 years, FEMA has released a new preliminary floodplain map for the county. It introduces several changes to the old map, making the floodplain smaller in some areas and bigger in others.

The map labels areas that are at low, moderate and high risk from flooding, based on the flow rates of nearby rivers. Properties in high-risk areas have higher flood insurance rates and more building restrictions. The last update to Morgan County's floodplain map was in 1989, while the maps for specific towns like Brush haven't been updated since 1981.

For some parts of Morgan County, the new flood map isn't big news. The city of Fort Morgan has always been too elevated to be greatly affected by the floodplain, and Bradley Curtis, the Engineering and Public Works director, said that hasn't changed.

"It has minimal effects," he said. "Not a whole lot of developments are affected apart from Riverview Park and the area down by Maverick's, which we knew about already."

Parts of Fort Morgan were flooded during the summer, but that was due to heavy rainfall rather than an overflowing river. The FEMA maps only take overflow from nearby rivers into account when predicting flood risks.

For other towns, the re-mapping is a bonus. Much of the town of Wiggins was in the floodplain under the old map, but now it's considered a low-risk area. Trustee JoAnne Rohn-Cook said she's delighted by the new map.

"Since the last survey was done, a dike was built west of the town, so I think that helped," she said.

She said the new mapping is especially fortunate considering the two new housing developments that are being built in Wiggins. Property values are usually lowered inside the floodplain, so the new houses will be more valuable now that they're in a low-risk area.

But some property owners are less than thrilled about the new map. In the town of Brush, a few developed areas that used to be outside the floodplain are now inside it. More significantly, much of the eastern side of town is now considered to be inside the "floodway," the estimated channel that Beaver Creek would take if it overflowed. Buildings and other "encroachments" inside the floodway will be more heavily regulated if they're predicted to increase water levels by more than half a foot.

These changes have a significant impact on Brush property owners, as evidenced by the large crowds that attended the town's floodplain mapping open house in July. Thuy Patton, the floodplain mapping coordinator for the Colorado Water Conservation Board, gave a presentation at that event and earlier at a Brush City Council meeting to explain the changes.

"You basically have to show a zero rise when you're doing any development in the floodway," she said during her presentation to the Council in June.

That assessment came as an unpleasant surprise to some property owners. Chuck Miller, who owns about 16 acres east of Morgan County Road 29 and south of the railroad tracks, said the new map will make it extremely difficult for him to repair or build anything new on his property in the future. When he wanted to build a house there in 1999, he laid the foundation five feet above the floodplain, after hiring an engineer to determine exactly where the base elevation. But the new map, he said, raised the floodplain six feet, which not only puts his property squarely inside the floodplain, it also places it in the floodway.

"I went through all this work and expense to raise my property above the floodplain for anything I wanted to build in the future, and they raised the elevation on me," Miller said. "Since the 1989 map, there have been zero floodwaters in Brush from Beaver Creek...this map is not based on factual information."

Miller said he plans to appeal his property's floodway status.

According to the FEMA website, changes to a floodplain map can be caused by a variety of things, such as new infrastructure and development, aging infrastructure, surface erosion and changing weather patterns. In Brush's case, Patton said the changes are partly attributable to five bridges across Beaver Creek that weren't included in the original map, as well as a more detailed analysis on the river's flow rate.

If the new floodplain mapping is approved by the county, it will most likely go into effect in the summer of 2017.

Officials Announce Residents Could See A Drop In Flood Insurance Rates

WWL-TV New Orleans, September 27, 2016

NEW ORLEANS – City leaders give many homeowners good news Tuesday, announcing potential reductions in the cost of flood insurance.

After Hurricane Katrina, not only were residents trying to fix their homes, but many faced high flood insurance prices.

Perry Treme moved to Lakeview from Mid-City after Katrina, but high insurance rates almost made it impossible.

"I had a hard time buying this house here because I couldn't get flood insurance, it was impossible to get flood insurance right after Katrina" explained Treme.

Tuesday, Mayor Mitch Landrieu announced that over 97 percent of the properties in New Orleans are going to see a potential reduction in the cost of flood insurance.

"A couple of years ago we were very fearful that without these investments, without looking at the hard things the city of New Orleans was going to be a very difficult place to live in because of the high cost of insurance," said Landrieu.

FEMA recently released new flood risk maps showing that 53 percent of properties will see a significant decrease. Rates will stay the same for 44 percent of homes, and for 3 percent, rates will increase.

The areas likely to see increases in Algiers. The reductions in the flood rates will be seen in New Orleans East, Gentilly, Lakeview, and Broadmoor.

The Landrieu administration explained the new flood maps are a result of the cities recent infrastructure investments.

"We started with hurricane protection system with the $14 billion for the outer layer of 200 miles of levee and floodwalls, said Cedric Grant, executive director of the Sewerage and Water Board.

The changes will potentially help protect the pockets of people like Treme.

"It would make quite a difference, still doing repairs on my house," said Treme.

These decreases are supposed to go into effect on September 30. The city will be eligible for an additional 15 percent reduction in flood insurance rates in 2017. WWL-TV was told homeowners will need to contact their individual insurance companies, who will be able to apply the new rates.

FEMA Breaks Down SC Flooding By The Numbers

WRDW-TV Augusta (GA), September 27, 2016

SOUTH CAROLINA (WRDW/WAGT) – One year ago, record rainfall and river flooding overwhelmed South Carolina triggering a federal disaster declaration for thirty-five counties.

To date, assistance to residents and communities in South Carolina from the Federal Emergency Management Agency totals well over $164 million, according to FEMA.

South Carolina by-the-numbers (information from FEMA):

More than 28,000 survivors in twenty-four South Carolina counties received $89,548,894 for individual and housing assistance.

Of that amount, $77,714,396 was provided for temporary housing and repairs not covered by insurance and $11,834,498 for other needs such as medical bills, moving and storage expenses, and personal property.

Thirty-three counties and the state received $74,920,813 in Public Assistance. Of that amount, $38,264,692 was obligated for debris removal and emergency protective measures and $36,656,121 was obligated for permanent repairs to public infrastructure.

Seven counties received more than a million dollars each in Public Assistance for emergency measures or permanent repairs to public infrastructure such as roads and bridges, and public buildings and utilities.

The National Flood Insurance Program (NFIP) paid 3,866 claims for flood damages totaling $134,177,354, as of May 25, 2016. The NFIP has closed out 99 percent of the claims filed.

FIRE GRANTS

Modesto Getting 9 More Firefighters

Modesto (CA) Bee, September 27, 2016

The Modesto City Council accepted a $2.2 million grant Tuesday that will let the Fire Department hire nine firefighters for two years and put back into service an engine company that was eliminated in a 2011 budget reduction.

The Federal Emergency Management Agency recently awarded Modesto the Staffing for Fire and Emergency Response grant. The council vote was 7-0 to accept the grant.

Modesto needs to recruit and hire the firefighters and put them through 12 weeks of training. Fire Chief Sean Slamon said he expects the firefighters to be on the job in April.

While the grant will pay for the salaries and benefits for the firefighters, Modesto also will have to spend some of its own money. Slamon estimates Modesto will incur nearly $421,000 in costs over the life of the grant. That includes hiring the firefighters, overtime and staffing an engine company.

While the grant covers the salary and benefits of nine firefighters, an engine company is staffed by three firefighters, three engineers and three captains. Engineers and captains earn more than firefighters, and Modesto will pick up the difference.

The SAFER grant will allow the Fire Department to add an engine company to Station No. 11, which is at Pelandale Avenue and Carver Road. The station has been staffed only by a ladder truck since 2011 because of budget cuts. The ladder truck will move to Station No. 5 at Briggsmore and McHenry avenues, the city's busiest station.

This is expected to improve response times in central and northeast Modesto.

Modesto is not required to keep the SAFER firefighters after the two years, but Slamon said he will look for ways to keep them, such as having them fill vacant positions, if there is not enough money in the budget.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Hope Academy Urged To Repay Millions In FEMA Disaster Aid

Jackson (MS) Clarion Ledger, September 27, 2016

WASHINGTON — Hope Academy in D'Iberville should repay $3.4 million of the $3.5 million in federal disaster aid it received after Hurricane Katrina, a federal agency recommended.

Hope Academy officials failed to provide sufficient information, engaged in unethical business practices and didn't have policies to prevent conflicts of interest, according to a report released last week by the Department of Homeland Security inspector general.

The school was awarded disaster assistance funds by the Federal Emergency Management Agency for damages caused by Hurricane Katrina in 2005.

The report slams FEMA for not checking all the academy's claims, including the cost of items the school lost during Katrina and even the number of students it said was enrolled.

The report comes in the wake of FEMA stopping $29.9 million in payments to Mississippi for a program to retrofit homes after Katrina. An IG report in August found the Mississippi Emergency Management Agency wasn't able to provide documents for about $30.5 million paid to contractors to retrofit 985 homes.

Calls to the academy Tuesday said the number is not in service.

The IG report recommended FEMA "disallow'' $3.4 million in reimbursements in public assistance funding.

It also urged FEMA to do more to get ''credible evidence'' for eligibility from applicants and press MEMA to better check groups awarded funding. State emergency officials are responsible for making sure Hope and other awardees comply.

"We believe that the state and FEMA should have been more diligent before approving an applicant's eligibility,'' the report said.

MEMA officials said they are waiting for final responses from FEMA.

"We're going to reserve any comments until FEMA makes its determinations based on the recommendations,'' said Greg Flynn, a spokesman for MEMA. "It's kind of like the ball is in FEMA's court.''

FEMA officials said Tuesday they agree with the recommendations and said they have taken steps to improve eligibility requirements and document guidelines. The agency said it will also disallow any funding for the building or site work that exceeds requirements mandated by building codes and other standards.

"FEMA is carefully reviewing the audit findings and all information on this project to validate previous decisions regarding the eligibility of various costs for which Hope Academy received FEMA grant funding,'' said Alexa Lopez, a FEMA spokeswoman. "FEMA will take appropriate action if our review determines that Hope Academy received federal funds for ineligible costs.''

The report said FEMA failed to verify the number of students Hope said were enrolled. The academy serves students through 12th grade.The report said Hope lost a 5,770-square-foot building located on 0.66 acres of land, but FEMA eventually approved funding for a new 13,319 square-foot building on 15.9 acres "based almost completely on Hope's word that it serviced 90 students.''

Hope officials said the storm destroyed their records, according to the report.

The report also blasted Hope for not having a policy to protect against conflicts of interest. It said the school administrator had "unilateral authority'' to buy property and entered into a contract to buy 15.9 acres of land in Gulfport owned by the school board president for nearly $1.5 million.

The report said the cost to buy the land was "excessive'' compared to three other schools.

"Therefore, we question $1,468,206 for the improper procurement of land, which includes $968,706 ($1,468,206 minus $499,500) of unreasonable cost,'' the report said.

FEMA said it agreed the school didn't properly procure contracts.

"FEMA funded only the cost that it found to be reasonable and disallowed the excess cost,'' the agency said in a response included in the report.

The agency, however, said it will review the cost of the building contents, which Hope said was $491,673. It said it will respond by January.

FLOODS

Senate Dems Upend Government Funding Over Flint

By Todd Spangler

Detroit Free Press, September 27, 2016

WASHINGTON — Democrats in the U.S. Senate, including Michigan's two members, upended votes on a short-term measure funding the government past Oct. 1 on Tuesday, objecting that it contained help for flood victims in Louisiana but failed to provide assurances that money to replace old lead water pipes in Flint would be forthcoming as well.

The two roll calls on the floor of the Senate — one which saw the bill fail 45-55 and a second which saw it go down 40-59 — fell short of the 60 votes needed to move forward a short-term measure keeping the government open until Dec. 9 and included not only Democratic votes against the measure, but also no votes of at least a dozen Republicans.

Those votes increased the likelihood that whatever funding measure passes before Friday, if any, it may not include money for addressing the Flint water crisis or last month's flooding in Louisiana, though negotiations are certain to continue.

"We hope that important flood relief will be a part of it," said Senate Majority Leader Mitch McConnell, R-Ky., who had proposed the funding bill, including money to respond to flooding in Louisiana but without funding for Flint. He said both sides would continue to work on a deal to stave off a government shutdown on Friday.

Two weeks ago, the Senate overwhelmingly approved the Water Resources Development Act , which included at least $100 million and likely more for Flint, which has been struggling to find the funding necessary to replace lead pipes throughout the city for more than a year. Those pipes have been blamed in part for high levels of lead found in the city's tap water.

But Republican leaders in the U.S. House have so far — as expected and previously reported in the Free Press — declined to guarantee that they will agree to that funding in any final version of the WRDA bill. It was left out of that chamber's version of the WRDA legislation which was headed to the House floor, even as House and Senate leaders have said Flint funding could ultimately be worked out in a conference committee between the chambers.

With no guarantee on Flint funding forthcoming, however, Democratic senators last week began raising loud objections to the proposed continuing resolution to fund the federal government through Dec. 9, including $500 million to help flood victims in Louisiana, arguing that if that legislation could be expanded to help residents of one state, it could also be a legislative vehicle to help Flint.

The argument came to a head with Tuesday's votes.

"Today, we're going to have a vote and we're going to send it back to the drawing board to get this right," said U.S. Sen. Debbie Stabenow of Michigan at a news conference before the vote, explaining that while Democratic senators support the Louisiana money, they can't do so without also including Flint's. "If, in fact, the people of Flint have to wait again, then the people of Louisiana can join that wait with them til the end of the year."

Flint's well-documented public health crisis began in April 2014 when the city switched water sources, but the state Department of Environmental Quality did not require corrosion control treatments as it should have, a mistake which led to lead leaching from old water pipes into residents' taps. Now, more than a year after skyrocketing lead levels in some residences and high blood-lead levels among Flint children were detected, residents are still being told to drink filtered or bottled water.

Mayor Karen Weaver and others have said it could cost hundreds of millions to replace all the lead pipes in the city and make other infrastructure improvements which would restore confidence in the water system. Stabenow and others have estimated that the funding included in the Water Resources Development Act bill could ultimately cover about half of the cost; state government has committed about $27 million but is being pressed to increase that amount.

"It's fully paid for," U.S. Sen. Gary Peters, also of Michigan, said of the federal Flint funding, noting that unlike the $500 million for Louisiana, the Flint money is offset by a reduction in spending on a grant program for advanced technology vehicles. "This should be something that is very easy. And if we can't do something that is this easy, it's why people have such scorn for this body."

Stabenow, Peters and their House colleagues, including U.S. Rep. Dan Kildee, D-Flint Township, have been trying to secure funding for Flint for most of a year.

Much of the frustration over the Flint funding has been fueled by the mixed signals coming out of the House: On Monday, the House Rules Committee rejected an amendment offered by Kildee for the House version of WRDA that would have added the Flint funding to that legislation — and which also includes a sweeping package of port, harbor and navigation projects across the U.S.

Speaking to the Rules Committee, U.S. Rep. Bill Shuster, R-Pa., who chairs the Transportation and Infrastructure Committee in charge of the WRDA bill, said while he thinks "It's a terrible thing that's happened to those folks" in Flint, he also believes it would set a bad precedent for the federal government to take the lead in funding pipe replacement. If it does so, he said, the federal government could be seen as being on the hook for pipe replacement across the U.S.

"This was caused at a state level," he said, adding, "I think the solution, the dollars ... have to be driven by the state."

But House Speaker Paul Ryan, R-Wis., said at a recent news conference that he believes the Flint funding belongs in the WRDA bill if anywhere — not the resolution to fund government — though he, too, said he considers the Flint situation "more of a local government issue." As for the Louisiana funding, Ryan said he believes the flooding there "does rise to the level of being dealt with as an emergency measure" in the funding resolution as a natural — not man-made — disaster.

But he, too, may in the end need the help of Democrats to pass that legislation to keep government open, meaning the Flint money — or at least the promise to consider it — may have to be dealt with in some way.

"We're going to use every tool we can to make sure they (the people of Flint) get the help they can," said Kildee. But again, noting that the funding is already paid for, he asked, "Why are they (Republicans) willing to take us up to the point of shutting down the government to prevent us from providing help for Flint? It makes no sense at all."

As the Free Press reported two weeks ago, however, it was clear that the Flint funding faced an uphill battle in the House and that if it were to be included in the WRDA bill, it would most likely be in the conference committee report issued after the two chambers settled differences in the bill — and that wouldn't come until sometime after the Nov. 8 election, if at all this year. Democrats in both chambers now say that assurance is not enough, however.

Now, there are questions whether Democratic objections to a WRDA bill without Flint funding could threaten that legislation's chances in the House — which in turn could result in no such bill passing, with or without Flint funding, this year. On Tuesday, U.S. Sen. James Inhofe, R-Okla., who spearheaded passage of the WRDA bill — and the Flint funding in the Senate — urged Democrats in the House to let that chamber's version of the bill pass even if it doesn't include money for Flint, saying he will fight for its inclusion at conference.

Stabenow stopped short Tuesday of saying Democrats would shut down government if Flint's money wasn't included in the continuing resolution but declined to say what paths of negotiation may still be open. However, it was clear that it was the funding for Louisiana in the budget bill — without similar consideration for Flint — that carried the sharpest sting.

Stabenow, Peters and Kildee were joined by other Democrats — including Sen. Barbara Boxer of California and Michigan U.S. House representatives John Conyers of Detroit, Debbie Dingell of Dearborn, Brenda Lawrence of Southfield and Sander Levin of Royal Oak — at a news conference on Tuesday morning outlining their plans.

"This is the one issue around which I would pray for some bipartisanship," said Conyers, the longest-serving active member of Congress. "If there were only one thing I could get, it would be around this issue. It would show that the common good triumphs over partisanship."

Howard Robotics Team Raises Funds For Ellicott City Flood Victims

Baltimore Sun, September 28, 2016

After watching videos of the July 30 Ellicott City flood, the Futuristic Engineers, a Howard County robotics team, immediately wanted to help.

"We saw a video on the news of the cars floating away in the flood, which is really devastating," said sixth-grader David Zheng. "That's why we wanted to raise money."

The group of 10 kids from various elementary and middle schools in the county came together to form their robotics team about a year ago at the Catonsville campus of the Howard County Chinese School, where they are students.

"We're in FLL. It stands for First Lego League, which we build with Legos. One part of it is core values, and one part of that is to help other people at all times," said David, who started the team the help of his mother, Mindy Liu. "So we try to fulfill the core values, to be the best FLL team that we can be."

After the flood, the team held a meeting to discuss how they could help, said sixth-grader Jeff Li, and to plan their next steps.

One student took notes to distribute in the form of a memo to each team member after the meeting.

The Futuristic Engineers had previously sold chocolate to raise money for their team, Jeff said, but had never fundraised for an outside cause.

The team decided to sell lemonade and cookies in front of the Miller Branch library during two nights in late August. They made posters and fliers and split up into two groups to cover each night.

"To make sure everyone came," David said.

Ultimately the team raised $98.05 to donate to victims of the Ellicott City flood.

"The hardest part of the sale was getting people to buy and donate," Jeff said. "Because we can't just scream out and force them to buy lemonade."

"Most people, they told us they would come out once they finished in the library," David said. "Which was very nice, and better than just waving us off."

Liu, the team's coach, said she was happy to see the team apply the skills they have picked up over the past year to plan their fundraiser.

"They really applied the way how they work as a team," she said. "How to share the workload, and how to attract people."

Learning these skills is more important than winning their robotics competitions, Liu said.

"The most important thing for them, that I really want to share, is how to work as a team," she said.

OTHER NATURAL DISASTERS

Earthquake Expert Lucy Jones: Salton Sea Swarms Occur

Palm Springs (CA) Desert Sun, September 27, 2016

It's been about eight years since the Salton Sea was the epicenter of a swarm of earthquakes, but the abundance of temblors doesn't necessarily indicate a larger one to come, a renowned seismologist says.

Lucy Jones, formerly with the United States Geological Survey, tweeted throughout Monday about the dozens of quakes centered near Bombay Beach. She said they were linked to a fault line that's about five miles south of where the San Andreas Fault ends and is known to produce clusters of temblors.

Previous: There was a cluster of earthquakes Monday

"Most likely, nothing more will happen," Jones said.

The last time there were swarms in the area were in 2001 and 2009 – periods separated by a stretch similar to the one separating 2009 from 2016. The 2009 swarm lasted for two days.

There were were more than 110 earthquakes in the same area since Monday morning, but they mostly included minuscule quakes that wouldn't have been felt.

At least two dozen earthquakes were magnitude 2.5 or larger. They included three earthquakes above magnitude 4.0.

The last earthquake happened about 10:45 p.m. Monday and was a magnitude 3.2, according to the USGS.

As is expected of such moderate-sized earthquakes, there have been no reports of damage.

ZIKA VIRUS

Senate Rejects Bill That Would Avert Government Shutdown And Fund The Fight Against Zika

By Lindsay Wise

McClatchy, September 27, 2016

The U.S. Senate on Tuesday rejected a stopgap funding bill proposed by Republicans that included funds to combat Zika, edging the federal government closer to a shutdown.

The federal government will shut down if Congress doesn't pass a bill to maintain current funding levels by Friday.

Democrats complained that the Republicans' bill provides money to flood victims in Louisiana and other states but nothing to help residents plagued by lead-tainted water in Flint, Michigan.

"It's outrageous that this funding bill would include money for some communities dealing with flooding but deny resources for families struggling with toxic drinking water in Flint, Michigan," said Democratic Sen. Claire McCaskill of Missouri, who voted against the bill.

Republicans in turn accused Democrats of moving the country toward a government shutdown in order to cast the GOP-led Congress as ineffective.

"Senate Democrats stooped to a new low today," said McCaskill's Republican colleague, Sen. Roy Blunt of Missouri.

"It's almost as if a few Democratic leaders decided long ago that bringing our country to the brink would make for good election-year politics," Majority Leader Mitch McConnell, R-Ky., said in a speech on the Senate floor.

In the end, however, some Republicans joined with Democrats on Tuesday to block two attempts to advance the bill that McConnell had offered to avert a shutdown, 45-55 and 40-59. The measure needed 60 votes to pass.

Democrats said they were holding out to add money to help residents affected by lead-tainted water in Flint.

The bill already includes $1.1 billion to fight Zika and millions to help flood victims in Louisiana, West Virginia and Maryland.

Minority Leader Harry Reid, D-Nev., said he hoped the defeat would force Republicans back to the negotiating table.

"I encourage my Republican colleagues to help us have some degree of certainty that the people of Flint will be helped," he said.

Earlier this month, senators passed a water resources bill by 95-3 that included about $220 million to help Flint. But the House of Representatives version of that bill doesn't have any Flint money in it.

House Speaker Paul Ryan, a Republican from Wisconsin, told reporters Tuesday that the House would bring its bill to the floor without Flint funding and lawmakers could work out the differences later on.

"I'm not going to negotiate in the media," Ryan said. He added that the proper place for the Flint money was in the water resources bill.

A handful of Democrats bucked their party to vote to advance the bill: Sens. Bill Nelson of Florida, Joe Manchin of West Virginia, Jon Tester of Montana and Joe Donnelly of Indiana.

On the other side of the aisle, 12 Republicans joined the majority of Democrats in blocking the bill, including Sens. Ted Cruz of Texas and Lindsey Graham of South Carolina. Graham opposes the bill because it does not contain a fix for the Export-Import Bank. Cruz wanted the bill to include language that would stop Obama administration plans to turn over control of internet domain names to an international body on Oct. 1.

Senate Blocks Stopgap Bill To Prevent Shutdown This Weekend

By Andrew Taylor

Associated Press, September 27, 2016

WASHINGTON (AP) – The Senate on Tuesday stumbled over a must-do bill to prevent the government from shutting down this weekend and to fund the fight against the Zika virus. Democrats, demanding money so Flint, Michigan, can address its lead-contaminated water crisis, overwhelmingly opposed the measure, as did a dozen of the Senate's most conservative members.

The 45-55 vote stalls the stopgap funding bill – for now at least – and is exasperating top Republicans like Senate Majority Leader Mitch McConnell, who made several concessions to Democrats in weeks of negotiations over the measure.

The GOP defections left McConnell, R-Ky., short of a simple majority, much less the 60 votes needed to clear a filibuster hurdle.

Republican leaders are promising to address the Flint issue after the election in a separate water resources bill, but Democrats refuse to take them at their word.

"'Trust me we will consider Flint later' – that's like nothing to me," said House Minority Leader Nancy Pelosi, D-Calif.

Democrats say that it's unfair that the water crisis in Flint has gone on for more than a year with no assistance, while Louisiana and other states are getting $500 million for floods that occurred just last month. Democrats have played a strong hand in the negotiations and know they have leverage because Republicans controlling the House and Senate are eager to avoid a politically harmful shutdown at midnight on Friday.

"Democrats have been clear that Congress should not leave Flint and other lead-tainted communities out of any (stopgap spending) negotiation that includes emergency disaster funding," said Senate Minority Leader Harry Reid, D-Nev., and other top Democrats in a Tuesday morning letter to McConnell.

McConnell characterized the Democratic position as "no Flint, no flood" and indicated he is considering dropping the flood aid.

The stopgap spending bill would keep the government running through Dec. 9 and provide $1.1 billion in long-delayed funding to fight the spread of the Zika virus and develop a vaccine and improved tests to detect it. Zika can cause can cause grave birth defects.

McConnell has made numerous concessions in weeks of negotiations on the measure, agreeing, for instance, to drop contentious provisions tied to Zika funding that led Democrats to filibuster prior Zika measures this summer and earlier this month. A provision to make Planned Parenthood ineligible for new anti-Zika funding for Puerto Rico was dropped, as was a provision to ease pesticide regulations under the Clean Water Act. A $400 million package of spending cuts added to the measure is no longer controversial.

The measure also includes a popular full-year spending bill that provides a 4 percent budget increase for the Department of Veterans Affairs.

"Can it really be that Democratic leaders have embraced dysfunction so thoroughly that they'd tank a noncontroversial, 10-week funding bill over – well, what exactly?" McConnell asked, as he opened the Senate on Tuesday. "It's almost as if a few Democratic leaders decided long ago that bringing our country to the brink would make for good election-year politics."

Republicans say the Flint issue will be handled in a separate measure to authorize water development projects. That measure – without Flint money – is set for a House floor debate Tuesday, but Republicans are telegraphing it will be included in any final measure handled in a postelection session. But GOP leaders on Monday night blocked Rep. Dan Kildee, D-Mich. – who represents Flint – from getting a vote on the Senate measure.

House Speaker Paul Ryan, R-Wis., on Tuesday said that the water development bill "is the better place to address this."

The White House, which has not transmitted an official request for Flint aid, poked at Ryan for excluding it from the water projects bill.

"The speaker of the House says he opposes adding funding for Flint to the continuing resolution and believes that it should be handled in the water resources bill. But it's not included in the water resources bill that's advancing through the House. And then he has the nerve to suggest that it's Democrats who are the ones causing problems," said White House Press Secretary Josh Earnest.

Democrats Block GOP Plan To Fund Government Because It Doesn't Help Flint

By Erin Kelly

USA Today, September 27, 2016

WASHINGTON — Democratic senators blocked a vote Tuesday to advance a Republican bill to keep the government open past Friday, because it did not include federal aid to help clean up lead-contaminated drinking water in Flint, Mich.

Senators voted 45-55 to advance the legislation, falling 15 votes short of the 60 needed to move the bill forward. A dozen Republicans joined 40 Democrats and two independents in opposing the proposal.

Congress must act by midnight Friday to prevent a government shutdown on Oct. 1, when fiscal 2017 begins. Senate Majority Leader Mitch McConnell said senators would "continue working on this important matter" and hold another vote soon.

McConnell, R-Ky., unveiled a proposal last week that would fund the government at existing levels through Dec. 9 to give lawmakers time to negotiate a bigger agreement to fund federal agencies through September 2017. It also would have provided $1.1 billion to combat the Zika virus and $500 million in aid to the flood-ravaged states of Louisiana, Maryland and West Virginia.

Democrats support those measures, but they were upset that Republicans did not include $220 million to help pay for a new water system for Flint, Mich., where residents have been poisoned by lead-contaminated drinking water. Democrats argue that Flint residents are victims of a disaster and deserve emergency aid just like the people of Louisiana.

"The Republican (proposal) ignores a two and a half year crisis in Flint, Michigan," said Minority Leader Harry Reid, D-Nev. "Lead has poisoned all 100,000 people, almost 10,000 children, some of whom are babies. Lead is a killer for children. A child who ingests lead in any way... (it) will affect them the rest of their lives. They won't be as smart as they could be. They won't be as agile as they could be. It really hurts them."

McConnell complained that Democrats keep changing what they want in the funding deal. He said he is giving Democrats what they have been seeking for months: $1.1 billion to combat the Zika virus with no "poison pills" to prevent Planned Parenthood from receiving federal funding or to waive federal environmental laws governing the use of pesticides to kill mosquitoes. Zika is spread by mosquitoes and through sexual contact.

McConnell's proposal also included full 2017 funding for military construction and veterans programs and about $7 million over the next 10 weeks to begin paying for new federal programs approved by Congress to fight heroin addiction and prescription painkiller abuse.

"Can it really be that Democratic leaders have embraced dysfunction so thoroughly that they'd tank a noncontroversial, 10-week funding bill over — well, what exactly?" McConnell said. "It's almost as if a few Democratic leaders decided long ago that bringing our country to the brink would make for good election-year politics."

McConnell said the $220 million for Flint was already approved by the Senate as part of a sweeping water projects bill called the Water Resources Development Act. But the House has not yet passed the bill, and its version does not include money for Flint.

House leaders have indicated that they expect the Flint aid to be included in a final bill, but Democrats don't trust them. Democrats said their distrust was underscored Monday night when the House Rules Committee ruled against allowing a vote on an amendment by Rep. Dan Kildee, D-Mich., to add Flint aid to the water bill.

"Would it be asking too much for the Speaker of the House, the Republican leader of the Senate, to stand and say, we're going to get that thing done, we're going to pass it, we're going to make sure that the bill that passed overwhelmingly in the Senate is going to become law?" Reid said. "But they ignore that. They ignore the people of Flint."

Sen. Debbie Stabenow, D-Mich., said the aid for Flint would be paid for by rescinding a credit subsidy for automakers for loans issued after Oct. 1, 2020. That subsidy costs the government about $250 million.

"We took the extra step because of the urgency and the dire circumstances in the city of Flint," she said. "It costs nothing to do this."

Will Democrats Force A Government Shutdown Over Flint Relief Funds?

By Mike Debonis

Washington Post, September 27, 2016

The federal government will shut down at midnight Friday unless Congress acts, and Senate Democrats say they will not vote for any spending extension that does not include federal aid to address the drinking-water crisis in Flint, Mich.

Flint relief has emerged as the crucial sticking point in negotiations on the stopgap spending extension necessary to avert a shutdown. Senate Majority Leader Mitch McConnell (R-Ky.) unveiled a bill last week that addressed several Democratic demands, including a deal on Zika response funding and the elimination of several contentious policy riders.

But it did not incorporate the $220 million Flint aid package that passed the Senate in separate legislation earlier this month. A senior Senate Democratic aide said Monday that Democrats will vote against the spending bill Tuesday, halting its progress and creating the potential for at a brief shutdown if all 100 senators do not agree to speed up procedural hurdles.

Top Senate Democrats asked McConnell in a Tuesday letter, sent ahead of the afternoon vote, to reopen negotiations to include Flint aid.

"We believe that the [spending bill] should include assistance for communities facing disasters across the country – and that Flint and communities like it should not be left behind," reads the letter, which is signed by eight Democrats, including Minority Leader Harry M. Reid (Nev.) and Sens. Debbie Stabenow and Gary Peters of Michigan.

Republican leaders in both the House and Senate have countered by pointing out that Flint aid will probably pass as part of a separate water projects bill, which cleared the Senate on Sept. 15 on a 95-3 vote.

Instead, Senate GOP leaders said Tuesday, Democrats are trying to create a shutdown crisis for political reasons.

"It's almost as if a few Democratic leaders decided long ago that bringing our country to the brink would make for good election-year politics, and then they've just made up the rationale as they go along," McConnell said.

"Because they think it helps them somehow politically, our Democratic friends are marching this country closer and closer to a shutdown," said Sen. John Cornyn (R-Texas), the majority whip.

He pointed to a remark that Sen. Jon Tester (D-Mont.), chairman of the Senate Democrats' campaign arm, recently gave to The Washington Post where he said candidates need to "show the fact that the Republicans really haven't done anything" in Congress.

"In order for them to win seats, they have to show that under Republican leadership, nothing has been done," Cornyn said. "Well, the facts would show otherwise."

Democrats, meanwhile, have sought federal relief money for the Flint crisis since January, and they are eager to get the funding passed into law. The issue has stirred resentments over the treatment of a majority-black city, and it has stayed near the top of Democrats' congressional agenda for months.

While the water bill that included Flint relief easily passed the Senate, the House version of the water bill, which is set to pass Tuesday, does not include the Flint funding

House Majority Leader Kevin McCarthy (R-Calif.) told reporters Monday that "we are going to deal with Flint," but later in the day, House Republicans moved to deny a vote on an amendment that would add Flint relief to the House bill. That has Democrats skeptical that their GOP counterparts are making a good-faith effort to pass the aid package.

"If I had any sense that the leadership in the House felt that Flint relief was appropriate, and the only question is which [bill] it should be placed in, that would be a different question," said Rep. Dan Kildee (D-Mich.), who represents Flint. "But I hear from the Republican leadership a question as to whether they should help Flint at all. … The idea that we would wait and maybe hope and trust that these sort of vague insinuations that maybe [the water bill] is where Flint could be taken up … it's hard to rely on that."

The Flint crisis is now into its second year, with most households and businesses in the Rust Belt city still unable to use their lead-tainted tap water for drinking or cooking. A decision made by a state-appointed emergency manager to switch water sources led to the corrosion of water-supply pipes that now must be replaced at a cost of hundreds of millions of dollars.

The federal aid package would fund a portion of those costs, while also helping Flint and other communities deal with the public health implications of lead exposure.

Democrats prefer the aid be attached to the stopgap spending bill, known as a continuing resolution or CR, because it is a must-pass bill that is guaranteed to become law. Even if the water-projects bill passes the House on Tuesday, the two chambers will have to resolve differences between the two bills, and there is no guarantee the final product — which might not emerge until November or December — will include Flint aid.

"Time does matter, the CR still by far is the preferable bill," Kildee said. "It's the bill that is going to the president's desk for sure."

The White House said Monday that "Congress should quickly pass targeted funding to support Flint, Michigan, whether in the Water Resources Development Act or another vehicle."

Also aggravating Democrats is McConnell's decision to include in the stopgap spending bill $500 million in disaster relief for flooding in areas largely represented by Republicans — mainly Louisiana and Texas.

"We are happy to help with the disaster that took place in Louisiana … but couldn't they help Flint?" Reid said on Tuesday. "The Republicans are essentially saying the disasters in our states are more important than the disasters in your state. It is unfair, and it is wrong."

Lawmakers Work To Avoid Shutdown As Stopgap Blocked Over Flint

By Billy House

Bloomberg Politics, September 27, 2016

Senate Democrats blocked Majority Leader Mitch McConnell's first effort to advance a stopgap spending measure Tuesday as McConnell and House Republicans explored separate options to avert a U.S. government shutdown.

Funding for the government expires at 11:59 p.m. Friday. The Senate failed to advance the measure on a 45-55 vote, with 60 required. Twelve Republicans opposed the bill.

Two House Republicans said Tuesday evening that discussions have begun on drafting an emergency seven-day spending measure that would give Congress more time for negotiations on stopgap measure that would last until December. The Republicans spoke on condition of anonymity.

Senate Democrats were angry that the measure included emergency flood aid but didn't address the lead-tainted water crisis in Flint, Michigan.

Congressional leaders still have time to reach a new deal, but the margin for error is growing thin. McConnell said he would consider offering a replacement version that would strip out flood aid, something that several Democrats said they would consider. But it wasn't clear whether he will follow through on that.

"We keep hearing their position is no Flint, no flood and that's certainly something to talk about," McConnell told reporters.

Republicans ripped Democrats for filibustering the bill's $1.1 billion in funding to fight the Zika virus, $500 million in flood relief and $37 million to address the opioid crisis. Republican leaders had also dropped House provisions on Planned Parenthood and other issues opposed by Democrats.

A seven-day stopgap would delay the risk of a shutdown, but it would also impinge on lawmakers' plans to return to the campaign trail.No Promises

Before the Senate vote on Tuesday, Democratic leaders had demanded guarantees from House Speaker Paul Ryan and McConnell that Flint would get funding to help fix its water lead-contamination crisis, but received none.

Many House Republicans say drinking water is an issue better left to states and localities to address. But the issue has taken on greater prominence with the presidential election, particularly after Republican nominee Donald Trump made a rocky visit to Flint earlier this month.

"Would it be asking too much for the speaker of the House, the leader of the Senate, the Republican leader of the Senate, to stand and say, 'We're going to get that thing done?'" said Senate Minority Leader Harry Reid of Nevada.

Reid also objected to McConnell continuing a provision in current law that prohibits the Securities and Exchange Commission from requiring corporations to disclose their political spending.

"The Securities and Exchange Commission will be powerless to tell corporations that they have to disclose their campaign contributions," Reid said. "They have to disclose everything else to their shareholders, but not that."Water Funding

The Senate has passed a separate measure that includes $220 million for Flint and other communities affected by lead on a 95-3 vote, but McConnell omitted the funding when he introduced his own stopgap spending bill last week after bipartisan negotiations broke down. The measure would fund the government through Dec. 9.

Lawmakers could still take it right down to the deadline Friday night, flirting with a government shutdown. Given Senate rules, a single unhappy senator could take it over the brink.

"The clock is ticking. We've been very clear," Democratic Senator Barbara Mikulski of Maryland told reporters before the vote. "I think we can come to an agreement on the money, we now just have to get rid of the poison pill riders."

It will be hard for House Republicans to pass a stopgap spending measure, or continuing resolution, without Democratic votes given fractures in their conference.Holding Firm

House Democrats are holding firm for now.

"We're saying we're not going to do a CR if you don't do Flint," second-ranking House Democrat Steny Hoyer said, adding that he could support a bill without flood aid or Flint money.

Hoyer suggested Republicans could add the money to the separate water resources bill on the House floor, but Republican leaders on Monday night teed up more than two dozen amendments for the House floor while blocking Democrats from offering one on Flint.

Ryan told reporters Tuesday that the water bill is "the proper place" for the Flint funding, but added, "I'm not going to negotiate that in the media."

Before it's here, it's on the Bloomberg Terminal. LEARN MORE

Senate Blocks Republican Stopgap From Advancing

Roll Call, September 27, 2016

Senate Majority Leader Mitch McConnell, R-Ky., holds a copy of his opening remarks as he speaks to the press about the continuing resolution in the Ohio Clock Corridor following the Senate Republicans' weekly policy lunch in the Capitol on Tuesday. (Bill Clark/CQ Roll Call)

The Senate on Tuesday voted 45-55 not to cut off debate on a 10-week continuing resolution proposed by Senate Majority Leader Mitch McConnell to keep government agencies and programs funded into December.

In addition to the stopgap funds, the package would have provided $1.1 billion to combat the Zika virus outbreak and $82.5 billion in fiscal 2017 Military Construction-VA discretionary spending, as well as $500 million to help disaster-affected states including flood-ravaged Louisiana. Sixty votes were needed to invoke cloture.

Senate Democrats voted overwhelmingly against the legislation largely due to the lack of funding to help citizens in Flint, Michigan, who have been grappling with a lead-contaminated water supply. Democrats also objected to a continued block in the McConnell proposal on a Securities and Exchange Commission rule that would require publicly traded companies to disclose political spending.

Tuesday's vote marks the fourth time Democrats have blocked Zika aid from moving forward, but the first time they've blocked the aid as part of a stopgap measure to keep the government running past the end of fiscal 2016 at midnight Friday.

Senate Dems: Add Flint Aid To Spending Deal

By Jordain Carney

The Hill, September 27, 2016

Top Senate Democrats are pressing the GOP to renegotiate a short-term spending deal to include aid for the Flint, Mich., drinking water crisis days ahead of a looming government shutdown.

Eight senators — led by Minority Leader Harry Reid (D-Nev.) — sent a letter Tuesday to Majority Leader Mitch McConnell (R-Ky.) and Speaker Paul Ryan (R-Wis.) saying the continuing resolution (CR) should "include emergency federal disaster funding for Flint, Michigan and other communities across the nation struggling with the scourge of toxic, lead-tainted water supplies."

"The CR is the only must-pass legislation remaining on the Congressional calendar, and Democrats have been clear that Congress should not leave Flint and other lead-tainted communities out of any CR negotiation that includes emergency disaster funding," the senators wrote.

Democratic Sens. Dick Durbin (Ill.), Charles Schumer (N.Y.), Patty Murray (Wash.), Barbara Mikulski (Md.), Barbara Boxer (Calif.), Debbie Stabenow (Mich.) and Gary Peters (Mich.) also signed the letter.

Senators are expected to take a procedural vote Tuesday afternoon on a short-term spending bill that would fund the government through Dec. 9. Democrats are threatening to withhold their support because the measure does not include aid for Flint.

Republicans are quick to note that the Senate passed a water infrastructures bill earlier this month that included help for the Michigan community.

But the House version of the Water Resources Development Act (WRDA) doesn't include the money, and Democrats warned Tuesday that the "path for that bill to reach the President's desk with aid for Flint and other communities intact remains unclear."

The showdown on the Senate floor comes after McConnell filed a CR last week that included Democrat-supported priorities, including funding to fight the Zika virus. But leadership quickly came out in opposition to the bill, noting they didn't sign off on the proposal.

The letter comes after McConnell pressured Democrats to back the bill from the Senate floor on Monday, questioning whether they want to remove flood aid for Louisiana, West Virginia and Maryland that is currently included in the bill.

Democrats said in the letter that Republicans should not consider removing the emergency flood funding but instead consider inserting aid for Flint and other communities.

House GOP leadership has pointed to the WRDA, and not the CR, as the vehicle for getting the Flint help to the president's desk.

Sen. James Inhofe (R-Okla.) also pledged in a Huffington Post op-ed late last week that the final version of the legislation would include the drinking water aid.

How Two US Disasters Could Lead To A Third – Another Government Shutdown

By Eric Pianin

Fiscal Times, September 27, 2016

Much of southern Louisiana is still under flood water. Flint, Michigan residents still can't drink their city's lead-contaminated water. And members of Congress are so heavily conflicted over how and when to respond to those two disasters that they are risking a government shutdown by the end of the week.

Lawmakers at one time had high hopes of quickly tying up loose ends and then head for the door at the end of the week to return home to campaign. But Congress's legendary dysfunction was on full view on Tuesday, as Senate Republican leaders tried again and failed to pass a massive stop-gap spending bill to keep the government operating beyond the start of a new fiscal year October 1.

After wasting a good part of the summer out of town on an extended recess without having passed a single appropriations bill or addressing the year-long Zika virus crisis in Florida and Puerto Rico, lawmakers returned to work last week determined to make short order of all outstanding business.

Yet now they find themselves ensnared in another financial crisis of their own making. This one has to do with when and how to finally approve critically need federal assistance to Louisiana, which is reeling from the worst natural disaster since Hurricane Sandy in 2012, and Flint, the economically depressed and largely black city struggling to function with no potable water and the terrible knowledge that 6,000 or more young children may have incurred serious health problems by drinking the water.

Senate Majority Leader Mitch McConnell (R-KY) and House Speaker Paul Ryan (R-WI) are in no mood for another government shutdown so close to the November 8 election – one that would likely anger constituents and be blamed on the GOP leadership.

But irate Democrats led by Senate Minority Leader Harry Reid and House Minority Leader Nancy Pelosi, have vowed to continue to block passage of a continuing resolution necessary to keep the government afloat unless it contains $220 million in emergency assistance to Flint and other communities with problems of contaminated drinking water.

Republicans for months have dragged their feet on approving emergency funding for Flint for eight months, despite the national outrage over the EPA and Republican state officials' gross mishandling and cover-up of the contaminated water system. Michigan Sens. Debbie Stabenow and Gary Peters, both Democrats, fought to get the money including in the continuing resolution, along with $500 million of emergency relief for bedraggled Louisiana residents and businessmen.

But Republicans have insisted on treating the Flint funding differently by including it in the 2016 Water Resources Development Act recently approved by the Senate, but that still awaits action in the House. While McConnell backed inclusion of the Flint funds in the Senate-passed version, Ryan and House conservatives are balking at including the money in their version of the water resources bill.

The House conservatives' motivation in slow-walking emergency assistance for a Midwestern city poisoned by lead is anybody's guess.

But Senate and House Democratic leaders are determined to block action on the CR until they receive assurance that the Flint money will be approved this fall, one way or another. During a news conference on Tuesday, just prior to McConnell's latest failed effort to win cloture on a stop-gap spending measure, Stabenow, Peters and a handful of other Michigan lawmakers warned they would risk provoking a fiscal crisis to get the Flint money approved.

Stabenow said that Flint residents have been consigned to unspeakable health problems and inconvenience, and that Congress has been jerking them around for months until the Senate finally overwhelmingly approved the funding last week as part of the water resources legislation.

"At 95 to 3, we thought we were finally on our way, and the people of Flint were hopeful," she told reporters. The funding then ran into a brick wall in the House, she said. And at the same time, the disaster relief for Louisiana was added to the continuing resolution.

"Now I'm happy to support Louisiana," Stabenow said. "I've said that from the very beginning. I understand about flooding. We just ask that the Republicans in the House and the Senate understand lead poisoning in water – shutting down an entire city's water supply of 100,000 people who have waited too long . . .If in fact the people of Flint have to wait again, then the people of Louisiana can join them in that wait until the end of the year."

Rep. Sander Levin (D-MI), a veteran legislator, warned that "We're here to say, if the money is not provided before we leave this week, we're not leaving." Peters added that "The people of Flint need help."

McConnell is exploring a number of options to break the logjam in the Senate and House before Friday's deadline for a shutdown. One possibility is a Solomon-like maneuver of dropping both Flint and Louisiana from the continuing resolution through Dec. 9 and then trying to reach a final agreement on the emergency funding during the lame duck session after the election.

McConnell floated that idea at a news conference shortly before the latest procedural vote to bring up the continuing resolution failed, 45 to 55, according to Politico.

"We keep hearing that their position is no Flint, no floods," McConnell said. "That's certainly an option worth discussing." When told of McConnell's comment, Reid, the Democratic leader who retires at the end of this year, said he wanted to see precisely what McConnell would do – and again said he wanted to see relief approved for both Louisiana and Flint.

Budget Resolution Needs Passed

Elkins (WV) InterMountain, September 28, 2016

As many victims of severe flooding earlier this year have come to learn, the Federal Emergency Management Agency is limited in how much money it can dole out for relief and rebuilding work. A bill scheduled for a vote this afternoon in the U.S. Senate could provide additional help.

Senators are to vote on a continuing resolution providing money for a variety of government activities. Among them are battling the Zika virus and addressing the epidemic of opioid abuse in many states.

Last week, a $500 million addition was made to the bill. It would provide Community Development Block Grant funding for West Virginia, Louisiana, Maryland and other states hit hard by flooding this year.

Sen. Shelley Moore Capito, R-W.Va., a member of the Senate Appropriations Committee, said members of the panel added the funding because they

"recognized the scope and scale of the damages incurred by my state" during the flooding in June.

"Getting these resources out to our communities quickly will help those families who are just beginning to rebuild get back on their feet," Capito added.

While initial coverage of devastating floods in our state and Louisiana was extensive, the national news media has moved on to other topics, including the race for president.

But in West Virginia, Louisiana and a few other states, tens of thousands of people have not been able to move on. Many flood victims simply do not know where to turn for help.

Providing federal aid in addition to FEMA funding is essential. The Senate should approve the budget resolution — with aid for flood victims included — to provide some hope where very little exists today.

Still A Problem, Two Areas Sprayed For Mosquitoes By Plane Tonight

By Trey Schmaltz

WBRZ-TV Baton Rouge (LA), September 27, 2016

BATON ROUGE – Two areas of the parish will be sprayed for mosquitoes Monday night due to an increasing number of bugs.

Crews will fly over Sherwood Forest east of Sherwood Forest Blvd. to Centurion Place. Also, an area of Highland Road and Perkins from Bluebonnet to the Country Club of Louisiana.

Standing water still lingering following the flood in southern areas of East Baton Rouge and Ascension Parish is fueling an increase in mosquitoes, the EBR mosquito abatement division has said. The mosquitoes breeding in the water are southern house mosquitoes, which carry West Nile but not Zika.

In Livingston Parish, where voters denied funding for a mosquito control service during a recent election, Orleans Parish mosquito control is spraying with an airplane using donated spray and flight costs reimbursed by FEMA.

EMERGENCY PREPAREDNESS

Flooding Possible Thursday With As Much As 6 Inches Of Rain Forecast

Baltimore Sun, September 27, 2016

As much as 4 to 6 inches of rain could fall on Central Maryland from Wednesday night through Thursday, prompting warnings of possible flooding.

A slow-moving low-pressure system is forecast to drop from the Great Lakes toward the mid-Atlantic. Meanwhile, winds laden with sub-tropical moisture are forecast to come in from the east.

“It could rain a lot,” said Andy Woodcock, a meteorologist with the National Weather Service’s Baltimore/Washington forecast office.

Though the ground is relatively dry – just three-quarters of an inch of precipitation has fallen at Baltimore/Washington International Thurgood Marshall Airport this month – flooding is still possible, he said.

“That should not allow us to get our guard down,” Woodcock said. “People should be prepared.”

Forecasters expect the heaviest rain to fall from Wednesday night through Thursday afternoon. A flash flood watch is in effect across Central Maryland from late Wednesday through early Friday morning.

According to the National Oceanic and Atmospheric Administration’s Weather Prediction Center, the region has a 50 percent chance of at least 4 inches of rain and a 10 percent chance of 6 inches of rain or more.

Tropical Storm Matthew Likely To Develop, Forecasters Say

Tampa Bay (FL) Times, September 27, 2016

Showers and thunderstorms associated with a tropical wave located about 250 miles east of Barbados continued to show signs of organization Tuesday night, leading forecasters to estimate a 90 percent chance they would develop into Tropical Storm Matthew within 48 hours.

Be prepared: Tap here for the latest on this storm system

Data from weather buoys indicated winds at near tropical storm force at 8 p.m.

Conditions seemed favorable for the storm’s development, with the possibility it could become a tropical depression or tropical storm late Tuesday or today.

The storm was moving west to west-northwest at 15 to 20 mph, and was expected to pass over the Windward Islands this morning, moving over the southeastern Caribbean late today and Thursday.

Wave In Atlantic Likely To Become Tropical Storm

Tampa Bay (FL) Times, September 27, 2016

Showers and thunderstorms associated with a tropical wave located about 350 miles east of Barbados continued to show signs of organization Tuesday, leading forecasters to estimate a 90 percent chance they would develop into Tropical Storm Matthew within 48 hours. Data from weather buoys already indicated winds at near tropical storm force at 2 p.m., when an Air Force Reserve reconnaissance aircraft had just begun a flight into Invest 97L to look for a closed circulation. Conditions seemed favorable for the storm's development, with the possibility it could reach tropical storm status. The storm was moving westward to west-northwestward at 15 to 20 mph, and was expected to pass over the Windward Islands this morning, moving over the southeastern Caribbean late today and Thursday.

Newark, N.J.

Christie knew about bridge, witness says

Gov. Chris Christie was told about the epic 2013 traffic jam at the George Washington Bridge while it was underway, seemed happy about it and joked sarcastically that there was nothing political going on, a former loyalist testified Tuesday in the scandal that helped destroy Christie's White House ambitions. David Wildstein, a former executive at the agency that oversees New York-area bridges and tunnels, took the stand for the prosecution at the trial of two one-time Christie allies accused of engineering the four days of gridlock to punish a Democratic mayor for not endorsing Christie. Wildstein has pleaded guilty. Wildstein's account was the first testimony to suggest Christie knew about the scheme as it was unfolding. Christie has repeatedly denied that and has not been charged with a crime.

Charlotte, N.C.: The black man killed by Charlotte police had a restraining order filed against him a year ago when he threatened to kill his wife and her son with a gun, according to court documents obtained Tuesday. Keith Scott's wife filed the order last Oct. 5. Police have said Scott had a handgun when they approached him at an apartment complex last week. Scott's family has said that he was not armed. Videos released by police and the family are inconclusive.

United Nations: Women leaders from 38 countries urged U.N. Secretary-General Ban Ki Moon on Tuesday to fulfill a promise he made in 2007 to start a Korean peace process before his term ends Dec. 31. The Korean Peninsula remains in a technical state of war because the 1950-53 Korean War ended with an armistice, not a peace treaty.

Haiti: Organizers of a cultural festival celebrating the Afro-Caribbean LGBTQ community said it has been called off due to numerous threats and a prohibition by a government commissioner.

Egypt: Rescue workers on Tuesday pulled dozens of bodies from the hold of an Egyptian fishing boat that sank last week in the Mediterranean carrying hundreds of migrants trying to reach Europe, bringing the toll to over 200 dead.

Purchases Of Earthquake Insurance Policies On Rise In California

Sacramento (CA) Bee, September 27, 2016

The Sacramento-based California Earthquake Authority, the not-for-profit provider of more than 75 percent of California's residential earthquake insurance policies, said Tuesday that it has seen a "significant increase" in the purchase of CEA policies to date in 2016.

CEA said it now has more than 908,000 policies in force, an increase of about 29,000 in the first eight months of this year, or nearly twice the number of new CEA policies purchased in all of 2015.

The group said the spike was likely helped by lower rates and expanded deductible choices introduced this year.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Time Is Running Out To Save The Salton Sea

By Sarah Friedman

Sacramento (CA) Bee, September 27, 2016

In the mid-1940s, the Salton Sea was a hotbed of activity, attracting Hollywood's most glamorous actors and musicians to its yacht clubs and campgrounds. Now, what was once the largest lake in California is disappearing before our eyes and endangering all its life.

We can still save it, but if we don't, we will have a massive public health, environmental and economic crisis that could cost as much as $70 billion.

The Salton Sea is a lake that was created most recently 112 years ago after canals and dikes failed along the Colorado River, opening the Imperial Valley to extreme flooding. This engineering mistake is now home to millions of birds and fish. But over the past few years, we have seen lake levels drop.

So how is a lake, three times larger than Owens Lake, nearly gone? An agricultural-to-urban water-transfer agreement between the Imperial Valley and urban San Diego and Coachella valleys is the main reason. This agreement contractually obligated the state to address the environmental impacts from the water transfer to the sea. But there has been little action over the past 10 years.

Meanwhile, the sea has been kept from collapse by water deliveries required under the agreement. This temporary plan was meant to buy time until the sea was restored and will end in 2017.

In about 15 years, however, 60 percent of the Salton Sea's volume will be gone and 100 square miles of lake bed will be exposed.

The less water, the more the salty underbelly of the lake is exposed, damaging crucial habitat in the water and on land. The dry lake bed releases toxic dust that is inhaled by 650,000 people who live nearby, causing respiratory illnesses.

The state recently created the Salton Sea Management Program, making money available for stakeholder-supported projects, including more than 1,000 acres of habitat and dust control projects. However, we need to do more – and now.

First we must restore some of the wetlands we've already lost or could lose as the sea recedes. The Salton Sea has become a resting place for half of the nation's birds as more than 90 percent of wetlands across California have been destroyed – the most in the nation. Wetlands restoration provides bird habitat and improves air quality.

Next, we must start working toward a smaller but sustainable sea that can still serve the needs of wildlife and the surrounding community. Through smart planning, we can maintain habitat for more than 400 species of migrating birds and the ever-disappearing fish species. Maintaining the Salton Sea will also reduce dust in the air and keep kids from the East Coachella and Imperial valleys out of the hospital for asthma attacks.

Lastly, the Salton Sea has a ton of geothermal potential. This energy resource is free of carbon pollution and won't add to climate change, which is driving a lot of problems affecting the lake.

This approach is the best path forward, but it won't be easy. We have seen incredible steps taken so far, including $80 million from the state and support from the Obama administration. But to truly stop both an ecological and environmental justice crisis, more resources and funding must be devoted to saving the Salton Sea.

ANALYSIS

- **Colorado:** The state is proceeding with a proposal to buy out landslide properties in Colorado Springs as quickly as possible, Colorado Division of Homeland Security and Emergency Management Marilyn Gally told the Colorado Springs city council Monday. The city has proposed a resolution asking FEMA to "move as quickly as possible."… The Beaver Creek Fire that started in June is believed to have been human-caused… A July hailstorm in Colorado Springs is the sixth-most costly disaster in state history, according to the Rocky Mountain Insurance Information Association.
- **Montana:** Several stories report about fires in the state. One near Kalispell led to evacuations, one in Yellowstone has made national news, and the Copper King Fire remains dangerous.
- **North Dakota:** Stories appear to reflect more tension at the site of the pipeline protest: Homeland Security Division Director Greg Wilz withdrew trailers and water tanks that had been supplied by the state after reports of criminal activity, including lasers being directed at pilots observing the protest; Governor Dalyrmple said numerous criminal acts had occurred and asked the Army Corps of Engineers to step in (as the protest is on its land, protesting its permit); and tribal officials acknowledged the campers had split into two factions, one pacifist and one that feels "something should be done."… Also: Three Affiliated Tribes approved a letter of support for the protest. About 60 tribes are believed to be represented at the campsite. A federal judge is to rule on a request for an injunction Wednesday. The Morton County sheriff estimates overtime costs for law enforcement may be $100,000 per week. Protesters plan a march at 2 p.m. today and to attend a Morton County Commissioners meeting at 5:30; two actresses will lead a protest outside the federal district court in Washington, D.C., today as well. Former *Grand Forks Herald* editor Mike Jacobs weighs in with an opinion piece on the protest … Xcel Energy is testing large drones that could be used to help identify power problems after a storm…

- **South Dakota:** The state has its first Zika case, a woman who had travelled to the Caribbean. (She is not pregnant.)
- **Utah:** Two new wildfires have broken out. Red flag warnings are out for the northern part of the state, and storms are expected in the south.
- **Other FEMA-related stories**: The Louisiana flooding, wildfires and the Zika virus continue to dominate national disaster news. No clips are included today.

COLORADO

On Unsolid Ground: State hustling to help Colorado Springs landslide victims (Colorado Springs Gazette)

By: Billie Stanton Anleu
August 22, 2016• Updated: August 22, 2016 at 6:23 pm

Colorado government is moving as quickly as it can to help Colorado Springs landslide victims, state Emergency Management Director Marilyn Galley assured the City Council during its work session Monday.

But Galley said her agency is completing buyouts of Boulder County homes from the 2013 floods, an indication of the two to three years needed to close out relief efforts after disasters.

"It is a tedious process," Galley said.

The state has submitted Colorado Springs' application to the Federal Emergency Management Agency, she said.

Mayor John Suthers and Councilman Keith King are sponsoring a resolution urging FEMA to "proceed as quickly as possible" in moving forward on the Hazard Mitigation Grant Program application. The resolution promises the council, mayor and city staff members' "full and timely attention" in cooperating with FEMA and the state Office of Homeland Security and Emergency Management.

The costs from the 2015 landslides are high, noted city Grants Manager Jen Vance.

When 27 homes were bought out in 2000 after landslides in Holland Park and on Regency Drive, the total project cost was $6.5 million.

But the 26 homes to be bought out because of last year's landslides have a projected cost of $16.2 million, because the cost of housing has increased, several of the houses are in Broadmoor neighborhoods and $1.9 million alone is attributed to a landslide lot owned by Judy Myklak in the Broadmoor Resort Community.

Meanwhile, Councilmen Don Knight and Tom Strand plan another workshop Monday with developers, builders, geologists and geotechnical engineers, among others, to resolve lingering questions on their proposed rewrite of the city's geological hazards ordinance.

Knight had noted holes in that safety net and wants more due diligence before homes are erected in landslide zones.

Planning and Development Director Peter Wysocki said questions to be resolved are:

- Who proposes and signs off on the geological hazard study?

- Is 14 days enough time for the Colorado Geological Survey to respond on how its recommendations have been implemented in development plans?

- Who verifies that those recommendations are addressed?

The original 1996 geohazards ordinance called for either a geologist or geotechnical engineer to write the studies, Knight noted, but both specialists are needed.

"The biggest issue," he said, "is who certifies that the house was built as designed. There's no guarantee your house isn't going to fall down into a landslide. All we're trying to do is make sure the house is built as designed."

Officials say Beaver Creek fire was caused by humans as crews continue to battle blaze (Denver Post)

The Denver Post
By Jesse Paul | jpaul@denverpost.com
August 23, 2016 at 9:03 am

WALDEN — Officials believe the Beaver Creek fire burning in northwest Colorado since June was caused by humans.

In an incident update Monday, commanders made the announcement, which they have been suggesting since the fire started on June 19. The U.S. Forest Service’s law enforcement division is investigating.

The fire, which has scorched more than 37,000 acres in Colorado and Wyoming, is listed as 53 percent contained. Nearly 250 firefighters were assigned to the firefight about 25 miles north of Walden as of Tuesday morning.

“Cooler weather later in the week is predicted to be even more favorable to suppression and containment efforts,” officials said in a Tuesday news release.

Total containment is expected Oct. 21. The fire has destroyed one cabin and a handful of outbuildings.

July hail storm in Colorado Springs sixth-most damaging in state history (The Colorado Springs Gazette)

By: Wayne Heilman
August 22, 2016 Updated: Today at 6:12 am

The July 28 hailstorm that smashed Colorado Springs was the sixth-most damaging event in Colorado history, triggering $352.8 million in claims for damage to homes and vehicles, an insurance industry trade group said Monday.

Described as an "absolute hail bomb" by Brian Bledsoe, chief meteorologist with Gazette news partner KKTV, the Rocky Mountain Insurance Information Association said the storm featuring up to tennis ball-sized hail resulted in 84,500 auto and homeowner insurance claims filed so far. That includes 51,300 auto insurance claims adding up to more than $164.6 million and 33,200 property insurance claims at more than $188.2 million.

"The difference between this storm and many of the other large storms that have hit Colorado is you typically see one storm travel across the state or along the Front Range causing damage over a wide area," said Carole Walker, the association's executive director. "This storm was concentrated in the Colorado Springs area and the size of the hail resulted in a very high percentage of claims that were total losses."

Renee Larson, a semi-retired homeowner near the Colorado Springs Airport, said the storm did about $60,000 damage to her family's three vehicles as well as the roof, six windows, skylights, chimney, siding, fence and shed on or near their home. The vehicles were total losses and she hopes repairs to her home will soon be approved by her mortgage company.

"Hopefully, they will get it done before the snow flies," Larson said. "You want to scream and throw your hands up, but it is Mother Nature, just like the floods in Louisiana. We are fortunate it is going as smoothly as it is. At least we are in the process of our claim. Some people I know might have to wait months to see an adjuster."

The estimated damage amount is preliminary and doesn't include any damage to commercial property such as vehicles of dealer lots or office buildings and hotels, or public property, including at least $500,000 in damage at the Colorado Springs Airport and about 40 Colorado Springs police cars as well as damages at Peterson Air Force Base. The total cost of the storm likely will increase as repairs are completed to roofs, siding and windows damaged by the storm that could take months to complete, Walker said.

"This is yet another reminder from Mother Nature of why Colorado is now ranked second in the nation for hail insurance claims," Walker said. "The size and amount of hail that battered Colorado Springs is, unfortunately, part of a pattern of catastrophic events the state has been experiencing during the past several years, so we need to be financially prepared for the unexpected."

The monetary damage of the storm ranks behind three hail storms, the Waldo Canyon and Black Forest fires, the association reported. The storms ahead of it are:

- A July 20, 2009, Denver area hail storm that caused $767.6 million in damages;

- A July 11, 1990, hail storm that caused $625 million in damages statewide;

- The June 2012 Waldo Canyon fire, which resulted in $453.7 million in claims;

- The June 2013 Black Forest fire, which resulted in $420.5 million in claims;

- A series of storms from June 6-15, 2009, in the Denver area with tornado and hail damage totaling $353.3 million.

When adjusted for inflation, the storm ranks as the eighth-worst in the state's history.

Colorado ranked behind Texas in hail claims from 2013-15 with 182,591 claims, according to a National Insurance Crime Bureau report in May. Nationwide, there were 5,412 major hail storms last year, according to the National Oceanic and Atmospheric Administration Severe Storms database.

Claims related to wind and hail damage accounted for nearly 40 percent of all insured losses during the past five years, averaging about $15 billion annually, the association said. The July 28 storm was the first catastrophic loss of the year in Colorado, which the association defines as insured damage of $25 million or more (flood damage is not included because it isn't covered by most homeowner's insurance policies).

Many of the state's top insurers, including USAA and State Farm, opened mobile locations along Powers Boulevard and elsewhere in eastern Colorado Springs to handle the large number of vehicle claims. Some body shops reported backlogs of work through December and the wait for getting roof or siding work could be even longer.

MONTANA

Evacuations ordered after Montana fire doubles in size (Associated Press)

KALISPELL — Authorities say homes in a rural area east of Thompson Falls have been evacuated after a wildfire in northwestern Montana doubled in size in one day.
Fire officials say extreme fire behavior is also expected for the Copper King Fire on Monday, with wind gusts of up to 40 mph forecast to blow across the dry, hot terrain.
The Sanders County Sheriff's Office issued evacuation orders early Monday along Little Thompson River Road. Some 20 homes and structures are threatened, and other residents have been put on notice that the evacuation area may spread.
A shelter has been set up at Thompson Falls High School.
Some 317 firefighters are responding to the blaze, which grew 4 ½ square miles Sunday to nearly 11 square miles as of Monday morning.

Wildfire smoke streaming across Montana (KXLH – Great Falls)

By: Julianne Dellorso and David Sherman - MTN News

GREAT FALLS - Many people have noticed a lot of smoke in areas of western, central, and northern Montana.
We have received reports of heavy smoke from residents in and around Helena, Shelby, Heart Butte, and even the Sluice Boxes area of the Little Belt Mountains.

Toole County Sheriff Donna Whitt says from what she's heard, it is smoke from the fires in Western Montana and Idaho.

She says there are no fires or incidents involving smoke in Toole County reported to her office.

The East Glacier Volunteer Fire Department posted the following message on Facebook on Monday morning: "Very windy, smokey day in East Glacier Park. Conditions are ripe for wildfire - a red flag day. Be careful with cigarettes and avoid any outdoor burning or anything that might spark a fire, like driving your car in high, dry grass or using a chainsaw."

The Montana Department of Environmental Quality reports that wildfire smoke in the area is likely due to several large fires to the west:

- The Pioneer Fire near Boise, Idaho, is 87,818 acres and 50% contained with active fire behavior.
- The Copper King Fire in northwest Montana is 3,900 acres and 30% contained with active fire behavior. Satellite imagery indicates a plume coming off the fire this afternoon and heading to the northeast.
- The Buck Creek Fire in central Washington is 1,083 acres and 0% contained with active fire behavior and contributing to the light smoke over Montana.

West Yellowstone residents voice concerns over Tatanka Complex (KTVM – NBC Bozeman)

By: Judith Retana
Posted: Aug 22, 2016 10:59 PM MDT

Updated: Aug 22, 2016 10:59 PM MDT

BOZEMAN, Mont. - The half dozen fires burning in Yellowstone National Park are now called the Tatanka Complex.

Fire officials in West Yellowstone held a community meeting Monday night where residents voiced their concerns about the fire. As black smoke continues to rise from the fires, many residents are worried.

"Oh, I'm saying my prayers like crazy," said Duck Creek resident Jim Criner. He was one of more than 200 residents at a community meeting to learn more about the fire.

Officials presented maps showing people where the fire perimeter was and the direction it's heading.

Strong winds and dry weather have a Montana senator and firefighters on alert.

"We want to make sure we have all the resources to ensure the community stays safe, the road stays open and we can protect these very important assets here around West Yellowstone," said Sen. Steve Daines (R-Montana).

Officials handed out fact sheets and maps to help residents understand more about the fires. They even handed out fire action plans to help them plan for an emergency.

Sasha Jevtich is a seasonal resident who works closely with the fire community. He and others looked at maps of the fire after the meeting.

"We took a ride into the park just to check things out for ourselves. You know, as you look at the maps, it is kind of scary. It does looks like it's rather close to town," he said. As scary as it can look, he said having the fire eat away at what is fueling it now, is good for the future.

Even so, the fire still makes residents like Criner nervous. He was around for the 1988 fires and saw how close those got to his neighborhood.

"The area between where the fire is and where we are in Duck Creek, is nothing but high grass and willows. The fire would move across the area really fast if it reached us," he said.

Although many in West Yellowstone are used to Montana's fire season, seeing dark plumes just a few miles away is always a concern.

Residents who wish to receive emergency notifications about the fire or any other event in the area, can sign up at ready.gallatin.com.

NORTH DAKOTA

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, "I think they have to step up and take some responsibility, as well."

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

"At this point, there is not a permit, but it is my understanding they are requesting a permit," which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

"We want to make sure that things are handled peaceably," she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff's Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

"I've been getting notifications from tribes all over the country that have caravans in route, so it's continuing to grow," he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

“He’d like to keep this in the law enforcement arena,” he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there’s an element of “outside agitators” responsible for vandalism, trespassing on private property and blocking the highway – “hundreds of criminal acts.”

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said “nothing bad is happening here.”

Still, protesters acknowledged the camp has split into two factions.

“You have the pacifists and then you have the people who feel something should be done, and they’re camped across the river from each other,” said Jesse Stevens, 32, a member of Wisconsin’s Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the “peaceful” side, Stevens said he felt like he should be across the river.

“My point in coming out here was some kind of action, regardless of whether it’s life-threatening or not,” he said. “This is our land, our people.”

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming’s Wind River Reservation, said she was a little concerned about her children’s safety at the campsite. But she added, “I believe there’s strength in prayer,” and said it’s a once-in-a-lifetime opportunity.

“Our water is sacred,” she said. “I want to make a difference, and I want them to know they can make a difference, too.”

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes’ chairman Mark Fox issued a formal letter of support for Standing Rock’s opposition.

“We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives,” Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe’s reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe’s water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It’s estimated some 60 tribes are represented at the protest and tribal leaders say it’s the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead ‘solidarity’ rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

MIKE JACOBS: Pipeline protest shows new dimension in North Dakota politics (Grand Forks Herald)

By Mike Jacobs Today at 6:00 a.m.

North Dakota still responds to an Indian scare. That's one thing we can say about last week's news.

On Friday, Gov. Jack Dalrymple declared a civil emergency in response to a protest against the Dakota Access Pipeline. The pipeline would cross the Missouri River less than a mile from the boundary of the Standing Rock Sioux nation.

Protests last week brought more than 1,000 people. Arrests were made.

Emergency declarations aren't all that uncommon in North Dakota, but almost all of them address natural disasters. North Dakota knows natural disaster. Hardly a year goes by without natural disaster. This place is flood prone, snow blasted and wind battered.

Civil disturbance is another thing.

The last civil emergency that comes to mind occurred in 1970, when Gov. William Guy sent the National Guard to an anti-war protest at the ABM missile site near Nekoma, N.D. A year before that, Guy called out the Guard when a bunch of college students descended on Zap, N.D., with the express purpose of getting drunk and having a good time. Some damage was done.

Dalrymple didn't send the Guard to the mouth of the Cannonball River. His emergency declaration is just in case local law enforcement needs help, he said.

Besides pointing out that this step is extremely rare, we can say some other things about it.

One is that Native opposition to pipeline projects is becoming a pattern. The Enbridge Company's Sandpiper line is stalled due to opposition from Minnesota's White Earth Band of Ojibway. Their spokeswoman is Winona LaDuke, who was Ralph Nader's running mate in 1996 and 2000 when he was the Green Party candidate for president.

The partnership between Native people and environmentalists is part of the pattern. We saw this in opposition to the Keystone XL Pipeline, and it's evident at the mouth of the Cannonball. The protest there has drawn movie stars as well as environmental activists.

That pretty much makes it the current front line in the war on fossil fuels.

It's easy to suggest (as some bloggers have done) that the tribe is being used.

There are two problems with this. For one thing, it's condescending. For another, it overlooks the growing activism of North Dakota's Native people.

This activism is especially evident at Standing Rock.

Opposition from the elected Tribal Council at Standing Rock doomed UND's nickname and logo. The NCAA said using "Fighting Sioux" would be OK if both of the state's Sioux communities said so. Standing Rock refused.

Another thing to say is that David Archambault, Standing Rock's tribal chair, has warrior blood in his veins. He's been on the front lines at the protest. On the pipeline issue, he's led the tribe to federal court and to the United Nations.

This is no surprise. At the opening of the 2015 legislative session, Archambault delivered the "State of the Relationship" message, a cry from the heart in which he spoke truth to power about Native issues and state jurisdiction.

Then there's the political context.

North Dakota's November ballot has three Native candidates: Chase Iron Eyes for Congress, Marlo Hunte-Beaubrun for Public Service Commission and Ruth Buffalo for insurance commissioner. All are Democrats, and none has much of a chance.

But each of them stepped up to fill slots on a major party ticket.

This has two important implications. First, as major party candidates, they will have media access. Second, they've established that the Democratic Party in the state can't just count on Native voters; it must also promote Native candidates to the white population.

It's also the essence of political organizing, as Mark Trahant pointed out in his blog, at trahantreports.com. Trahant is the nation's best known native journalist, a finalist for the Pulitzer Prize for national reporting and a member of the faculty at UND's Program in Communication.

None of this goes to the question of pipeline safety, much less to the future of fossil fuel development.

On these issues, everybody ought to be heard.

So there is one more thing, at least, to say about last week's developments.

Brian Kalk, one of three members of the Public Service Commission that approved a permit for the Dakota Access Pipeline, dismissed the protest. He told the Bismarck Tribune, "These groups didn't come to our hearings."

Well...

They could have been asked.

That's what "public service" means.

Disclaimers: Enbridge has right-of way on property that my partner Suezette and I own in Mountrail County, N.D. I was at Nekoma with the protesters. I was not at the so-called "Zip to Zap."

North Dakota Tests Drones To Be Used For Disaster Response (AP)

HILLSBORO, N.D. (AP) — A 20-foot-long drone that was brought to North Dakota to test precision agriculture methods is now part of a trial run to see if can help crews restore power to areas hit by natural disasters.

The Israeli-manufactured Elbit Systems Hermes 450 aircraft can cover 40,000 acres in an hour and fly up to 17 hours before refueling. Officials involved in the Xcel Energy test program say the larger drone's ability to cover more ground, collect more data and fly at night is expected to help the company move crews, materials and equipment quickly and safely.

"When you have a storm, when you have fires, getting crews on the ground to identify damage is flat-out dangerous," Raanan Horowitz, president and CEO of Elbit Systems of America, said Monday when the drone was shown off to public officials at an airport in Hillsboro, about 35 miles north of Fargo.

One of the tests involves a mock disaster using power poles placed in ditches in and around the nearby city of Mayville. Preliminary reports show that the drone is effective in quickly locating the downed poles both day and night, Xcel Energy Vice President Laura McCarten said.

"Apparently those wood poles stay warmer than the surroundings, so the infrared technology is able to spot them at night," she said.

Xcel Energy is headquartered in Minneapolis and serves customers in North Dakota, Minnesota, South Dakota, Wisconsin, Colorado, Michigan, Texas and New Mexico.

There are still key issues to be ironed out before the drones can be used on a widespread commercial basis, including Federal Aviation Administration approval to operate beyond line of sight, or without the use of a chase plane keeping tabs on the planes. North Dakota Sen. John Hoeven said he hopes North Dakota will be flying drones without chase planes by the end of the year.

"You're covering such big distances. You're losing the utility of the unmanned aircraft if you have to have a chase plane," Hoeven said.

Minnesota Rep. Collin Peterson, whose district borders North Dakota, said the FFA "didn't do too bad of a job" on regulations for small drones, but he expects a much stiffer challenge on rules for larger aircraft.

"The FAA is very slow moving bureaucracy, to say the least," Peterson said.

If larger unmanned aircraft are approved for beyond-line-of-sight operations, Horowitz said the quadcopters and drones that weigh less than 55 pounds would still be used in a complementary role.

"The bottom line is, when you look at the size and the areas that you are trying to cover, when you look at the resolution, when you look at using sensors that can yield data that is actually usable, this is the way to go," Horowitz said of the Hermes drone.

Elbit Systems and Xcel Energy have combined to contribute about $500,000 into flying the Hermes drone. McCarten said the agriculture test program that began in May provided a "ready-made platform" for the Xcel study.

North Dakota State University researcher John Nowatzki said the agriculture test has yielded impressive results on the drone's ability to capture images. Nowatzki has displayed pictures of a shelter belt taken from 4,000, 6,000 and 8,000 feet, with no discernable difference to the human eye.

"The key message here, maybe, is that we get high resolutions at all levels," he said.

Sarah Lovas, an area farmer and crop consultant, said some of her cohorts still want to find out how they can manage the data in an affordable way, but most have embraced the technology.

"There's just no such thing as a dumb farmer anymore," she said.

SOUTH DAKOTA

South Dakota reports first Zika virus infection (Rapid City Journal)

Journal staff
Rapid City Journal
Aug. 22, 2016

South Dakota has reported its first Zika virus infection, according to state health officials.

The infected person is a woman who traveled to a country in the Caribbean where Zika virus is transmitted. She later developed symptoms, the Department of Health said today in a press release. The infection was confirmed by the Centers for Disease Control and Prevention.

“This is a good reminder for anyone who travels to Zika-affected areas that it’s important to protect themselves from mosquito bites,” Dr. Lon Kightlinger, state epidemiologist for the department, said in the release.

Kightlinger said state officials are not disclosing where the woman infected is from in South Dakota, but did note that she is in her 30s and is not pregnant.

Zika is a tropical mosquito-borne infection. The virus is not known to be carried by the mosquitoes found in South Dakota.

Officials say there are no vaccines or treatment for the virus. To avoid infection, travelers to Zika-affected areas, particularly pregnant women, should follow strict mosquito control precautions — wear pants and long-sleeved shirts, use an EPA-registered insect repellent and ensure that windows and doors have intact screens.

According to the Department of Health, the infection is mild for most healthy adults. About one in five people who are infected will become ill.

The release says symptoms typically occur two to seven days after a bite and include fever, muscle or eye pain and a rash. Pregnant women who are infected run the added risk of having babies with the birth defect microcephaly. Microcephaly means the babies have heads smaller than expected and often have smaller brains that might not have developed properly, the department said.

UTAH

Crews battling new wildfires in northern, central Utah (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune

First Published 1 hour ago • Updated 1 hour ago

Two new wildfires had ground crews scrambling in Sevier and Cache counties on Tuesday, as fire retardant- and water-laden aircraft swarmed the flames from above.

The Sand Ledges Fire, first spotted on Saturday just west of Richfield along Highway 24, had blackened 3,022 acres and was 27 percent contained as of Tuesday, said Fire Information Officer Shayne Ward.

Believed human-caused, the blaze was consuming dry grass and sage brush, including valued sage grouse habitat, but no structures were threatened and no evacuations had been ordered.

In all, 70 firefighters were working to hem in the Sand Ledges Fire. It was a slow, often frustrating task with gusty winds periodically fanning the flames through the tinder-dry vegetation, Ward said.

Still, crews hoped to have the blaze 100 percent contained sometime Saturday.

What sparked the Peterson Hollow Fire Sunday afternoon was still under investigation, but it had scorched 150 acres on the Uinta-Wasatch-Cache National Forest's Logan Ranger District as of Tuesday. Fire Information Officer MaryEllen Fitzgerald said it was 5 percent contained, with no estimated time for when crews will completely contain it.

The fire is 23 miles northeast of Logan and just north of the Beaver Mountain Ski Area.
"[The resort] is currently not imminently endangered, but is the most important focus at this time. Structure protection is in place and being ramped up as a precaution," Fitzgerald stated.
The Peterson Hollow Fire is one of five active blazes on the Uinta-Wasatch-Cache National Forest; the other four are being allowed to burn as beneficial to clearing away accumulated undergrowth and dead timber.
About 160 firefighters were battling the blaze, aided by a fleet of air tankers and helicopters. Hot, dry and occasionally windy weather continue to challenge efforts to hem in the flames.

Utah forecast: Midweek weather brings high fire danger north, storms in the south (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune
If Goldilocks grew up to be a meteorologist, she might say of the midweek forecast for the Salt Lake and Tooele valleys, "Ahhh, just right."

If the fabled cabin burglar walked into the forests of the northern Wasatch Front, however, she might toss her porridge and run: from the mountains above Logan stretching south through Salt Lake City and Provo to Nephi, the National Weather Service declared a Red Flag Warning for wildfire danger from noon to 9 p.m. Tuesday.

Potentially too hot, indeed, thanks to low humidity, rain-starved rangelands and forests, and gusty winds.

Southern Utah? Goldilocks might prefer the company of three offended bears, after all. The region expects a cycle of thunderstorms the next several days — and humid, hot weather. High temperatures were forecast to be in the low- to mid-90s Tuesday, Wednesday and Thursday.

No, it will be the balmy weather due in the Salt Lake and Tooele valleys that is best for that post-porridge nap. Sunny to partly cloudy skies will reign through the midweek, with highs ranging from the mid- to upper-80s Tuesday through Thursday, and overnight temperatures in the upper-50s to low-60s making for sweet dreams.

ANALYSIS

- **Colorado:** The state is proceeding with a proposal to buy out landslide properties in Colorado Springs as quickly as possible, Colorado Division of Homeland Security and Emergency Management Marilyn Gally told the Colorado Springs city council Monday. The city has proposed a resolution asking FEMA to "move as quickly as possible."… The Beaver Creek Fire that started in June is believed to have been human-caused… A July hailstorm in Colorado Springs is the sixth-most costly disaster in state history, according to the Rocky Mountain Insurance Information Association.
- **Montana:** Several stories report about fires in the state. One near Kalispell led to evacuations, one in Yellowstone has made national news, and the Copper King Fire remains dangerous.
- **North Dakota:** Stories appear to reflect more tension at the site of the pipeline protest: Homeland Security Division Director Greg Wilz withdrew trailers and water tanks that had been supplied by the state after reports of criminal activity, including lasers being directed at pilots observing the protest; Governor Dalyrmple said numerous criminal acts had occurred and asked the Army Corps of Engineers to step in (as the protest is on its land, protesting its permit); and tribal officials acknowledged the campers had split into two factions, one pacifist and one that feels "something should be done."… Also: Three Affiliated Tribes approved a letter of support for the protest. About 60 tribes are believed to be represented at the campsite. A federal judge is to rule on a request for an injunction Wednesday. The Morton County sheriff estimates overtime costs for law enforcement may be $100,000 per week. Protesters plan a march at 2 p.m. today and to attend a Morton County Commissioners meeting at 5:30; two actresses will lead a protest outside the federal district court in Washington, D.C., today as well. Former *Grand Forks Herald* editor Mike Jacobs weighs in with an opinion piece on the protest … Xcel Energy is testing large drones that could be used to help identify power problems after a storm…
- **South Dakota:** The state has its first Zika case, a woman who had travelled to the Caribbean. (She is not pregnant.)
- **Utah:** Two new wildfires have broken out. Red flag warnings are out for the northern part of the state, and storms are expected in the south.
- **Other FEMA-related stories**: The Louisiana flooding, wildfires and the Zika virus continue to dominate national disaster news. No clips are included today.

COLORADO

On Unsolid Ground: State hustling to help Colorado Springs landslide victims (Colorado Springs Gazette)

By: Billie Stanton Anleu
August 22, 2016• Updated: August 22, 2016 at 6:23 pm

Colorado government is moving as quickly as it can to help Colorado Springs landslide victims, state Emergency Management Director Marilyn Galley assured the City Council during its work session Monday.

But Galley said her agency is completing buyouts of Boulder County homes from the 2013 floods, an indication of the two to three years needed to close out relief efforts after disasters.

"It is a tedious process," Galley said.

The state has submitted Colorado Springs' application to the Federal Emergency Management Agency, she said.

Mayor John Suthers and Councilman Keith King are sponsoring a resolution urging FEMA to "proceed as quickly as possible" in moving forward on the Hazard Mitigation Grant Program application. The resolution promises the council, mayor and city staff members' "full and timely attention" in cooperating with FEMA and the state Office of Homeland Security and Emergency Management.

The costs from the 2015 landslides are high, noted city Grants Manager Jen Vance.

When 27 homes were bought out in 2000 after landslides in Holland Park and on Regency Drive, the total project cost was $6.5 million.

But the 26 homes to be bought out because of last year's landslides have a projected cost of $16.2 million, because the cost of housing has increased, several of the houses are in Broadmoor neighborhoods and $1.9 million alone is attributed to a landslide lot owned by Judy Myklak in the Broadmoor Resort Community.

Meanwhile, Councilmen Don Knight and Tom Strand plan another workshop Monday with developers, builders, geologists and geotechnical engineers, among others, to resolve lingering questions on their proposed rewrite of the city's geological hazards ordinance.

Knight had noted holes in that safety net and wants more due diligence before homes are erected in landslide zones.

Planning and Development Director Peter Wysocki said questions to be resolved are:

- Who proposes and signs off on the geological hazard study?

- Is 14 days enough time for the Colorado Geological Survey to respond on how its recommendations have been implemented in development plans?

- Who verifies that those recommendations are addressed?

The original 1996 geohazards ordinance called for either a geologist or geotechnical engineer to write the studies, Knight noted, but both specialists are needed.

"The biggest issue," he said, "is who certifies that the house was built as designed. There's no guarantee your house isn't going to fall down into a landslide. All we're trying to do is make sure the house is built as designed."

Officials say Beaver Creek fire was caused by humans as crews continue to battle blaze (Denver Post)

The Denver Post

By Jesse Paul | jpaul@denverpost.com
August 23, 2016 at 9:03 am

WALDEN — Officials believe the Beaver Creek fire burning in northwest Colorado since June was caused by humans.

In an incident update Monday, commanders made the announcement, which they have been suggesting since the fire started on June 19. The U.S. Forest Service's law enforcement division is investigating.

The fire, which has scorched more than 37,000 acres in Colorado and Wyoming, is listed as 53 percent contained. Nearly 250 firefighters were assigned to the firefight about 25 miles north of Walden as of Tuesday morning.

"Cooler weather later in the week is predicted to be even more favorable to suppression and containment efforts," officials said in a Tuesday news release.

Total containment is expected Oct. 21. The fire has destroyed one cabin and a handful of outbuildings.

July hail storm in Colorado Springs sixth-most damaging in state history (The Colorado Springs Gazette)

By: Wayne Heilman
August 22, 2016 Updated: Today at 6:12 am The July 28 hailstorm that smashed Colorado Springs was the sixth-most damaging event in Colorado history, triggering $352.8 million in claims for damage to homes and vehicles, an insurance industry trade group said Monday.

Described as an "absolute hail bomb" by Brian Bledsoe, chief meteorologist with Gazette news partner KKTV, the Rocky Mountain Insurance Information Association said the storm featuring up to tennis ball-sized hail resulted in 84,500 auto and homeowner insurance claims filed so far. That includes 51,300 auto insurance claims adding up to more than $164.6 million and 33,200 property insurance claims at more than $188.2 million.

"The difference between this storm and many of the other large storms that have hit Colorado is you typically see one storm travel across the state or along the Front Range causing damage over a wide area," said Carole Walker, the association's executive director. "This storm was concentrated in the Colorado Springs area and the size of the hail resulted in a very high percentage of claims that were total losses."

Renee Larson, a semi-retired homeowner near the Colorado Springs Airport, said the storm did about $60,000 damage to her family's three vehicles as well as the roof, six windows, skylights,

chimney, siding, fence and shed on or near their home. The vehicles were total losses and she hopes repairs to her home will soon be approved by her mortgage company.

"Hopefully, they will get it done before the snow flies," Larson said. "You want to scream and throw your hands up, but it is Mother Nature, just like the floods in Louisiana. We are fortunate it is going as smoothly as it is. At least we are in the process of our claim. Some people I know might have to wait months to see an adjuster."

The estimated damage amount is preliminary and doesn't include any damage to commercial property such as vehicles of dealer lots or office buildings and hotels, or public property, including at least $500,000 in damage at the Colorado Springs Airport and about 40 Colorado Springs police cars as well as damages at Peterson Air Force Base. The total cost of the storm likely will increase as repairs are completed to roofs, siding and windows damaged by the storm that could take months to complete, Walker said.

"This is yet another reminder from Mother Nature of why Colorado is now ranked second in the nation for hail insurance claims," Walker said. "The size and amount of hail that battered Colorado Springs is, unfortunately, part of a pattern of catastrophic events the state has been experiencing during the past several years, so we need to be financially prepared for the unexpected."

The monetary damage of the storm ranks behind three hail storms, the Waldo Canyon and Black Forest fires, the association reported. The storms ahead of it are:

- A July 20, 2009, Denver area hail storm that caused $767.6 million in damages;

- A July 11, 1990, hail storm that caused $625 million in damages statewide;

- The June 2012 Waldo Canyon fire, which resulted in $453.7 million in claims;

- The June 2013 Black Forest fire, which resulted in $420.5 million in claims;

- A series of storms from June 6-15, 2009, in the Denver area with tornado and hail damage totaling $353.3 million.

When adjusted for inflation, the storm ranks as the eighth-worst in the state's history.

Colorado ranked behind Texas in hail claims from 2013-15 with 182,591 claims, according to a National Insurance Crime Bureau report in May. Nationwide, there were 5,412 major hail storms last year, according to the National Oceanic and Atmospheric Administration Severe Storms database.

Claims related to wind and hail damage accounted for nearly 40 percent of all insured losses during the past five years, averaging about $15 billion annually, the association said. The July 28 storm was the first catastrophic loss of the year in Colorado, which the association defines as insured damage of $25 million or more (flood damage is not included because it isn't covered by most homeowner's insurance policies).

Many of the state's top insurers, including USAA and State Farm, opened mobile locations along Powers Boulevard and elsewhere in eastern Colorado Springs to handle the large number of vehicle claims. Some body shops reported backlogs of work through December and the wait for getting roof or siding work could be even longer.

MONTANA

Evacuations ordered after Montana fire doubles in size (Associated Press)

KALISPELL — Authorities say homes in a rural area east of Thompson Falls have been evacuated after a wildfire in northwestern Montana doubled in size in one day.

Fire officials say extreme fire behavior is also expected for the Copper King Fire on Monday, with wind gusts of up to 40 mph forecast to blow across the dry, hot terrain.

The Sanders County Sheriff's Office issued evacuation orders early Monday along Little Thompson River Road. Some 20 homes and structures are threatened, and other residents have been put on notice that the evacuation area may spread.

A shelter has been set up at Thompson Falls High School.

Some 317 firefighters are responding to the blaze, which grew 4 ½ square miles Sunday to nearly 11 square miles as of Monday morning.

Wildfire smoke streaming across Montana (KXLH – Great Falls)

By: Julianne Dellorso and David Sherman - MTN News

GREAT FALLS - Many people have noticed a lot of smoke in areas of western, central, and northern Montana.
We have received reports of heavy smoke from residents in and around Helena, Shelby, Heart Butte, and even the Sluice Boxes area of the Little Belt Mountains.

Toole County Sheriff Donna Whitt says from what she’s heard, it is smoke from the fires in Western Montana and Idaho.

She says there are no fires or incidents involving smoke in Toole County reported to her office.

The East Glacier Volunteer Fire Department posted the following message on Facebook on Monday morning: "Very windy, smokey day in East Glacier Park. Conditions are ripe for wildfire - a red flag day. Be careful with cigarettes and avoid any outdoor burning or anything that might spark a fire, like driving your car in high, dry grass or using a chainsaw."

The Montana Department of Environmental Quality reports that wildfire smoke in the area is likely due to several large fires to the west:

- The Pioneer Fire near Boise, Idaho, is 87,818 acres and 50% contained with active fire behavior.
- The Copper King Fire in northwest Montana is 3,900 acres and 30% contained with active fire behavior. Satellite imagery indicates a plume coming off the fire this afternoon and heading to the northeast.
- The Buck Creek Fire in central Washington is 1,083 acres and 0% contained with active fire behavior and contributing to the light smoke over Montana.

West Yellowstone residents voice concerns over Tatanka Complex (KTVM – NBC Bozeman)

By: Judith Retana

Posted: Aug 22, 2016 10:59 PM MDT

Updated: Aug 22, 2016 10:59 PM MDT

BOZEMAN, Mont. - The half dozen fires burning in Yellowstone National Park are now called the Tatanka Complex.

Fire officials in West Yellowstone held a community meeting Monday night where residents voiced their concerns about the fire. As black smoke continues to rise from the fires, many residents are worried.

"Oh, I'm saying my prayers like crazy," said Duck Creek resident Jim Criner. He was one of more than 200 residents at a community meeting to learn more about the fire.

Officials presented maps showing people where the fire perimeter was and the direction it's heading.

Strong winds and dry weather have a Montana senator and firefighters on alert.

"We want to make sure we have all the resources to ensure the community stays safe, the road stays open and we can protect these very important assets here around West Yellowstone," said Sen. Steve Daines (R-Montana).

Officials handed out fact sheets and maps to help residents understand more about the fires. They even handed out fire action plans to help them plan for an emergency.

Sasha Jevtich is a seasonal resident who works closely with the fire community. He and others looked at maps of the fire after the meeting.

"We took a ride into the park just to check things out for ourselves. You know, as you look at the maps, it is kind of scary. It does looks like it's rather close to town," he said. As scary as it can look, he said having the fire eat away at what is fueling it now, is good for the future.

Even so, the fire still makes residents like Criner nervous. He was around for the 1988 fires and saw how close those got to his neighborhood.

"The area between where the fire is and where we are in Duck Creek, is nothing but high grass and willows. The fire would move across the area really fast if it reached us," he said.

Although many in West Yellowstone are used to Montana's fire season, seeing dark plumes just a few miles away is always a concern.

Residents who wish to receive emergency notifications about the fire or any other event in the area, can sign up at ready.gallatin.com.

NORTH DAKOTA

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, "I think they have to step up and take some responsibility, as well."

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

"At this point, there is not a permit, but it is my understanding they are requesting a permit," which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

"We want to make sure that things are handled peaceably," she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff's Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

"I've been getting notifications from tribes all over the country that have caravans in route, so it's continuing to grow," he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

“He'd like to keep this in the law enforcement arena,” he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of “outside agitators” responsible for vandalism, trespassing on private property and blocking the highway – “hundreds of criminal acts.”

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said “nothing bad is happening here.”

Still, protesters acknowledged the camp has split into two factions.

“You have the pacifists and then you have the people who feel something should be done, and they're camped across the river from each other,” said Jesse Stevens, 32, a member of Wisconsin's Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the “peaceful” side, Stevens said he felt like he should be across the river.

“My point in coming out here was some kind of action, regardless of whether it's life-threatening or not,” he said. “This is our land, our people.”

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming's Wind River Reservation, said she was a little concerned about her children's safety at the campsite. But she added, “I believe there's strength in prayer,” and said it's a once-in-a-lifetime opportunity.

“Our water is sacred,” she said. “I want to make a difference, and I want them to know they can make a difference, too.”

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes’ chairman Mark Fox issued a formal letter of support for Standing Rock’s opposition.

“We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives,” Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe’s reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe’s water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It’s estimated some 60 tribes are represented at the protest and tribal leaders say it’s the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead 'solidarity' rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county's emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court

in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

MIKE JACOBS: Pipeline protest shows new dimension in North Dakota politics (Grand Forks Herald)

By Mike Jacobs Today at 6:00 a.m.

North Dakota still responds to an Indian scare. That's one thing we can say about last week's news.

On Friday, Gov. Jack Dalrymple declared a civil emergency in response to a protest against the Dakota Access Pipeline. The pipeline would cross the Missouri River less than a mile from the boundary of the Standing Rock Sioux nation.

Protests last week brought more than 1,000 people. Arrests were made.

Emergency declarations aren't all that uncommon in North Dakota, but almost all of them address natural disasters. North Dakota knows natural disaster. Hardly a year goes by without natural disaster. This place is flood prone, snow blasted and wind battered.

Civil disturbance is another thing.

The last civil emergency that comes to mind occurred in 1970, when Gov. William Guy sent the National Guard to an anti-war protest at the ABM missile site near Nekoma, N.D. A year before that, Guy called out the Guard when a bunch of college students descended on Zap, N.D., with the express purpose of getting drunk and having a good time. Some damage was done.

Dalrymple didn't send the Guard to the mouth of the Cannonball River. His emergency declaration is just in case local law enforcement needs help, he said.

Besides pointing out that this step is extremely rare, we can say some other things about it.

One is that Native opposition to pipeline projects is becoming a pattern. The Enbridge Company's Sandpiper line is stalled due to opposition from Minnesota's White Earth Band of

Ojibway. Their spokeswoman is Winona LaDuke, who was Ralph Nader's running mate in 1996 and 2000 when he was the Green Party candidate for president.

The partnership between Native people and environmentalists is part of the pattern. We saw this in opposition to the Keystone XL Pipeline, and it's evident at the mouth of the Cannonball. The protest there has drawn movie stars as well as environmental activists.

That pretty much makes it the current front line in the war on fossil fuels.

It's easy to suggest (as some bloggers have done) that the tribe is being used.

There are two problems with this. For one thing, it's condescending. For another, it overlooks the growing activism of North Dakota's Native people.

This activism is especially evident at Standing Rock.

Opposition from the elected Tribal Council at Standing Rock doomed UND's nickname and logo. The NCAA said using "Fighting Sioux" would be OK if both of the state's Sioux communities said so. Standing Rock refused.

Another thing to say is that David Archambault, Standing Rock's tribal chair, has warrior blood in his veins. He's been on the front lines at the protest. On the pipeline issue, he's led the tribe to federal court and to the United Nations.

This is no surprise. At the opening of the 2015 legislative session, Archambault delivered the "State of the Relationship" message, a cry from the heart in which he spoke truth to power about Native issues and state jurisdiction.

Then there's the political context.

North Dakota's November ballot has three Native candidates: Chase Iron Eyes for Congress, Marlo Hunte-Beaubrun for Public Service Commission and Ruth Buffalo for insurance commissioner. All are Democrats, and none has much of a chance.

But each of them stepped up to fill slots on a major party ticket.

This has two important implications. First, as major party candidates, they will have media access. Second, they've established that the Democratic Party in the state can't just count on Native voters; it must also promote Native candidates to the white population.

It's also the essence of political organizing, as Mark Trahant pointed out in his blog, at trahantreports.com. Trahant is the nation's best known native journalist, a finalist for the Pulitzer Prize for national reporting and a member of the faculty at UND's Program in Communication.

None of this goes to the question of pipeline safety, much less to the future of fossil fuel development.

On these issues, everybody ought to be heard.

So there is one more thing, at least, to say about last week's developments.

Brian Kalk, one of three members of the Public Service Commission that approved a permit for the Dakota Access Pipeline, dismissed the protest. He told the Bismarck Tribune, "These groups didn't come to our hearings."

Well...

They could have been asked.

That's what "public service" means.

Disclaimers: Enbridge has right-of way on property that my partner Suezette and I own in Mountrail County, N.D. I was at Nekoma with the protesters. I was not at the so-called "Zip to Zap."

North Dakota Tests Drones To Be Used For Disaster Response (AP)

HILLSBORO, N.D. (AP) — A 20-foot-long drone that was brought to North Dakota to test precision agriculture methods is now part of a trial run to see if can help crews restore power to areas hit by natural disasters.

The Israeli-manufactured Elbit Systems Hermes 450 aircraft can cover 40,000 acres in an hour and fly up to 17 hours before refueling. Officials involved in the Xcel Energy test program say the larger drone's ability to cover more ground, collect more data and fly at night is expected to help the company move crews, materials and equipment quickly and safely.

"When you have a storm, when you have fires, getting crews on the ground to identify damage is flat-out dangerous," Raanan Horowitz, president and CEO of Elbit Systems of America, said Monday when the drone was shown off to public officials at an airport in Hillsboro, about 35 miles north of Fargo.

One of the tests involves a mock disaster using power poles placed in ditches in and around the nearby city of Mayville. Preliminary reports show that the drone is effective in quickly locating the downed poles both day and night, Xcel Energy Vice President Laura McCarten said.

"Apparently those wood poles stay warmer than the surroundings, so the infrared technology is able to spot them at night," she said.

Xcel Energy is headquartered in Minneapolis and serves customers in North Dakota, Minnesota, South Dakota, Wisconsin, Colorado, Michigan, Texas and New Mexico.

There are still key issues to be ironed out before the drones can be used on a widespread commercial basis, including Federal Aviation Administration approval to operate beyond line of sight, or without the use of a chase plane keeping tabs on the planes. North Dakota Sen. John Hoeven said he hopes North Dakota will be flying drones without chase planes by the end of the year.

"You're covering such big distances. You're losing the utility of the unmanned aircraft if you have to have a chase plane," Hoeven said.

Minnesota Rep. Collin Peterson, whose district borders North Dakota, said the FFA “didn’t do too bad of a job” on regulations for small drones, but he expects a much stiffer challenge on rules for larger aircraft.

“The FAA is very slow moving bureaucracy, to say the least,” Peterson said.

If larger unmanned aircraft are approved for beyond-line-of-sight operations, Horowitz said the quadcopters and drones that weigh less than 55 pounds would still be used in a complementary role.

“The bottom line is, when you look at the size and the areas that you are trying to cover, when you look at the resolution, when you look at using sensors that can yield data that is actually usable, this is the way to go,” Horowitz said of the Hermes drone.

Elbit Systems and Xcel Energy have combined to contribute about $500,000 into flying the Hermes drone. McCarten said the agriculture test program that began in May provided a “ready-made platform” for the Xcel study.

North Dakota State University researcher John Nowatzki said the agriculture test has yielded impressive results on the drone’s ability to capture images. Nowatzki has displayed pictures of a shelter belt taken from 4,000, 6,000 and 8,000 feet, with no discernable difference to the human eye.

“The key message here, maybe, is that we get high resolutions at all levels,” he said.

Sarah Lovas, an area farmer and crop consultant, said some of her cohorts still want to find out how they can manage the data in an affordable way, but most have embraced the technology.

“There’s just no such thing as a dumb farmer anymore,” she said.

SOUTH DAKOTA

South Dakota reports first Zika virus infection (Rapid City Journal)

Journal staff
Rapid City Journal
Aug. 22, 2016

South Dakota has reported its first Zika virus infection, according to state health officials.

The infected person is a woman who traveled to a country in the Caribbean where Zika virus is transmitted. She later developed symptoms, the Department of Health said today in a press release. The infection was confirmed by the Centers for Disease Control and Prevention.

“This is a good reminder for anyone who travels to Zika-affected areas that it’s important to protect themselves from mosquito bites,” Dr. Lon Kightlinger, state epidemiologist for the department, said in the release.

Kightlinger said state officials are not disclosing where the woman infected is from in South Dakota, but did note that she is in her 30s and is not pregnant.

Zika is a tropical mosquito-borne infection. The virus is not known to be carried by the mosquitoes found in South Dakota.

Officials say there are no vaccines or treatment for the virus. To avoid infection, travelers to Zika-affected areas, particularly pregnant women, should follow strict mosquito control precautions — wear pants and long-sleeved shirts, use an EPA-registered insect repellent and ensure that windows and doors have intact screens.

According to the Department of Health, the infection is mild for most healthy adults. About one in five people who are infected will become ill.

The release says symptoms typically occur two to seven days after a bite and include fever, muscle or eye pain and a rash. Pregnant women who are infected run the added risk of having babies with the birth defect microcephaly. Microcephaly means the babies have heads smaller than expected and often have smaller brains that might not have developed properly, the department said.

UTAH

Crews battling new wildfires in northern, central Utah (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune
First Published 1 hour ago • Updated 1 hour ago

Two new wildfires had ground crews scrambling in Sevier and Cache counties on Tuesday, as fire retardant- and water-laden aircraft swarmed the flames from above.

The Sand Ledges Fire, first spotted on Saturday just west of Richfield along Highway 24, had blackened 3,022 acres and was 27 percent contained as of Tuesday, said Fire Information Officer Shayne Ward.

Believed human-caused, the blaze was consuming dry grass and sage brush, including valued sage grouse habitat, but no structures were threatened and no evacuations had been ordered.

In all, 70 firefighters were working to hem in the Sand Ledges Fire. It was a slow, often frustrating task with gusty winds periodically fanning the flames through the tinder-dry vegetation, Ward said.

Still, crews hoped to have the blaze 100 percent contained sometime Saturday.

What sparked the Peterson Hollow Fire Sunday afternoon was still under investigation, but it had scorched 150 acres on the Uinta-Wasatch-Cache National Forest's Logan Ranger District as of

Tuesday. Fire Information Officer MaryEllen Fitzgerald said it was 5 percent contained, with no estimated time for when crews will completely contain it.

The fire is 23 miles northeast of Logan and just north of the Beaver Mountain Ski Area.

"[The resort] is currently not imminently endangered, but is the most important focus at this time. Structure protection is in place and being ramped up as a precaution," Fitzgerald stated.

The Peterson Hollow Fire is one of five active blazes on the Uinta-Wasatch-Cache National Forest; the other four are being allowed to burn as beneficial to clearing away accumulated undergrowth and dead timber.

About 160 firefighters were battling the blaze, aided by a fleet of air tankers and helicopters. Hot, dry and occasionally windy weather continue to challenge efforts to hem in the flames.

Utah forecast: Midweek weather brings high fire danger north, storms in the south (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune

If Goldilocks grew up to be a meteorologist, she might say of the midweek forecast for the Salt Lake and Tooele valleys, "Ahhh, just right."

If the fabled cabin burglar walked into the forests of the northern Wasatch Front, however, she might toss her porridge and run: from the mountains above Logan stretching south through Salt Lake City and Provo to Nephi, the National Weather Service declared a Red Flag Warning for wildfire danger from noon to 9 p.m. Tuesday.

Potentially too hot, indeed, thanks to low humidity, rain-starved rangelands and forests, and gusty winds.

Southern Utah? Goldilocks might prefer the company of three offended bears, after all. The region expects a cycle of thunderstorms the next several days — and humid, hot weather. High temperatures were forecast to be in the low- to mid-90s Tuesday, Wednesday and Thursday.

No, it will be the balmy weather due in the Salt Lake and Tooele valleys that is best for that post-porridge nap. Sunny to partly cloudy skies will reign through the midweek, with highs ranging from the mid- to upper-80s Tuesday through Thursday, and overnight temperatures in the upper-50s to low-60s making for sweet dreams.

COLORADO:

Study: Human-caused warming burns more Western forests – Colorado Springs Gazette

By: KEITH RIDLER, Associated Press
Updated: October 11, 2016 at 4:47 pm

BOISE, Idaho (AP) — A new study of Western forest fires confirms what is already apparent — wildfire seasons are getting longer and more destructive.

But researchers with the University of Idaho and Columbia University also say humans are to blame.

The study made public Monday says human-caused global warming contributed an additional 16,000 square miles of burned forests from 1984 to 2015.

Researchers say the 16,000 square miles represent half of the forest areas that burned over the last three decades.

"We're no longer waiting for human-caused climate change to leave its fingerprint on wildfire across the western U.S.," John Abatzoglou, the study's lead author and an associate professor of geography at the University of Idaho, said in a statement. "It's already here."

The authors of the study, published online in the Proceedings of the National Academy of Sciences, say it's the first to try to quantify how much human-caused climate change has increased wildfires in Western forests. Some other factors that had to be considered as contributing to the increase, the report said, included a legacy of fire suppression in the West, natural climate variability, and human settlement.

The study found that longer and hotter dry spells are causing Western forests to dry out and become more susceptible to wildfires.

Specifically, researchers said, spring and summer temperatures have warmed by 2 to 2.5 degrees since 1950. Researchers said that warming accounts for 55 percent of what they call "fuel aridity" from 1979 to 2015. The study attributed the other 45 percent to natural climate variations.

The study found that since 2000 there's been a 75 percent increase in forested lands with elevated aridity and nine more days each year with dry forests especially susceptible to wildfires.

"Anthropogenic climate change has emerged as a driver of increased forest fire activity," the report says.

Park Williams of Columbia University's Lamont-Doherty Earth Observatory, and a co-author of the study, said the report provides a better understanding of the effects human-caused global warming has on Western forests.

"This knowledge will allow us to make more educated fire and land management decisions," he said.

One of those decision-makers is Idaho Forester David Groeschl, who said the report could offer some help in the future.

"We know that our fire season is getting longer," Groeschl said. "We know that we're seeing more and longer fires, and we know that we have increasing fuels out there as well."

The fuel aridity was particularly bad in Idaho in 2015 when an extended heat and drought left northern Idaho forests parched and in the worst condition since 1926, officials said.

That summer and fall, 600 square miles of U.S. Forest Service land burned. Idaho's bill for fighting wildfires soared to $60 million with some 100 square miles, about three quarters of it forests, burning on state, private and federal lands that are in forest protective districts designated as the state's responsibility.

Idaho has taken a number of steps aimed at the wildfire risk, including increasing the pay of in-demand, experienced firefighters who were leaving to take similar jobs with more money at other agencies. Idaho also recently formed a partnership with the U.S. Forest Service to take on landscape-scale projects by using the state's land management expertise that includes selling timber on federal land. The state's first auction of federal timber took place last month.

How successful the partnership will take years to determine.

The study released Monday concluded that the trend of increased forest aridity resulting in large wildfires is likely to continue for decades while there are enough trees to fuel the flames.

MONTANA:

Protesters cause temporary shut-down of pipeline in northcentral Montana- KBZK TV Bozeman

Posted: Oct 12, 2016 8:28 AM MDT

GREAT FALLS -
The battle over the Dakota Access Pipeline in North Dakota came to Montana on Tuesday.

Protesters forced the temporary shutdown of five pipelines carrying oil from Canadian tar sands, including one at Coal Banks Landing south of Big Sandy in Chouteau County.

Spectra Energy confirmed to MTN News that trespassers tampered with a valve on its express pipeline on Tuesday, and that as a precaution it was shut off.

The environmental group Climate Direct Action said Tuesday that it had also successfully shut down express pipelines at locations in Washington, North Dakota, and Minnesota.

The group says it was attempting to shut the pipelines down over concerns about global warming, and in solidarity with members of the Standing Rock Sioux tribe's protest of the Dakota Access Pipeline.

Spectra Energy says it worked with law enforcement officers in its response to the tampering incident in Chouteau County, and that their primary concern was safety of the community and environment.

The website Unicorn Riot posted the following information on Tuesday:

> *Early this morning, five water protectors successfully shut down five pipelines across the northern United States that were delivering tar sands oil from Alberta, Canada. The action was in support of the call for International Days of Prayer and Action for Standing Rock.*
>
> *The individuals used manual safety valves and bolt cutters to access and shut down the flow of tar sands oil into the US. They are "calling on President Obama to use emergency powers to keep the pipelines closed and mobilize for the extraordinary shift away from fossil fuels now required to avert catastrophe."*
>
> *The actions were undertaken by Emily Johnson, 50, and Michael Foster, 52, of Seattle, WA, Annette Klapstein, 64, of Bainbridge Island, WA, Ken Ward, 59, of Corbett, OR, and Leonard Higgins, 64, of Eugene, OR.*

There is no word yet on whether any of the protesters might face charges.

Spectra released the following statement: "Spectra Energy has responded to a situation during which trespassers broke into a locked facility and tampered with a valve on its Express Pipeline Tuesday morning in Montana. We coordinated with law enforcement in this response. Our first concern is for the safety of the community and the environment, and tampering with this important U.S. energy infrastructure will not be tolerated. This pipeline provides a vital source of affordable, reliable energy to fuel the everyday lives of Americans. As a cautionary measure, we temporarily shut down this section of the Express Pipeline."

Butte firefighters teach students about fire safety- KTFM TV News Kalispell

Posted: Tuesday, October 11, 2016 8:46 PM

BUTTE -
Butte firefighters said fire education starts here, in the classroom. After the kids saw firefighters put on their gear and learn about stop drop and roll. Firemen Pat Doherty then spoke about the most common house fires

"Most structure fires in the United States are from cooking materials. It's always best to stay in the vicinity and keep an eye on it," said Pat Doherty, Butte Fire Department.

During the predicted cold snap, families will be turning up the heat. However, Doherty explains to kids to watch out for the dangers that can sometimes come from using space heaters.

Doherty also adds it's never smart to leave them unattended.

"Space heaters are dangerous. In the case of people forgetting to unplug them or they keep them too close to stuff that's going to catch on fire," said Doherty.

Airport Disaster Exercise Set for Thursday – DRGnews.com

October 12, 2016 (Dakota Radio Group)
By: Press Release

PIERRE, SD- You can expect lights, sirens and a whole lot of activity at the airport later this week.

Thursday evening, from 5:30 – 7:30, the Pierre Regional Airport and Hughes County will conduct a full scale disaster exercise. The mock disaster scenario includes a hazardous materials response on a simulated aircraft. The exercise is required by the Federal Aviation Administration and designed to provide first responders and airport personnel with disaster response experience.

"This is really practice for all the responders," said Mike Isaacs, Pierre Regional Airport Manager. "We do everything we can to avoid aircraft accidents, but we want to be prepared in the event there's one we can't avoid."

Isaacs went on to say that the exercise requires all the activity that a real disaster would require. Those involved in the exercise will be assigned a variety of responsibilities that include everything from information gathering and dissemination to coordination of involved entities to response management to logistics and cost tracking.

"An Emergency Operations Center and Unified Command Post will be set up at the airport for this exercise," said Isaacs. "They will serve as the hubs of all disaster response and recovery efforts.

Approximately 50 people will be involved in the exercise including volunteers, city and county officials, and first responders.

The Federal Aviation Administration requires airports with commercial air service to conduct a full-scale disaster exercise every three years. Additionally, the South Dakota Office of Emergency Management requires counties to conduct a variety of exercises throughout the year. The Thursday night exercise fulfills requirements for both Hughes County and Pierre Regional Airport.

National Fire Prevention Week (Hot Springs Star)

By John D. Taylor

A closer look at Hot Springs Volunteer Fire Department history

HOT SPRINGS – The advent of National Fire Prevention Week, Oct. 9 -15 this year, is a good time to look at the important role firefighters play in the community, and to consider what everyone can do to prevent fires.

Fire Prevention Week

Since 1922, Fire Prevention Week has been observed to commemorate the Great Chicago Fire, that tragic 1871 conflagration that killed more than 250 people, left 100,000 homeless and destroyed more than 17,400 structures.

The fire began on October 8, but did most of its damage on October 9, 1871 – why Fire Prevention Week is held on Oct. 9 annually.

Popular legend holds that while Mrs. Catherine O'Leary was milking a cow, it kicked over a lamp, ignited her barn, then lit the whole city of Chicago on fire. However, recent research by Chicago historian Robert Cromie has debunked this fairy tale – while retaining some elements of truth in the story.

The fire did, indeed, originate near the barn where Mrs. O'Leary kept her five milk cows. But there is no proof that her cow sparked the blaze. O'Leary's testimony says she and her cows were asleep, not milking, when the fire broke out.

Who started it then? Some blame some neighborhood boys who were near the barn sneaking cigarettes, some say a O'Leary's neighbor started the fire, another theory is that a meteorite shower that fell during Oct. 8 all over Michigan and Wisconsin may have started the fire.

Also, while the Chicago Fire is one of the most well known, it wasn't the biggest fire in American history. That notoriety belongs to the Peshtigo Fire, which also occurred on October 8, 1871, in northeast Wisconsin. It burned 16 whole towns, killed more than 1,100 people, and scorched 1.2 million acres. It began when several railroad workers, clearing land for tracks, unintentionally lit a brush fire. Before long, the fast-moving flames were whipping through the area “like a tornado,” survivors said. Peshtigo, Wisconsin got the worst of it, within an hour, the entire town was destroyed.

These fires changed the way firefighters and public officials thought about fire safety. And on the 40th anniversary the fires the Fire Marshals Association of North America decided to mark the anniversary in a way to keep the public informed about the importance of fire prevention.

In 1920, President Woodrow Wilson issued the first National Fire Prevention Day proclamation, and since 1922, Fire Prevention Week has been observed. According to the National Archives and Records Administration’s Library Information Center, it is the longest running public health and safety observance on record.

Hot Springs VFD

On July 2, The Hot Springs Volunteer Fire Department (VFD) celebrated its 125th anniversary.

The fire company was formed, according to a VFD history by William T. Richer – VFD member Jenni Sotherland shared this with the Star – in January of 1890, when a group of Hot Springs citizens gathered at the Minnekahta Hotel to organize themselves into the VFD. At this meeting, John Gillespie was elected chief; H. C. Venette, first assistant chief; John Mueller, second assistant chief; Kenneth Harris, secretary and Wally Root, treasurer.

In those days, there was no citywide water system, so the only equipment the VFD needed was a large number of leather water buckets. To fight fires, the men formed two lines –Richer calls them “strings” – going to and from the fire and a water source. Usually, Fall River, water holes or cisterns were the water sources. One line of men passed buckets of water from the river to the fire, the other line returned the empty buckets.

In July, when the modern VFD was whooping it up with a masquerade ball at American Legion Post 71 they may not have been thinking about these roots, but they are where the VFD originated.

Early days

Later in 1890, the city began to pipe water into the business district, so it purchased its first fire-fighting equipment: two, high wheeled hose carts, and one hook and ladder wagon. The hose carts were drawn by men, the wagon pulled by a team of horses.

Throughout those early days the city’s firefighting ability grew. In 1893, the city bought another high-wheeled hose cart, placed iton College Hill (where the high school is today).

One interesting story from those days is connected to John Mueller, father of the Mueller Center founder. In 1896, when Mueller was the VFD’s first assistant fire chief, he bought a white horse, named “Old Granger” from Bill Perry.

Mueller used Old Granger to ride to and from fires, and pull the No. 1 hose cart to fire scenes.

For many years Mueller kept his stable much the same as the city's fire equipment stables, with the bridle bit in Old Granger's mouth, so the horse was ready to go. When an alarm sounded, Old Granger would leave his stall, make a run for the buggy shafts, where the No. 1 hose cart could be hooked up to him with one snap of the harness, and "away he would go," says Richer.

Sometimes, Mueller was able to catch a ride on the horse, other times, Old Granger was the first responder to a fire.

Richer says, "The call of the fire alarm was greater to this noble horse than was the call of the feed box." Mueller used Old Granger in this fashion for a quarter century, until 1915, when the horse was "pensioned." The horse was so stiff and lame then he could hardly walk the streets, according to Richer. "But if an alarm came in, one would think he was a mighty young horse. He was able to forget his stiffness and lameness to answer the call."

Richer says in 1916, when Old Granger was "pensioned" and put out to pasture near town, the horse heard an alarm call and in a few moments showed up in town to answer the call.

Granger answered his last fire call in 1917.

Also during these early days, the VFD sponsored three-day 4th of July celebrations, free to the public. Special trains brought large crowds of people into Hot Springs from surrounding areas and the entertainment included greased pig-catching and greased pole-climbing contests, rodeo-style bucking horses, baseball games, swimming contests, foot races, human wheelbarrow races, tug-of-wars, band concerts and reading the Declaration of Independence.

In 1899, the VFD fire hall became a dual-purpose building, hosting Hot Springs' first opera hall as well as the fire hall. What happened was that the fire department remodeled their building, adding a small stage to the east end of the room, a set of bleachers in the west, and covering the remaining floor space with folding chairs advertising Happy Bill cigars. Two small dressing rooms were also built outside the building. The Fireman's Opera House was in operation until about 1909, when the skating rink and theater opened. The opera house never made much money, but it gave city residents a place for entertainment.

Up until the end of World War I (1918), the fire fighting equipment of the city included three hose carts and one hook and ladder wagon or truck. The hose carts were housed in various parts of town: One in the lower end, one on College Hill, one on Minnekahta Ave. The hook and ladder wagon was kept at city hall. Fire alarms were anything that made noise -- train whistles, church bells and "men hollering at the top of their voices," notes Richer.

There were no telephones in those days, so when fires occurred at night, VFD members "would generally exhaust themselves in running from their homes to the scene of the fire."

Often, by the time the hose carts got to the scene, the fire was out of control, and the VFD's efforts focused on keeping the fire from spreading to adjoining properties. "It was quite generally considered those days that if a property caught fires during the night time, there would be nothing left in the morning, except the lot. One example of this is how an April 1891 fire wiped out a whole city block of business buildings in “lower” town, the damage estimated at $35,000 – big money in those days.

Other big blazes of that era the 1891 blaze that took the Minnekahta Hotel, the 1892 blaze that took out several buildings where the Post Office now stands, an 1895 fire that destroyed the Jay Crane store building, a 1903 fire that took a block of business houses what was People’s National Bank and the Riverside Apartments, a 1907 fire that took the Catholican Hotel and bath house and the Siloam bath house, 1910’s Gibson Hotel fire and 1915’s Gillespie Hotel fire. In 1924, the High School building burned to the ground.

Motorization

In 1918, a movement was started to motorize the VFD. City businessmen, citizens and the fire company made donations of $1,875 which bought a combination Ford chemical and hose truck. This was put into service in June of 1919, when Dave Batchelor was foreman of the fire company. Batchelor’s house burned down, a $3,000 loss, in 1908.

An REO Speedwagon Fire Truck equipped with a pump was purchased in 1924, after the high school fire, to increase water pressure, and town founding father F.O. Butler offered the fire company his Pierce-Arrow touring car, which was reworked into a hook and ladder truck. This unit remained in operation until 1938, when it was replaced by a new, Ford V-8 truck.

In 1934, the REO Speedwagon was converted into a smoke extractor, a move made possible by the ingenuity of Vic Englebert, H.C. “Swede” Nelms, and Fire Chief L. J. Bingham. These men added a 25-horsepower Waukesha motor to a large suction fan, salvaged from the State Soldier’s Home. This rig was given credit for saving more property than any other equipment in the department, drawing smoke and gas from burning buildings at a rate of 6,500 cubic feet per minute, which made it possible for firefighters to get into burning buildings and extinguish fires.

Growth

Throughout the 1930s the VFDs gear grew, as Hot Springs grew, with horses and carts being replaced by larger and more powerful motorized equipment. In 1936, this enabled Hot Springs to get a 10 percent cut in insurance rates because of the efficiency of the fire department.

By the 1940s, there were 561 people in the VFD, with 65 active members and six living in Fire Hall, on call to fight fires. Engines and other gear were purchased by the city or the VFD via proceeds for insurance money or annual dances. But in 1942, city agreed to begin paying the VFD $200 per month to, with the understanding that the VFD would pay for all equipment, pay their own insurance, water, lights, telephone, gas, oil, fire station upkeep and other incidental expenses.

“Without a doubt the Hot Springs Fire Department is one of the very best strictly volunteer fire departments in the state…the department has brought home the South Dakota State Championship trophy a total of 11 times.

During the late 1940s, the fire chief was conducting “fire drills at both schoolhouses several times each year. These drills are not at regular intervals, but just whenever he takes the notion, giving no notice to teachers, janitors or pupils at the building.” A general inspection of “every business house within the city” was also held annually, which revealed any fire hazards.

In 1948, after Frank Fetzner, Deputy State Fire Marshall, saw the VFD in action for the first time, he said the VFD handled themselves like a experts and that the city should feel mighty proud that they have such a group of fire-fighters.

After flood of 1948, a VFD American LaFrance pumper was used to pump out Evans Plunge. This took days. Also, extension ladder truck saved a “kid” marooned on the cliffs at Hot Brook, with two fireman saving the goat.

Also, 800 questionnaires and inspection blanks were sent home with school kids, asking that they report any fire hazards in their homes. Returning this would get the kids a ride on the fire truck. More than 700 of these came back, the kids ratting out their parents bad habits, even in the homes of firemen.

Emergency ambulance was first put into service in November of 1949.

The 1950s

These were high times for the VFD – in more ways that one, according to new VFD scribe Howard McBride. In 1950, Chief Vic Englebert resigned, saying “he had gone on a bender, got himself in jail and fined. Was called on the carpet by his boss and was given an enforced vacation for two weeks from his job.”

That same year the city floated a $15,000 bond issue for new fire station, and it carried 1,098 to 487 votes. The VFD bought three lots (where the Valley Hotel burned in 1946) for $3,500 in the city’s name. Many private citizens gave donations to this, including one widow who gave $100, quite a bit of money then.

In February of 1950, at the annual Fireman’s Masquerade Ball, someone set fire to Wally King’s masquerade suit, which produced 2nd degree burns on his legs, hips, chest and chin, and 3rd degree burns on both hands. King was in hospital for several months, and the masquerade ball ended – until this year.

In 1951, street names in the city were changed, and a new map was prepared showing the new names and locations. Firemen instructed to study this and become familiar with it.

William Watson, of Wind Cave National Park, came to a VFD meeting in April to compliment the VFD on their cooperation. Watson said the park and the state Game, Fish & Parks department couldn’t see eye-to-eye on their cooperative agreement, and he thought VFD should take care of Southern Hills fires. “If the rest of Hot Springs had the getup and go of the fire department, the town would be a hell of a lot better off," Watson quipped, noting he wouldn't be at Wind Cave much longer due to a transfer to Hot Springs, Arkansas.

In 1953 a fire at the Minnekahta Building, took the lives of a woman and her two daughters, although the father and his two sons escaped harm. The building was falling into itself when VFD arrived.

The last years of the 1950s brought a new aerial ladder, an Oelrichs chicken hatchery fire that cooked 3,700 of the birds, and a January fire in 20-below temperatures that the fire chief said was the first time he'd see the smoke extractor tube freeze.

1960s and 70s

After the 1961 flood, the VFD was called on to pump basements, but lacked the equipment to do so. It was also called to Angostura Dam for rescue work. In 1963 a new addition was put on the station. School building inspections revealed a few hazards, which were eliminated.

And the 1979's Evans Hotel Fire proved to be a seminal event for the city.

Modern VFD

Most recently, the VFD has had some major fires to contend with.

It fought 2007's Alabaugh Fire, which burned 10,324 acres, destroyed 33 homes, killed one resident, and forced two firefighters to take refuge in a fire shelter. Hot Springs' Mary Goulet lived in one of those homes and wrote a book about the fire, "Cascade of Flames."

In 2015, the Bitter Creek fire started south of Hot Springs, off Highway 71 at the intersection of Maitland and Ash Creek Roads. It burned about 87 acres, and firefighters from Cascade, Hot Springs, and South Dakota State stopped the spread.

And just after their 125th anniversary, in mid-July of this year, the Indian Canyon fire, which began after four days of temperatures topping 90 degrees and a lightning strike touched off a blaze about five miles southeast of Edgemont, scorching 14,133 acres

Today, the VFD has 65 active volunteers led by Chief Jim Stevens, 1st assistant Chief Bob Evans, 2nd assistant chief Wendell Hertel, and Secretary Treasurer Gerald Hanson.

Argyle VFD looking for help

The Argyle Volunteer Fire Department (AVFD) located between Pringle and Hot Springs, SD is seeking new members. Applicants should be over 18 years of age, in good physical health, have a clean driving record, and be able to pass a Law Enforcement Background check. Firefighters will respond to structural and wildland fires as well as assist with search and rescue operations, motor vehicle accidents and other emergencies in our coverage area. First Responders will assist and respond to medical emergencies and assist patients until ambulances arrive on scene. Prior experience is not necessary but certainly welcome. This is a volunteer non-paid position.

The Department provides Fire and EMS response to a 144 square mile area of southwestern Custer County and provides Mutual Aid to Pringle, Minakata, Custer, Hot Springs, Wind Cave, Custer State Park, and other nearby agencies in Custer and Fall River Counties.

Meeting are held at the fire station on the first and fourth Thursdays of each month at 7 p.m.

For more information, call (605) 673-5823; e-mail ArgyleVFD.SD@gmail.com, or check the Argyle Volunteer Fire Department Facebook page.

WYOMING:

USDA designates Park County in Wyoming as a primary natural disaster area (Northern Wyoming Daily)

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

“Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters,” said Agriculture Secretary Tom Vilsack. “President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation’s economy by sustaining the successes of America’s farmers, ranchers, and rural communities through these difficult times. We’re also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood.”

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA’s Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program;Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

Study: Human-caused warming burns more Western forests – Colorado Springs Gazette

By: KEITH RIDLER, Associated Press

Updated: October 11, 2016 at 4:47 pm

BOISE, Idaho (AP) — A new study of Western forest fires confirms what is already apparent — wildfire seasons are getting longer and more destructive.

But researchers with the University of Idaho and Columbia University also say humans are to blame.

The study made public Monday says human-caused global warming contributed an additional 16,000 square miles of burned forests from 1984 to 2015.

Researchers say the 16,000 square miles represent half of the forest areas that burned over the last three decades.

"We're no longer waiting for human-caused climate change to leave its fingerprint on wildfire across the western U.S.," John Abatzoglou, the study's lead author and an associate professor of geography at the University of Idaho, said in a statement. "It's already here."

The authors of the study, published online in the Proceedings of the National Academy of Sciences, say it's the first to try to quantify how much human-caused climate change has increased wildfires in Western forests. Some other factors that had to be considered as contributing to the increase, the report said, included a legacy of fire suppression in the West, natural climate variability, and human settlement.

The study found that longer and hotter dry spells are causing Western forests to dry out and become more susceptible to wildfires.

Specifically, researchers said, spring and summer temperatures have warmed by 2 to 2.5 degrees since 1950. Researchers said that warming accounts for 55 percent of what they call "fuel aridity" from 1979 to 2015. The study attributed the other 45 percent to natural climate variations.

The study found that since 2000 there's been a 75 percent increase in forested lands with elevated aridity and nine more days each year with dry forests especially susceptible to wildfires.

"Anthropogenic climate change has emerged as a driver of increased forest fire activity," the report says.

Park Williams of Columbia University's Lamont-Doherty Earth Observatory, and a co-author of the study, said the report provides a better understanding of the effects human-caused global warming has on Western forests.

"This knowledge will allow us to make more educated fire and land management decisions," he said.

One of those decision-makers is Idaho Forester David Groeschl, who said the report could offer some help in the future.

"We know that our fire season is getting longer," Groeschl said. "We know that we're seeing more and longer fires, and we know that we have increasing fuels out there as well."

The fuel aridity was particularly bad in Idaho in 2015 when an extended heat and drought left northern Idaho forests parched and in the worst condition since 1926, officials said.

That summer and fall, 600 square miles of U.S. Forest Service land burned. Idaho's bill for fighting wildfires soared to $60 million with some 100 square miles, about three quarters of it forests, burning on state, private and federal lands that are in forest protective districts designated as the state's responsibility.

Idaho has taken a number of steps aimed at the wildfire risk, including increasing the pay of in-demand, experienced firefighters who were leaving to take similar jobs with more money at other agencies. Idaho also recently formed a partnership with the U.S. Forest Service to take on landscape-scale projects by using the state's land management expertise that includes selling timber on federal land. The state's first auction of federal timber took place last month.

How successful the partnership will take years to determine.

The study released Monday concluded that the trend of increased forest aridity resulting in large wildfires is likely to continue for decades while there are enough trees to fuel the flames.

MONTANA:

Protesters cause temporary shut-down of pipeline in northcentral Montana- KBZK TV Bozeman

Posted: Oct 12, 2016 8:28 AM MDT

GREAT FALLS -

The battle over the Dakota Access Pipeline in North Dakota came to Montana on Tuesday.

Protesters forced the temporary shutdown of five pipelines carrying oil from Canadian tar sands, including one at Coal Banks Landing south of Big Sandy in Chouteau County.

Spectra Energy confirmed to MTN News that trespassers tampered with a valve on its express pipeline on Tuesday, and that as a precaution it was shut off.

The environmental group Climate Direct Action said Tuesday that it had also successfully shut down express pipelines at locations in Washington, North Dakota, and Minnesota.

The group says it was attempting to shut the pipelines down over concerns about global warming, and in solidarity with members of the Standing Rock Sioux tribe's protest of the Dakota Access Pipeline.

Spectra Energy says it worked with law enforcement officers in its response to the tampering incident in Chouteau County, and that their primary concern was safety of the community and environment.

The website Unicorn Riot posted the following information on Tuesday:

> *Early this morning, five water protectors successfully shut down five pipelines across the northern United States that were delivering tar sands oil from Alberta, Canada. The action was in support of the call for International Days of Prayer and Action for Standing Rock.*
>
> *The individuals used manual safety valves and bolt cutters to access and shut down the flow of tar sands oil into the US. They are "calling on President Obama to use emergency powers to keep the pipelines closed and mobilize for the extraordinary shift away from fossil fuels now required to avert catastrophe."*
>
> *The actions were undertaken by Emily Johnson, 50, and Michael Foster, 52, of Seattle, WA, Annette Klapstein, 64, of Bainbridge Island, WA, Ken Ward, 59, of Corbett, OR, and Leonard Higgins, 64, of Eugene, OR.*

There is no word yet on whether any of the protesters might face charges.

Spectra released the following statement: "Spectra Energy has responded to a situation during which trespassers broke into a locked facility and tampered with a valve on its Express Pipeline Tuesday morning in Montana. We coordinated with law enforcement in this response. Our first concern is for the safety of the community and the environment, and tampering with this important U.S. energy infrastructure will not be tolerated. This pipeline provides a vital source of affordable, reliable energy to fuel the everyday lives of Americans. As a cautionary measure, we temporarily shut down this section of the Express Pipeline."

Butte firefighters teach students about fire safety- KTFM TV News Kalispell

Posted: Tuesday, October 11, 2016 8:46 PM

BUTTE -

Butte firefighters said fire education starts here, in the classroom. After the kids saw firefighters put on their gear and learn about stop drop and roll. Firemen Pat Doherty then spoke about the most common house fires

"Most structure fires in the United States are from cooking materials. It's always best to stay in the vicinity and keep an eye on it," said Pat Doherty, Butte Fire Department.

During the predicted cold snap, families will be turning up the heat. However, Doherty explains to kids to watch out for the dangers that can sometimes come from using space heaters.

Doherty also adds it's never smart to leave them unattended.

"Space heaters are dangerous. In the case of people forgetting to unplug them or they keep them too close to stuff that's going to catch on fire," said Doherty.

SOUTH DAKOTA:

Airport Disaster Exercise Set for Thursday – DRGnews.com
October 12, 2016 (Dakota Radio Group)
By: Press Release

PIERRE, SD- You can expect lights, sirens and a whole lot of activity at the airport later this week.

Thursday evening, from 5:30 – 7:30, the Pierre Regional Airport and Hughes County will conduct a full scale disaster exercise. The mock disaster scenario includes a hazardous materials response on a simulated aircraft. The exercise is required by the Federal Aviation Administration and designed to provide first responders and airport personnel with disaster response experience.

"This is really practice for all the responders," said Mike Isaacs, Pierre Regional Airport Manager. "We do everything we can to avoid aircraft accidents, but we want to be prepared in the event there's one we can't avoid."

Isaacs went on to say that the exercise requires all the activity that a real disaster would require. Those involved in the exercise will be assigned a variety of responsibilities that include everything from information gathering and dissemination to coordination of involved entities to response management to logistics and cost tracking.

"An Emergency Operations Center and Unified Command Post will be set up at the airport for this exercise," said Isaacs. "They will serve as the hubs of all disaster response and recovery efforts.

Approximately 50 people will be involved in the exercise including volunteers, city and county officials, and first responders.

The Federal Aviation Administration requires airports with commercial air service to conduct a full-scale disaster exercise every three years. Additionally, the South Dakota Office of Emergency Management requires counties to conduct a variety of exercises throughout the year.

The Thursday night exercise fulfills requirements for both Hughes County and Pierre Regional Airport.

National Fire Prevention Week (Hot Springs Star)

By John D. Taylor

A closer look at Hot Springs Volunteer Fire Department history

HOT SPRINGS – The advent of National Fire Prevention Week, Oct. 9 -15 this year, is a good time to look at the important role firefighters play in the community, and to consider what everyone can do to prevent fires.

Fire Prevention Week

Since 1922, Fire Prevention Week has been observed to commemorate the Great Chicago Fire, that tragic 1871 conflagration that killed more than 250 people, left 100,000 homeless and destroyed more than 17,400 structures.

The fire began on October 8, but did most of its damage on October 9, 1871 – why Fire Prevention Week is held on Oct. 9 annually.

Popular legend holds that while Mrs. Catherine O'Leary was milking a cow, it kicked over a lamp, ignited her barn, then lit the whole city of Chicago on fire. However, recent research by Chicago historian Robert Cromie has debunked this fairy tale – while retaining some elements of truth in the story.

The fire did, indeed, originate near the barn where Mrs. O'Leary kept her five milk cows. But there is no proof that her cow sparked the blaze. O'Leary's testimony says she and her cows were asleep, not milking, when the fire broke out.

Who started it then? Some blame some neighborhood boys who were near the barn sneaking cigarettes, some say a O'Leary's neighbor started the fire, another theory is that a meteorite shower that fell during Oct. 8 all over Michigan and Wisconsin may have started the fire.

Also, while the Chicago Fire is one of the most well known, it wasn't the biggest fire in American history. That notoriety belongs to the Peshtigo Fire, which also occurred on October 8, 1871, in northeast Wisconsin. It burned 16 whole towns, killed more than 1,100 people, and scorched 1.2 million acres. It began when several railroad workers, clearing land for tracks, unintentionally lit a brush fire. Before long, the fast-moving flames were whipping through the area "like a tornado," survivors said. Peshtigo, Wisconsin got the worst of it, within an hour, the entire town was destroyed.

These fires changed the way firefighters and public officials thought about fire safety. And on the 40th anniversary the fires the Fire Marshals Association of North America decided to mark the anniversary in a way to keep the public informed about the importance of fire prevention.

In 1920, President Woodrow Wilson issued the first National Fire Prevention Day proclamation, and since 1922, Fire Prevention Week has been observed. According to the National Archives and Records Administration's Library Information Center, it is the longest running public health and safety observance on record.

Hot Springs VFD

On July 2, The Hot Springs Volunteer Fire Department (VFD) celebrated its 125th anniversary.

The fire company was formed, according to a VFD history by William T. Richer – VFD member Jenni Sotherland shared this with the Star – in January of 1890, when a group of Hot Springs citizens gathered at the Minnekahta Hotel to organize themselves into the VFD. At this meeting, John Gillespie was elected chief; H. C. Venette, first assistant chief; John Mueller, second assistant chief; Kenneth Harris, secretary and Wally Root, treasurer.

In those days, there was no citywide water system, so the only equipment the VFD needed was a large number of leather water buckets. To fight fires, the men formed two lines –Richer calls them "strings" – going to and from the fire and a water source. Usually, Fall River, water holes or cisterns were the water sources. One line of men passed buckets of water from the river to the fire, the other line returned the empty buckets.

In July, when the modern VFD was whooping it up with a masquerade ball at American Legion Post 71 they may not have been thinking about these roots, but they are where the VFD originated.

Early days

Later in 1890, the city began to pipe water into the business district, so it purchased its first fire-fighting equipment: two, high wheeled hose carts, and one hook and ladder wagon. The hose carts were drawn by men, the wagon pulled by a team of horses.

Throughout those early days the city's firefighting ability grew. In 1893, the city bought another high-wheeled hose cart, placed iton College Hill (where the high school is today).

One interesting story from those days is connected to John Mueller, father of the Mueller Center founder. In 1896, when Mueller was the VFD's first assistant fire chief, he bought a white horse, named "Old Granger" from Bill Perry.

Mueller used Old Granger to ride to and from fires, and pull the No. 1 hose cart to fire scenes.

For many years Mueller kept his stable much the same as the city's fire equipment stables, with the bridle bit in Old Granger's mouth, so the horse was ready to go. When an alarm sounded, Old Granger would leave his stall, make a run for the buggy shafts, where the No. 1 hose cart could be hooked up to him with one snap of the harness, and "away he would go," says Richer.

Sometimes, Mueller was able to catch a ride on the horse, other times, Old Granger was the first responder to a fire.

Richer says, “The call of the fire alarm was greater to this noble horse than was the call of the feed box.” Mueller used Old Granger in this fashion for a quarter century, until 1915, when the horse was “pensioned.” The horse was so stiff and lame then he could hardly walk the streets, according to Richer. “But if an alarm came in, one would think he was a mighty young horse. He was able to forget his stiffness and lameness to answer the call.”

Richer says in 1916, when Old Granger was “pensioned” and put out to pasture near town, the horse heard an alarm call and in a few moments showed up in town to answer the call.

Granger answered his last fire call in 1917.

Also during these early days, the VFD sponsored three-day 4th of July celebrations, free to the public. Special trains brought large crowds of people into Hot Springs from surrounding areas and the entertainment included greased pig-catching and greased pole-climbing contests, rodeo-style bucking horses, baseball games, swimming contests, foot races, human wheelbarrow races, tug-of-wars, band concerts and reading the Declaration of Independence.

In 1899, the VFD fire hall became a dual-purpose building, hosting Hot Springs’ first opera hall as well as the fire hall. What happened was that the fire department remodeled their building, adding a small stage to the east end of the room, a set of bleachers in the west, and covering the remaining floor space with folding chairs advertising Happy Bill cigars. Two small dressing rooms were also built outside the building. The Fireman’s Opera House was in operation until about 1909, when the skating rink and theater opened. The opera house never made much money, but it gave city residents a place for entertainment.

Up until the end of World War I (1918), the fire fighting equipment of the city included three hose carts and one hook and ladder wagon or truck. The hose carts were housed in various parts of town: One in the lower end, one on College Hill, one on Minnekahta Ave. The hook and ladder wagon was kept at city hall. Fire alarms were anything that made noise -- train whistles, church bells and “men hollering at the top of their voices,” notes Richer.

There were no telephones in those days, so when fires occurred at night, VFD members “would generally exhaust themselves in running from their homes to the scene of the fire.”

Often, by the time the hose carts got to the scene, the fire was out of control, and the VFD’s efforts focused on keeping the fire from spreading to adjoining properties. “It was quite generally considered those days that if a property caught fires during the night time, there would be nothing left in the morning, except the lot. One example of this is how an April 1891 fire wiped out a whole city block of business buildings in “lower” town, the damage estimated at $35,000 – big money in those days.

Other big blazes of that era the 1891 blaze that took the Minnekahta Hotel, the 1892 blaze that took out several buildings where the Post Office now stands, an 1895 fire that destroyed the Jay

Crane store building, a 1903 fire that took a block of business houses what was People's National Bank and the Riverside Apartments, a 1907 fire that took the Catholican Hotel and bath house and the Siloam bath house, 1910's Gibson Hotel fire and 1915's Gillespie Hotel fire. In 1924, the High School building burned to the ground.

Motorization

In 1918, a movement was started to motorize the VFD. City businessmen, citizens and the fire company made donations of $1,875 which bought a combination Ford chemical and hose truck. This was put into service in June of 1919, when Dave Batchelor was foreman of the fire company. Batchelor's house burned down, a $3,000 loss, in 1908.

An REO Speedwagon Fire Truck equipped with a pump was purchased in 1924, after the high school fire, to increase water pressure, and town founding father F.O. Butler offered the fire company his Pierce-Arrow touring car, which was reworked into a hook and ladder truck. This unit remained in operation until 1938, when it was replaced by a new, Ford V-8 truck.

In 1934, the REO Speedwagon was converted into a smoke extractor, a move made possible by the ingenuity of Vic Englebert, H.C. "Swede" Nelms, and Fire Chief L. J. Bingham. These men added a 25-horsepower Waukesha motor to a large suction fan, salvaged from the State Soldier's Home. This rig was given credit for saving more property than any other equipment in the department, drawing smoke and gas from burning buildings at a rate of 6,500 cubic feet per minute, which made it possible for firefighters to get into burning buildings and extinguish fires.

Growth

Throughout the 1930s the VFDs gear grew, as Hot Springs grew, with horses and carts being replaced by larger and more powerful motorized equipment. In 1936, this enabled Hot Springs to get a 10 percent cut in insurance rates because of the efficiency of the fire department.

By the 1940s, there were 561 people in the VFD, with 65 active members and six living in Fire Hall, on call to fight fires. Engines and other gear were purchased by the city or the VFD via proceeds for insurance money or annual dances. But in 1942, city agreed to begin paying the VFD $200 per month to, with the understanding that the VFD would pay for all equipment, pay their own insurance, water, lights, telephone, gas, oil, fire station upkeep and other incidental expenses.

"Without a doubt the Hot Springs Fire Department is one of the very best strictly volunteer fire departments in the state…the department has brought home the South Dakota State Championship trophy a total of 11 times.

During the late 1940s, the fire chief was conducting "fire drills at both schoolhouses several times each year. These drills are not at regular intervals, but just whenever he takes the notion, giving no notice to teachers, janitors or pupils at the building." A general inspection of "every business house within the city" was also held annually, which revealed any fire hazards.

In 1948, after Frank Fetzner, Deputy State Fire Marshall, saw the VFD in action for the first time, he said the VFD handled themselves like a experts and that the city should feel mighty proud that they have such a group of fire-fighters.

After flood of 1948, a VFD American LaFrance pumper was used to pump out Evans Plunge. This took days. Also, extension ladder truck saved a "kid" marooned on the cliffs at Hot Brook, with two fireman saving the goat.

Also, 800 questionnaires and inspection blanks were sent home with school kids, asking that they report any fire hazards in their homes. Returning this would get the kids a ride on the fire truck. More than 700 of these came back, the kids ratting out their parents bad habits, even in the homes of firemen.

Emergency ambulance was first put into service in November of 1949.

The 1950s

These were high times for the VFD – in more ways that one, according to new VFD scribe Howard McBride. In 1950, Chief Vic Englebert resigned, saying "he had gone on a bender, got himself in jail and fined. Was called on the carpet by his boss and was given an enforced vacation for two weeks from his job."

That same year the city floated a $15,000 bond issue for new fire station, and it carried 1,098 to 487 votes. The VFD bought three lots (where the Valley Hotel burned in 1946) for $3,500 in the city's name. Many private citizens gave donations to this, including one widow who gave $100, quite a bit of money then.

In February of 1950, at the annual Fireman's Masquerade Ball, someone set fire to Wally King's masquerade suit, which produced 2nd degree burns on his legs, hips, chest and chin, and 3rd degree burns on both hands. King was in hospital for several months, and the masquerade ball ended – until this year.

In 1951, street names in the city were changed, and a new map was prepared showing the new names and locations. Firemen instructed to study this and become familiar with it.

William Watson, of Wind Cave National Park, came to a VFD meeting in April to compliment the VFD on their cooperation. Watson said the park and the state Game, Fish & Parks department couldn't see eye-to-eye on their cooperative agreement, and he thought VFD should take care of Southern Hills fires. "If the rest of Hot Springs had the getup and go of the fire department, the town would be a hell of a lot better off," Watson quipped, noting he wouldn't be at Wind Cave much longer due to a transfer to Hot Springs, Arkansas.

In 1953 a fire at the Minnekahta Building, took the lives of a woman and her two daughters, although the father and his two sons escaped harm. The building was falling into itself when VFD arrived.

The last years of the 1950s brought a new aerial ladder, an Oelrichs chicken hatchery fire that cooked 3,700 of the birds, and a January fire in 20-below temperatures that the fire chief said was the first time he'd see the smoke extractor tube freeze.

1960s and 70s

After the 1961 flood, the VFD was called on to pump basements, but lacked the equipment to do so. It was also called to Angostura Dam for rescue work. In 1963 a new addition was put on the station. School building inspections revealed a few hazards, which were eliminated.

And the 1979's Evans Hotel Fire proved to be a seminal event for the city.

Modern VFD

Most recently, the VFD has had some major fires to contend with.

It fought 2007's Alabaugh Fire, which burned 10,324 acres, destroyed 33 homes, killed one resident, and forced two firefighters to take refuge in a fire shelter. Hot Springs' Mary Goulet lived in one of those homes and wrote a book about the fire, "Cascade of Flames."

In 2015, the Bitter Creek fire started south of Hot Springs, off Highway 71 at the intersection of Maitland and Ash Creek Roads. It burned about 87 acres, and firefighters from Cascade, Hot Springs, and South Dakota State stopped the spread.

And just after their 125th anniversary, in mid-July of this year, the Indian Canyon fire, which began after four days of temperatures topping 90 degrees and a lightning strike touched off a blaze about five miles southeast of Edgemont, scorching 14,133 acres

Today, the VFD has 65 active volunteers led by Chief Jim Stevens, 1st assistant Chief Bob Evans, 2nd assistant chief Wendell Hertel, and Secretary Treasurer Gerald Hanson.

Argyle VFD looking for help

The Argyle Volunteer Fire Department (AVFD) located between Pringle and Hot Springs, SD is seeking new members. Applicants should be over 18 years of age, in good physical health, have a clean driving record, and be able to pass a Law Enforcement Background check. Firefighters will respond to structural and wildland fires as well as assist with search and rescue operations, motor vehicle accidents and other emergencies in our coverage area. First Responders will assist and respond to medical emergencies and assist patients until ambulances arrive on scene. Prior experience is not necessary but certainly welcome. This is a volunteer non-paid position.

The Department provides Fire and EMS response to a 144 square mile area of southwestern Custer County and provides Mutual Aid to Pringle, Minakata, Custer, Hot Springs, Wind Cave, Custer State Park, and other nearby agencies in Custer and Fall River Counties.

Meeting are held at the fire station on the first and fourth Thursdays of each month at 7 p.m.

For more information, call (605) 673-5823; e-mail ArgyleVFD.SD@gmail.com, or check the Argyle Volunteer Fire Department Facebook page.

WYOMING:

USDA designates Park County in Wyoming as a primary natural disaster area (Northern Wyoming Daily)

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

“Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters,” said Agriculture Secretary Tom Vilsack. “President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation’s economy by sustaining the successes of America’s farmers, ranchers, and rural communities through these difficult times. We’re also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood.”

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA’s Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program;Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

ANALYSIS

- Colorado: Colorado Springs OEM hosted a workshop on flash flooding.

- Montana: The Montana-Idaho communications director for Red Cross had a column about first aid for pets in emergencies.

- North Dakota: No FEMA-related stories

- South Dakota: Almost half the state is abnormally dry, according to the U.S. Drought Report. Two areas show moderate drought, the first areas so identified in SD since June… The leak in the Keystone Pipeline near Menno was apparently caused by a bad weld. The leak was about two drops per minute; almost 17,000 gallons of oil leaked. The company is working on where to dispose of the affected soil…. This weekend's massive storm will drop heavy rain from South Dakota south to Texas, including eastern Colorado. The worst day for violent thunderstorms and possible tornadoes should be today. The storm should quiet current fire danger.

- Utah: T

STORIES

COLORADO:

Don’t go chasing wildfires – unless you’re Scott Kelleher

13Oct, 2016 by Anne Ju Manning – Source/Colorado State University

Most people drive *away* from fires burning in the mountains. Scott Kelleher drives straight at them – well, near them, anyway. And it’s not for thrill seeking.

For two weeks in September, Kelleher drove the perimeter of a 6,000-acre prescribed burn in southern Colorado to set up 13 outdoor air samplers on steel stakes.

Kelleher’s system is suited for monitoring smoke emissions for both controlled burns and wildfires. Field-testing the sensors during an actual, unplanned wildfire would prove challenging. So, Kelleher received permission from the U.S. Forest Service to tag along on a planned, prescribed burn, which are common in the Rocky Mountains and other densely forested areas.

“The long-term goals of this project are very motivating,” Kelleher said. “It’s applying science and technology in an affordable new way to make the lives of those responsible for monitoring smoke much easier, with the main thought of protecting public health in mind.”

Field testing

Kelleher’s first field-testing campaign took place in a swath of land between Pagosa Springs and Bayfield, Colorado, near Pargin Mountain. Working closely with his contacts at the forest service, Kelleher set up each of his monitoring checkpoints in strategic proximity to the forest service’s monitoring zones.

The sensors Kelleher is testing are based off the principle of an Ultrasonic Personal Aerosol Sampler (UPAS) designed in the lab of his advisor, John Volckens, who is a professor in mechanical engineering and member of the CSU Partnership for Air Quality, Climate, and Health. The UPAS features an ultrasonic pump that draws in air, a sampling filter, rechargeable batteries, and an air flow rate sensor.

Kelleher’s master’s project involves adapting the UPAS for conditions suitable for prolonged outdoor monitoring. His new version, for which he is quick to point out he received many hours of help from other Volckens lab members, includes a hardened enclosure for weatherproofing; a solar cell for charging an extended-life battery; and a real-time, optical particle sensor that tracks the flow of particles 2.5 microns in diameter and smaller. “PM 2.5” is a standard measure for describing air pollution particles small enough to penetrate human lungs and cause health problems. The optical sampler contained in the device gives live updates.

The sensor also has a gravimetric analysis device that collects particles onto a filter. The filter is later weighed and analyzed for particulate matter concentrations. The entire device can be controlled remotely by smart phone.

The total cost of one of Kelleher's sensors is estimated at about $500, compared with particulate matter monitors used today that cost $10,000 to $20,000. The standard sensors usually require line power, and are large – about the size of a microwave oven.

Kelleher's unusual road trip involved seven rounds of 24-hour sampling. This involved traveling a route of 90 miles, changing out filters on each device and extracting information. In all, he was out in the fire for 14 days.

Automation in rural environments
A graduate of Montana Tech who grew up on a beef cattle, wheat and barley farm near the Canadian border, Kelleher is motivated by his work to bring the power of automation and monitoring to rural environments. Recognizing his penchant for engineering cost-effective solutions, and armed with his CSU master's degree in a couple of years, Kelleher hopes he can make a difference by bringing simple automation technologies to farmers or small businesses. The remainder of Kelleher's thesis will involve organizing and analyzing the data he collected at Pargin Moutain as well as follow-up prescribed burn experiments as needed. He will present his recent findings at the Second International Smoke Symposium (ISS2) in Long Beach, California next month.

"It was very cool to observe such a large-scale event and learn about the processes and effort that go into it," he said. "Hopefully, one day, my technology will enable anyone worried about air pollution to conduct monitoring right in their backyard."

NORTH DAKOTA:

Fox Island residents approve flood protection plan (Bismarck Tribune)

LEANN ECKROTH Bismarck Tribune 18 hrs ago

A $3.92 million Fox Island flood protection project has been approved 72-18 by property owners, who will pay part of its cost via a special assessment district, the Burleigh County Water Resource District Board announced Wednesday.

The project will involve raising a section of road and adding a levee to safeguard against a 20-foot flood. The Legislature has committed $2.8 million toward its completion, and the Burleigh

County Commission has approved funding of $920,000 in yearly installments. Fox Island property owners will pay the balance.

The project was driven by the 2011 Missouri River flooding.

The raising of the road would start at the pump at Tavis Road and move west along Farwest Drive and Gallatin Loop, according to Michael Gunsch of Houston Engineering, consulting engineer for the water resource district. The levee would extend west from Gallatin Loop to the Missouri River bank, then run north to the Whispering Bay accessory channel, he said.

Gunsch said about 80 percent of the 91 property owners who voted favored the project. One submitted a blank ballot.

With the residents' approval on record, the board is moving forward with the project and paying a design fee of $325,000 to Houston Engineering.

Completion is planned during the 2018 construction season, but authorization must first be granted by the U.S. Army Corps of Engineers and the North Dakota State Engineer's Office.

Earlier precautions were taken when the county partnered with Bismarck in creating the Tavis Road floodgate after the 2011 flood and Bismarck raised Mills Avenue, according to Larson.

A Dec. 14 hearing has tentatively been set to allow those within the special assessment district to protest.

Sixteen residents in the far western Gallatin Loop area signed a petition saying the construction of the levee would damage their yards, said Greg Larson, a member of the water resource district board.

"We 16 receive none of the flood benefit, but receive 100 percent of the street and yard destruction," he read from the statement.

The homeowners signing the petition also asked that a different street be raised near their properties.

Board members agreed they did not want to change the protection plan or do more study at increased cost to those being assessed.

Each property owner in the assessment district can expect to pay an average of $3,790 toward the construction project, Gunsch said. In addition, he said, some of them will pay $943 each toward the system's operation and maintenance.

Sen. Bernie Sanders asking President Obama to halt North Dakota pipeline for full review (KFOR TV, Oklahoma City, and AP)

Posted 7:17 am, October 14, 2016, by KFOR-TV & K. Querry and AP Wire

BISMARCK, N.D. – Vermont Sen. Bernie Sanders and four other Democratic senators are asking President Barack Obama to halt construction of the four-state Dakota Access pipeline until a full environmental review can be completed.

In a statement, the senators said Thursday the request is due to a federal appeals court denying the Standing Rock Sioux's motion for a temporary work stoppage in southern North Dakota within 20 miles of Lake Oahe. The feds stopped construction on land bordering and under the lake in order to review the permitting process.

An environmental review would likely delay the pipeline, which Dallas-based Energy Transfer Partners hopes to complete by the end of the year.

White House spokesman Patrick Rodenbush declined to comment.

The other senators are Patrick Leahy of Vermont, Dianne Feinstein of California, Ben Cardin of Maryland and Ed Markey of Massachusetts.

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

However, the Standing Rock Sioux Tribe says the pipeline would come within a half-mile of their reservation and could disturb or destroy sacred historical sites.

Also, tribal leaders are concerned about the consequences the pipeline would have on their water supply.

North Dakota sheriff out of town almost constantly as pipeline protest drags on (Fargo Forum News Service, WDAZ TV)

- By TU-UYEN TRAN Forum News Service
- 18 hrs ago

FARGO — In mid-August, Cass County Sheriff Paul Laney headed for southeastern Morton County, the scene of protests against the Dakota Access Pipeline, and, except for a few breaks, he's been there ever since. Serving as the elected sheriff of what's by far the state's largest county while consumed by policing the ongoing tribal protests of the oil pipeline has been a daily act of priority-balancing, Laney said.

"I'm very blessed to have a command team that I believe is second to none," Laney said. "They can hold the fort with most things, but there are certainly things that need my attention."

Laney, who is halfway through a third term after first taking office in January 2007, said he feels it's important for him to do everything he can to help Morton County in its time of need because Cass County got help during the flood fights of 2009, 2010 and 2011. In the worst of those floods, in 2009, hundreds of law enforcement officers from around the state and country came to Cass County for more than 40 days, he said.

“The fact that we've had to go out of state to bring in assistance,” he said, “how do we in-state not help first?”

Hundreds of law enforcement officials from all over the state and other parts of the country have been helping police the protests at the request of Morton County Sheriff Kyle Kirchmeier, whose force is stretched thin. Laney has been the operations chief for the law enforcement presence to the protests.

Last week, a representative from the Western States Sheriffs’ Association and the National Sheriffs’ Association said members of both groups have pledged to help Morton County. Laney is a board member for the national group.

Cass County Commission Chairwoman Mary Scherling agreed with Laney’s sentiment that pitching in is worth the heavy strain on the sheriff’s time.

“When we’ve had floods, for example, we've relied on many many outside agencies to help us with all of our sandbagging and dike patrols and search and rescue and so on and so forth,” she said. “The counties don't live in a bubble. We have to help each other and we’re glad to be able to do that.”

Scherling said she knows Laney is in “constant communication” with his subordinates in Fargo. Laney said he’s been able to take care of business back in Cass County by phone, by email or with scanned documents.

Cass County Chief Deputy Col. Rick Majerus is in charge while Laney is out. The sheriff said he does come back to Cass County when he’s absolutely needed.

Marty Johnson, Scherling’s opponent in November’s County Commission election, didn’t return a phone message Wednesday.

The pipeline construction site targeted by protesters is near the Missouri River just north of the Standing Rock Indian Reservation. Protesters, many of whom are American Indians, say construction of the $3.8 billion oil pipeline would desecrate burial grounds and other sites sacred to Indians. They also say a rupture would threaten water quality in the Missouri River, which the pipeline must go under as it continues on its way to Illinois.

Laney estimated that there have been 7,000 to 8,000 protesters, though more recently the numbers have dropped to 2,500 to 3,000 who are in it for the long haul. The majority are peaceful but 300 to 400 are “extremely confrontational,” he said, accusing them of trying to disrupt construction and intimidating farm workers. As of Tuesday, Oct. 11, the protests had led to 123 arrests.

State officials and lawmakers have criticized the lack of financial and law enforcement support from the federal government, given that the U.S. Army Corps of Engineers surprisingly withdrew its required approval of the pipeline’s Missouri River crossing for further review -- an announcement made Sept. 9, just minutes after a federal court ruling in support of the pipeline’s construction.

The number of law enforcement officials on the scene has fluctuated based on the need, though Laney said he couldn’t say how many because of security concerns. Several of his deputies have rotated in and out of Morton County over the last few months, he said, but it’s hard for him to stay away because he’s one of three top commanders on the scene.

Cass County taxpayers won’t bear the cost of deploying the deputies and Laney to the protest, and patrols in Cass County and jail security haven’t been affected, a department spokesman previously told The Forum. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs.

Laney said the days are long there, leaving only enough time to outside of work for him to grab a bite and sleep. Deputies who volunteer to rotate in all work seven days a week with no time off until they rotate out again, he said.

“I’m not going to lie, we’re all tired,” he said, but law enforcement officers expect that they may have to make sacrifices.

Asked how long he thinks he'll be needed in Morton County, Laney said that depends on the protesters.

The company building the pipeline, which was 87 percent complete in North Dakota as of the end of September, said Tuesday that it intends to resume construction promptly after the Standing Rock Sioux Tribe's request to stop work on the pipeline in places where it believes the project will desecrate sacred land was denied Sunday.

Protesters have also said they don't plan to leave anytime soon.

"This currently is a situation that there's no way one agency alone could handle this," Laney said.

Madison City Council member arrested in North Dakota pipeline protest (Bismarck Tribune, Wisconsin State Journal)

- Dean Mosiman, Wisconsin State Journal
- Oct 12, 2016

Madison Ald. Rebecca Kemble was arrested and jailed on Monday while acting as a legal observer of the continuing protests over a controversial oil pipeline in North Dakota that a Native American tribe says threatens tribal land.

Kemble's version of events contrasts sharply with statements by law enforcement, who characterized the event as a riot.

Kemble was among more than two dozen people arrested on Monday at two protests, Morton County Sheriff's Department spokesman Rob Keller said. She faces tentative charges of misdemeanor criminal trespassing, destruction of evidence, resisting arrest and engaging in riot.

She was taken to Morton County jail and released after posting a $1,250 bond Tuesday morning, Keller said.
Actress Shailene Woodley, who starred in the "Divergent" movie series and most recently in Oliver Stone's film "Snowden," was also among those arrested.

Kemble said Tuesday afternoon that she was wearing a hat that identified her as a legal observer and was videotaping a peaceful prayer ceremony when police arrived and began making arrests. She said she intends to fight the charges.

"I wasn't protesting. It wasn't a protest," she said. "I was legal-observing. I was targeted by law enforcement for my camera."

Kemble, 18th District, traveled with her husband over the weekend to Morton County to present the Standing Rock Sioux Tribe with a parchment copy of a recent City Council resolution expressing solidarity with those protesting the pipeline.

The tribe wants construction halted due to concerns of potential contamination of its water supply and says the pipeline will encroach on tribal burial sites and other cultural artifacts.

On Monday morning, Kemble said she went with others to attend a ceremony that started at an encampment on the reservation. The ceremony, she said, moved to the pipeline site near St. Anthony and featured prayer, drumming and dancing by tribes from Argentina and the Arctic Circle.

She said most people were beginning to leave after the event, except for about 16 people sitting under a tepee, when at least 40 police officers arrived.

A commanding officer, Kemble said, told the protesters they faced arrest if an officer touched them. She said most people backed up but police pursued. She said the commanding officer ran at her, grabbed her while she was holding her camera, put her hands behind her back, bound her with a zip tie, and took her camera as evidence, with police taking her and those arrested to jail. A Morton County's Sheriff's Department press release on Monday afternoon describes a different scene.

On Monday morning, authorities got a call that two protesters had locked themselves to equipment on private property near St. Anthony and were arrested and charged with a felony and misdemeanors, the release said. Another arrest was made and the group disbanded.

About two hours later, authorities were alerted to a convoy of about 100 vehicles assembling near the pipeline site, the release said. Law enforcement closed a road and told the protesters to disband. The crowd refused and 24 more people were arrested, it said.

In the statement, Cass County Sheriff Paul Laney said, "While some would like to say this was a protest, this was not a protest — this was a riot."

Kemble rejected the description. "What alternate universe was the sheriff in that day?" she said. "It was so peaceful. The whole day was steeped in prayer and ceremony.

"The police are fear-mongering."

Kemble said she'll present the parchment to tribal leaders Wednesday morning.

Last weekend, the Dane County Sheriff's Office sent 10 deputies from its special events team to the site of the protests, part of a state contingent of 40 members of law enforcement that have gone to provide assistance to the area.

Construction resumed Tuesday on the $3.8 billion, 1,200-mile pipeline on private land about 20 miles from the so-called Red Warrior Camp where thousands of protesters have gathered, The Associated Press reported.

Dean Mosiman covers Madison city government for the Wisconsin State Journal.

GOP Demands Punishment From AG Lynch Over Gold King Mine Disasters – The Daily Caller News Foundation (Washington DC pub)

Republican lawmakers are demanding the Department of Justice explain why criminal charges have not been leveled against an Environmental Protection Agency (EPA) employee allegedly responsible for a massive mine spill in Colorado.

"By not taking up the case, the Department of Justice looks like it is going easy on its colleagues in EPA," three lawmakers with the House Natural Resources Committee wrote Wednesday in a letter to Attorney General Loretta Lynch.

Republican Rep. Rob Bishop of Utah joined fellow GOP colleagues Chairman Jason Chaffetz, also from Utah, and oversight subcommittee chairwoman Cynthia Lummis, who represents Wyoming, to send out the letter Wednesday afternoon.

"Its lack of action on these charges give the appearance of hypocrisy," the lawmakers claim, "and seem to indicate that there is one set of rules for private citizens and another for the federal government."

The Colorado mine spill resulted in three million gallons of dangerous mine waste being dumped into Colorado's Animus River, turning it yellow and poisoning the drinking water for thousands of residents across three states and the Navajo Nation. The spill also dumped more than 880,000 pounds of toxic elements — like lead and arsenic — into the water.

The EPA had tried to keep the identity of the person responsible for the spill under wraps until June, when The Daily Caller News Foundation reported that EPA worker Hays Griswold was in charge at the Gold King Mine during the spill.

Someone removed Griswold's name from an "independent" review of the disaster, according to documents obtained by TheDCNF in June.

An EPA inspector announced Wednesday Bishop's committee wrote the letter that it found evidence an unnamed employee violated the Clean Water Act. The Department of Justice will not pursue the case, a spokesman told reporters, and is instead referring the case to the EPA's leaders.

The lawmakers added that the "EPA disaster deserves the same level of accountability to which private citizens are held."

EPA's failure to hold its employees accountable for last year's leak has become a standard operating procedure.

Senior EPA officials in 2015, for instance, largely ignored complaints by 16 women, mostly employees, accusing one agency official of sexual harassment. The employee got promoted despite the complaints.

Bishop's committee held a hearing in May showing that the EPA paid a registered sex offender to retire rather than terminating his employment.

The child molester was a registered sex offender and was fired in 2014 for violating his probation – but the EPA, as its custom, reinstated him under the Merit Systems Protection Board reinstated him. The employee was eventually paid $55,000 to resign in 2015.

Hurricane-level Winds Possible In Pacific Northwest (CNN)

By Max Blau

CNN, October 13, 2016

Brace yourself, Pacific Northwest. What's left of a typhoon, which has made its way across the ocean, is expected to pummel parts of Oregon and Washington over the next several days.

The National Weather Service has said a pair of strong storms are set to hit the West Coast on Thursday and Saturday.

CNN meteorologist Dave Hennen said parts of Washington and Oregon could see gusts of up to 80 mph near coastal ranges Thursday. According to the weather service, rivers are expected to rise, with flooding remaining most likely in the Olympic Peninsula.

"Areas of ponding on roadways will slow Thursday commutes," the weather service said. "Small creeks and streams will rise and flood as well."

After a brief lull, the fierce winds could whip again through the Northwest at up to 100 mph. Hennen, who described this storm as a "monster," said it has the potential to match the pressure levels of a Category 3 hurricane on the Saffir-Simpson Hurricane Wind Scale. The weather service has cautioned residents to watch out for tree damage due to the high winds.

"Many of the wind-related deaths in western Washington occur when trees topple onto people in cars," it said.

Though it's still too early to tell, the weather service said the Saturday storm could also lead to widespread wind damage, power outages and coastal erosion.

"(There's a chance for) a worst-case scenario leading to a historical and destructive windstorm for the area," it said.

According to Hennen, a third storm may pass through the Pacific Northwest next week.

STORIES

COLORADO:

Don't go chasing wildfires – unless you're Scott Kelleher

13Oct, 2016 by Anne Ju Manning – Source/Colorado State University

Most people drive *away* from fires burning in the mountains. Scott Kelleher drives straight at them – well, near them, anyway. And it's not for thrill seeking.

For two weeks in September, Kelleher drove the perimeter of a 6,000-acre prescribed burn in southern Colorado to set up 13 outdoor air samplers on steel stakes.

Kelleher's system is suited for monitoring smoke emissions for both controlled burns and wildfires. Field-testing the sensors during an actual, unplanned wildfire would prove challenging. So, Kelleher received permission from the U.S. Forest Service to tag along on a planned, prescribed burn, which are common in the Rocky Mountains and other densely forested areas.

"The long-term goals of this project are very motivating," Kelleher said. "It's applying science and technology in an affordable new way to make the lives of those responsible for monitoring smoke much easier, with the main thought of protecting public health in mind."

Field testing

Kelleher's first field-testing campaign took place in a swath of land between Pagosa Springs and Bayfield, Colorado, near Pargin Mountain. Working closely with his contacts at the forest service, Kelleher set up each of his monitoring checkpoints in strategic proximity to the forest service's monitoring zones.

The sensors Kelleher is testing are based off the principle of an Ultrasonic Personal Aerosol Sampler (UPAS) designed in the lab of his advisor, John Volckens, who is a professor in mechanical engineering and member of the CSU Partnership for Air Quality, Climate, and Health. The UPAS features an ultrasonic pump that draws in air, a sampling filter, rechargeable batteries, and an air flow rate sensor.

Kelleher's master's project involves adapting the UPAS for conditions suitable for prolonged outdoor monitoring. His new version, for which he is quick to point out he received many hours of help from other Volckens lab members, includes a hardened enclosure for weatherproofing; a solar cell for charging an extended-life battery; and a real-time, optical particle sensor that tracks the flow of particles 2.5 microns in diameter and smaller. "PM 2.5" is a standard measure for describing air pollution particles small enough to penetrate human lungs and cause health problems. The optical sampler contained in the device gives live updates.

The sensor also has a gravimetric analysis device that collects particles onto a filter. The filter is later weighed and analyzed for particulate matter concentrations. The entire device can be controlled remotely by smart phone.

The total cost of one of Kelleher's sensors is estimated at about $500, compared with particulate matter monitors used today that cost $10,000 to $20,000. The standard sensors usually require line power, and are large – about the size of a microwave oven.

Kelleher's unusual road trip involved seven rounds of 24-hour sampling. This involved traveling a route of 90 miles, changing out filters on each device and extracting information. In all, he was out in the fire for 14 days.

Automation in rural environments

A graduate of Montana Tech who grew up on a beef cattle, wheat and barley farm near the Canadian border, Kelleher is motivated by his work to bring the power of automation and monitoring to rural environments. Recognizing his penchant for engineering cost-effective solutions, and armed with his CSU master's degree in a couple of years, Kelleher hopes he can make a difference by bringing simple automation technologies to farmers or small businesses. The remainder of Kelleher's thesis will involve organizing and analyzing the data he collected at Pargin Moutain as well as follow-up prescribed burn experiments as needed. He will present his recent findings at the Second International Smoke Symposium (ISS2) in Long Beach, California next month.

"It was very cool to observe such a large-scale event and learn about the processes and effort that go into it," he said. "Hopefully, one day, my technology will enable anyone worried about air pollution to conduct monitoring right in their backyard."

NORTH DAKOTA:

Fox Island residents approve flood protection plan (Bismarck Tribune)

LEANN ECKROTH Bismarck Tribune 18 hrs ago

A $3.92 million Fox Island flood protection project has been approved 72-18 by property owners, who will pay part of its cost via a special assessment district, the Burleigh County Water Resource District Board announced Wednesday.

The project will involve raising a section of road and adding a levee to safeguard against a 20-foot flood. The Legislature has committed $2.8 million toward its completion, and the Burleigh County Commission has approved funding of $920,000 in yearly installments. Fox Island property owners will pay the balance.

The project was driven by the 2011 Missouri River flooding.

The raising of the road would start at the pump at Tavis Road and move west along Farwest Drive and Gallatin Loop, according to Michael Gunsch of Houston Engineering, consulting engineer for the water resource district. The levee would extend west from Gallatin Loop to the Missouri River bank, then run north to the Whispering Bay accessory channel, he said.

Gunsch said about 80 percent of the 91 property owners who voted favored the project. One submitted a blank ballot.

With the residents' approval on record, the board is moving forward with the project and paying a design fee of $325,000 to Houston Engineering.

Completion is planned during the 2018 construction season, but authorization must first be granted by the U.S. Army Corps of Engineers and the North Dakota State Engineer's Office.

Earlier precautions were taken when the county partnered with Bismarck in creating the Tavis Road floodgate after the 2011 flood and Bismarck raised Mills Avenue, according to Larson.

A Dec. 14 hearing has tentatively been set to allow those within the special assessment district to protest.

Sixteen residents in the far western Gallatin Loop area signed a petition saying the construction of the levee would damage their yards, said Greg Larson, a member of the water resource district board.

"We 16 receive none of the flood benefit, but receive 100 percent of the street and yard destruction," he read from the statement.

The homeowners signing the petition also asked that a different street be raised near their properties.

Board members agreed they did not want to change the protection plan or do more study at increased cost to those being assessed.

Each property owner in the assessment district can expect to pay an average of $3,790 toward the construction project, Gunsch said. In addition, he said, some of them will pay $943 each toward the system's operation and maintenance.

Sen. Bernie Sanders asking President Obama to halt North Dakota pipeline for full review (KFOR TV, Oklahoma City, and AP)

Posted 7:17 am, October 14, 2016, by KFOR-TV & K. Querry and AP Wire

BISMARCK, N.D. – Vermont Sen. Bernie Sanders and four other Democratic senators are asking President Barack Obama to halt construction of the four-state Dakota Access pipeline until a full environmental review can be completed.

In a statement, the senators said Thursday the request is due to a federal appeals court denying the Standing Rock Sioux’s motion for a temporary work stoppage in southern North Dakota

within 20 miles of Lake Oahe. The feds stopped construction on land bordering and under the lake in order to review the permitting process.

An environmental review would likely delay the pipeline, which Dallas-based Energy Transfer Partners hopes to complete by the end of the year.

White House spokesman Patrick Rodenbush declined to comment.

The other senators are Patrick Leahy of Vermont, Dianne Feinstein of California, Ben Cardin of Maryland and Ed Markey of Massachusetts.

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

However, the Standing Rock Sioux Tribe says the pipeline would come within a half-mile of their reservation and could disturb or destroy sacred historical sites.

Also, tribal leaders are concerned about the consequences the pipeline would have on their water supply.

North Dakota sheriff out of town almost constantly as pipeline protest drags on (Fargo Forum News Service, WDAZ TV)

- By TU-UYEN TRAN Forum News Service
- 18 hrs ago

FARGO — In mid-August, Cass County Sheriff Paul Laney headed for southeastern Morton County, the scene of protests against the Dakota Access Pipeline, and, except for a few breaks, he's been there ever since. Serving as the elected sheriff of what's by far the state's largest county while consumed by policing the ongoing tribal protests of the oil pipeline has been a daily act of priority-balancing, Laney said.

"I'm very blessed to have a command team that I believe is second to none," Laney said. "They can hold the fort with most things, but there are certainly things that need my attention."

Laney, who is halfway through a third term after first taking office in January 2007, said he feels it's important for him to do everything he can to help Morton County in its time of need because Cass County got help during the flood fights of 2009, 2010 and 2011. In the worst of those floods, in 2009, hundreds of law enforcement officers from around the state and country came to Cass County for more than 40 days, he said.

"The fact that we've had to go out of state to bring in assistance," he said, "how do we in-state not help first?"

Hundreds of law enforcement officials from all over the state and other parts of the country have been helping police the protests at the request of Morton County Sheriff Kyle Kirchmeier, whose force is stretched thin. Laney has been the operations chief for the law enforcement presence to the protests.

Last week, a representative from the Western States Sheriffs' Association and the National Sheriffs' Association said members of both groups have pledged to help Morton County. Laney is a board member for the national group.

Cass County Commission Chairwoman Mary Scherling agreed with Laney's sentiment that pitching in is worth the heavy strain on the sheriff's time.

"When we've had floods, for example, we've relied on many many outside agencies to help us with all of our sandbagging and dike patrols and search and rescue and so on and so forth," she said. "The counties don't live in a bubble. We have to help each other and we're glad to be able to do that."

Scherling said she knows Laney is in "constant communication" with his subordinates in Fargo. Laney said he's been able to take care of business back in Cass County by phone, by email or with scanned documents.

Cass County Chief Deputy Col. Rick Majerus is in charge while Laney is out. The sheriff said he does come back to Cass County when he's absolutely needed.

Marty Johnson, Scherling's opponent in November's County Commission election, didn't return a phone message Wednesday.

The pipeline construction site targeted by protesters is near the Missouri River just north of the Standing Rock Indian Reservation. Protesters, many of whom are American Indians, say construction of the $3.8 billion oil pipeline would desecrate burial grounds and other sites sacred to Indians. They also say a rupture would threaten water quality in the Missouri River, which the pipeline must go under as it continues on its way to Illinois.

Laney estimated that there have been 7,000 to 8,000 protesters, though more recently the numbers have dropped to 2,500 to 3,000 who are in it for the long haul. The majority are peaceful but 300 to 400 are "extremely confrontational," he said, accusing them of trying to disrupt construction and intimidating farm workers. As of Tuesday, Oct. 11, the protests had led to 123 arrests.

State officials and lawmakers have criticized the lack of financial and law enforcement support from the federal government, given that the U.S. Army Corps of Engineers surprisingly withdrew its required approval of the pipeline's Missouri River crossing for further review -- an announcement made Sept. 9, just minutes after a federal court ruling in support of the pipeline's construction.

The number of law enforcement officials on the scene has fluctuated based on the need, though Laney said he couldn't say how many because of security concerns. Several of his deputies have rotated in and out of Morton County over the last few months, he said, but it's hard for him to stay away because he's one of three top commanders on the scene.

Cass County taxpayers won't bear the cost of deploying the deputies and Laney to the protest, and patrols in Cass County and jail security haven't been affected, a department spokesman previously told The Forum. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs.

Laney said the days are long there, leaving only enough time to outside of work for him to grab a bite and sleep. Deputies who volunteer to rotate in all work seven days a week with no time off until they rotate out again, he said.

"I'm not going to lie, we're all tired," he said, but law enforcement officers expect that they may have to make sacrifices.

Asked how long he thinks he'll be needed in Morton County, Laney said that depends on the protesters.

The company building the pipeline, which was 87 percent complete in North Dakota as of the end of September, said Tuesday that it intends to resume construction promptly after the Standing Rock Sioux Tribe's

request to stop work on the pipeline in places where it believes the project will desecrate sacred land was denied Sunday.

Protesters have also said they don't plan to leave anytime soon.

"This currently is a situation that there's no way one agency alone could handle this," Laney said.

Madison City Council member arrested in North Dakota pipeline protest (Bismarck Tribune, Wisconsin State Journal)

- Dean Mosiman, Wisconsin State Journal
- Oct 12, 2016

Madison Ald. Rebecca Kemble was arrested and jailed on Monday while acting as a legal observer of the continuing protests over a controversial oil pipeline in North Dakota that a Native American tribe says threatens tribal land.

Kemble's version of events contrasts sharply with statements by law enforcement, who characterized the event as a riot.

Kemble was among more than two dozen people arrested on Monday at two protests, Morton County Sheriff's Department spokesman Rob Keller said. She faces tentative charges of misdemeanor criminal trespassing, destruction of evidence, resisting arrest and engaging in riot.

She was taken to Morton County jail and released after posting a $1,250 bond Tuesday morning, Keller said.
Actress Shailene Woodley, who starred in the "Divergent" movie series and most recently in Oliver Stone's film "Snowden," was also among those arrested.

Kemble said Tuesday afternoon that she was wearing a hat that identified her as a legal observer and was videotaping a peaceful prayer ceremony when police arrived and began making arrests. She said she intends to fight the charges.

"I wasn't protesting. It wasn't a protest," she said. "I was legal-observing. I was targeted by law enforcement for my camera."

Kemble, 18th District, traveled with her husband over the weekend to Morton County to present the Standing Rock Sioux Tribe with a parchment copy of a recent City Council resolution expressing solidarity with those protesting the pipeline.

The tribe wants construction halted due to concerns of potential contamination of its water supply and says the pipeline will encroach on tribal burial sites and other cultural artifacts.

On Monday morning, Kemble said she went with others to attend a ceremony that started at an encampment on the reservation. The ceremony, she said, moved to the pipeline site near St. Anthony and featured prayer, drumming and dancing by tribes from Argentina and the Arctic Circle.

She said most people were beginning to leave after the event, except for about 16 people sitting under a tepee, when at least 40 police officers arrived.

A commanding officer, Kemble said, told the protesters they faced arrest if an officer touched them. She said most people backed up but police pursued. She said the commanding officer ran at her, grabbed her while she was holding her camera, put her hands behind her back, bound her with a zip tie, and took her camera as evidence, with police taking her and those arrested to jail. A Morton County's Sheriff's Department press release on Monday afternoon describes a different scene.

On Monday morning, authorities got a call that two protesters had locked themselves to equipment on private property near St. Anthony and were arrested and charged with a felony and misdemeanors, the release said. Another arrest was made and the group disbanded.

About two hours later, authorities were alerted to a convoy of about 100 vehicles assembling near the pipeline site, the release said. Law enforcement closed a road and told the protesters to disband. The crowd refused and 24 more people were arrested, it said.

In the statement, Cass County Sheriff Paul Laney said, "While some would like to say this was a protest, this was not a protest — this was a riot."

Kemble rejected the description. "What alternate universe was the sheriff in that day?" she said. "It was so peaceful. The whole day was steeped in prayer and ceremony.

"The police are fear-mongering."

Kemble said she'll present the parchment to tribal leaders Wednesday morning.

Last weekend, the Dane County Sheriff's Office sent 10 deputies from its special events team to the site of the protests, part of a state contingent of 40 members of law enforcement that have gone to provide assistance to the area.

Construction resumed Tuesday on the $3.8 billion, 1,200-mile pipeline on private land about 20 miles from the so-called Red Warrior Camp where thousands of protesters have gathered, The Associated Press reported.

COLORADO

CBS: Colorado Springs Flooding. The CBS Evening News (8/29, story 5, 0:15, O'Donnell, 11.17M) reported, “Heavy rain and hail caused flash flooding today in Colorado Springs. Streets became rushing rivers. It came on so quickly, drivers got stuck. Their cars had to be pulled out of the flood waters.”

Wild weather causes flooding, hail on Colorado Springs streets (KKTV news, Colorado Springs)

Updated: Tue 5:46 AM, Aug 30, 2016

COLORADO SPRINGS, Colo. (KKTV) Wild weather roared through Colorado Springs Monday afternoon, quickly causing streets to flood and keeping emergency personnel busy.

Several drivers were caught in the rapidly rising water. Just east of downtown on Pikes Peak Avenue, four people inside one car, including a toddler, had to be rescued after the vehicle got stuck in fast-moving water.

"I saw that it only came up to the middle of the hubcap there, so probably up to my knees," said Sgt. Erick Frederic with the Colorado Springs Police Department, who pulled the victims from the car.

No one was hurt in the incident, but were all left pretty shaken up.

"That's always a scary thing because if there becomes more water then the car could be pushed over," Frederic said. "So it's a matter of yes, stay in there until the car stops moving, but you don't want to get stuck in a moving car either."

Plenty of others were left stranded after water came rushing down streets.

“It’s kind of scary, cause you don’t know what might happen," said Susan Kellman.

Near Bijou and Logan, a snowplow that was trying to move nearly 2 feet of hail off the street ended up having to be towed.

Zach Smith faced another obstacle. His car was picked up by moving water and floated down the street.

"I was at work and my neighbor gave me a call and said, 'Hey, your car’s in the middle of the road; you should probably come move it,'" he told 11 News.

When Smith got home, he found the car sitting sideways, literally in the middle of the street.

“It’s pretty crazy. I’ve seen some pretty heavy rains, but not one to float a parked car like that.”

Another problem spot was off Platte Avenue near Tia Juana. A car got stuck near Fargo's Pizza after water quickly overtook the roadway.

Other areas of Platte, just east of Union, were underwater after storm drains got clogged by the amount of water running down the street.

"It's mayhem. You never know what you're going to get in Colorado. First we have hail, then we get some flooding," said Phillip Groskinsky.

HOMES DAMAGED BY FLOODING

Homeowners near Platte and Wahsatch in Colorado Springs say a dog was killed when fast-moving water got into their garage.

The Pikes Peak Red Cross went to more than 60 homes on Monday. Although not all were damaged, some were left unlivable.

Tim and Debbie Hertzog had their fence destroyed by rushing water, their backyard deck lifted up, and thousands of dollars worth of damage to the inside their home.

Debbie said she came home in the middle of the storm and got trapped in her garage.

"I just saw sheets of rain coming down, so I rushed home. ... As soon as I pulled into the garage, the river coming down the alley came into the garage with me," Debbie recalled. "I couldn't open the door without it coming in. So I called 911...they told me to stay sheltered in place in my car, unless [the water] came in the car.

"It did come to about a quarter of an inch, to the bottom of my car, while I was sitting in there. And I was probably in there an hour and a half, or maybe close to that, and I had no idea what was going on with my house. ... I couldn't get out either door without an onslaught of water. There was so much water."

Tim described the outside as chaos.

"She called me, so I came home and I was trying to get her out of the garage, but the water was almost 18 inches over the garage door, couldn't get the garage door open, so we just had to wait for the waters to subside.

"We weren't sure how bad it was going to get; if it was going to get worse."

Near Palmer Park and Union, one family said they worry about flooding -- like what happened Monday -- any time it rains.

"It's not something to mess with," said Jessica Staten. "If you can't see the road, don't go through it, plain and simple."

Staten snapped video of a car and truck stuck in high water at Mount Vernon Street and Tweed Street. Firefighters were eventually able to help both out.

"This intersection is prone to getting flooded pretty bad," Staten said. "It was already up to the wall of my neighbor, the wall where his fencing is, so there's no way you would have been able to clear it with a car. The minute he [one of the drivers] hit the dip, he was gone. He was done."

It was a similar scene near Fountain and Circle. Kellman saw others get trapped trying to plow through standing water. She decided not to chance it.

"It's scary because you don't know what might happen. I mean, there's lots of accidents, too," Kellman said.

"I just pulled over and waited for it to stop."

FEMA criticized as slow on disaster housing aid in Louisiana (Colorado Spring Gazette)

By: MELINDA DESLATTE, Associated Press •
August 29, 2016• Updated: August 29, 2016 at 12:43 pm

BATON ROUGE, La. (AP) — The first out-of-state congressman to survey Louisiana's damage from catastrophic flooding Monday blasted the Federal Emergency Management Agency response as "pitiful."

U.S. Rep. John Mica, a Florida Republican who chairs a subcommittee with jurisdiction over FEMA, toured the destruction with U.S. Rep. Garret Graves, a Republican who represents much of the most heavily damaged region.

Mica said housing aid for the tens of thousands of people displaced by floodwaters two weeks ago has been sluggish and FEMA has been too slow to set up mobile homes that give people somewhere to stay while they repair their houses.

He said FEMA needs more "flexibility" in its programs to make them more adaptable to individual disasters.

"This is one of the biggest displacements of people I've ever seen in the country, and the response is pitiful from the federal level," Mica said.

Only one manufactured housing unit has been set up so far. FEMA regional director Gerard Stolar said the agency is working to speed aid to people displaced by the flooding.

"We're working very closely with the state. We're well aware of the devastation that's out there, that this is an historic event," Stolar said.

He said that FEMA's priority is to get people back into their homes and that 50 to 60 additional manufactured housing units are ready to be set up for homeowners after inspections of their property are complete.

"I'm very confident we're going to be able to ramp up the capacity for this in the very near future," Stolar said.

More than 100,000 homes are estimated to be damaged from flooding described as the worst disaster since Superstorm Sandy, after a storm that started Aug. 12 dumped as much as 2 feet of rain in some areas over two days.

More than 1,400 people remained in shelters Monday.

Entire communities were ravaged by floodwaters, and residents and volunteers have spent the last two weeks ripping out flooring, damaged furniture and drywall to ready homes for repairs. But many people didn't have flood insurance, leaving them dependent on savings and FEMA for rebuilding assistance.

Federal officials say more than $277 million in recovery grants have been approved for households so far and 22 assistance centers are open across the damaged parishes. FEMA said it has more than 1,100 housing inspectors on the ground.

Gov. John Bel Edwards has praised the federal response.

Graves, however, said FEMA needs to quicken the pace of its inspections and grant approval. He also worried about the size of grants. While the cap on assistance to households is $33,000, Graves said the largest grant received is around $8,000 so far.

"People are sitting there, looking at their home and business situation. They've got to make decisions," Graves said.

Edwards' administration opened registration Monday for a new, FEMA-funded "shelter at home" program aimed at providing grants of up to $15,000 to help people make modest repairs that can get them quickly and safely back into their houses while they start work on the larger renovations.

Graves said that program was a "fantastic" concept.

Both congressmen said some of the flexibility they'd like to see in FEMA programs could require congressional action. Edwards was meeting with Louisiana's congressional delegation Monday to discuss a flood relief package.

MONTANA

Yellowstone's south entrance reopens Tuesday morning (Billings Gazette)

The south entrance to Yellowstone National Park reopened at about 7 a.m. Tuesday after a wildfire cut off access for several days, said Larry Helmerick, National Park Service public information officer.

The more than 13,000 acre Berry fire shutdown a stretch of Highway 89/191/287 between Jackson Hole and the south entrance of Yellowstone. Pullouts near the burn area will remain closed, said a National Park Service news release.

The Berry fire cutoff access to the south entrance on Aug. 23 but no roadways inside Yellowstone National Park were affected.

Governor declares state of emergency for Yellowstone River fish kill (Bozeman Daily Chronicle)

By Michael Wright Chronicle Staff Writer

LIVINGSTON —Montana's governor on Monday signed an executive order declaring the fish kill on the Yellowstone River earlier this month an emergency, a move that makes available millions of dollars for unemployment benefits and other labor programs.

The order frees up $15.4 million in emergency funds for workers and businesses affected by the river's closure, accessible to them mostly through unemployment insurance, retraining programs and planning grants.

Patricia Dowd, a natural resource policy adviser for the governor, announced the order at a meeting here on Monday, where officials from the Montana Department of Labor and Industry tried to offer people guidance on how they could get help in this time where businesses built on the tourism economy are taking a major hit.

"The Yellowstone River is a key contributor to Montana's tourism and outdoor recreation economy," Dowd said.

Earlier this month, Montana Fish, Wildlife and Parks closed 183 miles of the Yellowstone River and hundreds more miles of its tributaries to all public use in response to the deaths of thousands of whitefish in the river. Dead fish were found as far upstream as Corwin Springs and as far downstream as Springdale. Mostly whitefish have been found dead, and FWP estimates the total death toll to be in the tens of thousands.

Tissue samples showed the culprit to be a parasite that causes proliferative kidney disease, which can decimate trout and whitefish populations. An FWP press release sent Monday said whitefish have tested positive for the parasite as far downstream as Laurel and that the parasite had been confirmed in two brown trout taken from Nelson’s Spring Creek.

The river and tributaries were closed as a way to reduce stress on the fish so they might be able to fight off infection. It also was meant to prevent the spread of the parasite to other watersheds in Montana. But the move has significant economic consequences for people who depend on the tourism dollars that the river brings in — like fishing guides, raft companies and hotels and restaurants.

The governor’s emergency declaration allows the state to dip into a $16 million fund to offer assistance to people out of work or who have lost money because of the river closure. About $600,000 from that fund has already been spent in response to a heavy winter storm along Montana’s Hi-Line and a tornado in eastern Montana.

How much is spent from the fund depends on how many people are able to access the money, which may be tricky. Unemployment insurance, for example, might not be available to fishing guides who work as independent contractors.

For workers to be eligible, they have to work in a job where their employer pays payroll taxes — which might not be the case for all independent guides. But if they work seasonally at another job that does pay those taxes throughout the year and quit to guide in the summer, they may qualify for some benefits.

Paul Martin, who works in unemployment insurance claims processing for the Montana Department of Labor, said people won’t know if they qualify unless they apply because each individual case is so different.

“It’s like snowflakes,” Martin said.

Some at the meeting on Monday said they weren’t interested in being retrained, and others said they would probably try for a loan from the U.S. Small Business Administration — which is federal money, not state — to keep their doors open into the next year.

“I think I’m looking at a small business loan,” said Jim Kahl, the co-owner of River Source Rafting Company north of Gardiner.

Kahl said the last few weeks have been “pretty dismal,” and that the final weeks of the season are crucial for his company. A loan would be the way to make sure they are around for next season.

Tina Marshall, the ranch manager at 7 Point Ranch in Emigrant, said she hopes the emergency declaration would help them file a successful loss-of-income claim with their insurance company. The ranch hosts events and offers lodging to travelers, and Marshall said they had lost $43,000 in cancellations since the closure.

“It adds up fast,” Marshall said.
